

we are now told that two of the Ministers support Mr. STRAUSS's views. If this be true, we can only say that the intellectual and moral acumen of two members of the Ministerial body are gravely compromised, and a most unjust suspicion is necessarily thrown on the other members. And we further say deliberately, that all this unnecessary and most objectionable scandal arises from M. T'KINT DE ROODENBECK's incredible indiscretion, and from his utter incapacity to deal with Mr. STRAUSS's conduct, or to rise to a fitting sense of the responsibilities imposed on him by his duties and his position.

#### MORTALITY IN YOKOHAMA.

THE list of burials in the General Cemetery of Yokohama, which we published in full in our last issue, derives very considerable importance from the fact that, with the exception of those burials which take place at sea, it is a very fair record of the deaths which have taken place in the Settlement. By the table before us it appears that between July 11th of last year and the 22nd of last month, there have been some one hundred and fourteen deaths from all causes, including accidents of all kinds, and those of children; Of this list we find that a very large proportion of the mortality has arisen from small-pox; not a few from typhoid fever, and a very fair share directly or indirectly from excessive drinking. Of deaths by accident there have been five from scalding, consequent on the boiler explosion on board the *City of Yedo*, two from pistol wounds (the deaths of Ensign WEDGE, and Mr. GRAUERT), and three by drowning (the death, of Capt. BROOKSS, Mr. BOWLES, and a seaman), making in all a sum total of ten deaths resulting from unforeseen accidents. We have also a case of asphyxia from chloroform which can hardly be classed among the list of accidents, but which in reality was an accident. There have been eight deaths from dysentery or diarrhoea, besides a variety of other complaints too numerous to mention. The only deaths which it is our present business to touch are those resulting from typhoid fever and small-pox. In the spring of last year it will be remembered that there was a somewhat severe epidemic of typhoid fever, and though our list does not go back so far as last spring, yet we may trace the remains of the infection in the early part of the list before us. On July 14th, two Malays died of the disease, and then another death on the 20th of the same month; this being apparently the last of the epidemic, for, from that time till the end of the year, there were only two deaths from fever, one on the 18th September, and the other on the 27th November. Quite recently, on the 17th January and the 6th February, two other deaths occurred, and although we are loth to sound an alarm, yet we cannot but remember that last year the epidemic sprung from a few cases, and that the result was by no means to be anticipated. A little hot weather, and the corruption and filth to be everywhere met with in the native towns will spring into life. Infection will be spread broadcast over the settlement, and an epidemic may very probably be the consequence of present neglect and inattention. We are not "croaking" over possible but improbable misfortunes, for the condition of the native town is now no whit better than it was this time last year. In addition to this, the foul mud in the creek which has hitherto been covered with water has recently been laid bare at the sides, and this will unquestionably add to the chances of an epidemic, of which it may be that the two recent cases of typhoid fever are the commencement. Let us then be watchful; the causes of disease if taken in time can be removed and the result avoided, and we should not be doing any-

thing amiss were we to take care that the first causes of typhoid fever are removed, even were there no probability of an epidemic.

But the small-pox epidemic through which we have but scarcely passed concerns us most at the present moment. As usual we find that the number of patients was small at the first; the deaths were in the first instance but few and far between. As far back, however, as August 31st, a Malay seaman died; but this was probably an isolated case, for with the exception of the death of an American seaman on the 18th September, we do not find any more till 19th November. Even then the epidemic was but in the bud, although it rapidly became worse and worse. One death took place on December 1st, another on the 9th, one on the 12th, two on the 18th, one on the 22nd, 23rd, 26th and 27th, two on the 29th, four on the 4th January, two on the 6th, two on the 13th, two on the 15th, one on the 18th, 22nd 23rd, 25th, 27th, two on the 28th, one on the 30th, one on February 1st, 17th 18th, 19th and 23rd. Thus we see that the epidemic was mild during the end of November and the beginning of December, but increased in virulence towards the middle of the latter month, being at its height, during the last few days of December and the beginning of January, and dying away in February. At one period, there were as many as twenty-seven deaths in thirty-four days, while in the month of December there were fifteen, and in January there were twenty deaths. In all there have been, since the commencement of the epidemic (Nov. 19th), as many as forty-one deaths, not mentioning the Chinese or Japanese who have fallen victims. Besides these forty-one there have been, or at least it is stated that there have been, several deaths in the French men-of-war which have not been accounted for in the list of the Cemetery authorities. It is stated that those who have died on board the French men-of-war have been buried at sea, or in the harbour. If this be true, and we must acknowledge that we have obtained it on good authority, it accounts for the otherwise remarkable absence in the list of any deaths in the French navy. From Nov. 19th to Feb. 23rd, there was apparently only one death in the French navy from small-pox, and that took place on December 19th, and by this it certainly does appear that there is some truth in the statement that the French sailors dying of small-pox were buried in the harbour or at sea, since it is hardly to be credited that only one small-pox patient in the French navy died. Under such circumstances the matter to us appears to call for further investigation. The idea is not a pleasant one, and we cannot but think that there should be either an official denial of the rumour, or an acknowledgment; in which latter case measures should be taken to prevent the recurrence of so unsatisfactory a state of affairs.

But yet notwithstanding the fact that it is now dying out, the epidemic may return with renewed vigour at the next favourable opportunity. We have before this drawn public attention to the matter; have pointed out the evils arising from the want of proper Municipal Government, and have demonstrated the fact that as certainly as we neglect the proper sanitary precaution, so surely shall we be again subject to the inroad of pestilence, and we now supplement our previous remarks with yet another suggestion. In all communities which are under proper regulations and government, means are taken to ascertain the health of the place, and to provide against the spread or outbreak of any malady of an infectious character. Boards of Health are established, properly authenticated statistics are provided, and a due and effective

supervision exists. Why should not Yokohama have a Board of Health? Is there any reason, social or political, why Yokohama should be compelled to be subject to scourges of disease when a little care and a little organisation would do so much towards improving the health of the settlement? Look back upon the forty-one deaths in three months and a few days, and it must at once be apparent how great is the risk we run, and how careful we should be to take such measures as experience and caution would suggest. A Board of Health might consist of only five members, one or two of whom should be medical men, a third the British Consul *ex officio*, and the two others ordinary residents selected at a public meeting. With the advice of the medical men the sanitary duties of the Board would be well carried out, the Consul would avoid all political complications, while the civilian members could amply take care of the local interests of the residents. Under the supervision of the Board, arrangements of the most thorough and efficient character could be made, and Yokohama could be in a short time be freed from all ordinary danger of infectious diseases. Some such proposition as this we believe was made at the meeting at the British Consulate on the small-pox question, but red tape and want of organization killed the suggestion, and it came to nought. Despite this discouraging fact, however, we most earnestly draw the attention of the Community to the matter. It is of most vital importance, and a little well directed energy will do much towards ensuring us partial security. Vaccination, native hospitals, and the sanitary arrangements of the native town should all come under the supervision of the Board, and with a good selection of members much might be done without making violent or offensive changes. That bugbear—the Japanese Government—which is so frequently raised when any interference with the Japanese is suggested—notably the hindrance placed in the way of Dr. NEWTON in carrying out the propositions made at the recent meeting—is only nothing but a bugbear. To secure his own health is surely a right appertaining to every member of this community, and if the Government undertakes any interference, a little “friendly pressure” we feel sure will secure entire acquiescence in our projects. Others before us have insisted upon the Japanese carrying out proper and justifiable measures for the benefit of the foreigners,—why then should they not be compelled to enforce proper sanitary precautions in the native town?

#### JAPAN 1854—1864.

(Continued from our last Number.)

So for a short time all the officials were happy and contented with themselves, until a short time after some Dutchmen came to Nagasaki and presented the following petition. “Our country since the beginning of the dynasty has had permission to trade and have intercourse by letter; and every year, up to the present time included, we have come in our ships to Nagasaki. But lately Americans have come to Uraga in Sagami and have preferred insolent petitions, and we hear that in accordance with their petition you have granted them permission to come in their ships to the neighbourhood of Yedo. We desire that our nation shall be treated in the same manner.” Again the Russians came to Nagasaki and presented the same petition as the American barbarians, and close on their heels followed the English and French with proposals to open ports for trade, to establish perpetual peace and friendship between themselves and Japan, and mutually to try to enrich and strengthen each other. It seems that the officials could not refuse to consent, and so they were all treated in the same way as the Americans.

However all the patriots and honest men in the Empire were enraged at the doings of Shōgun’s officials, and

did not cease to censure them; all sorts of arguments without end were started about this question, and thus was laid the foundation of trouble at home and difficulties abroad, and of manifold troubles and misfortunes.

In this way then, by an unavoidable series of events, the different nations of the Western Ocean came constantly into our inner seas, and as it was expected that they might make a sudden attack upon us at any moment, several forts were erected in the sea between Shinagawa and Susaki, and the Daimios were ordered to keep strict watch and ward on the seacoast. On the 6th day of the 4th month a fire broke out in palace of the retired Miadō; the palace of the reigning Emperor took fire and the apartments of the Emperor and his family were all destroyed by the conflagration. His Majesty moved his residence to the house of Shōgo in Ito Miya. The flames spread to the town, and consumed a district comprised between Shōfukuji on the west, Imadegawa on the north, and Shimotauri on the south, including about two hundred and thirty streets of more than six thousand houses. On the 13th day of the 6th month there was a great earthquake along the line of the Tokaidō and in the Northern provinces, houses were overturned in places, and the high road opened and vomited mud and sand, causing the death of a large number of people. On the 15th day of the 7th month there was a great rain storm in the Northern provinces, followed by a flood. The river Sae in Kaga, the rivers Koya, Totori, and Hine in Etchu overflowed their banks. The village of Asai was carried away and one hundred and fifty people drowned. On the 4th of the 11th month, between seven and nine o’clock in the morning a violent earthquake occurred throughout the country, the effects of which were felt most severely at Osaka; a large number of houses were overthrown and a huge wave ran up the three mouths of the Yodogawa, carrying large junks with it whose masts struck the bridges and carried them away. One hundred and fifty junks of different sizes were destroyed. More people lost their lives by drowning than it was possible to ascertain. In the Eastern provinces, three small craters burst forth on \*Fujisan; the pine forest of Miyo was washed away; a Russian man of war was sunk in the bay of Suruga; throughout the country mountains were levelled and valleys filled up by an earthquake; a tidal wave rose along the coast and destroyed the houses of the inhabitants; an immense number of people lost their lives and great damage was done to property all over the country. On the 27th day of the same month the chronological period was changed, and a new one called Ansei inaugurated, in consequence of the burning of the Palace in the summer of this year. This year permission was granted to build some large men-of-war, and a notification was issued that all Japanese vessels were to hoist a flag showing the sun on a white ground. In consequence of the constant visits of barbarian ships of late years, the Daimios were ordered to guard the sea coast at †Naniwa, Nishino-miya and Sakai in the province of Setsu. Ikamon no kami was appointed to guard the Europeans, and his troops were quartered in the temple of Honnōji at Kiōto. On the 1st day of the 8th month of the next year (1855) a great storm occurred in the home provinces, accompanied by a flood. On the 2nd of the month a severe earthquake occurred in the eastern provinces; numbers of houses were destroyed in Mutsu and Dewa and many lives lost. On the 20th there was a great storm accompanied by a flood in the home provinces. The mountain called Kasaoki-yama crumbled away, and a great many lives were lost. On the 26th there a tidal wave rose in the provinces of Owari, which washed away land to the amount of more than eighteen thousand koku. At ten o’clock on the night of the 2nd day of the 10th

\* Incorrectly but usually called Fujiyama by Europeans.

† The Daimio was called Sakai by a trial way.

‡ Another name for Osaka, does not exist.

§ Chronological period. The Japanese take the Chinese date from no era; they give a name to the current period and change it at intervals of years whenever any great event occurs. Ansei means peace, and was named to mark the dawn of a peaceful period. The previous period Kōei, means “eternity.” The names of the provinces because they surround Kiōto.

month, there was a great earthquake in the eastern provinces, which was felt most severely at Yedo. More than ten thousand houses, including the castle, residence of Daimios and vassals of the Shōgun (hatamoto) Shintō Shrines, buddhist temples and citizen's houses were shaken down; fires broke out in thirty places at once; the flames ascended and spread on all sides, and so that a great conflagration ensued. The number of lives lost amounted to a hundred and four thousand; the corpses were buried by the authorities in thirteen large temples. About this time the Minister Abe Ise no Kami died. One of the Shinagawa forts slipped down and the officers and men on duty in it were killed on the spot. On the 23rd day of the 11th month, the Imperial palace, which had been in course of reconstruction since the fire which took place in the previous summer having arrived at completion, the Emperor took up his residence there. The imperial palanquin stated from the house of Kagura no Miya\*, passed the Imadegawa street, along the streets named Muro-machi and Sanjo Sakai Machi. His Majesty was escorted by the Kuambaku Takadzusasa Daijō Daijin, by the Sadaijin, Udajin, Dainagon (hinanagon) and Urin Jijū. The military class was represented by the Shōgun's Resident Wakizaka Awaji no Kami, by the civil governors of Kiōto Asano Nakadzukasa no Shōyn and Okabe Bingo no Kami, and the Tsukebuke,† Okubō Osumi no Kami and Okabe Suruga no Kami, who were all magnificently dressed and accoutred, and mounted on horseback. Then those who had the honour of seeing the procession, lay down on their faces in the road, and wept tears of joy, clapped their hands, and worshipped with fear and reverence.

On the 11th day of the 8th month the of 3rd year of Ansei (September 1856) in the evening, a great deal of rain fell over Osaka, Sakai, Hiōgo, Nishinomiya and these parts; more than three hundred thunderbolts fell in different places. On the 27th of the same month about eight o'clock in the evening, a great storm took place at Yedo and in the neighbourhood; the thunder was particularly loud, especially at Yedo. The whole of the Fisher's street was washed away, a great number of houses were destroyed at Shinagawa by a tidal wave, and several thousand junks and boats disappeared. The man-of-war belonging to His Highness of Mito ran on to the second fort, and was smashed to pieces. Large junks went up the river against the stream, and broke down the bridge called the Yei-tai-bashi. Tsukudashima,‡ Teppōzu, and Hamagoten, were laid in ruins, and the roof of the Monzeki temple at Tsukiji was blown away. From the castle, to the temples and shrines to the residences of the Daimios and the houses of the common people, there was hardly a roof that was not awry; all were more or less damaged. It is said that the wounded and killed amounted to more than one hundred thousand persons. Great losses of property occurred in the provinces of Awa, Kadzusa, Shimosa, Hitachi, Kōdzuke, Shimotake and along the whole line of the Tōkaidō. These constantly occurring signs and wonders were attributed by the people to the anger of the gods at the continual pollution of our country by the visits of the outer barbarians.

The same month the Kuambaku Takadzusasa Daijō Daijin resigned his office, and was succeeded by Kujō Sadaijin. The question "what is to be done about the barbarians" was constantly under discussion at Yedo, yet without any decision being arrived at. While time was being wasted in this way, a barbarian vessel touched several times on the coasts of Setzu and Kishiu, taking soundings.

In the autumn of the next year (1857) the President (sic. in orig.) Perry, who had visited Japan previously, came with Consul Harris§, and complained vehemently that the articles of the petition granted already some time back, were not yet put in force. They observed that as to the question of general intercourse with Western States, the Dutch had already sent in a petition the pre-

vious year, and naturally enough too, that Prussia, France and England, making in all five States, would conclude treaties of intercourse and enter into amicable relations; and they proposed that a rule should be established that they should help us and we them in case difficulties should arise; that consequently† all the nations had come and that it depended on our management of the question whether we should be plunged into an embarrassment. Upon hearing this the Ministers, vice-Ministers and officials were greatly alarmed, and reported what had been said to the Shogun. Then Hotta Bitchiu no Kami, Makino Bizen no Kami, Kuze Yamato no Kami, Naitō Kii no Kami, Torii Tamba no Kami, Honda Echizen no Kami, Endō Tajima no Kami, Honjō Aki no Kami, Sakai the Civil Governor of the city, Tsubouchi Idzu no Kami, Matsudaira Awa no Kami, Kawaji Sakingo, Midzuno Chikuzen no Kami, Hongō Tamba no Kami, Hiraoka Tambano Kami, Natsume Sakon no Shōgen, Okabe Inaba no Kami, Ogasawara Wakasa no Kami, and Okubō Suruga no Kami, met together night and day for consultation. On the one hand, if the demands of these people were granted, it was easy to see that the population of Japan would become disturbed and excited and alienated from the Shōgunate. On the other hand if intercourse with the foreigners was declined in order to avoid the troubles which might spring from it, then war would break out at once. Japan would then have to fight all the countries of the Western Ocean at once, and how could she expect to win. Any internal disturbances could be kept down by some means or other, but if war broke out with foreign countries, the integrity of the empire would be imperilled and it would be a difficult thing to subdue them entirely. So they decided to arrange the matter as quietly as possible as the affair had arrived at such a pass that it could not be got rid of, and the proposals which had been made previously by the old Prince of Mito became the subject of general ridicule. What the foreigners had persistently demanded was the opening of the ports of Niigata in Echigo, Yokohama in Musashi, Hiōgo in Setzu, Nagasaki in Hizen, with the permission to build lofty houses and shops at these places and carry on a great trade. It was decided therefore that the thing to quiet them was to open a port near Kanagawa in Musashi as a temporary measure, and to grant a treaty with the privilege of building shops and trading.

The envoy was therefore invited to the residence of Hotta Bitchiu no kami, and this determination was made known to him; he was much pleased and was profuse in respectful thanks, saying that this would be the basis of long continued friendship between the two countries; that after the conclusion of treaties with all the states, in order to confirm this treaty, and to increase the existing amity, he begged that the envoy might have an audience of the sovereign of this country in order to pay his compliments, which would be a fine thing for the United States. The officials did not know what to say to this, but seeing that they could not well refuse, at last permission was given, and on the 4th day of the same month the two envoys proceeded to the castle at Yedo, and saw the Shōgun. As the thing was done without sufficient grounds, the old Prince of Mito and all the patriots of the Empire were much grieved, and some of them censured the proceedings of the Shōgun's officials, disliking extremely that the opening of the ports should be granted; and besides to have allowed these people, in accordance with their request to have an audience of the Shogun, was a thing certainly not to be passed over. There were many, who outraged at these things, urged their prince to remonstrate with the Shōgun, and when they saw there was no hope of success, they absconded from his territory, in the hopes of accomplishing their aspirations by other means. From this time numbers of low-class two-sworded men wandered about the country, and gave promise of noble deeds. Subsequently the Ministers, Vice-Ministers and other officials met the envoys at the guard house for

\* The province commonly called Ōshū.

† One of the Princes of the Blood.

‡ Officials of the Tokugawa clan lent for the Mikado's private service.

§ The Island within or at the mouth of the river at Yedo.

\* This refers to the mediation article in the American treaty which runs as follows. "The President of the United States, at the request of the Japanese Government, will act as a friendly mediator in such matters as may arise between the Government of Japan, and any European Power."

† The meaning of this "consequently" is not quite clear in the original even to a Japanese.

the examination of junks\* and concluded a temporary treaty with them; the envoys produced some trading regulations, and having exchanged signatures, they concluded the negotiations for the gradual opening of the ports.

The Imperial Court now began to hear that the barbarians came to the Kuantô (the Yedo district), and increased daily in pride and insolence, and the Emperor's mind was sore disturbed; the nobles of his Court too were profoundly grieved and lamented over the state of affairs. The Shogun's officials in Kuantô seem to have feared the disastrous consequence of their acts, and during the 12th month, (Jan. 1858), Hayashi Daigaku no kami, Tsuda Hanzaburo and Nakadai Shintaro left Yedo and arrived at Kiôto on the 22nd, when they communicated what had taken place to the Shoshidai † Honda Mino no Kami, and other officials of the Shôgunate named Okubô Osumi no Kami, Tsuchizuki Suruga no Kami, Asano Nakadzukasa no Shôyu, and Okabe Bingo no Kami, civil Governor of Kiôto. On the 24th the Tensô Hirohata Dainagon and Higashibôjô Dainagon were summoned to the Resident's house, to meet the messengers from Yedo. These latter said that affairs in Kuantô had reached such a condition, that they had been obliged to grant a treaty, by which ports were opened to commerce to the five barbarians namely Holland, England, America, Russia and France, and that it was intended to open a port near Kanagawa in Musashi; that they ardently desired that the Emperor and the Shôgun should come to a good understanding with each other; and they handed over to the Tensô seven documents, amongst which were the trading regulations, the reports of the conferences held at Hotta's residence, and the letter brought by the Envoy, and begged them to induce the Emperor to give his approval to them. The Tensôs agreed to do so, and reported all this next day to the Emperor, who was intensely grieved and disturbed. As this was a thing that could not be permitted for a moment, he summoned all the nobles of his Court, and ordered them to hold a council. Kuambaku Kujô dono and the retired Kuambaku Takadzukasa Udaijin, Ichijô Naidaijin, Sanjô the retired Naidaijin, Nijô Dainagon, the Gisé Kuga Dainagon, Tokudaiji Dainagon, Made no Koji (Chunagon, Bôjô Sadaiben, and Uramatsu Saishô, the two Tensô, the Princes of the Blood, and other nobles of the court (Kugé) besides, all assembled at the palace and discussed the matters laid before them by the messengers from Yedo. They spoke as follows. "Our country from ancient times has refused all intercourse with foreign countries; a myriad of sovereigns in one unbroken line have occupied its throne, and it is an independent empire. Shall we let these people pollute one inch of our territory? But the Shogun's officials, by a wilful error, have given permission for friendly relations and commerce; worse than this they have promised to open ports, acts which must excite the profoundest indignation. If they go on in this slothful and supine way, they will gradually fall into the snares of these people, the fundamental laws of the state will be altogether lost, we shall be insulted, be compelled to to fold our coats with left lappet outside ‡ write across the page instead of from top to bottom, get our Government and laws from stinking dogs and goats, and become the subjects of the jurisdiction of barbarian States. Then the national glory which has lasted for thousands of years, will be utterly tarnished; then it will be too late to gnaw our entrails with rage, and disgraced as a country we shall become a dependent state." "The people of Kuantô have changed the excellent laws of their ancestors, and brought them to this condition. Even supposing that they were compelled to act thus by the force of circumstances, the Mikado's Court can never give its consent for a moment." This opinion was written down and signed by all present, and then sent into the Mikado. So the court made up its mind and

\* At Uraga.

† Daimio nominated by the Shôgun, to garrison Kioto and represent him generally at the Mikado's court: elsewhere translated "the Shôgun's resident."

‡ A noble of the Court, intermediary of all communication between the Shôgun and the Mikado.

§ The Japanese do actually fold the left side of the dress over the right. The expression is a proverbial one adopted from the Chinese.

informed the messengers from Kuantô what the Imperial decision was. Hayashi Daigaku no Kami was extremely grieved and immediately sent off a messenger to Yedo to convey this news to Kuantô. The foreign envoys were constantly urging the exchange of the ratifications of the treaties, and the Shogun was excessively fatigued with the whole affair. The Ministers, Vice-Ministers (Rojin and Sansei) and all the other officials met together to consult, and wasted their time so that the year came to an end and followed by the 5th year of Ansei (1858). Hayashi's report arrived from Kiôto in the beginning of the 1st month, and seeing from it what was the state of things in the imperial Court, Hotta Bitchin no kami Iwase Higo no kami, the finance commissioner Kawaji Sayemon no jo, Tatsuda Rokuske, and Hara Yajiu set out from Yedo on the 26th day, arriving at Kioto nine days later, where they lodged in the temple called Honnoji. On the fourth day after their arrival they went to the Palace, and on the next day, but one they received the two Tensôs at their lodging in Honnoji. They explained to the two Tensô the affairs at Kuantô, the extremely embarrassing position in which they had been placed, and the necessity for settling the matter quickly; and they begged the Tensô to explain to His Majesty, and obtain his consent.

## Correspondence.

(Reprinted from the Japan Mail Daily Advertiser.)

YOKOHAMA GENERAL HOSPITAL.

YOKOHAMA, 28th February, 1871.

TO THE EDITOR OF THE Japan Mail Daily Advertiser.

SIR,—In consequence both of an official communication to the Hospital Committee and of Statements that appeared in your issues of the 18th and 25th February, to the effect that a patient in the Hospital, Taylor by name, and under treatment for small-pox had escaped from the establishment during the night of Thursday, the 16th instant, under circumstances which you considered in the interest of the public called for a searching inquiry into the management of the Hospital, it was deemed advisable that the Hospital Committee should enquire into the circumstances of this case, and Dr. J. J. R. Dalliston, the Surgeon-in-charge, was called upon to furnish an explanation, which he promptly did.

By the enclosed copy of correspondence which the Committee beg you will publish, you will perceive that the statement that the patient (Taylor) "escaped on Thursday night, and was found next morning in the settlement in a very dangerous condition" is greatly exaggerated. The fact being simply, that he broke out of the Hospital on the Friday morning by sheer force, having knocked down the attendant who was with him in his room, and beating down the opposition of others who attempted to stop him, that he was followed immediately by the Hospital staff and brought back in a chair within two hours from the time of his escape, say from 9 A.M. to 11 A.M. The unfortunate man did not therefore suffer by exposure during the coldest night of the year.

The Committee authorise me to say that whilst acknowledging the right of the Press to expose wrongs, they cannot but think that before making the assertions complained of (and which are proved to have been exaggerated) that some little trouble should have been taken to ascertain facts before inserting articles which are not only calculated to be detrimental to the interests of a struggling and useful Public institution, but also to cast a slur on the internal management by the *employés* with whose services the Committee have every reason to be satisfied.

I am, Sir,

Your obedient Servant,

W. R. DALZIEL,

Honorary Secretary.

Yokohama General Hospital.

(Copy)

JAPANESE IMPERIAL RAILWAY DEPARTMENT,

YOKOHAMA, 23rd February, 1871.

SIR,—I beg to call your attention to the circumstances attending the illness and death of a man named "Taylor",

words about his own antecedents. He goes on to give an outline sketch of the kind of railway it would in all probability be advisable to construct, with such details as such a letter would naturally involve. A letter from Mr. LAY, dated the same day, authorizes Mr. MOREL to engage two assistants. An interval of six weeks follows, at the end of which Mr. MOREL writes a letter to Mr. LAY, dated Yokohama 9th April, announcing his arrival. About a fortnight afterwards Mr. MOREL writes to say that he had been introduced to the Japanese authorities by Sir HARRY PARKES, that he has his offices in Yedo and Yokohama, that pupils and assistants have been placed under him, and that although there are certain obstacles in the way, he trusts they may be surmounted. Mr. LAY then writes from London, stating that he had withdrawn his power of attorney from Mr. TRAUTMANN, and expressing some astonishment at the contents of one of Mr. MOREL's letters, which seems simply to have stipulated for some compensation for having left his own employment, in the event of anything occurring to necessitate the cancelling of his new agreement. Mr. LAY objected to this as being beyond Mr. TRAUTMANN's powers. The next letter is also from Mr. LAY, stating that he had succeeded in obtaining the services of Mr. G. P. WHITE, the consulting engineer of the British Government, and examiner for all Indian civil-engineering appointments, as consulting engineer at home, and also that he had selected two assistants approved by Mr. WHITE. The next letter is from Mr. MOREL, stating that delays were occurring, and urging Mr. LAY to return to Japan. In a postscript follow some technical remarks as to the most desirable kind of rails. And here it may not amiss to point out, that if Mr. MOREL values himself on his epistolary style, and is ever likely again to incur the risk of having his semi-official letters published, he might usefully expend a little more grace on them, and do himself greater justice than he has in these letters. There is no necessary connection between a correct style and the power of constructing a tank, sinking a shaft, or laying out a line of railway, but Mr. LAY has certainly some cause of triumph here and there in publishing letters which are not as carefully written as they might have been. On the other hand Mr. MOREL has no cause to blush for them for any other reason; they were evidently never intended for publication, and some doubtful English is all they can be charged with. We may dismiss this part of the subject by saying that Mr. MOREL must look with some bitterness on his *quondam* correspondent, who unfeelingly publishes a letter containing such a sentence as this,—“Diplomacy without work would be a mere absurdity.”

A letter from Mr. LAY follows next in order, in which he says that it would be most inconvenient to him to come out, as he is engaged with the important affairs entrusted to him. It encloses a letter addressed by Mr. WHITE to Mr. LAY, containing a series of questions in regard to the proposed work, the nature of the soil, &c., &c. This is followed by a letter from Mr. MOREL, going with some minuteness into the work at that time being accomplished, and his views upon it. A succeeding letter from Mr. MOREL states that inconveniences attended Mr. TRAUTMANN's intervention from Shanghai, that the surveys were progressing, but that the position of affairs was unsatisfactory, and again urged on Mr. LAY the expediency of coming out to Japan. Mr. LAY then writes that he had contracted for forty miles of permanent way, and made arrangements to despatch a body of workmen in addition to the assistants before-mentioned. The remainder of the letter is technical. A letter from Mr. MOREL follows, which places the exact position of affairs frankly before

Mr. LAY, and shows an entire apprehension of the difficulties which were approaching, and the causes of these difficulties. A second letter succeeds this, simply reporting progress. Mr. LAY then addresses Mr. MOREL on the subject of Mr. BRYANT's position, he sees the necessity for harmonious action and for centralizing all the work, expresses his conviction that the jealousies which have surrounded his action will soon disappear, and reports progress from his side. This is followed by a second letter from Mr. LAY showing that he was earnestly at work over his duties. Thereupon follows Mr. MOREL's indent for stock and materials, and the pamphlet concludes with the articles of agreement drawn up by Mr. LAY appointing Mr. MOREL Engineer-in-chief.

After examining the correspondence carefully, we can fairly come to one or two conclusions on the whole subject. It is clear that both Mr. LAY and Mr. MOREL went heartily into the work assigned respectively to each, that both were entirely determined to do it well, and that Mr. MOREL soon discovered the impossibility of proceeding under a constitution so anomalous as that appointed to superintend the Railway. Mr. LAY was in England, working, indeed, for the Government, but still in England; Mr. TRAUTMANN was in Shanghai; and the Japanese were obstinate and obstructive. How could things work under such a system? In justice to Mr. LAY, it must be said that all his orders for railway plant, stock, material, &c., were most honestly given out, and all that he has purchased is well and cheaply bought. As regards Mr. MOREL's position, it must be clear to any one that he entirely stood by his agreement with Mr. LAY, so long as Mr. LAY retained his Commissionership. He advised him faithfully of the progress of affairs, of the difficulties which beset them, and of the urgent necessity for Mr. LAY's return to Japan. But on the revocation of Mr. LAY's Commissionership, Mr. MOREL must have seen at once that his own agreement was worthless, unless accepted explicitly by the Government whose Commissioner Mr. LAY was. He left an important post to serve the Japanese Government, and Mr. LAY cannot surely be disappointed if, when his own Commission was revoked, Mr. MOREL accepted one from Mr. LAY's own masters.

That Mr. LAY is disappointed at the result of his mission to Japan may easily be imagined, but, however Jonah's best friend may have lamented his fate, he could not be expected to jump into the water after him, and Mr. LAY's own action is the sole cause of his disappointment. A finer card no one ever had to play, within the limits permitted by the game. Had Mr. LAY, on the refusal of his friends to advance the sum he had contracted to deliver to the Japanese, at once returned to Japan and placed the whole affair before them, stated his difficulties and obtained fresh instructions, he would have found in those who superseded him excellent allies in the prosecution of his work, he would in all probability have secured for himself a valuable and important agency, and retained his connection with an Empire, his first advances into which promised him so much power of doing good to it and to himself.

JAPAN 1854—1864.

(Continued from our last Number.)

The two Tensô promised to do so, and on taking their leave, went at once to the Palace and reported what had been told them. All the chief nobles came to the Court and discussed the matter in council as at first, but without arriving at any other conclusion. They became very angry and excited, saying “the ugly barbarians be-

"come more aggressive and insolent every day, and though Kuantō reports that it is unable to keep them in order, we cannot allow our country to be insulted for a single moment; His Majesty ought at once to issue a decree for their expulsion." Thus did they clamour, so that Hotta Bitchiu no Kami, hearing of it, was sadly distressed. Then Tsudzuki Suruga no Kami laid a scheme.

There was a certain retainer of the Hikone clan named Nagano Shiuzen who lived in Kiōto under the pretence of studying poetry; he had the privilege of visiting the Princes of the Blood (Miya) and nobles of the Court (Kugé), and went now and then to the Kuambaku to see His Highness and ask after his health. As he was a man of great ability Suruga no Kami sent for him to his residence, in order to consult with him and get him to arrange the matter on hand. Shiuzen having received minute instructions as to the object to be gained, undertook the job, and put it into the hands of Shinada sahiō-yei no jō, a retainer of his friend the Kuambaku. Shinada, who was a great rascal, at once accepted the task, and by means of his cunning talk, managed to persuade His Highness. His Highness, convinced of the honesty of the Shōgunate, invited the Tensō Higashibōjō Dainagon to come and see him. He explained to him that the Shōgun was really surrounded by difficulties, and the Rojiu and Sansei (Vice-Ministers, also called Wakadoshiyori) did not know where to turn. That if the Court did not make up its mind to be on good terms with the military power, hostility would be generated between them, and that might lead to complications undreamt of at present. In that case he feared that no good would result to the Imperial Court, because of the power and prestige so long possessed by the Shōgunate. Higashibōjō Dainagon, seeing these signs of alarm, assented to the expressions which had been forced by circumstances from the Kuambaku, and privately communicated their gist to the Emperor, who informed the nobles of the Court that he intended to give full powers to the Shōgun to settle the affair of the outer barbarians. So again there arose violent discussions in the palace, and all classes were as excited as a boiling cauldron. Amongst others Arisugawa no Miya and Sanjō Naidaijin, hearing that the Emperor had granted the plaintive petition of the Kuantō messengers, were greatly distressed, and thinking the opinions of His Highness were profoundly suspicious, again presented a memorial to the Emperor. Every one became greatly excited, and a body of eighty-eight kuge, headed by Nakayama Dainagon and Oye-Mikado Dainagon, proceeded to the palace of Kujodono,\* and begged him to give them a categorical answer to their questions. His Highness was greatly alarmed, and without answering their questions, said that he had acted thus, being very anxious for the safety of the state and of the Emperor. They thereupon sent in a memorial signed by all of them, and all the officials in their employ sent in another expressing identical views. So the Imperial Court came to a decision, and deprived Higashibōjō Dainagon of his office. Tsudzuki Suruga no kami, the *tsuke-buke* died suddenly on the same day. The Emperor's answer was then delivered to the Kuantō messengers as follows. "What you have told His Majesty involves the safety of the fundamental laws of the Empire, and as the popular mind would be disturbed by it, the Imperial consent cannot be given. Let the Shōgun in future zealously perform his duty of subjugating barbarians, and let him sweep them away." The Kuantō messengers were sadly disappointed at their want of success, but that was of no avail, so on the 3rd day of the fourth month Hotta Bitchiu no kami went to the palace to take his leave, and started from Kioto for Yedo on the 5th.

The Imperial Court hated profoundly the doings of the outer barbarians, and it was evident that they might make a sudden inroad at any moment. Yet the Bakufu† was supine and wasted its time, which greatly grieved the Imperial mind, and His Majesty therefore resolved to send an envoy to the two shrines of Ise, to upper and lower Kamo, and to Yahata to offer up prayers on his behalf for the peace and tranquillity of the country.

In Kuantō, after the return of Hotta Bitchiu no kami, the public mind was unquiet. In consequence of this

\* The Kuambaku.

† Another name for the Shōgun's Government.

important national crisis, the Minister and the chief Chinese Scholar had been sent to Kioto for the express purpose of asking the Emperor's opinion, but a number of worthless Kugé, rebelling against the wishes of the Shōgun, had prevented the Emperor from granting his permission. If this sort of thing were passed over with impunity the prestige of the Shōgunate would be entirely ruined. As the Tokugawa\* house possessed the office of barbarian-subjugator with full powers, independently of the Mikado's permission, to act in accordance with its own notions was by no means a violation of the imperial orders. The Kugé had taken advantage of the peremptory language used towards the Mikado to interfere in this way. The only way to keep up the military prestige of the Shōgunate was to choose a man of sufficient capacity, and to appoint him Tairō.† So on the 23rd of the 4th month Hikone Chiujo Nawosuke Ason, Ii kamon no kami‡ was appointed to the office of *Shikken*§ and Ota Setsu no kami, Manabe Shimosa no kami and Matsudaira Idzumi no kami were appointed a second time Ministers. From this time a gulf began to exist between the Government and the military power (i.e. between the Mikado and Shōgun), the Imperial Court gained more and more power, while both internal and external troubles arose. Previously to this the foreign envoy Consul Harris went away, for the President Perry had fallen ill and died, and he had to go to his funeral. Whilst he was thus occupied he took no notice of the delay of the communications which he expected from the Shōgunate, but about this time he began to renew his urgency, and the Ministers informed him of the Mikado's wishes. The Shōgun also notified to the daimios that he had written an answer to say that even if the opening of the ports according to the temporary treaty previously exchanged were delayed, there would be no contravention of the treaty, and that the question would be dealt with at a later period. That in consequence of the urgency with which the outer barbarians had demanded the opening of the ports, he had applied to the Mikado for permission, which had been refused; but His Majesty had bravely decided, that as it was impossible to say at what moment the foreign barbarians might make a sudden attack on our inner waters, the country must be placed in a condition of military preparation, and that when all was ready to ensure victory, the military glory of the empire should be made to shine before the eyes of foreign countries. The protection of the coast of Kuanto was entrusted to the daimios, and all of them guarded it with vigilance. In the provinces round Kioto also garrisons were established with great vigour. At Kioto certificates of merit were given to the nobles and their adherents who had displayed honesty and fidelity in their zeal for the honour of the Mikado; they were all proud of the distinction they had gained, and the influence of the Court daily grew and increased. The more hotblooded among them, excited by the power which appeared to attach to the Court, declared that the acts of the Shōgunate were in many ways discordant with the Imperial orders; that it treated the decrees of the Court in a contemptuous manner, which was a heinous crime; and they talked freely in this way, censuring the Shōgunate, without ceasing.

In the end of the 5th month the Shōgun's Resident Abe Setsu no kami became a member of the Council of Ministers, and departed for Kuanto. The Governor of Fushimi, Naito Bungo no kami built a new residence at the Kojin entrance to Kioto in order to superintend the police of the city, and taking up his residence here, looked after affairs both in Kioto and Fushimi at the same time. The real cause of it was, that as the prestige of the Court increased, the patriotic two sworded men bubbled over, and went about in numbers abusing the action of the Bakufu officials, and this was done to facilitate their discovery. However the agitation for and against inter-

§ One who has authority.

course with the frontier barbarians increased from day to day; Ii Kamon no kami seized upon the power, and in direct contravention of the Imperial will, permitted the opening of the ports in a most determined manner. The old Prince of Mito was filled with grief and several times addressed letters of remonstrance to him, which were not in the slightest degree attended to. Then the Daimios of Tosa, Hizen, Sendai, Inaba, Uwajima, and Tsuyama sent in memorials advocating the shutting of the ports and the expulsion of the barbarians and remonstrated, but even they were not listened to, and all men declared that the obstinacy and self-willedness of Ii Kamon no kami were too great and detestable. In the middle of the 6th month of this year a terrible pestilence broke out in the east of Oshiu and spread over the Kwantō. Its symptoms were a sudden attack of fever, violent vomiting and constant motions; the whole body became cold, and the patient, worn out with pain, died in a couple of days. In several cases the patient succumbed in thirty six hours, so that by the common people it was called 'three day cholera.' Subsequently there were sufferers who died after only a couple of hours sickness, and from this it got the name of "sudden cholera." Everyone was seriously alarmed; the pest gradually spread to the vicinity of the capital, and from thence to the capital, to Osaka, the western provinces, and Kiushiu. Of this plague there died in the whole Empire three hundred thousand and odd persons. The Shogun Iyesada fell ill of this or some other violent disease, and after one day's severe illness died on the 8th day of the 7th month, at the age, as it is said, of thirty-five. When this happened, all classes who lived in the castle were sore grieved and moved, and as there was no heir they discussed who should be appointed to succeed him. Now Hitotsubashi\* dono was the real son of the old Prince of Mito, and was a particularly wise and intelligent young Prince. As to his age, it was thought it just fitted him to be chosen successor in a time like the present. The Daimios of Owari, Echizen, Tsuyama, Sendai, Tosa, Hizen, Uwajima, Sakura (who was one of the Ministers) Uyeda (also a Minister) Ishikawa Wakasa no Kami (a wakadoshiyori) Hongo Tamba no Kami (a wakadoshiyori) and all the patriotic men of the families related to the Tokugawa house, were united in desiring him to be the successor to the late Shogun in such a difficult political crisis. But the Regent Ii Kamon no Kami would by no means consent; he alleged that the late lord had desired Kikuchiyō of the Kishiu family to be his successor, and had talked of adopting him for his son, and therefore he would make that Prince the successor to the Shogunate; so, without caring for the different view taken by others, he set up Kishiu Saisho dono, who was scarcely twelve years of age, and made him successor to the line of the Tokugawa family and fourteenth Shogun of that house. Kenkichi the second son of Matsudaira Ukio Daibu was made successor to the Kishiu family, and was subsequently raised to the rank of Chiunagon.

About this time every night a comet was seen in the north west about twenty feet long; it seemed to vomit smoke over the heavens and men feared because they thought such a wonder was a forerunner of great and awful changes in the empire, and of trouble to the country. All sorts of stories were abroad about the sudden death of the Shogun Iyesada, and somewhat suspicious reports were in circulation. The suspicions of Ii Kamon no kami fell upon the old Prince of Mito, and he forced all those who had worked to get Hitotsubashi dono made the adopted heir to retire from public life. The doctor Oka Kakusenin was condemned to the strictest form of confinement, and Taki Rakushiuin was put in prison. The secretary Koga Hachiro, disembowelled himself. The old Prince of Mito was put in the strictest confinement at his home in Komagome. Owari Dainagon was forced to retire into private life at his residence at Toyama, and was succeeded in the daimiate by Matsudaira Setsu no kami. Hitotsubashi dono was forbidden to appear at the castle, and ordered to remain in confinement at home. The daimios of Satsuma, Sendai, Inaba (or Inaba) and Tsuyama were ordered to remain at home with closed doors. Those of Hizen, Tosa and Uwajima were ordered to retire into private life. Hotta Bitchiu no kami

Matsudaira Igu no kami, Ishikawa Tosa no kami, and Hongo Tango no kami, were deprived of their offices, and ordered to confine themselves to their houses till further notice; and the others who were punished on this occasion amounted to several hundred persons.

On the 18th day of the same month the corpse of Iyesada, the late Shogun, was conducted to Tyoeizan at Uyeno, and the name inscribed on his tomb was Onkio in dono. Subsequently the rank of Sho-ichi-i Daijo daijin was conferred on him by a decree of the Mikado, and his consort received the appellation of Tensho-in dono.

The Imperial Court was deeply offended by the arbitrary way in which the officials of the Bakufu acted, and insulted the Mikado by neglecting to obey his wise will; and privately summoning the patriotic and devoted Kuge, he sent a secret order to the old Prince of Mito. The order stated that His Majesty had heard that affairs were not quiet in Kwantō, and that the Prince must use all his endeavours with the Bakufu to reconcile the existing differences and to induce them to sweep away the barbarians at once.

Although His Highness the Kuambaku was actually the real father of the Empress, he was an object of suspicion to the Emperor on account of the sympathy he had displayed for Hotta Bitchiu no Kami when he was at Kiōto in the spring of the year, so this noble was left out of the affair, and a document signed by Konoye Sadaijin, Takadzukasa Udaijin, Ichijo Naidaijin, Sanjo Saki no Naidaijin and Nijo Dainagon was handed to Ukai Kichizaemon and his son Ukai Kokichi, who resided in the Mito Yashiki\* at Kiōto, on the 8th day of the 8th month they set out on this secret mission. On arriving at the Komagome Yashiki in Yedo they handed the letter containing the Imperial will to the old Prince, who was intensely delighted, and accepted the commission gratefully.

Ii Kamon no Kami, expecting that something of this kind would happen, had secretly despatched Nagano Shiuzen to Kiōto as a spy, and Shiuzen having heard of this affair, at once started for Yedo in great haste, and told the Chiūjo what had occurred. Ii Kamon no Kami was greatly astonished that such an important affair should have been entrusted to the hands of unimportant persons, and feared moreover that it would cause a breach between the Mikado and Shogun, a thing extremely injurious to the tranquillity of the state. As it was a matter not to be neglected for even one day, he despatched Manabe Shimosa no Kami to Kiōto to announce the punishment of those who had been active in getting up this scheme. Manabe Shimosa no Kami arrived at Kiōto in the middle of the 9th month, and took up his residence in the temple of Mionanji at Kiegoku. He was followed by Sakai Wakasa no Kami and after consultation with Naito Bungo no Kami His Highness the Kuambaku was reinstated, and the patriotic two sworded men implicated in the despatch of the secret instructions of the Emperor to the old Prince of Mito were carefully sought after. Takahashi Hiobu Shoyu, Koyabayashi Mimbutsu, Kaneda Jori, Mikuni Daigaku, retainers of Takadzukasa Dono, Itami Kurando, Yamada Kageyu, retainer of Shorenin no Miya, Iida Soma retainer of Arisagawa no Miya, Wakamatsu Moku no Kami, Iriye Uta no Kami, retainers of Ichijo Dono, Niwa Bazen no Kami, Moridera Inaba no Kami, and his son Wakasa no Kami, and Tomida Oribe, retainers of Sanjo Dono, Kasuga Samuki no Kami, retainer of Kuga Dono, Fujii Tajima no Kami, Mikura Kotoneri, and Yamashina Idzumo no Kami retainers of Saionji Dono, Muramaka, a lady of Konoye Dono's household, Rokubutsu Kiōman pupil of Daigaku Teramiya, Ukai Kichizaemon and his son Kokichi, retainers of Mito Dono, some Chinese professors named Umeda Genjiro, Ikenouchi Daigaku and Rai Mikihachiro, a painter named Ukida Ikkei and his son Shōan were one after another arrested and put in prison. At Yedo by order of the Rōjū, Sansei and of the governor of the city, the police searched diligently for all persons well affected towards the Mikado, and all persons concerned in the opposition made to the choice of Kikuchiyō as heir to the Shogunate. Yasushima Tatewaki, Kayane Iyo no Ské, Aizawa Idaiyu, Otako Mohei, retainers of Mito, Kasakabe Isaji and his son Yunojo, retainer of Satsuma, Yoshimi Chozemon, retainer

\* The residences of persons are called Yashiki or "splendid houses"; sometimes translated place, but hardly coming up in splendour to that idea, it seems best to keep the Japanese word.

\* Usually spelt Stotsbashi by foreigners.

of Uwajima, Yoshida Tomijiro, retainer of Choshu, Hashimoto Sanai, retainer of Echizen, Omura Matasaburo, Fujita Chiuzo, inferior officials of the Bakufu, Hasegawa Soyemon, and his son Hayami, retainers of Takamatsu, Gabuchi Tadashi a Ronin\*, the doctor Ii-idzumi Kinai and his son Shundo, and the *Yamabushi* Riyeki-in were arrested and imprisoned at Yedo. Besides these even peasants and townspeople were arrested at Kioto. The officials were put into sedans, covered with nets and the non-official persons into bamboo cages and sent from the official residence of the governor of Kioto, Ogasawara Nagato no Kami, under a guard to Yedo.

On the 1st day of the 12th month (early in 1859) the ceremony of investing Kikuchiyo with the Shogunate took place, and from this day the Saisho was called by the title of Shonii Dainagon Iyemochi. Tayasu was appointed his guardian.

So that year passed away and in the early spring of the next (1859) the conferences with the foreign states arrived at a conclusion: the Regent Ii Kamon no kami assumed more and more authority, and being no longer afraid of anybody or anything, opened resolutely at Yokohama in Musashi a port and a town; erected factories for the Russians, English, Dutch, Americans and French, and built shops and native houses and drove a brisk trade. A brothel quarter was also set apart beautified as much as possible, pleasure gardens full of artificial scenery, of fountains and of the flowers which flourish each season. The vessels of all sizes of the five barbarians came and anchored in numbers in the port; the sight was most beautiful and incomparable, and the place became the lusiest port of all Kwantu; nay it was enough to make any traveller wonder.

Then some new *lungio* (commissioners) were appointed, namely Midzuno Chikugo no kami, Sakai Oki no kami, Muragaki Awajino kami, Kato Iki no kami, and Hori Oriba no kami. In addition guards were stationed at Hommoku, Kanagawa, Haneda, Omori and other places, and the trade increased from day to day, according as the Kwantu officials had desired.

Now Manabe Shimosa no kami had been at Kioto ever since the 9th month of the previous year, and having arrested all the patriots and men of action, despatched them under a guard to Yedo. In the end of the 2nd month he also left Kioto and returned to Yedo.

After all the trials were over in Kwantu those who were condemned to suffer punishment were executed in two batches, in the autumn and winter. Yasushima Tatsuwaki, a high officer of Mito performed disembowelment. Kayane Iyo no ske, Ukai Kichizaemon, and his son Kokichi, Hashimoto Sanai, a retainer of Echizen, Yoshida Tomijiro, a retainer of Choshu, the Chinese professor Rai Mikihachiro, the doctor Ii-idzumi Kinai and others were decapitated. The rest were condemned to banishment to distant islands. Konoye Sadaijin, the former Kuambaku, Takadzukasa Udaïjin, and Sanjo Sadaijin were obliged to go into Monasteries. Higashiboji Dainagon was condemned to perpetual confinement in his own house, Awata no Miya, Ichijo naidaijin, Nijo Dainagon, Kuga Udaïjin, Hirohashi Dainagon, Madenokoji Dainagon, Okimachi-Sanjo Chiunagon, and Ohara Sanimi were confined to their houses, and thus everything ended. This is called the crisis of Tsuchinoye m'ma. (1858).

## GENJI YUME MONOGATARI.—VOL. II.

For some time after this, the fear inspired by the military prestige of the Bakufu was such that no one dared to talk about politics, and Ii Kamon no kami, acting as the Chief Adviser of the new Shogun, asserted his authority abroad throughout the empire. Yet still the enthusiasm of patriotic men increased. They maintained that rebellions acts like those of Shokin† and Kemmu

\* A two sworded man who has absconded from his prince's service.  
† Shokin, 1219-1221. The Emperor Juntoku tried to put down the Hejo family, who worked the Shogunate for the successors of Yoritomo, but failed, and was compelled to abdicate. Kemmu 1231-33. The war between the two branches of the Imperial dynasty continued. One of the Princes of the blood was murdered by the rebel Ashikaga Tadayoshi. This family shortly afterwards seized the Shogunate, vide the Koku shinku. Vols. III p. 361 and IV.

were being repeated, simply owing to the violent and arbitrary way in which Ii Kamon no kami governed. They felt indignation and hatred, while the people's hearts revolted.

On the 21st November 1859 a fire broke out in the principal apartments of the castle at Yedo, which consumed the Shogun's residence, with all the adjoining buildings, while the flames spreading to towers of the enceinte burnt them down also. The Shogun removed to the buildings in the western enclosure.\*

In the beginning of the year 1860, Ii Kamon no kami issued an order that in consequence of foreign trade, the current values of the coins relatively among themselves did not correspond with their true values, and that a new coinage should be made. The value of the old gold was thus greatly enhanced. An order was issued that the *hoji koban*† was to be exchanged for three *rios* one and a half *boos* of the new coinage; and that the *shoji koban*‡ was to be exchanged for two *rios* two and a quarter *boos*. Immediately the price of everything rose enormously, and the lower classes found themselves considerably impoverished, an effect attributed by most with great bitterness and hostility to the onerous government of Ii Kamon no kami.

On the 3rd day of the 3rd month (24th March,) all the daimios went to the castle to offer the usual compliments to the Shogun. Amongst them was the Regent, Ii Kamon no kami, who set forth from his *yashiki* near the Sakurada gate in a palanquin. It was eight o'clock in the morning and the snow was falling heavily. As he approached the Sakurada gate seventeen or eighteen men, of ronin-like appearance rose from the side of the road, and attacked the palanquin in which Ii Kamon no kami was riding. The attendants quite lost their heads from the suddenness with which the onslaught was made, and four or five of them were at once cut down, a great number of others being wounded. Most of them fled, but some young Samurai§ nerved by a sense of shame, stopped and drew their swords in defence of their chief. The enemy, however, was desperate, and advanced resolutely upon them, so that Kada Kuro, Ozawamura Gunroku, Kawanishi Chiuzemon and others of the Hikone clan were killed on the spot. During the fight the palanquin was hurried back to the *Yashiki*, in ignorance whether the Chiuzo was alive or dead. The men who committed this act of violence were the following retainers of Mito dono; Sano Takenoské, Kurozawa Chiuzaburo, Ozeki Wahichiro, Hirōoka Chisojiro, Yamaguchi Tatsunoské, Mori Gorokuro, Sugiyama Yaichiro, Hassuda Ichigoro, Hayashi Chiuzemon, Saito Kemmotsu, Koibuchi Kaname, Hiroki Matsunoské, Moriyama Hannoské, Inada Juuzo, Mashiko Kimpachiro, Seki Yanoské, Takahashi Taichiro, and Arimura Jisemon of the Satsuma clan. Sano, Koibuchi, Hirōoka, Yamaguchi and Arimura were severely wounded and committed suicide on the battle field or died fighting with the enemy. Saito died afterwards of his wounds. Ozeki, Mori, Sugiyama, Hassuda and Moriyama delivered themselves up at the *yashiki* of one of the Ministers, and were afterwards executed. Takahashi Taichiro escaped to Osaka, but finding it impossible to conceal himself, committed suicide at Tennoji. Each of them had in the bosom of his dress a document explaining that their object was to kill

\* Usually occupied by the Shogun's heir apparent.

§ Samurai, literally a servant, i. e. a two-sworded man.

thirty-seven in the second week, and the same in the third. The smallest number visited was four thousand two hundred and twenty-four houses, and fifteen thousand three hundred and thirty-one inhabitants during the week ending March 11th. Now, if we take the largest number of inhabitants visited, fifty-one thousand four hundred and thirty-seven, and compare that with the numbers vaccinated, we must draw a conclusion which is not particularly favourable towards the Japanese authorities, and their method of doing their work. The numbers reported vaccinated from the various places, which we presume are to be considered "Yokohama and its suburbs," amounts to two thousand and eighty-four, and if we add to this an average number of four hundred as vaccinated in Hachioji, whence there are "no returns," we arrive at a total number of two thousand four hundred and eighty-four persons vaccinated in two months. Allowing an equal number as having been vaccinated before—a very large estimate, it must be admitted—we have a total of four thousand nine hundred and sixty-eight persons who have been vaccinated out of fifty-one thousand four hundred and thirty-seven visited. This then shows how incomplete and unsatisfactory the arrangements made by the Japanese authorities have proved to be. If fifty-one thousand people have been visited by the doctors, how is that fifty-one thousand have not been vaccinated? Or why has not even one man in five been operated upon? It shows a laxity and a remissness on the part of the Japanese doctors which entirely nullifies the precautions which we foreigners take to ensure our freedom from infection. Compulsory vaccination in its entirety may be almost impossible under the existing circumstances; it would require machinery and an organisation not at all within the compass of Japanese powers, but yet much might be done. The universal vaccination of young children is, of course, one of the main objects, but this cannot be obtained in Japan. In England, where the practical and medical supervision is carried to an extreme point, it is oftentimes difficult to induce the proper registration of births; *a fortiori* in Japan, where every house is an aggravated example of a London tenement house, the registration would be almost impossible. Yet, the unpleasant fact remains that the vaccination returns, as they stand, are mere figures, showing—if they do show any thing at all—that about one man only in ten has been vaccinated.

On the other hand, we may learn that something, however small, has been effected, and that Dr. Newrox has done his utmost to set the wheels in motion which may ultimately roll on to system and organisation; but it will be a long time ere that success is achieved, and as the popular saying reads, "while the grass is growing the horse dies." We must have present and efficient protection, no matter how, or in what form it may be obtained, and we must be careful that the epidemic having passed away, we ourselves do not lapse into that heedlessness which is but an excuse for further inaction on the part of the Japanese.

As to the number of cases, and the relative number of deaths per hundred, the returns only lead the reader into mistake and misconception. As Dr. Newrox very fairly says, the returns are "unreliable," explaining that he is unable to state the ratios the cases and deaths bear to the population on account of the incomplete character of the returns. Dr. Newrox is disappointed in the returns—as well he may be—and says:—"by the 28th of January report there were fourteen thousand four hundred and forty-one houses with forty-seven thousand one hundred and ninety-five inhabitants, of whom thirty were suffering from small-pox

that is one in every one thousand five hundred and seventy-three persons. The number of domiciles became gradually less in the subsequent reports, until the one on the 11th of March, when there were four thousand two hundred and twenty-four habitations, with fifteen thousand three hundred and thirty-one residents accounted for, and as many as twenty-three cases of small-pox, that is one in every six hundred and sixty-two persons. From this we would be naturally led to infer that the disease was increasing, whereas I believe it to be the contrary, as by strict enquiries which I have instituted among the native medical officials, it appears to be decreasing." If then the ratio increased while the actual number of patients decreased, the obvious result is that the doctors only visited those houses where danger of infection, or the disease itself, existed. Thus we are forced to the conclusion that the reports are each calculated from a different basis, thereby rendering them collectively of no use as a guide for future action, or as a report of the existing state of affairs. The table which we published yesterday is of the same unsatisfactory character, and if we summarise the whole of the cases and deaths, which amount respectively to two hundred and thirty-four and forty, we have said all that is necessary on the subject.

This unsatisfactory result, however, points to the necessity for amendment; we have elsewhere alluded to the want of a Board of Health, and need not here go into that portion of the question; but in regard to Japanese regulations we need more precision, fuller returns, and ample information. Without these we are unable to act with any certainty that we are doing right, and the sooner the Board of Consuls, the Chamber of Commerce, or some newly appointed sanitary authorities, insist upon proper returns, the sooner we shall be free from the danger of infection. With full returns we can insist upon proper precautions, and, though it may be found that there is difficulty in insuring compulsory vaccination, still by attempting to enforce it much good is done and partial success attained. The hospitals too must be established, and the people forced to make use of them; vaccination without segregation would be but a half measure; and the natives must not be allowed to put our lives in jeopardy by a remissness on the part of the Japanese authorities which a little determination on our part would convert into energy and alacrity. We have analysed these returns in perfect good faith, but we may say in conclusion that they strike us as being entirely visionary from beginning to end.

#### JAPAN 1854—1861.

(Continued from our last Number.)

Raihana Rizo who had accompanied Nagai to Kioto on this occasion, was a Samurai of honour, and blushed for the disgraceful conduct of his companion; after returning to Yedo he disembowelled himself in a most heroic and honourable manner.

Constant reports came post haste to Kanto from the Bakufu officials resident in Kioto of the uprising of *ronins* there, that Shimadzu hounded on the ronins, and had offered advice to the Imperial Court. The *Kakuro Itakura Suwo no kami*, Naito Kii no kami, Sakai Uta no kami, Midzuno Idzumi no kami and Matsudaira Bazen no kami were greatly perplexed. To a certainty, the Mikado would give an order to punish the crimes of the Bakufu, and to release the persons belonging to the civil and military classes (i.e. the *Kuge* and the daimios) who had been condemned to various degrees of confinement on account of the disturbances of 1853. Already under pretext of the auspicious marriage of the Prince a general amnesty had been proclaimed. Consequently on the 24th of May, Owari Saka no Chumagari, Matsubashi Gohachiro,

• Afterwards known as Iga no kami. He stuck to the Shogun Kell almost to the last.

Matsudaira Shungaku\*, Yamanouchi Yodo† and all the rest had been released from confinement. At Kioto also, Takadzukasa Taiko,‡ Konoye Sadaïjin, Takadzukasa Udaïjin, Awata no Miya and others were released from confinement.

Now, the prince of Choshu set out from Yedo to return to his territories and arrived at Kioto on the 28th of May. On inquiring after the Emperor's health, he was informed that Shimadzu Idzumi had been ordered to keep quiet the ronins who had risen in the vicinity of the home provinces, and was further told to assist Idzumi with all the resources of his clan. The prince of Choshu accepted the commission, and remained at Kioto to give all the assistance in his power.

His Majesty being pleased at the loyalty which had induced Idzumi to put himself forward as the leader of the supporters of the throne and discovering for that reason a resemblance between him and Koshima Bingo-saburo of old, expressed a desire to him that he should change his name from Idzumi to Saburo, and henceforward he went by the name of Shimadzu Saburo.

About this time Kuze Yamato no kami received notice to proceed to Kioto, in order to receive the commands of His Majesty, and set out from Yedo with the intention of so doing; but on the road he received certain information of the state of affairs at the capital, which so alarmed him that he returned back at Sumpu on pretence of sickness, and came back to Yedo.¶

On the night of the 5th July, fifteen or sixteen ronins made a sudden attack on the residence of the barbarians at Tozenji in Takauawa, a suburb of Yedo. The guards, who were retainers of Matsudaira Tokinoske, defended the place and eight of the ronins were killed; eight of the guards also were cut down, and several wounded. One barbarian and a priest of the temple were also killed. The ronins who were killed on this occasion were the following retainers of Mito dono, Arika Hanjiro, Kimura Shimpachiro, Kogawa Shiunenoske, Kobori Sadakichi, Yamazaki Shinnoske, Nakamura Sadaske, and Ishii Kinjiro. What became of the others is not known.

When it was known in the castle at Yedo that the influence of the Imperial Court was becoming so great, there were great changes made in the personnel of the officials. Wakizaka Awaji no Kami, who had formerly been the Shogun's resident at Kioto and had acquired a complete acquaintance with the affairs of the court during his long stay there, was now placed on the list of Ministers and received the title of Nakadzukasa no Taiyu. Tatasu dono resigned his office of guardian to the Shogun.

The Imperial Court therefore, to ensure the execution of the determined purpose of the Mikado, decided that Ohara Hiu, sammi should be sent as Imperial Envoy to Yedo. He was raised to the rank of Shosammi and appointed Sayemon no Kami, and left Kioto on the 18th June, being escorted along the road by Shimadzu Saburo whose men to the number of six hundred, well armed with muskets and other weapons, presented a brilliant and impressive appearance.

At Yedo the report had been received of the uprising of the ronins at Kioto and of the tumultuous state of things in consequence. The *Kakuro* Sakai Uta no Kami was appointed to superintend the police of the western capital and left for that place on the 15th June, arriving at Kioto on the 6th of July; but the Imperial Envoy had already left escorted by the house of Shimadzu. The house of Mori, in the full blaze of military glory, was stopping at Kioto, and appearing to guard the Imperial Court, so that its influence rose like the morning sun. All the Bakufu officials seemed shrivelled up with fear, so Sakai Uta no Kami, thinking it no doubt a strange state of things, installed himself and his men in the temple called Honmanji, and kept himself in the dark. The Shogun's Resident Sakai Wakasa no Kami, being permitted to resign his office, left for Yedo in the end of the same month. Matsudaira Hoki no Kami of Miyadzu was appointed acting Resident, but under the pretence of sickness, d-

‡Title given away to the Kuambaku on his retirement.

¶This paragraph belongs to the events of the previous year. The author has made a mistake.

clined to go to Kioto.

On the 8th July Konoye Sadaïjin was appointed Kuambaku, and Awata no Miya returned to his former residence at Shorenin. His Majesty, in consideration of the exertions made by the late Prince of Mito and of his great services, conferred on him the posthumous title of Dainagon; and in recognition of the merits of Sanjo Naidaijin, who after having for years exhausted his strength in the service of the state, had died whilst under sentence of confinement, His Majesty sent Hirohata Dainagon and the Imperial Envoy Takatsuji Shonagon to the temple of Nisonin on the west of Kioto to carry to him the posthumous title of Adaijin.

On the night of the 10th August stars flew across the heavens in all directions to the number of several hundreds of millions. Later on in the month Chidane Shosho, Iwakura Shosho,\* Tomi-no-koji Nakadzukasa no Taiyu, accused of having misbehaved themselves in connection with Kuanto affairs, were condemned to become priests and live in perpetual seclusion outside the capital. Kujo the retired *kuambaku*, was condemned to a severe form of seclusion, to shave his head, to take the name of Yenshin, and to reside in confinement in the village of Kujo. Kuga Naidaijin, resigned the title of Udaisho, and shaving his head and retiring into seclusion, took the name of Sodo. Kuze Sammi was ordered to keep within closed doors, Kuze Shosho had to shave his head, and Kuze Uyemon no naishi was granted a long furlough.

On the night of the 16th August, the head of Shimada Sahioyei no gondaijo, retainer of Kujo dono was cut off by ronins, as it was believed, and stuck on the end of a bamboo pole, as on a pillory, in the bed of the Kamogaway on the North of the Shijo bridge. In front was set up a board declaring the nature of his crime; it said, this individual was a rebellious traitor who contrived treason in combination with Nagano Shiuzen; he is a traitor whom heaven and earth cannot tolerate; wherefore he has been executed and his head pilloried. This Shimada Sahioyei in the autumn of 1858 had become a Kuanto spy and had, in company with Nagano Shiuzen of the Hikone clan, caused the death of honest patriots belonging to the Kuge families by his slanders; the lower two sworded men appear to have done this to avenge his victims. About the end of August, a marvellous star appeared in the northwest; it emitted a white vapour and passing over head spread out over the south east; after a while it gradually got back to the northwest; in September it got round slowly to the west, and disappeared. Of late years, some great event had always occurred after the appearance of a miraculous star, and therefore when such a star appeared again now, people discussed whether it was a forerunner of some great calamity impending over the empire; or whether it was a good omen prognosticating the uprising of the ronins of the western provinces and the increase of the national glory through their possessing themselves of the Imperial prestige; but at any rate disturbances of some sort or another were expected.

On the 2nd July the Imperial Envoy Ohara Sakingo arrived at Shinagawa, and entered the castle on the 6th. The Shogun invited him to the hall called Teikan-no-ma and Sakingo there delivered to him his message.

The message declared that since barbarian vessels had commenced to visit this country, the barbarians had conducted themselves in an insolent manner, without any interference on the part of the Bakufu officials, with the result of disturbing the peace of the empire and plunging the people into misery. That His Majesty was profoundly distressed at these things, and the Bakufu on that occasion had replied that of late discord had arisen among the people and that it was therefore impossible to raise an army for the expulsion of the barbarians; and they said that if His Majesty would graciously give his sister in marriage to the Shogun, the court and camp would be reconciled, the people would put forth their efforts, and the barbarians be swept away. Thereupon His Majesty good naturedly granted the request and permitted the Princess Kazu to go down to Kuanto. Contrary however to all expectation, traitorous officials be-

\*The name was after the revolution shared the office of Hoshio with Sanjo.

†The river at Kioto, the shingly bed of which is usually half dry

\* came more and more intimate with the barbarians and treated the Royal Family as if they were nobody; in order to steal a day of tranquillity they forgot the long years of trouble to follow, and were close upon the point of asking the barbarians to take them under their jurisdiction. The nation had become more and more turbulent; of late, therefore, the ronins of the Western provinces had assembled in a body to urge the Mikado to ride to Hakone and after punishing the traitorous officials to drive out the barbarians. The two clans of Satsuma and Choshu had pacified these men, and were willing to lend their assistance to the Court and Camp in order to drive out the barbarians. The Shogun (Taijiu-ko)\* must proceed to Kioto to take counsel with the nobles of the Court, and exert himself thoroughly; must send forth orders to the clans of the home provinces and seven circuits, and performing within a few days the exploit of expelling the barbarians, restore tranquillity to the empire. On the one hand, he must appease the sacred wrath of the divine ancestors of the Mikado, and on the other lay the basis of the return of faithful servants to their allegiance, and of the peace and prosperity of the people, thus giving to the empire the immovable security of Taizant. Or secondly, in accordance with the law laid by Toyotomi Taiko, that five of the great maritime daimios should assist in the Government with the title of the Five Tairo, defend the country against the barbarians, and keep up the defences in a proper condition, and then perform the exploit of driving out the foreigners. Or thirdly, that Hitotsubashi Giobukio should be directed to assist the Shogun, and that Echizen Chiujo should be appointed Tairo to assist the Bakufu in its conduct on domestic and foreign affairs. That one of these three proposals must be accepted in order to prevent the disgrace of having to fold the left lappet over the right.

The Shogun received the Imperial commands with respect, and on the 27th July gave a formal answer that he accepted them. In accordance with the wishes expressed by the Mikado, Hitotsubashi Giobukio was appointed a Chinagon, and made guardian to the Shogun; Echizen Shungaku was appointed to the office of Supreme Exerciser of the Governmental Authority (Seiji-so-sai-shoku). Kazu Miya, who had been called Midaidokoro since her entry into Kanto assumed again the title of Princess Kazu. Kuze Yamato no kami, Naito Rii no kami, and Ando Tsushima no kami were dismissed from the post of Minister.

Thus the Imperial will was obeyed in Kanto, and on the 15th September, Ohara dono left Yedo to return to Kioto. Shimadzu Idzumi had left Yedo on the 13th in advance of Ohara dono, and on arriving at Namamugi in Musashi, fell in with English barbarians riding on horseback. They passed through the front of Shimadzu's retinue, and behaved in a rude manner. The light infantry in front of the procession rebuked them for their rudeness, and killed three of them on the spot. After this, the military glory of the house of Shimadzu shone more and more brightly.

On the 29th September, Ohara Sakingo arrived back at Kioto. His Majesty was much delighted and praised Ohara and Shimadzu for the great deeds they had accomplished; he gave Ohara permission to wear the *nosui*,† and sent orders to Kanto to confer on Shimadzu Saburo the title of Osumi no kami with the rank of jin-go-i-noge. Hereupon the Guardian of the Shogun, Yoshinobu\* and the Sosai Shungaku replied that they declined to do so, and so this promotion in rank was deferred for a while; but His Majesty gave Shimadzu a gold mounted sabre, to his intense gratification, and Shimadzu then left

\* Literally the Great Tree Prince, because a general's duty in battle is to sit under a tree, and Shogun means generalissimo. The castle at Yedo, and thence the Shogun's government were called *Shogun* or Willow Building.

† A mountain in Hupeh in China.

\* This is the person usually called Taikōsama, and stated in most foreign works on Japan to have been the 1st Shogun. He was never Shogun; the title of Taiko, great lord, indicates that he had been Kuwabaku. His first name was Hiroshimaru and after many changes he took that of Toyotomi Hideyoshi.

† Chief elders.

‡ Shungaku.

§ A dress worn by the *daijin*, or highest Ministers of State.

¶ Also called Keiki, and Hitotsubashi, Keiki is the Chinese pronunciation of the two characters with which Yoshinobu is written.

Kioto on the 15th October for his country.

In the end of September, Matsudaira Tosa no kami entered Kioto. He received a message from the Court to say that Satsuma and Choshu had lately been stopping at the capital, and had exerted themselves strongly (in the Mikado's cause), and that he must also stay there awhile, and join his efforts to those of Satsuma and Choshu in the service of the state. This order he accepted with gratitude, and taking up his residence in his yashiki in Kawaramachi, devoted himself to business.

From this time everybody talked of the three clans of Satsuma, Choshu and Tosa, and their influence was enormous.

On October 17th a great reformation was proclaimed at Yedo, with reference to styles of dress and the attendance of the Daimios at Yedo. The Obiroma Daimios\* were to remain at Yedo a hundred days every three years, the Tamari no ma Daimios (the Tosama or lesser independent Daimios and the greater vassals of the Tokugawa family) were to spend one year out of three at Yedo; the small Daimios, called Fudai and the Tozama Daimios of the Gau no ma, the *Soshaban*, the *Kikunoma*, and the smaller vassals of the Shogun called *Hatamoto* were to pass two hundred days at Yedo every year. Those who had formerly been obliged to reside the whole year at Yedo might now return, by asking for permission, to their territories situated in different parts of the country. The Daimios and greater hatamotos had formerly been obliged to leave their wives and children at Yedo, but now they might return home at their own option. In addition the custom of making presents every three months to the Shogun and of receiving gifts from him was abolished. The Daimios might hurry to the castle whenever they wished, and their retinues might be considerably diminished. Their ordinary clothes for the future were to be the *haori* (and mantle) *kuhakama* (trousers) or the *machi-takabakama* (riding trousers). On days of ceremony it was not necessary to wear the *Noshimé*†. Other rules were established and regulations issued. In consequence all the Daimios and the *hatamotos* who owned lands sent their wives and children to their country residences, and in the twinkling of an eye the flourishing city of Yedo became like a desert; so that the Daimios allied to the Tokugawa family and the Tokugawa family and the vassals of the Shogunate of all ranks, and the townspeople too, grieved and lamented. They would have liked to see the military glory of Kanto shine again, but as the great and small Daimios who were not vassals of Tokugawa had cut at the root of this forced residence in Yedo, and few of them obeyed any longer the commands of the Bakufu, they also began to distrust it, and gradually the hearts of the people fell away. And so the prestige of the Tokugawa family, which had endured for three hundred years, which had been really more brilliant than Kamakura in the age of Yoritomo, on a moonlight night when the stars are shining, which for more than two hundred and seventy years had forced the Daimios to come breathlessly to take their turn of duty in Yedo, and had day and night eighty thousand vassals at its beck and call, full to ruin in the space of one morning.

NOTE.—A friend of mine said in an inquiring tone: "The decadence of the Shogunate was caused by the temporizing conduct of its officials, who were frightened by the tricks and lies of the barbarians ever since they first visited us in their ships. This temporizing policy had been the cause of many crooked dealings, and even the lowest classes began to dislike the Government and men's hearts had fallen gradually away, so that the prestige of the Shogunate was lost past all recovery. But the Bakufu by its own orders had relaxed the system of Daimios coming in turn to do duty at Yedo, and had let them remove their families to their possessions in the provinces, and thus brought about its downfall by its own acts. Do you not think so? I replied, as you say, the Bakufu, conscious of having failed in its duty, is now frightened at the orders of the Mikado, and cannot venture to disobey in any one point. It is certain that hence forward the Daimios will stand aloof from

\* Those called *Kokusan* or Lords of provinces, such as Satsuma, Choshu, Tosa, Owari, etc.

† A dress the upper and lower parts of which were of different colours.

"the Shogun, and in obedience to the Mikado's orders, do all they can to forward his fall. If the Mikado gives an order to the Shogun he dare not disobey. The proof of it is, that before the Mikado had time to give the order, the Bakufu itself issued a decree, in consideration of the poverty of the Daimios, that they should devise a plan for enriching the country and strengthening its defences." My friend acknowledged the truth of this, and said that certainly it must be so.

(To be Continued.)

## Correspondence.

### VACCINATION AND SMALL-POX.

The following letters which were forwarded to us for publication have already appeared in our daily issue; but owing to their interesting contents we now republish them in these columns.

Yokohama, March 15th, 1871.

SIR,—I have the honour to report for your information the measures adopted by the Japanese authorities for the suppression of Small-pox.

#### VACCINATION.

At your request Mr. Isaki the Chiikenji of Kanagawa authorised the establishment of stations for gratuitous vaccination in Yokohama and the other principal towns of the Ken under his governance. By issuing public notices, and ordering the officers in the different districts to make it known to the inhabitants, the system was well introduced, favourably received by the people, and appears to be firmly and satisfactorily established. The operations are now performed by careful and competent medical officers of the Government, and are attended with great success, and will result, I doubt not, in saving many valuable lives, which would otherwise have been sacrificed to Small-pox.

#### THE VACCINATION IS PERFORMED AT

1871	Kanagawa every Sunday	Kawasaki every Monday	Tokyo every Tuesday	Fujisawa every Wednesday	Kawaguchi every Thursday	Hachioji every Friday	Yokohama every Saturday
Months	Number Vaccinated	Number Vaccinated	Number Vaccinated	Number Vaccinated	Number Vaccinated	Number Vaccinated	Number Vaccinated
January.....	156	216	356	150	146	No	60
February .....	164	141	207	263	72	Returns	189
Total.....	320	357	563	386	219	—	249

During the above months I attended the different stations on the days named to initiate proceedings and supervise the operations of the native practitioners, but the latter now conduct their duties so skilfully that I no longer find continuous attendance necessary.

In accordance with resolutions passed at a meeting of medical men at the English Consulate on the 12th January, domiciliary visitation of the native town of Yokohama and its suburb was undertaken. The Japanese Doctors of the different wards were employed and paid by the Saibansho. The following returns were forwarded to me from that office:—

#### SMALL POX.

In Yokohama and its Suburbs.

Date	No. of Houses Visited	No. of the Inhabitants	SMALL POX.		
			No. of cases under observation	No. of Deaths	Ratio of death per 100 cases
Jan. 15th to 20th	7,943	34,216	—	11	—
" 20th to 28th	14,041	47,195	10	9	30
" 28th to Feb. 4th	12,344	51,147	39	4	10
Feb. 4th to 11th	12,344	51,147	45	3	6
" 11th to 18th	8,510	37,308	27	3	11
" 18th to 25th	8,101	37,308	30	1	3
" 25th to Mar. 4th	7,361	27,703	25	2	8
Mar. 4th to 11th	4,224	15,331	23	3	13

I hoped by these returns to have been able to state the ratio which the affected bore to the number of the inhabitants, but in this I am disappointed, for by the 28th of January report there were fourteen thousand and forty-one houses with forty-seven thousand one hundred and ninety-five inhabitants, of whom thirty were suffering from small-pox, that is one in every one thousand five hundred and seventy-three persons. The number of domiciles became gradually less in the subsequent reports until the one on the 11th of March, when there were four thousand two hundred and twenty-four habitations with fifteen thousand three hundred and thirty-one residents accounted for, and as many as twenty-three cases of small-pox, that is one in every sixty-six.\* From this we would be naturally led to infer that the disease was increasing, whereas I believe it to be the contrary, as by strict enquiries which I have instituted among the native medical officials, it appears to be decreasing, and that it is only the houses in the neighbourhood of the infected which are now visited.

No reliable information can be gained from these returns, for they cannot be considered trustworthy, nor can I see that any advantage will accrue from these visitations as long as the segregation of those found labouring under the infection is not enforced. The Hongis at Kanagawa and Hachioya, which it is said would be set apart for that object, have not as yet been so appropriated, therefore my services for their superintendence have not been required.

I have, &c.,  
(signed) GEO. NEWTON,  
Surgeon R.N.

March 23rd, 1871.

SIR,—In this morning's *Advertiser* appeared a letter from me on vaccination and small-pox in Yokohama and its suburbs, in which existed a mistake, and I will feel obliged by being allowed to correct the paragraph containing it. It ought to have read: "The number of domiciles became gradually less in the subsequent reports, until the one on the 11th of March when there were only 4,224 habitations with 15,331 residents accounted for with as many as 23 cases of small-pox or one patient in every 662 individuals (the 2 was left out, and the ratio of one in every sixty-six, as printed.)"

The following is a copy of the last return sent me from the Saibansho, being for the week which ended on the 19th inst.

Name of the ward or District in which Small-pox exists.	Number of Houses Visited.	Number of Inhabitants	Small-Pox.	
			No. of cases under observation	No. of Deaths
Motomachi.....	2,151	9,334	15	4
Kitagata.....				
Negishi.....				
Honmuku.....				

\* Should be six hundred and sixty-two.

thoroughness, the efficiency, order, and system of the service which has produced it. It is absurd to suppose that any scheme which the Chinese or Japanese could contrive or keep in motion would collect their revenue with the exactness, efficiency, and small amount of slip of the Chinese foreign inspectorate. We doubt if we should be far wrong in estimating the loss of revenue to Japan consequent on its present mode of collection at less than twenty per cent., and it would probably exceed this estimate very considerably. Presuming that the total duties collected at all the ports now amount to a \$1,000,000, this sum might be increased by \$200,000 per annum, at an expenditure of perhaps a fifth or sixth of this sum. This may not seem any such advantage as should induce the Japanese to make so vital and organic a change as the replacing of a Japanese by a foreign staff of officials. But it must be remembered that a large increase in the trade at all the ports is absolutely certain, and should we have a good rice crop during the next two autumns this increase may be very rapid indeed. It were far better to undertake this new system while it can be done without great mistakes of organization arising. The longer it is delayed the more difficult it will eventually be. Commenced early in the history of our intercourse, it would be sufficiently plastic to adapt itself without difficulty to the gradual expansion of trade which may be certainly predicted, and any necessary modifications could be easily introduced as occasion required it.

But what is likely to be the Japanese view of any such change? Undoubtedly their first impressions would be adverse to it. They would naturally say that they were fully able to collect their own duties, and every officer now employed in the native service would oppose it vigorously. The cherished recollection of the last bribe, the hope of promotion by natural routine, the disturbed position, the latent or avowed dislike of foreigners, would all extort a serious opposition in the department itself, while it could not be expected to see, much less to confess, the advantage the State would derive from the change. What placeman even saw any merit in a scheme which displaced him, and could any one be expected to acquiesce in the warrant for his own removal? This would, of course, have to be faced, but a local opposition of such a kind is of small importance. The serious difficulty would be with the party which is jealous of, and more or less opposed to foreigners, who know only enough to be suspicious of us, and not enough to trust us. But they may be reminded that in dealing with us so far, they have generally been wrong—wrong in their confidence and wrong in their mistrust. It is the suspicion or the trust of men who know little, opposed to the astuteness of men who know much. They have never been a match for us when anything like a large policy was concerned, and they neither understand our faults nor our merits. They have had ample ground for suspicion, and ample grounds for confidence, but it may be doubted whether they know where to feel the one or repose in the other. The Chinese have been wiser. They have set foreigners to deal with foreigners, and have now a Customs' service of remarkable intelligence, efficiency, and probity. The Japanese could do the same. They have been forced to resort to foreign aid for their Mint, their Railway, their Arsenal, and their Lighthouses, because they have not sufficient experience to enable them to undertake these things themselves. The collection of duties may seem an easy enough affair, and on their method it doubtless is so. But the question is, are they well collected? Does the Government get what it ought, and what it might, out of the

foreign trade? Could it not largely increase its revenue by adopting a different system? And would not this change be an incalculable boon to the foreigners? These questions we can answer but in one way. We think that a foreign Inspectorate of Customs would be an equal advantage to the Government and foreigners. This is not the first occasion on which we have drawn attention to this important matter, and we are in hopes that it may sooner or later be seriously discussed by the Government.

#### THOUGHTS ON ARMY REFORM.

THAT England is at the present time on the eve of great and important changes in her military system and organization, is a fact which must present itself forcibly to the mind of every thinking person, civilian no less than soldier, for, happily, the old and exclusive barrier which interposed between the military and non-military classes is being by degrees broken down, and though much jealousy of civilian interference does still undoubtedly exist, yet among military men of the most advanced views and education there has latterly sprung up the firm conviction, that it is conducive to the best and permanent interests of the army that its entire system should be open and subject to intelligent outside criticism; that those who pay the taxes and provide the sinews of war have an indefeasible right to scrutinize the return they obtain for their outlay, and that it is no longer possible, even were it advisable, to draw a cordon round the service, and keep it, its doings and requirements, shrouded in an official haze of mystery from the public eye. That the nature of these impending changes is a question of the deepest and most vital importance to every one who has the honour and reputation of his country at heart, we cannot for a moment doubt.

Recent events have attracted public attention to matters of military detail in a more than ordinary degree. The campaign of 1866, in which a great and powerful military nation was in six weeks utterly crushed by the rapid mobilization and superior organization of Prussia, the vast though antiquated military system of Austria utterly demoralized, and peace dictated under the walls of Vienna, will be still fresh in the minds of our readers and require no comment; while the startling success of the North German armies over France in the unparalleled struggle of 1870 are but a fresh proof, were one needed, of the benefits of ascertaining and carrying out, during peace, those military organic reforms which the ever changing necessities of modern warfare imperatively demand. Is it too much to say that the cause which has led to the crushing defeats of the French armies may—since no Englishman will for an instant admit that Frenchmen as soldiers are deficient either in courage or in military ardour—be found in a faulty system of organization, which cancer-like has eaten away her intrinsic strength, and rendered collapse an inevitable consequence? It will be one of the deductions of future history that not alone superiority in numbers, but still more the high intelligence and careful culture of her officers, the unity of action which has marked the plans of her chiefs, her superior organization in all details, were the secrets and mainsprings of Prussia's success.

England happily is now at peace, but no one can say at what moment war and its attendant miseries may flash upon us; events now follow with such lightning-like rapidity, our relations with Continental powers are so complicated, our wealth so tempting, our position so exposed to attack along the great extent of our seaboard

which is at once our weakness and our strength, that, in a period when treaties seem to be looked upon as made to be evaded or repudiated at the first convenient moment, and the spirit of war to be thoroughly roused throughout the world, this golden season of preparation may too soon be exchanged for war. It is therefore imperatively incumbent upon us to look to the joints of our harness, search out our weak points and amend our defects, while the opportunity be still allowed us. Not that we would be alarmists—far from it—but the old maxim, *si vis pacem, para bellum*, has rather increased than lost its force, and to be forewarned it still to be forearmed.

The question then is, how is this forewarning to be turned to good account so as to afford some reasonable security from panic, and to enable the country to feel assured that it possesses within itself an adequate means of defence against the cupidity and aggression of powerful neighbours? The plans hitherto pursued seem to have failed in their effect. It is not by voting an additional two or three millions to the army estimates for the raising of twenty or thirty thousand additional men,—who would again be turned adrift as soon as the momentary or fancied demand for their aid had passed away, to gratify the taxpayers and enable the CHANCELLOR OF THE EXCHEQUER to shew a surplus of revenue over expenditure—that this needful feeling and assurance of security can be gained. Such a capricious and, after all, merely nominal extension of the numbers of our fighting men, can never produce any well founded confidence in the stability of our resources, for even supposing that all so made additions were actually re-inforcements of strength, what, we ask, could a disposable regular army of eighty or ninety or even a hundred thousand men—raised, be it remembered, at a vast and disproportionate cost, and supplemented as yet by no reserves properly so called,—avail against Powers who, without seriously impairing their resources, can bring seven or eight hundred thousand combatants into the field, and not only bring them there, but provide continual reinforcements? Nothing; and we say worse than nothing, by fostering a false idea of security, and lulling the nation into an ungrounded belief that, since the money was voted, the men were actually procured, instead of being, to a great extent, merely battalions on paper. The fact must not be lost sight of that, under our existing system of army service and recruiting, it has been found impossible, up to the present time, to raise the whole of the additional twenty thousand men for whom Parliament voted supplies in the course of last session, or that, with all the great advantages of the service fully placed before the eyes of the population, and every exertion made to attract recruits, about thirty thousand per annum is the highest number that can apparently be raised; how far would such a contingent suffice toward repairing the carnage of one such battle as Gravelotte? and yet, were England invaded, many such a struggle would have to be fought before she either yielded or expelled her invader. If this is all we can do, reliance on our present system is only leaning on a broken reed, and some method must be found which without pressing too heavily on our industrial population, without permanently absorbing into the ranks of our army too great a number of the bread-winners of the country, or necessitating an enormous and utterly insupportable increase of taxation, shall give us a real tangible fund upon which to draw in case of need. This is the problem of the day. An army of reserve is what England urgently requires, and as yet has not; how is it to be obtained?

As it appears to us only by two methods combined, a short period of army service on the active list, followed by periods of service in an army of 1st and 2nd reserve, and—for it must eventually come to this, and we dwell upon the idea, because we think it highly important that Englishmen, in whatever quarter of the globe their profession or inclination may place them, should give their best attention to the subject, and accustom themselves to look upon it not merely as a problematical issue but a future reality—compulsory enrolment, if not for the regular army, certainly for the militia. We say it must come to this however hateful be the word conscription to English ears, nor are we solitary in this opinion, for the topic has of late been frequently broached by men of deep thought and high position in England; nor, if we fairly and honestly weigh the matter, does such a measure appear unreasonable. We hold that, with some obvious exemptions of which more may hereafter be said, every man of mature age, no matter what his state or position, owes, as a duty no less binding than the legal one of paying taxes or obeying constituted authority, something of military service to his country in return for the security of life and property he therein enjoys. Let the payment of this debt be made as easy and as little as you can consistent with efficiency, and the recognized obligation that he be ready to come forward in time of need, with a knowledge of his drill and his weapons kept up by the minimum annual amount of training necessary for its retention. The plans by which such efficiency should be acquired and maintained are mere matters of organization, and the periods of annual training given to secure it might without difficulty be so arranged as to cause the minimum disturbance to the industrial occupation of the contingent called out for exercise. Drill, at any rate the larger portion of it, for the private soldier, is after all such a complete matter of routine, including as it does so many useless and merely show parade movements, that a knowledge of it once thoroughly acquired is not easily lost. We entirely dissent on this head from the views held by Lord Macaulay, who considers the whole life of the private soldier as one long preparation for the day of battle, drawing from this idea his denunciations of militia and volunteer forces, and his arguments for the necessity of a large standing army. Now it is unquestionable that England will never endure the expense of keeping up, in time of peace, a standing regular army at all numerically equal to those of Continental nations, the taxation required to maintain such a force would be so enormous as to ruin even a far wealthier country. What England does want, is a peace army of small numbers, highly trained and perfectly equipped, and capable, in prospect of war only, of extension to a scale which should provide for the safety of the country if attacked, or the adequate prosecution of any foreign war forced upon us for the defence of those nations whom by treaty we are bound to protect.

It is necessary now to take a cursory glance at the present state of our home defences; and in so doing we may leave out of the computation, not certainly as unimportant, but rather as requiring a special article to itself and as being confessedly in an efficient state, the part which the fleet—undoubtedly our first line of defence—would occupy, and confine our attention to land forces only. First then we have our active regular army, the numbers of which by the Mutiny Act of 1870 are fixed at 115,000, exclusive of Regiments on the English establishment serving in India and paid for out of the Indian exchequer. Of these 115,000, the number serv-

ing at any one time in Great Britain, and therefore the only portion *immediately* available for home defence, is about 70,000, of all ranks and arms; the colonies and military stations abroad absorbing the remainder. In our second line of defence must be enumerated the Militia and Yeomanry cavalry, of the former of which, out of a maximum of 120,000, fixed by act of Parliament in 1852, probably not more than 80,000, in the proportion of one-fourth artillery to three-fourths infantry, are enrolled; the Yeomanry Cavalry may amount to 10,000. To this second line of defence belongs also the "Army of Reserve"—about 2,000 strong! being the only Reserve, properly so called, we as yet possess, the other forces being merely auxiliaries unconnected with the regular army,—and the enrolled Pensioners amounting to about 11,000. The third line of defence is formed by the Volunteers who number about 150,000, and are composed of Light Horse, Mounted Rifles, Engineers, Artillery, and Rifle Corps. It would appear therefore that we have available for the defence of the United Kingdom, should an enemy elude or defeat our fleet and land upon our shores, a total of about 323,000 men. To some this may represent a very respectable muster-roll, and quite large enough to cope with any force which an invader could throw upon our soil. But in calculating our defensive power we must beware of basing our estimate entirely on these numbers, unless it can be proved that they are backed up by well organized reserves. The fact must be steadily looked in the face that any Power seriously contemplating the invasion of England would do so by directing two or three, if not more, simultaneous expeditions upon different portions of our seaboard, and that it is quite within the bounds of possibility that our fleet might be rendered powerless to prevent an invader from gaining a secure footing in some maritime stronghold, using it as a base of operations, and pouring through it continual reinforcements; those who hold the contrary and repose implicitly on the invincibility and ubiquity of our navy should, if they would be consistent, advocate the entire disbandment of our home army, and trust the safety of the country to our fleet alone! Are they or any one else prepared to advocate such a course? It is not enough to have an army, we must also have the means of repairing the losses that army would sustain, and that too with greater celerity and in larger numbers than the invader could refill his thinned ranks, and, as it appears to us, we have not these means to the extent it is our best interest, as it is our highest duty, to possess them.

Further, even were the numbers we have enumerated above sufficient, and were recruits to crowd into their ranks in time of danger, as we can confidently say would be the case,—for when were Englishmen backward in responding to their country's call?—where is the organization which should weld all the different component parts of the force into one homogeneous and easily wielded mass, and enable a Commander-in-Chief to assemble it within a short time, and direct it at the foe with confidence that its efforts should not miscarry either by deficiency of supplies or diminished numbers? It is to be feared that such a system has yet to be elaborated, for grant it may not have to be attempted under the dismay hurry and confusion of an imminent peril.

Having thus in general terms attempted to point out that a need does exist of some change in our military system, we must defer to a future opportunity the consideration of what those changes should be, and the means by which a reserve—England's great desideratum—may be economically and effectually obtained.

## JAPAN 1854—1864.

(Continued from our last Number.)

On the morning of the 24th October, the head of a man aged about thirty was found in the bed of the river near the Shijo bridge, stuck on the end of a green bamboo, as if pilloried. On the placard was written, "Homma Seiichiro; this individual has excited people by his falsehoods; has got admittance into the houses of high personages, and with his insinuating tongue has slandered Samurai of Satsuma, Choshu, and Tosa; he has intrigued with the vile object of creating disunion among patriots." This Seiichi was originally an Echigo ronin, and for some years past had conspired with honest patriots to forward the interests of the sovereign, but on account of some quarrel or other, had finished by behaving in this way. On the morning of the 16th, the head of Ugo Gembu no kami retainer of Kujo dono was found in the bed of the river by Matsubara stuck on the end of a spear; the placard said, "this individual conspired with Shimada, to bring undeserved odium on his master's house; his crime being even greater than that of Shimada, heaven punishes him thus." On the 23rd October the naked corpse of a police spy named Bunkichi was found, with hands and feet tied, in the shingly bed of the river, near the Sanjo bridge. The placard said, "this individual was a follower of Shimada Sakon for many years, and assisted him in his machination. Since 1855 he has devoted his soul to the cause of the traitorous officials, has injured loyal patriots in various ways, and compassed their death. Thus is it done to him, to punish his lust for gold." On the morning of the 15th November, the heads of Watanabe Kinsaburo, Mori Magoroku and Okawara Jinso, policemen in the service of the civil Governor were pilloried at the Awata entrance on the east of the capital. The placard said "Since 1858 these men have assisted Nagano Shinzen and Shimada Sakon in their traitorous schemes, and have caused innocent patriots to be condemned for offences which they had not committed. Thus are they punished for their crimes." A crowd went to stare at the exhibition. In consequence the Bakufu officials concerned with affairs since 1858 were in a great state of alarm, and one of the police named Odera Chiuzo disembowelled himself, while Takaya Skezo shaved his head and disappeared no one knew whither. Some abandoned their hereditary appointments, their household goods and families, and fled far away to hide their shadows from sight. They dreaded the ronins as if they had been tigers or wolves, and remained shrivelled up with fear.

When the Bakufu officials, who had hitherto stood upon their dignity, and treated the peasants and tradespeople as if they were the dust of the earth, acted thus, the ronins began to feel puffed up and seemed inclined to become violent, but they only desired in reality to help the right and punish the wicked.

They appeared to be a sort of *otokodato*, and in reality they only did justice on traitors, or if they heard that some wicked tradesman had bought up any article, with the object of raising the price and thus afflicting the people, no matter what the distance, they hastened to the spot, and after inquiring into the facts of the case, inflicted condign punishment; so that they were feared more than the Bakufu officials, and prices at once went down. So all men in secret honoured the ronins, and every one called them "the righteous samurai" or "the loyal samurai" or "the avengers of heaven."

NOTE.—Many different views were taken about the ronins who performed these noble deeds, and it is difficult to give a decided opinion upon the whole question. The Bakufu officials looked upon them as disturbers of the peace; they believed that these men, relying on the intrepidity which naturally communicates itself to a band of ruffians, treated the Bakufu with insolence and contempt, and envying the prestige formerly enjoyed by the officials of the Bakufu, desired to take advantage of this state of things to root them out. They said that amongst the lower two-sworded men there were some who hoped to get an opportunity of rising in the world by fighting at the present juncture, and who had absconded from their clans with that idea. That this could be seen from the fact that the men who left their clans were of the lower class,

and that it was not the higher retainers. It seems that they believed profoundly in this view of the question. The reason I hold this opinion is that three or four volumes written by Kwantō men on the politics of the time all take this side. However, even supposing that there were some men of this description, I think it may be concluded that on the whole they were men over-excited by good motives, or men who had studied Japanese antiquities. Besides, what is the reason that patriots were found among the inferior Samurai alone, and not among the chief retainers? During a long peace, personages in high places did not know how the lower classes suffered. Hence the inferior Samurai understood best the feelings which existed among the common people, and being aware of the dangerous pass to which their part of the country had got, constantly warned and advised those who possessed the authority; but the chief retainers, sunk in slothful ease, treated these men as turbulent agitators, and would not take their advice. Besides, many who were enraged that their words did not find their way to the ears they were intended for, and that their aspirations could not be attained, abandoned their property and families, and absconded from the provinces their ancestors had inhabited before them, because they were desirous of warding off the peril. And in order to save their native provinces, they thought it their duty to take the post of danger and render all the assistance in their power. Most of them were animated by these motives. Amongst them there were some who thought that if the barbarians were treated in a friendly manner we should fall into their snares, and that the provinces they belonged to would become their prey. Others there were who sincerely looked upon the barbarians as little better than beasts and birds, and thought it a disgrace and a pollution to the empire to be friendly with such people. Then there were those who hated the Bakufu officials for the greed which they so constantly displayed, and desired to root them up. All their acts seem to have proceeded from some noble, disinterested motive.

The tombs of the Emperors' ancestors, beginning with Jimmu tenno, were in a disgraceful state of dilapidation and His Majesty was sore distressed about it. For some time past Toda Echizen no Kami had cherished the wish to repair them, and the Shogun had directed him to see that the sepulchres were restored. He accepted the task respectfully, and having a retainer named Mase Wahichiro learned in the old native writers, and earnestly desirous of superintending the repairs of the tombs, had got permission for him to be commissioner for the work. Wahichiro, grateful for the trust reposed in him, exhausted every possible means, and gradually the repairs arrived at their completion. His Majesty was highly gratified, and conferred on him the rank of Jiu-go-i-no-go with the title of Toda Yamato no Kami, and he was appointed permanent commissioner for the Imperial tombs.

About this time the Daimios of the Western provinces came gradually into Kioto. Amongst them were Matsudaira Sagami no Kami (Inshiu), Matsudaira Mino no Kami (Chikuzen), Matsudaira Aki no Kami (Geishin), Arima Nakadzukasa no Taiyu (Kurume), Date Totomi no Kami (Uwajima), Matsudaira Awaji no Kami (Awa), Ikeda Shinano no Kami (Cadet of Bizen) and Hosokawa Rionoske (younger brother of the prince of Higo). These men were the vanguard of a body of more than forty Daimios who came up to Kioto the following spring and stayed there. All the large temples of the capital were occupied as the headquarters of Daimios, and those who could not be accommodated within the city got temples in the neighbouring villages. Kioto had never been so crowded since the visit of Iyemitsu, third Shogun, in 1634.

On the third of December, Sanjo Chiunagon Saneyoshi \* as Imperial Envoy, and Anenokoji Shosho as second Envoy started for Kwantō. Matsudaira Tosa no Kami accompanied them along the road as their escort. On the 24th December Nakagawa Shiuri no taiyu \*\* was going to pass through the town of Fushimi on his way to stop at Yedo for his term of duty. Now at a time like the present, when all the Daimios of the west who were devoted to the throne were hastening to Kioto and exerting themselves on behalf of the state, to pass through a town so close to the capital without the slightest intention of asking after the Mikado's health, was a slight offered to the

Court and therefore a crime. The Prince Awata and the Kuambaku gave orders that his conduct should be rigidly inquired into, and in consequence a number of patriots proceeded at once to Fushimi, cut off the Daimio of Oka and demanded an explanation. The Daimio obeyed the orders of the Court, and entering Kioto, took up his residence in the temple called To-jiu-in on the west of the city.

A retainer of Nakagawa Shimuri no Taiyu, named Oga-wa Yayemon, had collected together a number of his confederates and had gone to the capital in May, at the same time as Lord Shimadzu, where he had been working for the good cause. His Majesty having heard of this, had rewarded him for his loyalty in October together with Shimadzu Saburo. On returning to his native province, Yayemon was put in confinement, in order that his chief might not incur the suspicions of the Bakufu. Shiuri no Taiyu had received secret orders from the Bakufu to come to Yedo in order to be made a *Kakuro*, and had got as far as Fushimi in obedience to the order.

About this time Lord Satsuma made a present to the Imperial Court of 10,000 Koku† of rice; they were laden on some two hundred and thirty carts and dragged from Fushimi to the palace.

The Daimios of Inshiu and Chikuzen left about the same time on a mission to Yedo, where all sorts of ideas were being agitated, not calculated to forward the Emperor's views. So these two Daimios were ordered to go and try to arrange matters, and in obedience to His Majesty they went.

The previous Envoys Sanjo and Anenokoji had arrived at Yedo, and notified the Imperial will to the Shogun on the 22nd January, 1863; to the effect that the Shogun, profoundly regretting the grief caused to the Imperial bosom ever since the ugly barbarians had come to the country, had reformed the Government in various ways, and had thus restored His Majesty's peace of mind. That the following spring the Bakufu must go up to Kioto, and assuming the command and leadership of all the clans, wield in his hand the military prestige of the Empire, and accomplish the feat of driving out the barbarians without loss of time.

As the Shogun and all his Ministers declared their readiness to obey the Imperial will, the two Envoys left Yedo, and returned to Kioto on the 10th February.

At Kwantō still greater changes than had taken place before were inaugurated. Appointments and dismissals of officials were made in large numbers. Ten thousand Koku out of Hikone's revenue of thirty-five thousand were confiscated, on account of Ii Kamon no kami's father having, when he was intrusted with the guardianship of the young Shogun and the supreme direction of affairs, done all he could to annoy the Mikado and stir up discord among the people; he had distributed praise and blame, had made appointments and given dismissals in an arbitrary manner, had swallowed bribes in quantities, had constantly caused the goodness of His Majesty to be misrepresented and up to the day of his violent death had always deceived the Mikado. Hikone was also ordered to put to death his retainer Nagano Shiuzen, who for years past had traitorously plotted to mislead the government and had caused great injury to the state. Naito Kii no kami, on account of his malpractices while holding the appointment of Minister, was deprived of 10,000 Koku which had been added to his revenues, and degraded in rank. Manabe Shimosa no kami, formerly Minister, and Sakai Wakasa no kami formerly Resident at Kioto, having behaved during their respective periods of office with disrespect to exalted personages, treated important affairs as if they were not of the slightest consequence, created a breach between the Court and the Camp‡ and caused discord to arise among the people of the empire, were deprived of the additions they had received to their revenues and condemned to solitary confinement. The father of Hotta Konojo, Bitchiu no kami, having during the tenure of his office of Minister lightly disregarded the wishes of the Mikado in respect to the treatment of the barbarians, was condemned to solitary confinement. Kuze Yamato no kami

† A koku is about 2½ piculs.

\* The present Udaijin and prime Minister of the Mikado. \* of Oka in Bungo, 70,000 koku tozama.

who, on the occasion of the violent death of Ii Kamon no kami during his period of office, had been guilty of dishonest practices, was deprived of 10,000 koku of lands and condemned to solitary confinement, and his son was appointed to take his place in the daimiate. Twenty thousand Tsoku of Ando Kushima no kami's lands were confiscated for the same offence; he was condemned to solitary confinement and to resign his daimiate to his son Kinnoke. Matsudaira Hoki no kami was condemned to the second degree of confinement for his unrighteous proceedings in 1858. Matsudaira Idzumi no Kami, on account of his unrighteous proceedings in 1858, and for having deceived His Majesty on the occasion of the violent death of Ii Kamon no kami, was condemned to give back 10,000 koku of good lands, which he had received in exchange for bad land, and to resign his Daimiate to his adopted son Mondo no Kami. The father of Wakizaka Awaji no Kami was condemned to solitary confinement for his suspicious conduct on the occasion of the assassination of Ii Kamon no Kami, and for his mis-government generally. The father of Midzuno Dewa no Kami was condemned to confinement in the second degree for having while in office as Minister truckled to Ii Kamon no Kami in a manner unworthy of his dignity and position. In addition numbers of the Shogun's lesser vassals were dismissed from office. Furthermore, the Shogun offered to descend one step in rank out of penitence for his shortcomings in administering the Government, but as His Majesty would not permit this, he continued gratefully to enjoy that rank; and as Ii Kamon no Kami had misbehaved with regard to the Imperial order sent to the old Prince of Mito in 1858, he promised henceforward to do better, and to obey faithfully His Majesty's will in all things.

On the 10th February\* Aidzu Shosho Katamori entered Kioto with the appointment of military Governor of that city, and placed his troops in Black Valley on the East Hill. From this time until the spring of 1863 the daimios from the east and west of the country came up to Kioto to about the number of seventy; and besides them the number of vassals of the Shogun was also very considerable. As none of them had residences in the capital, they hired temples as temporary head-quarters, so that all the temples and monasteries within and without the city were occupied in this way. The clans, anxious not to be behindhand in appearing at Kioto, at last bought houses in the streets of the town, and built residences, and some of them built barracks at Yoshida, Shirakawa, Yamabata, Mimuro, Saga, Matsunō and Nishinōoka. The streets were crowded with Samurai on foot and on horseback; pleasure and sightseeing became the order of the day, and the capital flourished as it had never done in any former reign.

Thus the year came to an end and the spring of 1863 followed. All the daimios present in Kioto went to court to offer their felicitations to the Mikado, in the order of their rank, clad in court dress, and among them were the Kuge in their court dress also. Their retinues were dressed in the hoi, the suwo and the hakuchō, and truly it was a beautiful sight. Outside the nine gates were crowds of spear bearers, matchlockmen, led horses and baggage coolies awaiting the exit of their masters. When the evening came on hand-lanterns and lanterns on poles were lighted in such numbers that it seemed to be broad daylight in the palace. Such a splendid exhibition of the greatness of the Court had not been known since earliest ages.

On the 1st of March the Shogun's guardian, Hitotsu-bashi Chiuunagon, arrived at Kioto in pursuance of an order from the Court, accompanied by the kakuro Ogawara Dzusho no kami, the Ometsuke Okabe Suruga no kami and the Okonando Sawa Kanhi chiro. He took up his abode in the Eastern Honguanji temple, to remain in the capital. The lowclass janitor sworded men had for some time past been anxiously looking for the arrival of the Shogun's guardian, and had talked much amongst themselves about the nearness of the time when the barbarians were to be driven out. When they heard that the Shogun himself was to arrive at the capital shortly, and that the date would be at once

fixed as soon as he should come, the ronins felt disappointed in their hopes and began to get turbulent.

On the 14th March the ronins murdered Kagawa Hajime a retainer of Chidane dono, and cutting off his head, put it on a tray of ceremony (sambo); they placed with it a paper saying that the views of Hitotsu-bashi dono about the expulsion of the barbarians were of a temporizing nature, and in which they recounted the treasonable crimes of Kagawa since 1858, and they offered him as a present these firstfruits of blood, depositing the whole at the porch of his quarters. Then cutting off one of the arms, they sent it to Chidane.

On the 1st March, the head of Ikenouchi Daigaku had been cut off and stuck on the Naniwa Bridge at Osaka, as if in the pillory, with a placard which said "This Daigaku since 1858 followed the upright and patriotic Samurai, and was of use to them in various ways, but he has turned round and has given information to traitorous officials, on account of which faithful and loyal Samurai have lost their lives. Heaven punishes him for his crimes." The two ears were cut off and thrown into the residences of Nakayama dono and Okimachi-Sanjo dono, who were apparently so frightened that they resigned the office of Giso. On the 8th March Todoroki Buhei, of the Higo clan, Hisazaka Genzui and Terajima Chiusaburo, went to the residence of the Kuambaku, and said that since the purchased and patriotic daimios had gradually taken up their residence in Kioto, and had exerted themselves diligently, they wished the Mikado would at once name a day for the expulsion of the barbarians.

On the 11th March Konoye Sadaijin resigned the office of Kuambaku, and Takadzukasa Udaïjin was appointed in his stead.

In the same month Awata no Miya, who for years past had diligently given all the assistance he could in national affairs, was permitted by a special decree to return to the condition of a layman, and on his accepting, he received the title of Nakagawa no Miya, and took the Kiuriden at the temple Ichijo-in in the street called Hirokoji for a temporary residence. Here he devoted his attention more and more to the affairs of the state, and his influence became enormous. He established a college in front of the Sun-gate of the Palace, assembled therein numbers of patriots, and told them that any one was at liberty to offer any plans he might have for the good of the state.

About the same time the prince of Awa presented the Mikado with fourteen horses.

On the 16th March, the English war vessels which were at Yedo sent in a despatch, demanding the apprehension and execution of Shimadzu Saburo and his set for having murdered some of their officials at Namamugi in Musashi the previous year, or else the payment of an indemnity of five hundred thousand dollars in expiation of the crime by the Japanese Government. That afterwards they would go to Kagoshima, to demand satisfaction (lit. to reproach for the crime) and obtain thirty thousand dollars in gold. If these demands were refused, they would proceed to hostilities, and the high officials of the Bakufu might come on board as spectators. They would wait ten days from the date of the letter to receive an answer; that if there were any delay, the war vessels would immediately proceed to Osaka, Nagasaki, Hakodate and other ports to seize the junks as they entered or left; and they would lay Yedo in ashes, because of this violation of the treaty.

The Kakuro and Sansei were mightily perplexed. At the moment they received such an ultimatum as this from the barbarians, their own countrymen taking advantage of the state of things, were urging them to expel these very barbarians. "Here is another, and a worse national calamity," said the officials. "If we let the English squadron go to the Bay of Satsuma, something calamitous will be sure to ensue. The best thing we can do will be to pacify the English barbarians." So they returned an answer to the English squadron, to the effect that if such applications were listened to by the Government, the country would be torn by internal dissensions, and the consequence would be a state of external and internal discord. Besides the letter contained things contrary to the laws of our country and therefore highly

\* The 23rd day of the 12th month is the 10th February 1863; the Japanese year began on the 18th February 1863.

objectionable; wherefore it was desirable that they should put off the despatch of the war vessels to Satsuma. That the Government had the matter under consideration, and that they had better trust to them to settle it. The letter was signed by Matsudaira Buzen no kami. The barbarians seeing the alarm of the Bakufu officials, abounded in falsehood and swagger. So, as it seemed that the demands of the barbarians were not to be easily got rid of, and that at any moment they might move their war vessels against us and commence hostilities, the Shogunate made diligent preparations to defend itself; and the defences of the home provinces being very slight, Li Kamon no kami was ordered to guard the bay of Osaka.

As Hitotsubashi dono, in his character of guardian of the Shogun had already arrived at Kioto, and the Supreme Administrator of the Government, Echizen Shungaku, was daily expected, the patriots and the lower class of two-sworded men demanded constantly from the Kuambaku that the date for the expulsion of the foreigners should be decreed resolutely at once, and they also pressed the same thing on the Giso and Tensō. So on the 8th April Sanjo Chiunagon Sancyoshi, Ano Chiujo, Okimachi Shosho, Anenokoji Shosho, Hashimoto Shosho and one or two more made their way to the lodgings of Hitotsubashi dono, and demanded an explanation from him. Mori, the prince of Choshū, who was quartered in the Tenriuji at Saga, hastened that evening to the house of the Kuambaku, and urged him repeatedly to fix the date. The following day Yodo Lord Tosa, the Chiujo of Inshū and five or six *Kugé* went to Hitotsubashi dono and told him the affair was becoming serious; thus exerting themselves to prevent any harm coming to the Shogunate. Hitotsubashi, Shungaku and the Sansei replied that for some time past Kuanto has been in a state of commotion about the Shimadzu Saburo affair at Namamugi in the previous year; that the barbarian matters down there were becoming serious, and that therefore the Shogun was obliged to delay his appearance at Kioto. That he would come up shortly, and then when the state of affairs at Kuanto was fully known, both sides could consult together and the date should certainly be fixed. That until that could take place they must keep the patriots quiet. So they agreed to this and went home.

When it was heard that the Shogun was shortly coming to Kioto, every body said what a wonderful event it was, for since the visits of Hidetada in 1624 and Iyemitsu in 1634 more than two centuries had elapsed without such a thing happening, and all expected that he would come with a brilliant retinue.

However, on the morning of the 9th of April the heads of the wooden images of the three Ashikaga Shogun Takauji, Yoshinori and Yoshimitsu, usually enshrined in the temple of To-jiu-in on the west of the city were found pilloried in the bed of the river south of the Sanjo bridge. The placard said. "The chief bandit Yoritomo commenced the disloyal conduct, which was carried to its highest pitch by the Hojo and Ashikaga; but the power of the Imperial Court was not sufficient to punish them for their crimes. Is not this highly to be deplored and lamented. If we had lived five hundred years ago we would have wrung their heads off, but we can only punish the crimes of these scoundrels who act disloyally in this age of a return to the ancient system and of reformation." Those who had received the favours of the Shogun were much hurt; and were enraged that such hateful acts should be committed just upon the eve of his journey to Kioto.

Upon Aidzu Shosho giving orders to his own men to search secretly for the authors of this deed, certain low two-sworded men, named Miwata Tsunaichiro, Morooka Sessei, Miyawata Yutaro, Tatebe Kenichiro, Awoyagi Kennoske living at Idana and Nijo, were caught. Takamatsu Okinoske and Sengoku Sadaiyu were killed on the spot, and of the rest Nagazawa Seihei, Oba Kiohei, Nagawo Ikusaburo and Yamada Kofu were arrested at different places, and thrust into prison. There were other gangs, but they absconded and all trace of them were lost. In consequence of this affair Mori Nagato no kami\* sent in a remonstrance to the Imperial Court saying that he had heard of the arrest and imprisonment of the *ronins* who had pilloried the heads of the wooden images of the Ashi-

\*The young prince of Choshū.

kaga family kept in Tojiu-in. Although it could not be denied that they had committed a riotous act, they had only been animated by hatred of the treason of the Ashikaga family, and by a desire to show clearly how men's acts and professions should coincide; as they had therefore not been actuated by private feelings of resentment, he begged they might be treated leniently and pardoned. When the Tensō communicated this memorial to the Supreme administrator of the Government, the latter found it necessary to take the opinion of Aidzu Shosho. The reply he gave was that the ronins just apprehended had, in defiance of the Court, agitated the popular mind; and that being a set of evil fellows, they certainly should not be released from prison. Henceforward the ronins became more and more devoted to the Prince of Choshū, and venerated him as if he had been their lord and leader, so that the influence of that Prince was unsurpassed within the Empire.

Now the Shogun having come to Kioto and the expulsion of the barbarians having been determined upon, it seemed that the ronins might be of great service to him, and that it would be advisable to take them into his service. So, by the order of Aidzu Shosho, they received pecuniary assistance, and Udonō Kiūo was appointed to keep them in order. Henceforward the ronins were separated into two parties, those attached to the Bakufu being styled the Shin-cho-gumi (or newly chosen Band), and because they dwelt at Mibu they were also called the Mibu Band. The ronins who followed the Prince of Choshū were styled the Seigishi (or the Perfectly Righteous Samurai). But the Shin-cho-gumi, unable to become the rivals of the Seigishi, in their secret hearts disliked their master, though from first to last they seemed to belong to him.

Note.—The punishment of the ronins imprisoned in connection with the affair of the wooden heads of the Ashikaga generals was commuted, and in the month of July, by a special act of His Majesty's clemency, they were placed in the custody of certain lords. One only, Nagayū Ikusaburo, was left in prison and was killed in the fray of the 21st August 1864.

END OF VOL. II.

#### THE OPENING OF THE YOKOSKA ARSENAL.

The inauguration, in a country comparatively new to civilization and almost entirely unacquainted with the appliances and labour saving machines in use among Western peoples, of an undertaking of the extent and importance of the Yokoska Arsenal is an event, which, apart from the fact that it is the first of the foreign undertakings which has arrived at completion, of the greatest interest both to Japanese and to foreigners. It is evident that such was the light in which it was held by the Japanese, for on all hands much ceremony, and official display that could be brought to bear were lavished upon the inauguration of the Dock. Originally fixed for the 20th March, it was postponed first to the 27th, and then on account of the weather to Tuesday the 28th. On that morning the sun shone out brilliantly; not a cloud was to be seen to give a foreboding of rain or storm, and all who were fortunate enough to receive invitations for either of the men of war or the private steamers looked forward not only to an interesting ceremony, but also to a pleasant and enjoyable day.

The whole of the diplomatic Corps of Yokohama were of course among those present; Sir HARRY PARKES went down to Yokoska in the *Elk*, M. OUTREY in the *Alma*, Mr. DE LONG in the *Alaska*, Mr. VON BRANDT, Mr. VAN DER HOEVEN, DON RODRIGUEZ and Conte FE D'ASTIANI in the *Hertha* and *Medusa*, the Japanese officials in the *Osawa* and *Jho-an Maru*; and the invited guests, among whom were several of the Consuls, in the *Thabor*. In addition, the P.M.S.S. and P. & O. tugs and several other private steamers went down with large parties on board. All these vessels, with the exception of the *Hertha* and *Medusa* which went down on Sunday, started early on Tuesday morning, and the sight from the deck of the *Thabor* as they sailed down the bay, with the snowy cap of Fusi-yama in the background, lent an additional charm to an already pleasant excursion. A short two hours sufficed to convey all but the Japanese officials to the entrance of Yokoska harbour, which is perhaps one of the

most beautiful of the inlets which are to be found in the bay of Yokohama. The entrance is easily made, although it is sufficiently narrow to present a most pleasing view of the shore on both sides, while the hills on both sides which act as a shelter for the bay itself, and the ships already in the harbour, awaiting or undergoing repair, decorated with bunting in every possible and impossible manner combined on this occasion to render Yokoska bay as beautiful as the Arsenal makes it useful. In a few minutes after entering the harbour, anchors were dropped, and in a trice every ship was dressed from stem to stern with flags of all colours of the rainbow, the Japanese sailors in the *Thabor* being especially smart in rigging out the vessel in its gaudy trappings. Boats were in readiness to convey the passengers on shore, and in a few minutes every one but the Japanese officials were landed at an extempore quay close to the large dock, the opening of which was to form on the principal events of the day's ceremonies. This Dock is we believe the largest piece of masonry yet undertaken by Japanese, and is in every respect a credit both to the builders and the designers. The caisson which closed the entrance to the Dock was painted bright red, and being plentifully decorated, as indeed was everything that could be decorated, contributed in no small degree to the success of the occasion. Already in the Dock, which, we should mention, is four hundred and thirty feet long, ninety feet in width, and twenty-four feet in depth, was the *Kiang-su*, one of the "Lay-Osborn" fleet, now about to be handed over by the Prince of SATSUMA to the Mikado's Government, which was, according to the programme, to be hauled out into the bay. But although everything was ready, although Sir HARRY PARKES, M. OUTREY and every foreign official whose presence was desirable at the ceremony had arrived, the Japanese officials, whose arrival was necessary before the first step could be taken, failed to put in an appearance. Meanwhile the tide went down, the spectators hinted at failure, and it was confidently stated that it would be found impossible to get the *Kiang-su* out of account of the tide. At last the authorities came ashore in a large European boat manned by Japanese in a very seamanlike manner, and after the preliminary bowing and hand-shaking the word was given, and at a turn or two of the screws the water poured into the Dock in three large cascades, which had a very pretty effect as the sun fell upon the falling water. In a few minutes the ship was ready to float, the supports were knocked away, and in half an hour the caisson rose about two feet. But there it stopped; and the prognostications of those who said the delay had been fatal to success were found to be true. The caisson floated, but could not be opened, nor could the *Kiang-su* be towed out. Thus the effect which would have been caused was lost, and the spectators, already listless with waiting, felt that the chief event of the day had been a partial failure.

The responsibility of this wholly falls on the Japanese, but as it was probably the first affair of the kind which they had ever witnessed they may be excused for not knowing that punctuality was necessary for success. The Japanese officials numbering some nineteen were as follows:—

Arisugawa Hiobu-kio no Miya, Minister for War; Tokudaige Dainagon, Date Okura-kio, Minister of Finance; Okuma Sangi; Sasaki Sangi; Oki Mambu-tyu; Terashima Gaimo-tyu Vice Minister for Foreign Affairs; Tanaka chu-ben, Fukuba Shingi Chofku, (Department of Shinto religion.); Hijikata cho-ben, Nagamatsu and Nakamura, Secretaries to the Council of State; Sisido Giobu shoyu, Vice President of the Judicial Board; Isaki Chikenji; Ogatase-kio Shohakase; Ino Oni Okura Shoyu; Shibusawa Okura Shoyu; Yatchi Kosaku.

Scarcely had the *Kiang-su* begun to float ere a move was made by several of the officials and spectators to a slip where the steamer *Promise* was hauled up ready for being launched. Every preparation here was complete, and the last shores having been knocked away, the ship glided down the ways into the water, making room for one of the other ships which were awaiting repairs. Between this ship and the dock were another slip with the ship *Yokohama* of Havre hauled up, and another dock

unlike the one just opened in not being faced with masonry, but yet cut out of the solid volcanic rock and quite ready for use. The launching of the ship having been witnessed, another vessel in course of building was inspected, as were the arrangements for bending wood for ships' timbers. The party having thus reviewed that portion of the work directly abutting on the bay were then, under the convoy of M. VERNY, taken through a variety of brick buildings in which for the nonce all the machines which included planing, grooving, drilling and sawing machines for wood and iron work, were hard at work, and thence, those of the spectators who had been invited, ascended into a sail loft in which a most substantial tiffin had been spread. Sir HARRY PARKES, M. OUTREY and several Japanese officials occupied several chairs set apart for them on one side of the table, faced by Mr. de LONG, M. T'KINT DE ROODENBECK, and several Japanese officials. The room was decorated in a most tasteful and appropriate manner. Bunting was wisely dispensed with, but evergreens were in plenty, the chief ornaments being various implements and materials in use at the Arsenal. Saws, nails, hammers and axes, tastefully intermingled with garlands of rope, formed a novel but certainly very elegant and appropriate ornamentation, and the designer, whoever he may be, earned well merited approval from many of the spectators. Ample justice having been done to the entertainment His Imperial Highness ARISUGAWA NO MIYA handed the following speech to his interpreter, Mr. TATSU, who read it in French:—

"It is some years since the Japanese Government, in view of the importance of public works, undertook the formation of the Arsenal at Yokoska. The work was entrusted to the control of M. VERNY, by whose able supervision and that of his staff, the dock just opened has been completed. The Japanese Government rejoices that the ceremony of the opening takes place in presence of the foreign Ministers and this distinguished company.

We hope that the dock will be serviceable both to native and foreign shipping, and that it will assist in developing our international commerce.

I take this opportunity of expressing the acknowledgements of our Government to the French Government which so kindly placed the services of M. Verny at our disposal.

In conclusion, we heartily thank all present for having consented to assist at this ceremony.

SIR HARRY PARKES then replied in the following terms. "Your Imperial Highness and Excellencies. In the name of my colleagues and of the various nations represented here I beg to offer you our best thanks for the honour you have done us in drinking the healths of the sovereigns and rulers of our respective states. In doing so the obvious duty devolves upon me of acknowledging this toast by proposing in return the health of His Majesty the Tenno. The custom which restrains comment in drinking the health of sovereigns renders it incumbent on me to refrain from offering any but the briefest observations, but I feel I should not omit to say on the part of all the foreigners present that in the interesting event of the day, which we have met to celebrate, and in the kind manner in which we have been invited to participate in this ceremony, we see proofs of that friendly feeling towards foreign nations, of that desire for progress, and of that liberality of sentiment which we trust will ever distinguish the reign of the present sovereign of this realm, and the government over which His Majesty presides. Gentlemen I beg you to join me in drinking the health of His Majesty the Tenno of Japan."

M. OUTREY said "I thank His Highness ARISUGAWA NO MIYA for the kindly expressions to which he has given utterance. The eulogy of the results obtained at Yokoska which they contain is assuredly a cause for great satisfaction on the part of the representatives of France, since these same works have been executed by Frenchmen.

But, at the same time, I experience another sentiment when I look at the question from an universal standpoint; I see in the ceremony which brings us together to-day something more than the inauguration of an establishment specially designed for the marina. I see in it the inauguration of a series of great works which the

Government has undertaken on behalf of commerce, industry, and international amity. From this standpoint all those who take an interest in the development of Japan ought to applaud the efforts of the Government.

I propose gentlemen to drink to the prosperity of the Yokoska Arsenal and to the success of all great works which the Government has now in course of execution."

Mr. VERNY then replied as follows:—

"Gentlemen; I thank you for your kind reception of the flattering speech pronounced in the name of H. E. ARISUGAWA NO MIA. The praises of Your Excellency are reflected upon all the French subjects who have lent to the Yokoska arsenal the support of their devotion and their intelligence. I should mention with special distinction M. FLORENT, the constructor of the dock which has furnished the occasion of this fête, and M. THIBAUDIER the engineer of the forges and workshops of which you have only seen the smallest part to day.

Perseverance and unanimity are the first elements of success.

You will acknowledge this, gentlemen, for this gathering, prevented yesterday by the unfavourable weather, is not the less numerous to-day on that account. Our efforts would never have attained the present almost complete realization of the vast programme of 1865 if we had ever encountered from the Japanese Government the least hesitation. I therefore take this pleasing opportunity to testify to the unfailing good will of the Government, and I beg you, gentlemen, to receive on behalf of the Japanese Government our thanks for the confidence which has invariably been reposed in us.

Gentlemen, a conjoint enterprise like this, furnishes the best proof of the excellent relations which can be maintained between the people of this country and foreigners. I ardently hope for the continuation and development of these, and beg you to join me in drinking to the *entente cordiale* between the Japanese and foreigners.

M. T'KINT DE ROODENBECK then proposed the health of Her Majesty the EMPRESS, and this being like the toast of "the ladies," the last on the list, the company separated, some to make their way to the ships, others to follow Sir HARRY PARKES in a visit to the forge and workshops. Here were to be seen several large hammers of Dutch construction, but like the Nasmyth hammer of great power, and capable of being regulated in force either to crack a nut or to fashion a shaft. During the time the forge and workshops were under inspection a shaft for a sixty horse power engine was in course of construction, while a casting was also made, but from some unfortunate circumstance it was, in a measure, a failure. The building having been inspected, Sir HARRY PARKES and the rest of the company went on board the various ships and returned to Yokohama.

On the whole the opening of the Arsenal may be considered as practically a success, although the ceremony was somewhat of a failure. What with the late arrival of the Japanese officials, the want of a programme, and the impossibility of obtaining official and accurate information, the public were at a complete loss what to do or where to go. Only by following closely on the heels of Sir HARRY PARKES, M. OUTREY and party, could those invited to the *dejeuner* ascertain in which building it was to be given, or at what time it would take place. It was equally impossible for us to enter into more than a general account of the proceedings or of the Arsenal itself. The latter we fully described last October, while as to the statistics connected with the docks and various buildings, and the expenses incurred in their construction, the following correspondence and memorandum will speak for themselves:—

TO THE EDITOR OF THE "JAPAN WEEKLY MAIL."

SIR,—At the close of the inaugural ceremony of this day at Yokoska, I received from H. E. OGUMA SANGUI instructions to communicate to you the following memorandum relative to the expenses of the arsenal. I should be obliged if you will give publicity to this document in your Journal.

I am, Sir,

Your very obedient Servant,

L. VERNY.

March, 28th 1871.

You will also find enclosed the text of two of the speeches made at the entertainment.

#### MEMORANDUM OF THE EXPENSES OF THE ARSENAL AT YOKOSKA.

The programme adopted by the Japanese Government in 1865 comprised the construction of forges, workshops and docks sufficient for all necessary naval requirements. The expense was estimated at \$600,000 per annum for four years, or a total sum of \$2,400,000.

The works were commenced in 1866 and on the 19th February 1871 the cost had amounted to a total sum of ... .. \$1,769,026

Disposed of as follows:—

1.—Material raw and worked ... ..	\$509,827
2.—Machinery and tools ... ..	215,816
3.—Freight and sundry expenses ... ..	140,793
4.—Balance of money due to agents ... ..	333,039
5.—Salaries of workmen ... ..	188,263
6.—Works unfinished ... ..	321,391
7.—Expenses of workshops at Yokohama making a separate schedule for 1869 and 1870 ... ..	59,827
	<u>\$1,769,026</u>

From this sum must be deducted.

1.—Work done for foreigners or for other native departments ... ..	\$190,348
2.—Value of machinery in workshops in Yokohama ... ..	62,800
3.—Price of constructing and maintaining 4 lighthouses ... ..	45,447
	<u>\$298,597</u>

The balance, viz: \$1,470,431, representing the present value of the establishment at Yokoska, is made up as follows:—

1.—Existing works and works in course of completion on the 19th February 1871	\$187,203
2.—Ground and buildings ... ..	211,524
3.—Workshops for machinery and tools	306,317
4.—Dock ... ..	164,826
5.—Floating stock ... ..	107,555
6.—General costs and expenses which could not be reckoned in the preceding items	492,996
	<u>\$1,470,431</u>

The extent of ground occupied by the arsenal is sixteen and a half hectares. That of the ground allotted to dwelling houses, stores &c., is nine and a half hectares; in all, twenty-six hectares.

On the 19th February 1871, certain work yet remained to be done for the offices and store-houses, quays and there would still be space to construct a second dock in order to complete the programme of 1865.

The number of workmen employed in the workshops and on the naval constructions amounts to about 800. The works could give employment to 1,200 men.

The hydraulic and civil works (*travaux civils*) employ a number of men, varying from 300 to 600, who are at this moment at work on the same conditions as regards wages as in Europe. Besides there is a small employment of convict labour.

Part of an area of 11 hectares has been dredged to the depth of 9 metres by means of a machine which can raise 80 cubic metres per hour, and will be entirely protected on the N. E. by a breakwater of 180 metres.

The plan affixed to this memorandum shows the whole of these arrangements.

Yokoska, 9th March, 1871.

(Signed) L. VERNY.

A metre is equal to 39.37 inches and a hectare is 10,000 square metres.

well seasoned old fellows, with well earned medals on their breasts, whom it was a pleasure to talk to; men who did their work, looked after their Companies, and scorned to do a mean or dirty action. You never heard then of young officers being robbed and having to make good the debts of their companies. Alas, this now is no uncommon occurrence. Officers are now obliged to do the work of the non-commissioned ones; be their own Pay-Sergeants and Orderly Corporals, lest they should (to put it mildly) lose money.

I do not agree with your opinion as regards the advantages of short periods of enlistment. We have from time to time reduced the periods and the effect has been as I say. You contend that short service in the line and then yearly practises of a fortnight or so with the reserves, would have the effect of getting over the difficulty. Now it has never been shown that the length of the period is what prevents men from engaging; there are other reasons, the principal of which is our treatment of old soldiers, for the paltry pittance called a pension is not worthy of notice. Speaking generally, when we get a man willing to serve the time we keep him on for twenty years, and then give him the grand allowance of £18.5s. a year, to keep himself and support his wife and family. If he is not willing to serve longer than ten years, he takes his discharge with no pension; in each case becoming an advertising medium warning all men against serving their country.

Officers or Soldiers after any length of time in the Army are seldom fit for anything else; a man cannot, be a "Jack of all trades," for, as the old proverb adds, he will be master of none; once a soldier, always a soldier, should be the rule.

How to get them is the question. In many ways I say. Mr. CARDWELL states that the men last enlisted, joined with few exceptions, and of their own free will without any escort. This is as it should be, but it is the first time. How about the mode of their enlistment? On this head the Honourable gentleman is silent. Now, Sir, the majority of recruits for years past have been obtained by the importunities and lying tales of recruiting Sergeants, who will not stick at a trifle to obtain their ends. The men they get are generally the ne'er-do-weels of society, who take the shilling under the influence of beer, or who, having committed some foolish act, are anxious to get away. A better means of obtaining recruits would be first by treating the old soldiers and time expired men more liberally; the service would then become popular, instead of being notoriously the reverse. You could make use of all Magistrates, Parish Doctors, Village School masters and Clergymen as agents; schools should be instituted for training boys, from the age of fourteen years to sixteen, when they would be eligible for the service. It is done in the Navy; why not in the Army?

Once make the Army popular, and there will be no scarcity of recruits. In your first article you say every exertion has been made to attract recruits, I will add, every exertion but the right one, viz: bettering the condition of discharged soldiers.

As regards organization, the plan I would suggest is as follows, so far as periods of enlistment are concerned:—

- 1st.—Ten years abroad.
- 2nd.—Five at home or abroad, optional; if abroad, with increased pay; if fit, recommended and willing, five years more abroad, with another increase of pay.
- 3rd.—Ten years, Reserve, on the same pay as that received during the first period; as long as Government did not give him other employment, such as might be found in Government Offices and Public Works; when so employed his pay to be deducted from his salary when the latter amounted to three times the former.
- 4th.—A Pensioner for life, on double pay, if unable to earn anything or continue his employment.

Men in the 3rd period to be called out only in case of invasion, and once a year for drill and inspection, the drill not to occupy more than one week, and at such time as would best suit the authorities.

I have written but briefly, and not expressed one half of the arguments I could bring forward for fear of occupying too much space. I cannot conclude though without

reiterating my opinion that the service must be made popular before recruits will flow in. Otherwise conscription is the only alternative. All other plans will fail.

JAPAN 1854—1864.

(Continued from our last Number.)

GENJI YUME MONOGATARI.

VOL IV..

On the 30th September a tremendous event occurred. The following are the facts. A gun was fired close to the Sun Gate of the Palace (Hi no Go-mon) about two in the morning, upon which Nakagawa no Miya went to the palace by the Ishi-yakushi gate. The Guardian of the Mikado's person Aidzu Shosho, and the Shogun's Resident Inaba Nagato no kami, at the head of a large force, presented themselves immediately afterwards. They were followed by Nijo Udaijin, Konoye dono and his son and Tokudaiji Naidaijin, who came in obedience to a hurried summons from the Mikado. The different gates in the neighbourhood of the Palace, and of the Palace itself, were then shut with considerable stir and strong guards stationed at them.

No one, not even the Tenso, Giso and Ministers of State, was allowed to enter. Notice was sent to the Princes of Inshiu, Bizen, Awa, Yonezawa and the other Daimios resident at the capital that an affair of great moment had occurred at the Palace, and that they must come thither at once, with their minds made up to do or die. Orders were also sent to Mori Sanuki no kami, the only one of the Choshu family then at Kioto, that that neither he nor any of his men could be admitted into the Palace. The Satsuma clan, which since the month of June had ceased to guard the Inui Gate, was instructed this morning to man it with the speed of fire, and the Satsuma troops, in obedience to the mandate, assembled inside the Palace enclosure, to the number of four or five hundred, clad in armour and provided with cannon, by five o'clock in the evening.

Immediately upon hearing that there was all this tumult in the neighbourhood of the Palace, Mori Sanuki no Kami, Kikkawa Kemmotsu and Masuda Uyemou no Ské, a chief retainer of the house of Mori, marshalled their troops and hastened thither, but when they found all the gates firmly shut, and that not a single man would be permitted to enter, they forced their way in at the back gate of Takadzukasa dono's residence to see what was the matter. When they found the Palace enclosure full of warriors in armour, and the gates all strongly guarded, they were amazed and said to themselves, "here's a tremendous business." When they asked the Kuambaku what it all meant, His Highness said that he knew nothing about it, not having been informed. From there they went to Sanjo dono, and inquired of him, but the Chiunagon Saneyoshi replied that he also did not understand the meaning of this day's proceedings. Kemmotsu then escorted the Chiunagon to the residence of the Kuambaku, where, after having sent for the Ministers of State (Koku-ji-gakarit) to find out what was going on and to demand explanations, he waited their arrival.

At this moment Nakagawa no Miya, the ex-Kuambaku Konoye Sadaijin, Nijo Udaijin, Tokudaiji Naidaijin, and Konoye Sadaisho, were assembled in the Palace in conference. The In no Miya commenced by saying that the Giso and Ministers of State had lately, under the influence of the turbulent counsels of Choshu, been saying a great many things in the Emperor's name which

• NOTE by translator.—It appears from a letter written by the Prince of Aidzu to the Prince of Yonezawa, and dated October 7th 1863, that the Choshu clan was suspected of a design to seize the Mikado on his way to Yamato to visit the shrines, and to carry him off to their territories. The same letter states that the Choshu men who were lying in the neighbourhood of Kioto with this object numbered at least 1,500. The reader will perceive further on that the Choshu men brought a similar accusation against the Prince of Aidzu, namely, that he desired, in the interests of the Shogun, to carry the Mikado off to Yedo.

† These were *kuge* who had possession of the Mikado's confidence, and were consulted by him on general questions of policy, but without executive power.

His Majesty had never intended. In particular, with reference to the matter of His Majesty taking the field in person, they had ascribed to him intentions which had never entered into his thoughts, much to His Majesty's displeasure.\* It was evident that such impetuous and turbulent actions were the results of participation in an infamous plot of Choshu, and to have urged them upon the sovereign was the most flagrant treason. That Sanjo Chiunagon and the rest would shortly be brought to trial, and that for the present they were ordered to remain at home and to see no one. Then Yanagiwara Chiunagon was summoned and ordered to perform the duties of a Giso; and Nakayama Dainagon, Okimachi Sanjo Dainagon, and Ano Saisho-Chinjo, who some time back had been dismissed from office on account of misconduct in the public affairs, were summoned and restored to their original functions of Giso; while Okimachi Dainagon, Niwata Chiunagon and Hamura Sadaiben were appointed additional Giso.

The Daimios who had hastened to the Court on receiving the summons, namely Inaba Chinjo, Yonezawa Shosho and Bizen Shosho, had put on their armour and had come to garrison the Palace at the head of considerable bodies of men. Aidzu Shosho and the Shogun's resident Inaba Nagato no kami being present at the Council, urged upon the daimios of Inshu, Bizen, Yonezawa and the rest that the Choshu clan harboured treasonable schemes, and had contrived a most abominable and traitorous conspiracy, in pressing and advising the Mikado to take the field in person. An order was therefore given to dismiss the Choshu clan from its posts within the Nine Gates of the Palace, and to expel all his forces from the city.

At this moment Yanagiwara Chiunagon was despatched to order the Kuambaka to appear at Court, who thereupon presented himself in company with the messenger. He was immediately summoned to the presence of the Mikado who said to him, "Although We had not determined that the moment for Us to take the field against the barbarians had arrived; you have falsified Our intentions and have issued orders which never came from Us, to Our great displeasure. We certainly intend to take the field Ourself and to expel the barbarians; on those two points Our purpose is unchanged; but We must put off Our departure for the present."

In spite of repeated orders to the Choshu clan, informing them that they were relieved from the guardianship of the Sakai-Street Gate, there was no sign of yielding on their part. Yanagiwara dono was therefore despatched on a message from the Emperor to the post held by the Choshu clan, to tell Mori Sanuki no Kami, Kikkawa Kemmotsu and Masuda Uyemon no S e to retire to their *yashiki*, and await the coming of a messenger from His Majesty. They replied that they should think it a great hardship to have to retire under such circumstances. They were therefore told to hear the Imperial orders at the residence of the Kuambaka. These orders stated that although His Majesty for some time past had resolved to take the field in person against the barbarians, he intended first to make inquiries into certain turbulent proceedings in connection with his setting forth. That His Majesty's determination to expel the barbarians was however irrevocably fixed; the Choshu clan had already served the court diligently; he therefore still relied upon it to animate the popular feeling, and desired that it would be most faithful and loyal. That as the number of men in the clan was so large, their chief should keep them quiet and restrain their turbulence, and in thus preventing the occurrence of misunderstanding, should go on, as he had always done, serving the cause of his sovereign, with all his heart and strength.

Kikkawa Kemmotsu respectfully accepted these orders and gave an acknowledgment in writing. He then said that Sanjo dono and the rest were perfectly wretched at having incurred His Majesty's displeasure, and begged with great earnestness that they might be readmitted to his favour. The Aidzu soldiers all this time were drawn up in front of the Choshu barracks, with the muzzles of their cannon aimed against the Choshu

\* Lit. Which had nullified his scales very much; presumably the scales of the dragon which he is fabled to resemble. His face is called *ryo-guan* the dragon-countenance, in polite phraseology.

troops, looking as if they were ready to fire at the slightest indication of an intention to stir. Kikkawa and Masuda turned to the Mikado's messenger, and asked why these violent demonstrations were made. The whole clan was becoming excited with passion, and it was impossible to tell what violence they might not proceed to. Yanagiwara dono therefore addressed himself to the Aidzu men, and ordered them to turn the muzzles of their guns the other way. Upon which, the order to withdraw the Choshu troops having been communicated by him, they promised to do so, and gradually withdrew. Immediately afterwards, the troops of the Shogun's resident, Inaba Nagato no Kami, took their place.

Sanjo dono was still at the residence of the Kuambaka, whither the late Giso and Ministers of State Sanjo Chiunagon, Higashizono Chinjo\*, Higashikaze Shosho, Shijo Jijin, Nishiki-koji Uma no kami, Mibu Shiari no Taiyu, and Sawa Mond no kami, assembled one after the other to consult. At this moment Shimidzuani Sasho-Chinjo came with a message from the Mikado, to tell them that their attempt to violate the sanctity of the palace, and the urgent visit they had made to His Highness, were heinous offences, and that they must retire. If they persisted, they would be considered to be in flagrant rebellion to the Mikado's orders. So Sanjo dono and the other seven *to-hopata*,† escorted by Mori Sanuki no Kami and Kikkawa and Masuda, left the palace at the head of a large body of men, and retired to the residence of the Abbot of Mio-ho-in‡. The seven nobles were dressed in court costume with their sleeves thrown back, and had their sabres on and were mounted on saddle-horses. The bodyguard which accompanied them had on *tate-boshi*§, were breast plates, gauntlets and leg-pieces, and were armed with spears and pikes. Their faces wore an expression of indignation as they withdrew, guarding the nobles before and behind, very much as when in the period of Jiuei§, long ago, the nobles of the Hei family (Heike), attacked by the Genji (Minamoto), escaped the Emperor Antoku and fled towards the western seas.

At the apartments of the Abbot of Mio-ho-in, the seven nobles and the three men of Mori held a consultation, and at a late hour of the night Masuda Uyemon no S e sent in a supplication to His Highness. It represented that having been dismissed from the guard of the Sakai-machi gate, they desired to exert their efforts in the defence of the sea coast of their country, and that Mori Sanuki no kami and Kikkawa Kemmotsu, as well as the others stationed at Kioto, would at once return home. That they were grateful for the confidence reposed in them by His Majesty with respect to the expulsion of the foreigners. That the whole country would put forth all its energies with desperation. That Sanjo dono and other personages who had for years been true and faithful (thus earning the respect of the people), desired to be first in the fight against the barbarians, and that they would escort them to Choshu; and that they expected respectfully to be at once restored to the exercise of their functions.

Having sent this document in, they left at ten o'clock the same night for Fushimi. Their body guards announced their intention of accompanying them to the end of the world, but the nobles told them that they could not carry off, on their own responsibility, body-guards attached to them by the Imperial Court, seeing that they lay under the displeasure of His Majesty, and so most of them went no farther than Miohoji. Some twenty or thirty accompanied the nobles on their own responsibility.

It seemed likely on this occasion that some of the young and impetuous fellows might proceed to acts of violence, but the three leaders, who felt great anxiety about it, succeeded at last in pacifying them, and setting

forth from Kioto with the seven nobles in their midst, they retired to their own country.

Alas for these seven nobles, who till but yesterday had performed their functions near the throne, whose glory had spread like a flood over the whole country and who had governed the princes, theirs was a pitiful case; to-day must they undergo the hardships of a voyage to distant parts, and go to the western provinces. How lamentable their case.

On the morning of the next day, the 1st October, the departure of Sanjo dono and the others for Choshu being as yet unknown to the Imperial Court, an order was sent to Sanjo dono's house to command his presence at the Palace; and as the answer was that he had gone the previous night to Mio-ho-ji, the message was sent there. It then became known that he had already started for Choshu. Nakagawa In no Miya and Higo no kami therefore urged the Mikado to decree the pursuit and chastisement of Sanjo Chiu-nagon and the other seven *Kuge*, for having violated the sanctity of the Palace, and disobeyed His Majesty's orders. The Imperial Court could not agree upon the matter, but at last a decree was issued depriving them of their titles and honours.

A notice was issued the same day to all the clans saying that although a delay in the departure of His Majesty had been announced, the exploit of driving out the barbarians must be speedily performed. Consequently, all the clans who had the interests of the Sovereign at heart must at once expel them, without waiting for orders from the Bakufu.

None of the townspeople knew a word of what had been passing. The 30th September being the annual festival of the Gorio Shrine\*, the children born during the past year were taken, from an early hour in the morning, to pay their devotions to the God who had presided over their births. But on this particular occasion, unlike all others, the nine gates of the Palace were all shut, and not a single person allowed to pass. Not knowing the reason of this, they thought it very peculiar, and people stood here and there in the streets of Kioto, whispering and spreading all sorts of rumours, which did not tend to allay the excitement. Then they saw men running together all directions with arms in their hands, or hastening to the Palace with the matches of their fire-arms ready. The excitement seemed to become greater and greater; some hurried about on horseback, some passed along dragging field pieces and rockets in carts. The townspeople were mightily astounded, and were afraid that something fearful had happened, until, about ten o'clock in the morning, the whole place was in a commotion. Several myriads of soldiers of the different clans stationed at Kioto were running hither and thither, all clad in armour, and making the dust and stones fly about as they unceasingly hurried to and fro.

When the townspeople saw that the wives and children of the *Kuge* and officials were departing to the neighbouring villages accompanied by servants laden with their most valuable property, they began to be alarmed for their own safety too, and packing up their furniture and other moveables, removed them to the neighbouring villages. Just as on the occasion of a grand conflagration, there were many who abandoned the houses inhabited by their ancestors before them, and fled away.

So the day's festival could not be celebrated, and by night-fall the rumours became more and more disquieting. All the clans were moving up provisions to the Palace to the sound of *yoi, yoi, yoi*, and the enclosure was so full of lanterns that it seemed almost like broad daylight. All the soldiers were clad in armour, and several myriads of them with loaded muskets stood waiting arranged in order, ready to fire as soon as the word should be given. This military fierceness was wonderful to behold, and every one thought that the fighting might commence at any moment.

However, as there was no enemy to fight, and no re-

† The noise made by the carmen to enable all to keep time in pushing the carts.

bels appeared to be approaching, the soldiers who had turned out could not understand the object of it all, but they remained all day in the Palace enclosure, their mouths waiting to begin.

Up to last year the people of different classes in Kioto had seen fire arms in pictures or on the stage, but no one had even seen a real musket; on rare occasions they had perhaps seen the weapon of some hunter from the distant wilds, and it had been esteemed a rare and curious sight. Since last winter however firearms had been openly carried in the streets of the capital to the general astonishment. Few there were who did not lament this fearful age, when soldiers carried firearms in the neighbourhood of the Throne, and dreadful to relate, rushed wildly in with open touch-holes.

Four or five days passed without the Nine Gates being opened, and the town was extremely uneasy; but on the 7th October, the gates were opened and people were allowed to pass through, as before, so that tranquillity gradually returned. The bands of Ronins and low class Samurai who had roamed about Kioto were sought diligently after, and all who bore the slightest resemblance to them were arrested. As none of the Mori family, which the Ronins had made their rallying point, were permitted to put foot in the capital, some of them betook themselves to Choshu, and others joined the band in Yamato, so that the Ronin sort became rare in Kioto. The traitorous tradesmen therefore, profiting by this second opportunity, put up the price of every article in the twinkling of an eye, and all men regretted the Choshu family as a lost child its mother.

From this time the scheme of expelling the barbarians fell to pieces like ice during a thaw, and the prestige which had accrued to the Imperial Court seemed to be lessened again by its own acts. Some time after the Prince of Choshu sent in a memorial to the Emperor by the hands of Kan-shiu-ji\* dono to the following effect.

"His Majesty had resolutely made up his mind with regard to the expulsion of the barbarians since the summer of 1862, and had placed great reliance on the Shimadzu family and on my humble clan. The whole of my country consequently zealously co-operated, and we induced the Shogun to come up to Kioto. His Majesty then fixed the date for the expulsion of the barbarians, and the soldiers down in my country, animated by the sincerest zeal, fought hard to drive out the barbarians. We were ahead of all other clans in producing a successful result, for which I received His Majesty's approval in writing. The slander of one morning has now thrown the foot of the throne into confusion, and I have been dismissed from my duty of guarding my sovereign. Sanjo Saneyoshi and seven other nobles, who have hitherto served the state with fidelity and success, have been deprived of their functions. It pains me deeply to think that His Majesty's feelings should so have changed. Setting aside the question of my humble clan, I have prayed His Majesty to restore their employments to these seven nobles without delay, but His Majesty totally refuses to listen to my suggestion."

"When I sent up my *karô* Negoro Kadzusa to carry a tearful petition to His Majesty, he was told he might proceed as far as Osaka with a small number of men. In compliance with this order, he stopped there a long time, and passed many days in fruitless waiting, for in the end no answer came from His Majesty. Then, when he asked again and again for a reply, he received a communication from the *tenso* to say that Mori Sa-ruki no Kami and his associates had incurred His Majesty's suspicion, in connection with the affair of September 30th; that I must inquire into it at once and give His Majesty an explanation; that I should carefully consider that the loyal efforts made by myself and my son up to the present time were manifest, and speak accordingly." So Kadzusa bearing this order returned to his country. Subsequently the Prince of Choshu sent one of his retainers named Ibara Kazuyue to explain these things humbly to the Mikado, but His Majesty would not admit his representations. The Prince of Inshu, Bizen and Tsuyama remained

\* A *Kuge*.

with His Majesty and with the Bakufu, warning them that, if the offences of the seven nobles and of Choshu were not pardoned, calamity would closely follow. But His Majesty refused to listen to them.

(To be Continued.)

#### THE SILK TRADE.

In accordance with the public notice, the adjourned meeting of the Chamber of Commerce was held yesterday, to receive the report of the Committee appointed at the last meeting to consider the remedies which may be adopted to improve the quality of the Japan silk brought to Yokohama for sale.

Mr. VAN DER TAK in the chair.

The Minutes of the previous meeting having been read,

THE CHAIRMAN said, that as all those interested in the silk trade had probably read the report it was unnecessary to read it on this occasion. The only question before the meeting was whether or not it should be adopted.

Mr. MILSOM said that he had been asked to propose that the suggestions contained in the report should be separately considered. The report was full of good information; but they could not order the Japanese not to reel fine silk for they would soon again fall into the other extreme. They could not tell the Japanese to reel one sort of silk in one province and another in a second. We are the secondary cause of the bad silk, because we have exported inferior and not fine silk; the latter has always found a good market. We ought not to tell the Japanese to reel this year coarse silk, for next year we should want fine. Let the Japanese reel with care and they would be able to compete with other silks. Japan silk is preferred, for it loses less than European in dyeing. Let the Japanese reel as they used to, and they would be able to find a ready market. As to the export of eggs, it is not proved that it effects the quality of silk; the Japanese take the best eggs for home use, and another quality for export. As to recommendation G, the Japanese cannot produce a good clean and round thread without changing their system of reeling, using two skeins instead of one.

The CHAIRMAN thought they had no right to change the report of the Committee. The question was whether or not it should be accepted.

Mr. WHITE said that Mr. Milson supposed that they commanded the Japanese; they only suggested, the natives could do as they pleased.

Mr. JACQUEMOT said that the Chamber could not compel the Japanese to do anything, they could only recommend. As to fine silk, they would want it, but the report suggested that it should only be reeled where best produced. He acknowledged that according to the altitude, climate and water, the silk was good or bad. They could not change localities in Japan. The Japanese used to reel fine silk at first, the silk was very good, and they recommended the Japanese to reel the same as ten years ago; not too fine, for it then had too little nerve. They suggested that fine silk should only be reeled in Provinces where it is suitable. The Committee asked them to adapt their facilities to the requirements of European manufacturers.

Mr. ISIDORO DELL'ORO said to reel 6 to 7 cocoons silk only, as Mr. Jacquemot suggested, would produce too coarse a silk.

Mr. BARLOW proposed, and Mr. POLLARD seconded, that the report be adopted. Carried by a majority of 3.

Mr. BARNARD proposed, and Mr. T. SMITH seconded, that the Foreign Ministers be requested to forward the report of the Committee to the Japanese authorities.

Mr. ISIDORO DELL'ORO suggested that the expenses should be paid by the houses interested in the silk trade.

The Chairman said the Chamber would pay the expense.

Mr. MERRY proposed, and Mr. MILSOM seconded, a proposition

that the report be translated and circulated through the interior through the means of the silk dealers in Yokohama.

Mr. MILSOM proposed, and Mr. BARLOW seconded, a vote of thanks to the Committee for the report.

Mr. WHITE proposed, and Mr. LE MARE seconded, a vote of thanks to the Chairman.

The meeting then terminated.

The following is the Committee's report:—

#### REPORT.

##### OF THE

#### COMMITTEE APPOINTED AT THE MEETING OF THOSE INTERESTED IN THE SILK TRADE.

*Held at the Chamber of Commerce, on the 14th April, 1871.*

It is beyond question that the consumption of fine Japan silk by the European manufacturers has been gradually decreasing for the last two or three years, but specially for the last eight or ten months past, and is now unable to keep pace with the shipments from this side or with the production in the country.

Therefore the stocks in London and other places in Europe are becoming very heavy, and exporters will suffer serious losses.

The late war in Europe has had but little to do with it. It is true that the consumption of silk was considerably checked in France; but on the other hand it became, during the war, far more active in England, Switzerland and Prussia than it had been previously. Consequently had Japan silk remained as favourite a produce as it was everywhere some years ago, the manufacturers of the last named countries would have absorbed a great portion of the silk that the French workmen were unable to consume. But such is not the case. The dislike for fine Japan silk appears to have spread itself generally throughout Europe; we must therefore look elsewhere for more plausible reasons, and shall expose hereafter what has given rise to the present state of things.

When Japan silk was first introduced in Europe some twelve years ago, there was but a relatively small proportion of it that was reeled fine, say with six or seven cocoons. The silk which came from the Provinces of Joshu and Sinchiu possessed at the same time fineness of size, cleanness, and firmness of thread.

Silk from Sendai was also distinguished by its fineness, although not to the extent exhibited by that grown in Joshu and Sinchiu; but being remarkable by its cleanness, brilliancy and firmness of body, it was justly considered by the native manufacturers as their best quality of silk.

At the time we speak of, (ten or twelve years ago) fine silk was very scarce in Europe, owing to the disease with which the silkworms were attacked. The consequence was that Japan silk which would fill up the deficiency in the European crops, was readily bought here and much appreciated in Europe for its good intrinsic qualities.

The produce of almost all the other provinces, such as Musashi, Oshio, Koshio, Yetchizen, Machida, Mino, Tazima and others, was more or less full-sized, say reeled with eight to ten or any greater number of cocoons. So long as this full-sized silk was clean, the foreign manufacturers were quite content to use it, and the Yokohama houses also bought it readily.

After some time the Japanese dealers seeing that fine silk fetched at Yokohama a much higher price in proportion than the coarse kinds, began gradually to reel their silk generally fine, whereby their profits were no doubt much enhanced. But in doing so, and in their ignorance of the purposes for which fine descriptions were wanted in Europe, they lost sight of the various qualities of cocoons they had to work. They thought, no doubt, that provided they could produce a fine thread with three-four, four-five or five-six cocoons, it was all that the European consumers required, and the finer the better, both for themselves and for the foreign buyers.

That was a grievous mistake. Cocoons which were good enough for a thread of ten, twelve or fifteen cocoons, were not well adapted for a thread of three-four or four-five cocoons; they lacked the tenacity, the adhesiveness and the firmness that are required for fine silk, and which we had originally found in the produce of Joshu, Sinchiu and Oshio.

The reeling of fine silk demands not only a good quality of cocoons, but a greater amount of attention and care than a full sized silk, in order to ensure evenness and cleanness of thread.

The girls who had not been previously used to reel fine, fell into the fault of reeling their cocoons into an uneven and weak thread without any twist on it, often with a defective guider, sometimes with scarcely any guider at all. It is true that the recent introduction into the provinces of a small reel with a good guider has done something to obviate the defect complained of; but unfortunately in the process of re-reeling from the small on to the larger reel, the same fault of an insufficient guider is often committed, and consequently very little progress has been, on the whole, made in that respect.

vague and delusive cry about the opening up of the country. When this step can be proved to be for *the real benefit of the Empire*, and when the Government shall be manifestly strong enough to cope with all the inevitable difficulties which would attend it, then it will be time to talk about the opening of the country, but not till then. Between the present time and that future, is a gap which can be bridged only by successive arches, each having a direct and immediate relation to the other, and it is in the construction of these that Japanese statesmen will find their real difficulty. There is nothing so easy as to point to some given event, to which, by the common consent of mankind, society is inevitably tending. The difficulty consists in preparing the approach to it in such a manner that it shall be a blessing and not a curse. There are forces which, do what we will, we must obey; but it depends on ourselves whether they shall drive us into danger or safety. The opening of this country is an event which may be confidently looked for in the distant future, but it would be nothing less than madness to attempt it at present, and mere folly and cruelty to place a pressure on the country with this end in view. Would Mr. Le Long couch the eyes of a blind man, and immediately expose them to the glare of a midday sun? Would he send mariners across a trackless sea who knew nothing of the art of navigation or the laws of storms? Or, to use his own metaphor would he have children exposed to the dangers and difficulties attendant upon manhood, and would the transient fame of enriching a few hundreds of Americans or Europeans, compensate him for the reflection that he had wrecked and ruined the fortunes and the happiness of a nation? These are the questions which in all earnestness and seriousness we would ask Mr. De Long. Whatever Japanese vanity and ignorance may dictate to its own Ministers, whatever faith they may have in themselves, and whatever conviction they may entertain of their own ability to solve the problems now presented to them, the foreign Ministers are at this moment, in some sense, the trustees of the nation's welfare. Let them act unitedly, wisely, conscientiously, and firmly, and they may advance the happiness and prosperity of a not inconsiderable number of their fellow creatures. But if, forgetting and forsaking these nobler aims, they permit unworthy motives of vanity or jealousy to sway them, and seek to found their fortunes on a showy but false and meretricious display of critical energy, and useless and irritating activity, they will deserve, and assuredly attract, the censure of those who watch their proceedings, and the bitter reproaches of those whose welfare and happiness they have had no little power of making or marring.

#### THE RACES.

**I**N a few days Yokohama will once more don its holiday appearance, and will hold high jinks in honour of the spring meeting of the Yokohama Race Club. Lodgers will be closed; merchants will cast Grey Shirtings and T-Cloths to the winds, and taipan and clerk will wend their way to the racecourse. The only uncertain element is the weather, and as we are just now more favoured in this respect than was Shanghai last month, we may hope for a large attendance of ladies whose presence on these occasions imparts all the grace, and, to many, more than half the interest attached to them.

For the races themselves, we look forward with most sanguine expectations to a brilliant and successful meeting; not only that we may expect to see a large attendance, but

that, through the efforts of the committee, a programme has been compiled of sufficient attractions to induce one or two new competitors for the honours of the turf to add their support to one of the most enjoyable amusements of Yokohama. At the close of last meeting, we, in conjunction with many others, felt that in order to induce fresh support, and to achieve greater success than has lately attended the sport, alterations both in the Committee and in the system of managing the affairs of the Club were necessary. At the annual meeting in January we were somewhat surprised to see assembled at the rooms of the Chamber of Commerce a larger proportion of members than had ever before been induced to devote a few minutes to the affairs of the Club. For this most satisfactory change we may take the entire credit, having brought about so strong a feeling in favour of our views that the Committee felt themselves compelled to beat up supporters on all sides. The result showed that, although defeated, our suggestions carried with them so much soundness of reasoning and such strong precedents, that they have in part been adopted by the newly constituted governing body. As a partial concession, the gentleman who acted as starter, and against whom most unjust charges had been brought by some of the Committee's own supporters, withdrew from his place on the committee, while it happened that the gentleman who had acted as judge was on the point of leaving Yokohama for Europe. A third member of the committee had already left Yokohama, and openings were thus made for three fresh members. To say that these three vacancies might have been better filled up would be somewhat ungracious, but it is possible that in one or two instances gentlemen might have been chosen whose knowledge of racing was greater. On all other grounds the selections were unimpeachable. As to the question of judge and starter, we hope that with three gentlemen out of five in a measure unconnected with racing, neither will be owners of racing ponies. But, however that may be, it is most probable that one or other office will be held by a non-racing Committeeman.

We have before this expressed our approval of the various features of the programme, and we now take another opportunity of reiterating that opinion, which is entirely confirmed by the entries, themselves by far the best tests. We will not here particularize any special race; for that belongs to the department over which our sporting prophet is the ruling spirit, but we may express our great gratification at seeing that the races, one and all, have attracted full entries, not only from the large stables, but also from those owners whose team comprises one, or at the most, two or three ponies. The Griffin's Plate, the Newcomer's Cup, and one or two others, it is true, have not filled so well as last year, but the fact that there are eleven entries for the Crawford Cup, ten for the Ladies' Purse, thirteen for the Emerald Cup, eleven for the Handicap Plate, fifteen for the Consolation Plate, ten for the Scurry, and seven each for the Hurdle race and the Hunt, Cup more than counterbalances this deficiency. There are an abundance, so to speak, of Presentation cups, notably the Crawford and Emerald Cups, presented by late residents in this settlement, which, with the rest of the races will be ample sport for three days.

We may also note other improvements which will tend to enhance the coming meeting. We are always extremely loth to give praise where none is earned, and are somewhat chary of praising those who do no more than their duty; but, although we have often been in opposition to Mr.

MORRISON, we cannot but give him every praise for the great exertions he has made in the cause of the Club. A few weeks ago the rails of the course were in a most unsound condition, but through the efforts of Mr. MORRISON, new rails have been put up, and the Grand Stand has been painted and renovated. To add to this, we are given to understand, that all this has been done at no expense to the Club, the Japanese authorities having performed the work, and we believe supplied the material, without charge. Such efforts as these deserve recognition, and we are happy to be able to give him all due credit, the more so that, on other occasions, we have had cause to oppose him.

We have, however, to make one suggestion which may not prove palatable to Mr. MORRISON, or to other owners of large stables. It is with regard to the riding. There are in this settlement many gentlemen whose aspirations to the pig-skin are great, but who are balked by the fact that the large stables do not extend their favours beyond a select few. The Yokohama Race Club was established for sport, and that alone: the racing experience of nearly every member has been gained in the East, and it is hardly fair that they should be obliged to compete with members, whose experience, gained by constant practice at nearly every race meeting in China and Japan, would qualify them to take rank with professional jockeys. Let the large stables look at home for their jockeys instead of to Shanghai, and Sport, the object for which the Club was established, will be materially increased.

In conclusion, we may once more revert to the suggestions which we made last year, and which have been, in a measure, adopted. Before the last meeting we wrote very strongly against the pernicious system of selling lotteries, and advocated the more simple sweepstakes. As the result of this, sweepstakes were established and the lotteries were next door to a failure. This year the sweepstakes have been an increased success, while the lotteries are certain to prove a failure. At the time of writing we are not sure whether the lotteries will be held or not; but should the promoters determine to risk the experiment, it is evident that it will be a failure in every sense, and that we shall have the satisfaction of knowing that the popular feeling inspired by our repeated attacks upon this pernicious system has had the desired effect.

JAPAN 1854—1864.

(Continued from our last Number.)

To return to another part of our subject. On the 30th of August the young noble Nakayama Tadamitsu dono, having slain Suzuki Gennai, the Daikuan of Gojo in Yamato, and taken up his abode there, took counsel how he should proceed.

Hereupon the Tenso, Giso and Ministers of State sent a message to him by Hirano Jiro, of the Chikuzen clan, a student of the Gakushiu-in, to tell him not to commit any acts of violence, as the Mikado was going to take the field in person in a few days. He seemed to consent and to be doing what he could to keep his men under control, but having received report after report on the morning of the 1st October of the troubles at Kioto on the previous day, and of the tumult at the Palace, the whole band were much frightened. "After this, we may expect in a few days to have an attacking party sent against us by the Bakufu, with orders to subdue us. Shall we remain quietly here to be subdued? Never! Let us rather rouse all our energies and make our name blaze forth to the sky." Everyone of them was wrought to the highest pitch of desperate enthusiasm, and their heroism increased a hundred-fold. On the morning of the 8th October the whole force, amounting to three hundred and odd men, made an attack on the castle of Takatori. The lord of the place, Uyemura Suruga no kami, took

the command of his men, and defended it. Sometimes too he made a sudden sally in full force. But the assailants being an undisciplined band, and being moreover ill provided with arms and provisions, were in the end routed by the garrison, and fled in disorder to Amanogawa, where they entrenched themselves.

At Kioto such a rigorous search was prosecuted after ronins, that all the gangs gradually fled and joined their fellows at Amanogawa, so that the numbers of the latter now amounted to over five hundred men. The Kishiu family, the prince Todo and the prince of Hikoné were ordered to send attacking parties against them, and though they all despatched men to Yamato and fought several engagements, the Tenchiugumi, being collected in a place of vantage; being animated by the feeling of the justice of their cause, and despising their lives as so much dirt; were not easily to be driven out. Instead of succeeding in the attack, the camp of the assailants was taken and set on fire several times, and the provisions carried off.

The assailants finding the enemy too strong for them, orders were given to the Prince of Kaga to furnish an attacking force; and the combats being renewed, the Tenchiugumi at last got tired of fighting, for their provisions and ammunition came to an end, and they received no reinforcements. So they left the place by threes and fives, and their number gradually diminished. At last there were only fifty or sixty of them left, and as it seemed impossible for them to hold out any longer, the commander-in-chief Nakayama Tadamitsu fled. The leader Fujimoto Tesseki, with Matsumoto Kenzaburo, Yoshimura Torataro, Nasu Shingo, Shishido Yashiro, Maeda Shigema, Hayashi Heishiro and Kusume Shidzuma died fighting bravely, while Kanjiuro, Okami Tomijiro, Tsuji Ikunoske, Yasuoka Onotaro, Sawamura Kokichi, Sakai Denjiro, Yoshida Chiuzo, Tadokoro Tozaburo, Shimamura Shogo, Minabe Kohayato, Nagano Ichiro, Hobo Tate, Nakagaki Sotaro, Tsuruda Toji, Eto Tanehachi, Aramaki Hanzaburo, Doi Sanoske, Shibuya Iyosaku, Ozaki Tomogoro, Tomobayashi Rokuro, Morishita Ginoske, Asaka Goro, Ando Kasuke, Ozaki Jiro, Sawada Kokichi and some others were taken prisoners. Ikenouchi Kurata, Makioka Kiuhei and Ozawa Itsuhei, with some others, accompanied the young noble Nakayama, and went off to Choshu.

So when all those brave Samurai were thus killed or taken prisoners, they were defeated, and by the middle of November the Yamato disturbances were put down.

About this time, that is in the beginning of November, news came that a large number of Ronins were collected together at the silver mines of Ikeno in Tajima, and the neighbouring Daimios were ordered to go and quell them. The origin of the affair was as follows. In the previous summer, when Prince Shimadzu went up to Kioto, Hirano Jiro, a runaway from Chikuzen, sent in a memorial to the Imperial Court urging the expulsion of the barbarians. Subsequently for some reason or other, he was placed in confinement in his native country; but was shortly after summoned by the Emperor and employed in the Gakushiu-in. On the occasion of these disturbances in Yamato, he had been ordered to go thither and try to quiet them; but hearing of the tumult at Kioto, he returned thither, and subsequently urged with much persistence his humble petition that the seven nobles should be re-appointed to office and Choshu be pronounced innocent. With the desire of restoring the Imperial law which demanded the expulsion of the barbarians, he then proceeded to Tajima, and after concerting measures with others of the same opinions, went on himself to Mitajiri in Suwo, and invited Sawa Mondo no Kami, one of seven nobles to join him in his desire of getting up a volunteer expedition to lay complaints before the Mikado by force.

The following men joined themselves to his band: Mitama Sanpei, a runaway from Satsuma, Kawamata Saichiro, a runaway from Mito, Tanaka Guntaro, a runaway from Geishiu, Fuji Shiro, a runaway from Chikuzen, Honda Soko, a runaway from Zezé, Yoshimura Ukio, a retainer of Sawa dono, Choskabe Tahichiro of Awa, Kimura Ainoske of Mizudzu in Tango, Ota Rokuyemon of the same clan, Kuroda Yoichiro, of the same clan, Mimaki Tozo and Minami Hachiro of Choshu, Tohara Ukitsu, a runaway of Akidzuki in Chikuzen, Shiroishi Bunsaku, Odamura

Shinichi, Ito Saburo, Shimose Takehiko and Ogawa Tozo runaways from Mito, Hida Sayemon, Kuru Shinzaburo, Nagano Kach'suke, Nishimura Seitaro, Wada Kodenji, Izeki Hidetaro, Omura Tatsunoske and Tada Yataro, who made their rendezvous at the temple of Yenoji in the village of Morishiwo, all clad in armour.

On the 21st November they attacked the official residence of Kawakami Inutaro, the Daikuan of the silver mines, and seized a quantity of gold, silver and rice. Kawakami Inutaro was just then absent inspecting the crops at Kurashiki in Bitchu, leaving behind him only his family and servants. These were driven out of the official buildings, which were converted into a camp.

As soon as it was known that they were assembled in this place, orders were given to Iimeji, Tatsuno, Okayama, Idzushi, Miyadzu, Sakakibara, Sonobé, Hachiyama and Tanabé, to go and subdue them. All of these daimios at once set forth.

Upon hearing of this, and of the defeat of the force in Yamato, followed by the flight of the young noble, Nakayama, and the loss by capture or death of the rest of the band, the courage of the rioters cooled, and they saw that they had lost their opportunity. It was evidently impossible after these events, to hold out encamped where they were.

So seventy or eighty ronins and three or four hundred peasant soldiers quitted the place, with the object of securing a place of vantage, and betook themselves to Mionkan near the village of Morishiwo in the same province, with Minami Hachiro for their leader. They were making preparations at this point for receiving an attack and for dying in one last heroic struggle, when they were surprised by the approach of the Okayama and Idzushi forces. Up to this moment the peasants had stuck by the ronins, but they now suddenly turned traitors, and turning their spear-points, played a trick on the latter, on whom they poured down a destructive fire, after having gained the top of the mountain. Disgusted at seeing no hope of escape, the ronins thus hid in the mountain with Minami Hachiro at their head, ripped up their bowels and died, on the 24th November. The leader, Hirano Jiro, invited Sawa Mondo no Kami to make his escape, and having conducted him to a place of safety, was himself surrounded by the Toyōka forces at Tsunabamura and taken prisoner. Of the rest of the band, Midama Sampei, Nakahara Taichi, Yoshimura Ukio, Chosokabe Tahichiro and some more provoked an attack and were killed fighting. Kuroda Yoichi, Okawa Tozo, Kawamata Saichiro killed themselves. Mimaki Tozo, Kimura Ainoske, Honda Soko and some others were taken prisoners and all sent to Kioto. The remainder accompanied Sawa dono in his flight. So the Ikeno disturbances were completely quelled.

With respect to the matter of the expulsion of the barbarians a decree was issued by the Imperial Court to the Daimios, saying that His Majesty was informed by the Shogun that negotiations were being proceeded with in Kanto for the closing of the ports; that the directions of the Bakufu were to be followed in all things, and that no rash or violent actions must be committed. Hereupon the patriotic Samurai became highly excited and indignant, but having no one to help them, departed in a body to Choshu, in the hope of being able when once there, to restore the old law about the expulsion of the barbarians.

In consequence the Kanto officials, who were under the impression that the authority of the Tokugawa family was now restored, gave themselves up to expressions of joy and content.

On the 25th of October Makino Bizen no kami was reappointed *Kakuro*.

On the 13th November prince Shimadzu (Saburo) entered Kioto for the third time. Grieving profoundly over the state of affairs then existing, he devoted all his energies to the discovery of a policy which should aid the Shogun in performing his duty against the barbarians, and in giving peace to the empire. He also proposed to assist in setting the Tokugawa family up again, and that the Shogun, Hitotsubashi dono and Echizen Shungaku should pay another visit to the capital.

Nakagawa no Miya, who had for years past devoted himself to the interests of the state, now received the site

of the Kiu-in-go-ten\* as a gift, and removing his residence thither, was appointed to the office of Danjo no In (Chief of the College of Censors), wherefore he was henceforth usually entitled the In no Miya.

The Kuambaku Takadzukasa Udaijin Sukénori resigned his office, in which he was succeeded by Nijo Udaijin Nariyuki.

The Shogun was now ordered to come with all speed to Kioto, for the Imperial Court had business to transact with him; and Hitotsubashi dono setting out as his forerunner on board a man of war, arrived at Hiogo on the 2nd January 1864, whence he proceeded to Osaka on the following day. The same night a fire broke out at the western end of the Shinmachi bridge, and the wind blowing fresh from the north-west, the whole of Minamimemba was consumed in the conflagration. The fire spread from the Higashibori (eastern canal), destroying Kamimachi and Tamatsukuri on its way, right up to the fields on the east of the town. It was at last got under at eight o'clock on the morning of the 5th. A space measuring 30 *cho*† east and west, and ten odd *cho* north and south, was laid bare. One hundred and fifty streets, containing 14,000 houses, besides four villages, were consumed by the flames.

Hitotsubashi dono entered Kioto on the 5th January and took up his quarters at the Eastern Honguani.

In the 1st of February a steamer belonging to the Prince of Satsuma was fired on from the ports as she was passing through the straits of Shimonoseki and sunk, the Choshu clansmen mistaking her for a barbarian vessel.

On the 4th of February the Shogun embarked on board a man-of-war, in obedience to the Mikado's summons, for Kioto. He anchored one night in Shinagawa roads, and set sail the following day. At Uruga he landed and held an artillery review, after which he re-embarked and loosening his cable, went out of port. He passed the Japanese new year on board, and arrived at Hiogo on the 11th day of the first month of the following year (18th February.) He proceeded thence to Osaka by land and embarking on board a river barge, reached the castle of Nijo on the 22nd. Shortly afterwards Echizen Shungaku, Matsudaira Shimosa no kami and the rest of the *fudai*‡ Daimios came to Kioto one by one.

On the 27th February a messenger from the Mikado appeared at the Castle of Nijo to convey the appointment of Udaijin to the Shogun Iyemochi Ko. Echizen Shungaku was appointed Okura Taiyu (Vice Minister of the Treasury). Shimadzu Saburo was elevated to the 2nd class of the 4th rank, and decorated with the titles of Shosho and Oumi no Kami, with correlative rank among the Daimios, as a reward for his exertions in years past and for his good services in assisting the restoration of the Tokugawa family.

On the 28th of February the Shogun had an audience of the Mikado in order to offer the compliments of the season. His suite consisted of Hitotsubashi Chiunagon Yoshinobu, Aidzu Chiujo Katamori, the military governor of Kioto, Sakai Uta no kami of Iimeji, Midzuno Idzumi no kami of Yamagata, both *kakuro*, Inaba Nagato no Kami the Shogun's Resident, the Sansei Tanuma Gamba no kami and Inaba Hiobushoyu, Hayashi Higo no kami the Governor of Fushimi, and the following Daimios: Echizen Chiujo, Hikone Shosho, Takamatsu Shosho, Matsuyama Shosho, Chikuzen Jijiu, Todo Jijiu, Geishiu Jijiu, Kuwana Jijiu, Takata Jijiu, Matsudaira Kai no kami, Akidzuki Ukio no s'ke, Abu Kazuye no kami, Doi Noto no kami, Akimoto Tajima no kami, Nagai Shinano no kami, Ikeda Tango no kami, Masuyama Kawachi no kami, Seki Mimbu shoyu, Oda Yamaishi no kami, Sawa Kadzusa no s'ke, Soma Daizen no s'ke, and the Warrior-in-waiting Matsudaira Wakasa no kami, all dressed in their court robes and mounter on horseback. The Kuambaku Nariyuki, with the Giso and Tenso and other nobles were ranged

\* The Palace of the previous emperor, burnt down by a fire a few years previously.

† A *cho* is 120 yards; the usual length of a ward in a Japanese town.

‡ *Fudai*, literally "all ages," i.e. hereditary vassals of the Shogunate. The term *Fudai* is also applied to all hereditary retainers.

in the order of their respective ranks in the Privy Council Chamber (*Ko-go-sho*), and were\* harangued together with the Shogun and forty-eight clans. The In no Miya in the presence of the assembly received the Imperial speech with proper respect and conveyed it to the others. It was to the following effect. "A glance at the present condition of affairs shows at home the laws put aside, the bonds of society loosened and the people groaning under a weight of misery; on all sides there is evidence of dissolution and ruin. Abroad, we are exposed to the insults of five great continents of haughty barbarians, and the calamity of being swallowed up by them threatens us at every moment. The danger is like unto piling eggs in a heap, or to the stinging of an eyebrow. Our thoughts are so occupied by these things that we can neither eat nor sleep. Alas! Alas! Ye men of office what think ye of it? But you are not to blame. Our own want of virtue the cause. The crime is Ours alone; and what will the god of heaven and earth say of Us? How can we dare to meet Our ancestors underground. It seems to Us that you are Our babes, and the love we bear to you is as that of a mother for her child. Do you therefore regard Us in the light of a parent, for on the depth or shallowness of that affection hangs the success or failure of the attempt to restore the Empire. How serious a matter it is! Do you therefore give your whole mind to the subject day and night and respond to the prayer expressed by the national heart."

"The subjugation of the ugly barbarians is a fundamental law of our polity, and we must set an army on foot in order to strike awe into them and chastise them. But we like not in truth a reckless attack upon the barbarians. Do you therefore ponder an efficient scheme and submit it to Us. We will then discuss its merits with care, and come to a firm and irrevocable determination."

"We believe that in order to restore the Empire to its ancient splendour we must have a man equal to the task. We are confident, when we look round upon Our hundred of Military Leaders, that such a man exists, but at the present moment Aidzu Chiujō, Echizen Saki no Chiujō, † Date Saki no Jijiu, ‡ Tosa Saki no Jijiu, || and Shimadzu Shoshō appear to Us trusty and faithful to a high degree, and sagacious in counsel, and therefore fit to undertake the important interests of the state. We love them as Our children; do you § therefore be affectionate to them and work with them. We swear to you to restore the Empire from its fallen state, to follow in the steps of the spirits of the departed Emperors and to rescue the people out of their misery. Should the work be neglected and the result be unsuccessful, we and you would be specially to blame. The Gods and Spirits of Heaven and Earth would condemn us. Be you therefore diligent, be you therefore diligent."

A second Imperial Letter¶

"We with Our feeble body tread the celestial throne, and have unworthily received the Golden Jar which endures for a myriad generations; but Our virtue is always inadequate to the task, and we are afraid of offending against the former Emperors and Our people. Since the year 1853 the foreign barbarians have continuously and with fierce violence come to Our ports, so that the country has been exposed to unspeakable danger. The prices of all articles have risen and the people have suffered grievous affliction. What will the gods of heaven and earth say of Us? Alas! Alas! Whose fault is it? Morning and evening we hold council upon it. What is to be done? After a peace of more than two hundred years, Our military power is insufficient to put down our foreign enemies, and we therefore fear lest to revive recklessly the law of punishment and warning would be to plunge the state into unfathomable disasters. The

\* The Mikado is not in the habit of speaking his speeches; they are read for him by some other person, usually his chief Minister.

† The old Prince of Echizen, also called Matsudaira Shungaku.

‡ The old Prince of Uwajima, now Date Okura Kio.

|| The old Prince of Tosa, called Yamanouchi Yodo.

§ This is addressed to the Shogun.

¶ The translator has been obliged to correct the text here, which is full of faults and badly printed in the original, by comparison with another work called the *Kinse-yu-shi*. These two documents are huddled into one in the *Genji-yume-monogatari*.

"Bakufu has resolutely spread abroad Our will, has formed the antique laws of ten generations and more; he has released the Daimios from attendance on him at Yedo, and has sent back their wives and children to their homes. He has retrenched the unnecessary expenses of the public service, has diminished those which are ordinarily incurred, and has made large provision of war vessels. Truly this is not only Our good fortune but the good fortune of Our ancestors and the people also. Moreover, the revival last spring of the old practice of coming up to the capital is certainly worthy of commendation."

"But contrary to all anticipation, Fujiwara Saneyoshi and others, believing the violent words of low and vulgar fellows, and disregarding the condition of the Empire and the safety of the state, have falsified our command, and issued orders to soldiers of low rank to expel the barbarians, and madly have tried to raise up war to destroy the Shogun."

"The violent servants of the Saishō of Nagato have made a tool and a plaything of their master, have without provocation fired upon barbarian ships, have murdered the messengers of the Bakufu, and have for their own purposes seduced away Saneyoshi and others to their province. Such mad and turbulent people must certainly be punished. Nevertheless, as all this arises from Our want of virtue, we sincerely feel unspeakable repentance and shame. Moreover, we are of opinion that if the matter be considered, it will be seen our war vessels are compared with those of foreigners, that they are as yet insufficient either to destroy the fierceness of the proud barbarians, or to manifest the dignity of our country abroad; but on the contrary we receive constant insults at their hands. You must therefore, as you have frequently asked permission to do, fortify the important harbours of the Inland Sea, with the whole resources of the empire, subjugate the ugly barbarians, and carry out the Law of Punishment and Warning made by the former Emperors."

"Last year the Shogun stopped a long time at Kioto, and this spring he has again come here. All the Daimios, too, have run hither and thither, and have sent back their wives and children to their homes. All this is good. Henceforth no expenses must be incurred which are not for military defences; the luxury and waste consequent upon a long state of peace must be diligently cut down; you must exert all your powers and give your whole mind to it; you must make your preparations for the subjugation complete and trenchant. You must fulfil all the duties of a military vassal and preserve the name of your family from everlasting disgrace. Alas! Alas! You, the Shogun, and all the Daimios of every province are Our babes. Desiring therefore in concert with Us to regenerate the Empire, you must not waste the property of the nation, you must abstain from effeminate prodigality, and you must be resolute in preparing for Punishment and Warning. If you are indolent or remiss, you will thereby not only highly offend against Our will, but you will rebel against the spirits of the Emperor-Gods, and act contrary to the intentions of your ancestors. Moreover what will the gods and spirits of heaven and earth say of you?"

A copy of these documents was delivered by the Tensō Sadayoshi and Toshikatsu to each of the Daimios. The Shogun and Daimios present then signified their acceptance of the Imperial mandate, and took their leave. The decree was also sent to the Daimios who were in their territories at this moment, and was forwarded post haste to them by their chief retainers.

(To be Continued.)

Translation referred to in the Article on Sericulture.

In the first Chapter of the Appendix to Vol. I. of his book, M. Pasteur proves that pebrine is an ancient disease, and that it has always affected the silkworm broods, though to a small and unknown extent. In the second Chapter he gives the reasons why this scourge has followed the operations of the traders in eggs across Europe and Asia. He says:—

"In order the better to fix our ideas upon the point upon which we are engaged, let us consider a very prosperous

all of it dead, enabled Garry Owen to score the victory. However, his subsequent success in the Visitor's Cup, the Handicap Plate and the Scurry Sweepstakes amply made amends for it. In *Moctezuma* Mr. RADLEY's owns a pony second to none. He has a turn of speed probably never before seen in a Japan pony, while his staying powers, evidenced in the Champion Cup, are beyond question. Only once before, when *Samourai* won, has a Japan pony been able to make any show against a China pony, and *Moctezuma* on two occasions during this meeting has been among the foremost in two races. In the Handicap Plate with a good jock on his back, who, however, was fifteen pounds over weight, *Moctezuma* was fourth, and we can well imagine how near he would have been to beating *Southern Cross* had he carried his proper weight. In the Handicap Plate *Southern Cross* was handicapped to carry only 13 lbs. more than *Moctezuma*, the distance being half a mile, and as *Moctezuma* was carrying 15 lbs. over this, the China pony was in reality receiving lumps of weight from his stable companion. In the Champion Stakes *Moctezuma* was in receipt of 18 lbs. and, the distance being a mile and a quarter, beat the China pony in their places. Indeed, his jockey confidently asserts that had he not mistaken the winning post he could have beaten *Will o' the Wisp*. However, that may be, *Moctezuma* is undoubtedly a grand pony, and the way in which he disposed of *Samourai* on two occasions is good evidence of his powers.

Mr. ECALLAW, however, has been the most fortunate in his races. In the Newcomer's Cup *Will o' the Wisp* was considered quite out of the betting, but, contrary to all expectation, he contrived to get first past the post. *Samourai* also pulled off two races, and in the Champion Stakes *Will o' the Wisp* performed a feat which stamps him as a first class pony. After passing the Grand Stand on the first time round *Will o' the Wisp* bolted and was left fully twenty lengths in the rear, yet by dint of good riding he managed to recover his lost ground and beat such ponies as *Southern Cross*, *Flatcatcher* and *Hard Lines*. There is, however, little doubt that *Southern Cross* could have very nearly, if not quite, won this race had he not carried such an enormous mass of dead weight. He is a willing pony, can either make the running or play a waiting race, but when he has to carry some forty pounds of lead even his great powers succumb. Had a jockey who could ride the weight been on his back there is little question that *Will o' the Wisp* would have had a much harder task out for him than was the case.

A word as to the jockeys. With those who have before appeared on the course we have little to say; their powers are well known to all, but we must devote a few lines to the first appearance of Mr. TEKKAY. His riding was, we may fairly say, a surprise to almost every one. Those who have seen him morning after morning during training time anticipated a failure, but the way in which he rode *Uhlán* for the Newcomers Cup was unquestionably a success. After that he had several mounts, and finally rode *Will o' the Wisp* in the Champion Stakes, in a manner deserving of the highest praise. Practice only can give him a good judgment of pace, but he certainly has acquired all that a novice in the pig-skin could be expected to know. Besides Mr. TEKKAY Mr. CARLINGFORD and another gentleman made their first appearance on the Yokohama turf, but they are old China hands and their present performances demand no special notice.

In conclusion we may again express our satisfaction at the general results of the meeting, and we look forward with equally pleasant anticipations to the next contests on the Yokohama turf.

## JAPAN 1854—1864.

(Continued from our last Number.)

On the 21st March, the Shogun sent in his answer, ✓ which was as follows\* :—

"The Imperial letter which I was commanded to read ✓ on the 5th March, declared that his Majesty deigned to "take upon his sacred self all the misfortunes which have befallen the country since his succession, at which announcement I trembled and feared with exceeding grief and joy. Now the Bakufu confesses himself the ✓ cause of all the calamities which have occurred of late and he knows that his crimes are many in number. His Majesty's servant Iyemochi, with his degenerate person, has continually disgraced his important office. He has neglected the administration of the laws, while disorder and misfortune have been perpetual throughout the country. For many years has he troubled the Imperial bosom, and although, when he came up last spring to the capital, he received the Imperial orders to expel the barbarians, that result has not yet been attained; not only have the conferences about the closing of the port of Yokohama not been completed, but the date for that exploit to be performed cannot be fixed. Therefore, when, in obedience to a second order he came up to the capital, he fully expected to meet with the Imperial dis- ✓ pleasure, and to be severely reprimanded; but contrary to his expectation, he has received the Emperor's approbation, and not only that, but in the most benevolent and kind way, His Majesty said that he loved his servant Iyemochi and the nobles as his babes; and ✓ moreover gave them some valuable admonitions for the future. His Majesty's servant Iyemochi has no means of requiting this kindness, which is as lofty as the ✓ mountains and as profound as the ocean. Henceforth he will reform the old abuses which occur in ten thousand matters, he will look on all the Daimios as his brethren, he will unite his strength with theirs, he will fulfil the duties of a servant and a child, he will diligently retrench the unnecessary expenditure which ✓ a long period of peace has given rise to, he will strictly carry on the military preparations, he will arrange the internal Government of the country, and he will give life again to the people. The protection of the seaboard is a matter of course, and he will carry to the highest degree of perfection the military defences of ✓ every province; he will put an end to the contemptuous treatment we receive from the barbarians, and will prepare vessels of war; in the end he will revive the great law of Punishment and warning, and cause the ✓ dignity of our country to be known beyond the seas. To all these things will he give his most diligent attention.

"He says with diffidence, that he desires to set the ✓ Imperial bosom at rest. But he will strictly observe the Imperial wish that Punishment and Warning should not be recklessly entered upon, and he hopes to ✓ be able to devise such a plan as shall ensure certain victory. As he has already sent envoys to foreign countries to speak about the matter of closing the port of Yokohama, he hopes, at all events, to be able to accomplish that; but as the dispositions of the barbarians ✓ are hard to fathom, he will continue to be most diligent and energetic in the fortification of the seaboard. He will perform strictly the duties of a military vassal; all these weighty schemes shall be formed in accordance with the national wishes, and he prays for the Imperial approval. Restoring the fallen fortunes of the Empire, he will on the one hand destroy the fierceness of the proud barbarians, and on the other protect the lives of the people, and tranquillize the Imperial bosom. He ✓ will show his gratitude to the spirits of the Emperor-gods, and carry out the policy bequeathed to him by his ancestors."

"This then is the most earnest and truthful prayer of His Majesty's servant Iyemochi, wherefore he presents this in answer."

"His Majesty's servant Iyemochi with real fear and

\* The translator has taken this also from the *Kin-se-ya-shi*, as it is given there in full.

"real awe strikes his head on the ground and bows "reverentially."

A great many people, on the arrival of the Shogun at Kyoto, had expected to see him receive a severe reprimand from the Mikado for so constantly putting off the date of the expulsion of the barbarians. When it was known that full power had been committed to him to act in the matter of the expulsion of the barbarians, those who had hitherto exerted themselves in the service of the state and had desired to accomplish the expulsion of the barbarians, were deeply grieved.

On the 3rd April the Shogun had an audience of His Majesty. His retinue consisted of Hitotsubashi, prince Echizen, the prince of Aizu the Supreme Administrator of Affairs, the *Kakuro*, *Sansei*, his resident, and the Warriors in waiting. The rank of Jiu-ichi-i was conferred on him by an Imperial decree as a reward for his having completed during the past year repairs of the cemetery off Jimmutenno.

On the 14th of March the Shogun went to pray at the temple of Senyujii. On the 19th he went to pray at Chi-on-in. On the 22nd he had an audience of the Mikado.

On the 24th March Aizu Higo no kami resigned the office of military governor of Kyoto and was appointed commander-in-chief of the land forces; Matsudaira Yamato no Kami became *Sosai Shoku*. The civil governor of the eastern side of the city, Nagai Mondo no kami, became an *Ometzuke*, and Kasuya Chikugo no Kami became Warrior in waiting.

About this time there came up to Kyoto, as messengers from the nobles who some time previously had made their escape from that city, Kawano Noto no kami, retainer of Sanjo-nishi dono, and Niwa Idzumo. As they were proceeding thither to present themselves before the Tenso with the memorial of which they were the bearers, the governor of Fushimi made them captive and put them in prison.

On the 25th March the ronins concerned in the attempt made last year in Yamato were put to death. Takigawa Harima no kami, the civil governor, read out their sentences to them, and their heads were afterwards cut off in prison. Their names were Asaka Goro, Shibuya Iyosaku, Okami Tomijiro, Sakai Denjiro, Tsuruda Toji, Aramuki Hanzaburo, Nakagaki Sotaro, Eto Tanchachi, Ozaki Jiro, Tadokoro Toji, Doi Sanoske, Morinoshita Ginoske, Shimamura Shogo, Yasuo'a Onotaro, Ozaki Tomogoro, Tomobayashi Rokuro and Nagano Ichiro, nineteen in number. After this the search for ronins was so vigilantly conducted, that no one was left to advocate the expulsion of the barbarians. Nevertheless all the clans sent in repeated memorials, advising that Choshu should be allowed to enter Kyoto, the seven nobles be reinstated, and the expulsion of the barbarians be reenacted, but as His Majesty turned a deaf ear to their entreaties, they looked up to heaven and lamented. Every one felt that if this state of things continued to endure, the empire was certain to become the theatre of civil war, and the fortunes of the Tokugawa family would become precarious; the sensation was like walking on a thin sheet of ice.

This year being *Kinoye ne*, || the name of the period was changed in the second month, in accordance with precedent, and the new name adopted was *Genji*.

On the 12th of April the Shogun had an audience of His Majesty. His suit consisted of Matsudaira Okura no taiyu, Sakakibara Shikibu taiyu, Matsudaira Etchuu no kami, Inaba Nagato no kami, Matsudaira Shimosa no kami, Hitotsubashi Chiunagon, Owari Dainagon, and more than thirty of the Daimios resident at Kyoto in addition.

On the 13th May the Shogun's Resident, Inaba Nagato no kami was appointed a *kakuro*, and was succeeded in his previous office by Matsudaira Etchuu no kami. Matsudaira Higo no kami\* was again appointed Military Governor of Kyoto. Mito Chiunagon and Kii Chiunagon

received the rank of Sho-sam-mi. Matsudaira Okura no taiyu was made Saisho, with the rank of Sho-shi-i. Ii Kamon no kami received the title of Chiujo, Matsudaira Etchuu no kami was made a Sho-sho. The ex-Dainagon of Owari received the rank of Sho-ni-i, Matsudaira Awa no kami, Matsudaira Mutsu no kami,† Matsudaira Sagami no kami,‡ Matsudaira Kanso|| and Matsudaira Mino no kami§ were all made Shaisho. Nambu Mino no kami, and Arima Nakadzukasa no taiyu were appointed *Chiujo*. Todo Daigaku no kami, Matsudaira Shimotsuke¶ no kami, and Satake Ukio Daibu\* were made Sho-sho. Matsudaira Yodo became Sho-sho with the rank of Jiu-shi-i. Nakagawa Shiuri no taiyu, received the rank of Jiu-shi-i-no-gé, and Matsudaira Awaji† no kami was appointed a Sho-sho. All these promotions were made at the request of the Shogun, as a reward for the exertions made by the recipients in the service of the state.

On the 3rd of June the Shogun had an audience of the Mikado. His suite was composed of Hitotsubashi Chiunagon, the Military Governor of Kyoto, the Resident, and the *Kakuro* Sakai Uta no kami, Midzuno Idzumi no kami and Inaba Nagato no kami.‡ His Majesty's speech on this occasion was as follows:—

"The duties of the Bakufu are on the one hand to govern the empire in peace, and on the other to subjugate the barbarians; but during a long period of peace, all classes have sunk in sloth, and the present aspect of affairs is such as to wring the Imperial bosom deeply. The Shogun however has come up to the capital, and in concert with assembled daimios has determined on the best policy to be pursued in the interests of the nation. His Majesty, in the exercise of his wisdom, has seen fit to commit full powers to the Bakufu, and he desires that the orders of government shall therefore proceed from a single centre, that the suspicions of the popular mind shall not be excited. He therefore orders you to fulfil the duties of your office enumerated above. Further you must accomplish without fail the exploit of closing the port of Yokohama. With respect to the punishment of Choshu, His Majesty gives you no special directions as to the runaway nobles and the turbulent retainers of that clan, but you are ordered to punish them as you think fit, full powers being entrusted to you for that purpose.

The Shogun received these orders with gratitude, and said in reply "that he would henceforward pay in two thousand bags of rice annually for the support of the Shrines in Ise. That the Shoguns should in future go to Kyoto to receive investiture on their succession to office. That the *Sanku*|| and all the other Daimios should proceed to Kyoto to receive investiture on succeeding to their fiefs, and on receiving titles and honours. That the western Daimios should call upon His Majesty on the occasions of their journeys to Yedo. That the guardians of the Nine Gates should be entrusted to the Shogun's vassals of not less than 3,000 *k ku*. That all the Daimios should annually make presents to the Mikado of the productions of their provinces. That all playing on musical instruments throughout the Empire should be stopped on the occasions of the deaths of Princes of the Blood and Ministers of State, and that the Palace enclosure should be extended on the north and east. These and other articles to the number of eighteen were referred to the Mikado, who graciously approved of them."

On the 8th June, the Shogun had an audience of the Mikado to take leave; after which he started on the 10th. He got from Fushimi to the castle at Osaka by boat, and remained there till the 20th, when he embarked on board a steamer, and loosening his cable from the mouth of the river, set sail. On the 23rd he arrived at Yedo, to the great joy of all the officials, both great and small

who were glad to think that, by the aid of the Shimadzu family, the Tokugawa family had been reinstated, and their happiness was shared by the town, down to the very lowest classes.

The Shosho of Shimadzu, Osumi no Kami, had returned to his territories before the departure of the Shogun, while Hitotsubashi dono and Echizen Saisho remained at Kioto. Sakai Uta no kami of Himeji accompanied the Shogun to Yedo.

Now the direction of the national policy having been confided to the Shogun by the Mikado as heretofore, many of the patriots who had exerted themselves in the service of the state and had gradually made the authority of the Mikado to be respected, began to be afraid that the same effect and slothful policy would be adopted as heretofore, and grieved to think that the Empire should fall back into its previous degenerate condition. Choshu also had sent in many humble petitions, but none of them were attended to. To aggravate the matter, the direction of the national policy was now entrusted to the Bakufu, to the great indignation of the patriots who had previously collected together in Choshu. The two provinces of Nagato and Choshu began to get highly excited, and it was soon reported at Kioto and Osaka that the assembled ronins of Nagato and Suwo would shortly call upon Nagato no Kami and the seven nobles to take command of them and lead them to Kioto. When this rumour became commonly known, men's minds became ill at ease, and all felt as if they were walking on a sheet of thin ice.

In the spring of this year Aizu Chiujo had resigned the office of military governor of Kioto, but when the state of affairs became again unquiet he resumed his former functions. It was reported to him that some Choshu men and ronins were living in an inn kept by a certain Ikedaya Sobei, in the Sanjo street on the west of the bridge, and that they were planning a secret conspiracy. So on the 8th July the men of the military governor, of the Shogun's resident and of the civil governor, together with the ronins of the Shin-sen-gumi, to the number of about seventy or eighty, clad in chain-armor and armed with naked spears and swords, forced an entrance into Ikedaya,\* and suddenly appearing at the top of the stairs, set upon the ronins who were indulging in a feast. The latter, being taken thus unawares, had scarcely time to draw their swords and defend themselves, and had to repel the attack with whatever they could lay their hands on. The attacking party, however, were numerous, and had the advantage of having made up their minds beforehand, so that when the leader of the ronins, Miyabe Teizo had fallen, they lost their heads, and some escaped by fleeing over the roofs of the adjacent houses, while others were taken prisoners. Some of them, namely Matsuda Jiuske of Higo, Motoyama Hichiro, Matsuwo Konoshin, Shoyama Yasaku, Yoshida Nen-maro and Amada Hankichi, were killed on the spot. Ando Seinoske, Ozawa Itsuhei, Matsuyama Riozo and a few others, who were present on the occasion, escaped the peril and fled. The rest, Onaka Shiuzen of Yamato, Sawai Tatewaki of the same province, Mori Kazuye, retainer of Honami Dono, Kimura Shingoro of Choshu, Miyafuji Mondo of Iwami and now retainer of Itsutsuji dono, Uchiyama Taroyemon of Choshu, Sato Ichiro and Yamada Toranoske of the same clan, with some townspeople, to the number of twenty-five, were taken prisoners, and conveyed to the office of the Civil Governor, where they were put in close confinement. A man named Kodaka Shintaro, alias Yorodzuza Kiyemon, living at the Shijo little bridge, suspected of being one of the band, because he had a quantity of arms and ammunition in his possession, was also arrested and conveyed to the same prison.

On the night of the 19th of July, Hiraoka Danshiro and Okada Shintaro, attached by the Bakufu, to Hitotsubashi dono, were murdered, on the ground of being traitors, by Hayashi Chiujiro and Ehata Sadahichiro of the Mito clan, in front of the Sanjo Yashiki occupied by Hitotsubashi, as they were returning to it in palanquins.

\* Ikedaya means, Ikeda House. Japanese merchants use as their surnames the names of their shops. Ya means house, as we say Waterloo House etc.; within the last few months the merchants have had leave to use ordinary surnames like the Samurai.

The murderers disembowelled themselves and died immediately after. From this time on men's minds began to become uncontrollable and a passion for murder seemed to take complete possession of them. Society became gradually more and more agitated, so that there was every apprehension that some dreadful event was close at hand. And no man felt at ease, but great fear was upon all.

To turn again to Choshu. After the disturbance at Kioto in the month of September of the previous year, the seven nobles had betaken themselves thither, and the runaways and deserters from every province gradually collected together under the designation of *Kiheitai*. These fellows concerted with the Samurai of the other clans how they might prove that the Saisho and his son and the seven nobles were innocent of the crimes falsely laid to their charge, and assist them in carrying out their disinterested and patriotic designs. Numerous petitions were addressed to the Heavenly Court, but the clouds which floated in the air had not yet cleared away, and still continued to obscure the blue sky. They had alternations of lamentation and wrath, until at last their indignation became so strong, that there was nothing left but to go up to Kioto with a display of military force, sweep away the traitor and the wicked man from the Sovereign's side, and force the Heavenly Court to listen to their petitions. Full of impetuous feelings and boiling indignation, Hama Chintaro (a Shinto priest of Sui-ten-gu in Kurame, known as Maki Idzumi no kami) Kuzaka Giske (also called Matsuno Jihei), Raijima Matabei (known as Mari Kitaro) Terajima Chiuza-buro (called Ushiku Shunzaburo) Iriye Kuichi (alias Kawajima Kotaro) and a runaway of Chikuzen called Nakamura Yentaro, choosing a *Karo* Fukuwara Echigo as chief, and gathering together a body of 400 men in all, resolute men every one of them, set sail from the port of Mitajiri in Suwo on the morning of the 22nd July. They were clad in complete armour and had put a quantity of cannon and small arms on board; and their appearance was noble and determined.

On the 24th they arrived at the port of Osaka, and took up their quarters temporarily at the *yashiki* of the clan near the Tokiwa bridge. On the morning of the 26th, before it was yet light, the *Kiheitai* left Osaka in boats and ascended the Yodogawa. They bore the appearance of troops about to enter on the campaign, and waving red and white flags from the boat, got up as far as Yamazaki. Here they landed and mounting the hill called *Tempezan*, took up their quarters in the Takaradera. At this spot (i. e. at Yamazaki) a barrier had been erected by Matsudaira Kai no kami of Koriyama in Yamato, under the orders of the Government, which was guarded by a number of his troops. The news was therefore immediately reported to Kioto by him.

Fukuwara Echigo, at the head of a large body of his fellow-clansmen started the same day by land for Fushimi. At the Hashimoto watchhouse, Matsudaira Iloki no kami, the Lord of the castle of Miyadzu in Tango had constructed a barrier, and was guarding it vigilantly with his troops. The Choshu clansmen explained that they were going to the capital, and were allowed to pass through. They arrived that evening in Fushimi, and took up their quarters at the Choshu *yashiki* near the Kiobashi (bridge). They then sent a message to Hayashi Higo no kami, the Governor of the place, to say that they were going to the capital, and that having some business to arrange with the Kioto *yashiki* first, would like to stop in Fushimi two or three days.

The governor was in a great state of alarm, when he considered the numbers of the Choshu men and their warlike appearance, and decided that every precaution was necessary. When he received information that the Choshu men had gradually arrived at Yamazaki by the river, and had landed there, he entirely lost his head and expecting that some fearful affair was going to take place before his eyes, got together with all speed a number of

† That is the Band of Irregulars.

‡ This band consisted of a number of Choshu men and of the *Kiheitai*, composed of ronins from Kurume, Tosa, Higo, Utsunomiya, Echigo, Ise, Tsuyama, Tajima, Teshima, Hiraoka and other clans, with the remains of the fugitives from Yamato.

On the left bank of the river, opposite Yamazaki, some twenty miles from Osaka.

Samurai and put himself in as strong a posture of defence as his means permitted. He then rushed up to Kioto on a sweating horse, hardly stopping to take breath, in order to communicate the information.

(To be Continued.)

# BRITISH CONSULAR TRADE REPORT FOR KANAGAWA FOR 1870.

BRITISH CONSULATE,  
KANAGAWA, March 25th, 1871.

SIR.—I have the honour to forward to you in duplicate the following Tables shewing the Trade and Shipping of the Port of Kanagawa for the year 1870.

- 1.—Return of the Import Trade from England and other countries.
- 2.—Return of the Import Trade from open ports in Japan.
- 3.—Return of the Export Trade to England and other countries.
- 4.—Return of the Export Trade to open Ports in Japan.
- 5.—Return of Duties collected during the year.
- 6.—Four Returns of the Shipping.
- 7.—Three forms showing the British and Foreign Import and Export Trade, and the Shipping, distinguishing British and Foreign.

The Import Trade of the past year shews on a comparison with the Custom House statistics of 1869 the large increase of \$10,812,691, which is accounted for principally by the increased business in Rice and Cotton Yarn.

The following return will furnish a comparison of the direct Import and Export Trade for years 1869 and 1870:

	1870.	1869.
Imports, ... ..	23,428,965	12,617,174
Exports, ... ..	11,331,482	9,083,302
Total, ... ..	34,760,447	21,700,476

This shews an increase in Imports of \$10,811,791, and in Exports of \$2,248,180, or a total increase in the trade of \$13,059,971, as compared with that of the preceding year.

## IMPORTS.

*Shirtings.*—The trade in this staple shows much about the same as during the three previous years. In 1869, 527,834 pieces valued at \$1,530,719 were imported. In 1870 the import amounted to 511,700 pieces valued at \$1,458,345.

In December 1869, the market closed weak, 8½ lbs. were difficult to move at \$2.95 to \$3 per piece and other weights in proportion. In 1870 the trade during the first six months was restricted, the greater proportion of the business being done during the latter half of the year. In February and March prices reached their highest limit when sales of 8½ lbs. were made at \$3.10, 7 lbs at \$2.70 to \$2.75. Prices then declined till June when the quotations were respectively \$2.80 and \$2.50 for 8½ lbs and 7 lbs, some enquiry was experienced in June which became more pronounced in July and August when a large business was done. The news of the war in Europe then stopped for the time all business and when it was resumed a tendency to low prices was apparent, a fair business was done in December but rates kept gradually declining until at the close of the year, 8½ lbs only fetched \$2.77½ to \$2.80, and 7 lbs. \$2.20 to \$2.25.

*Cotton Yarn.*—A marked increase will be observed in the Import of this staple, shewing in quantity 73,090 piculs valued at \$3,544,865 against 51,040 piculs valued at \$2,552,000 in 1869. The year 1870 however closed with large stocks in hand something like 30 per cent being left unsold in the hands of importers, the actual deliveries to natives being not much more than 10 per cent. over the corresponding figures of 1869. This, however, is no doubt attributable in a great measure to the generally depressed state of trade during the latter half of the year consequent on the political complications in Europe.

At the commencement of the year 16-24, 28-32 and 38-42 were quoted respectively at \$53 to \$54 and \$64.

A fair amount of business was done throughout the first five months of the year, but in June prices declined when the quotations were \$45.25, \$46.25 and \$48.50 for the respective counts.

A large business was however done in July at recovering rates, but in August, on receipt of the war news, weakness again set in and although a moderate trade was carried on till the

close of the year, rates gradually declined until the quotations were as low as \$39.50, \$41 and \$41.50 for 16-24, 28-32 and 38-42 respectively.

The year 1871 opens with an unprecedentedly large stock from last year and large supplies are afloat.

*Taffetas.*—The import of which shows in excess of 1869 is in little demand, the consumption has been small and stocks are large. The declining consumption accounts in a measure for the increasing trade in Cotton Yarn, with which the Japanese manufacture a similar class of goods; being able to meet the constantly changing tastes as regards pattern and texture they are enabled to compete successfully with the foreign manufacturers.

*Velvets.*—The consumption in these has increased but prices having fallen from \$9 to \$6.50 per piece, the trade has been a most discouraging one—excessive supplies have been the bane of the trade in this article for some time and the same applies to Turkey Reds and Chintzes.

The total value of the Import trade in Cotton manufactures amounts to \$6,514,543 against \$4,631,885 in 1869.

*Candlets.*—Although returns shew considerable increase in importation as compared with 1869, the consumption in these stuffs continues to decline rapidly as will be shewn by the following comparison of deliveries for the years 1867, 1868, 1869 and 1870.

## Total deliveries during

1867, ==	52,607 pieces.
1868, ==	24,615 "
1869, ==	9,653 "
1870, ==	6,099 "

transactions have been almost entirely confined to old stock and the year closed with 17,668 pieces in the hands of Importers.

*Woolen Manufactures and Mixtures.*—The trade in these has been overdone and must have shewn a serious loss to importers.

The total value of the Import Trade in Woollens amounts to \$1,347,653 against \$1,238,447 in 1869.

*Metals.*—This business which is confined principally to Nail Rod Iron has been a fair one, but the market has been overstocked and but little good has resulted to those engaged in it. The importations have nearly doubled those of the preceding year, amounting in 1870 to 71,187 piculs as compared with 46,244 piculs in 1869.

*Arms.*—Deliveries have been made to the value of \$200,000 but the trade in these is almost a stagnant one.

The total value of the Import trade in Metals amounts to \$217,021 against \$462,638 in 1869, and that in arms to \$62,986 against \$747,003 in 1869. Although the actual import of Metals has been much in excess of that of 1869 the value shews considerably less. I can only account for this by the high and almost fictitious value which was placed on Nail Rod Iron in the Import table of 1869, the price figuring at \$10 per picul, the average market value during 1870 being \$2.80 per picul.

## LOCAL TRADE.

*Cotton.*—Raw Cotton shews a falling off as compared with the Import of 1869, this being attributable to the fall in value of Cotton Yarn together with a better outturn of the native crop.

*Rice.*—Continues to be a marked feature in the Import Trade of the Port, the value of the Import for 1870 being \$10,626,199 the quantity 4,427,583 piculs, against 908,341 piculs valued at \$2,243,602 in 1869. The grain ruled high at the beginning of the year and prices were well sustained till June when owing to the expectation of a good outturn for the native crop, prices began to decline; just as the grain was ripening, bad weather set in, but it was still hoped the yield would be a good average one and prices remained low till December, but when the crops were gathered it was found that much damage had been sustained, and an increased demand again set in. The average quotation has been \$2.40 per picul.

*Sugar.*—The trade in this has considerably increased, but Chinese being the largest importers it is difficult to ascertain whether the trade has been a paying or a losing one. The Returns of 1869 shew for Brown Sugar an Import of 194,427 piculs valued at \$972,135. In 1870, 343,351 piculs were imported valued at \$1,373,404—\$4 per picul may be taken as a

Worse than this, when the barbarous tribes convulsed the interior, and the state came to be exposed to calamity from without, the evil of the feudal system rose to its height. Under the Chou dynasty, the Hien-Yün, the Jung and Ti (various barbarous tribes) constantly invaded the home provinces, and even during its period of greatest prosperity the royal army was constantly wearied with expeditions to the North and expeditions to the South, but one does not hear that the power of the princes was able to give protection against these foreign foes. In the age of its decadence King Yu lost his life at the foot of Mount Li, and the princes though they saw his signal leacons alight, did not come to his help; of what use were they as "hedged" or as "fences" (*han*, usually translated "clan," means literally a hedge.) The Chin dynasty centralized the empire, concentrated its forces, built the great wall, and thereby kept out the Northern barbarians. All the dynasties, from the Han downwards, have profited by its exertions. Nevertheless in subsequent ages foolish men among them were puffed up with conceit, and both their civil and military organization went wrong. For this reason they constantly had to undergo the insults of foreign nations, which must be attributed to the bad administration, not to the system of centralisation.

No one in ancient or modern times has surpassed Lin Tzu's power as a writer on the feudal system. It is as clear as light that he was perfectly acquainted with the current which moved events in all periods of history, and with the principles which governed the affairs of the Empire. The students of Chinese philosophy during the last two thousand years have never been able even to equal the unsurpassable force of intelligence displayed in his saying that the feudal system is not consonant with the sentiments of a sage. The commencement of justice in the empire was in the time of the Chin dynasty. Unfortunately he only discusses the means of domestic rule, and has not touched upon the means of defending the country against foreign foes.

There is no greater misfortune for the Empire than the fact that it is not one compact whole. If its military strength be not compact, it is weak. If its financial strength be not concentrated, it is poor. Ten ordinary men, by uniting together, might make Wuhao (the Chinese Sampson) prisoner, but the property of a hundred middle class men would not enable them to compete with Shichung (a rich man of the Chin dynasty): if you ask the reason why, it is because in the one case they act together, and in the other they do not. The feudal system is the farthest limit to which uncombined action can go; the centralized system is the acme of combined action. The centipede can run well when all its legs move in the same direction, but if every separate leg has its own individual will, the insect cannot move an inch. If a snake has two heads, one of which wishes to go eastward, while the other wishes to go westward, it is perfectly certain that it can go neither way. It is sure therefore that if we desire to be independent and to compete on an equality with the other nations of the earth, we must absolutely have the centralization system.

In the vast region between heaven and earth there are a myriad states established. In the five continents there is not a single state which is not independent, and there is not one of them constituted according to the feudal system. In former times all the states of Europe were divided into fiefs, and the cause of their prosperity at the present day is their having abolished that system universally.

The German Bund and the United States are collections of a number of small states, which unite their forces and their treasures. Each of the individual states is governed by its own separate laws, but in their intercourse with foreign nations or in fighting against a foreign foe they confer authority upon a general assembly or upon a President, and by obeying the laws they are enabled to preserve the whole country. This is called a confederation or a federation, with numerous heads which constitute one single head.

Besides, each of the individual states is in itself a large independent country, quite unlike Japan which is divided into three hundred *han* varying in size, some of

ten thousand *koku*, others of thirty thousand *koku*, and in which the governing force is split into fragments.

Our feudal system arose from the division of the strength of the empire by daring but unprincipled men, who merely consulted their own selfish interests. In this way they ruled the country in separate fragments, and there was no general government. The smallest among them had no more than a country or a township, the larger ones had several provinces under their jurisdiction, or had territories scattered far and wide at distances of several hundred leagues. It is correct to say that their forces could not have been more divided than in this way. In consequence of their possessing lands and people as their private property during several centuries, the customs, predilections, rules, and laws are not the same in any two of them; it scarcely seems as if they were all subject to one sovereign.

Suppose you were to travel among the territories of the small *han*, and proceed at rate of ten leagues a day, No one can tell how many changes in the administration, circulating medium, amount of wealth or of power, in the customs and languages would meet you. How is government to be successful under such conditions?

Long ago the Hôjô family exterminated the Mongol robbers in the western sea. At this moment the feudal system had not received its full development. All the warriors of the Empire obeyed the orders issued by the Hôjô family. For this reason the latter could give their orders from a distance of a thousand leagues, and the magnificent exploit was performed in a moment. Had the *han* been rivals of each other, each using its power for its own arbitrary purposes, as in the present day, Tokimune would never have been strong enough to succeed, though he had headed the Empire in person.

During a time of perfect quiet in the Empire, the *han* provinces are ranged in their order, and they look up to one chief. The attendance at his Court and the general assemblies are not deficient in stateliness. To one looking on from outside there appears to be magnificence, propriety, and decorum; the laws of the three\* dynasties seem to be revived again to-day, and no sight can be more beautiful than this in a time of perfect tranquillity. But if anything should unfortunately happen to disturb the domestic peace of the country, the feet of the centipede would run in all directions just as each pleased. Instead of the Empire being a compact unit, and having all its strength at its command, we should simply have to suffer any calamity which might come upon us.

At the present moment all the free and independent countries of the five continents assert to the full their own sovereignty, neither do they humiliate themselves before each other. This is like a gigantic feudal system, but without any sovereign of all countries standing alone above them all, the most high and only venerable. Their forces are of course divided and cannot be united in one. Even supposing that there were a person who was the lord and master of all countries, it is certain that he would not be able to unite them in one, nor make them obey him, nor decide the question of life or death for them. This is what is meant by the disease of the tail being too large in the feudal system; that is to say, the vice of the Government being many-headed.

Suppose there were another earth besides ours, which came to invade our earth in the plenitude of its whole power and might, and to powder our earth to dust; the myriad countries of our earth would combine their forces and treasure, would cast from them their independent sovereignty, would become a confederation, a state banded together, like brothers in one family; would obey the commands of one sovereign lord, and thus defend themselves against the violence of the other earth. This is the condition under which alone protection against a foreign foe can be secured, and to it union is indispensably necessary. That this is the principle which ought to govern the course of events is most easy to be perceived; that this is the force which ought to guide the Empire, is easy to be comprehended.

Therefore the means by which a country can be independent, and save itself from the insults of foreign foes, is that there should be one head instead of many.

\* The Hia, Yin, and Chou, spoken of before.

Until lately our country had nothing to fear from foreign foes, and the feudal system was not without its advantages. At the present day we have a myriad for foreign countries on our hands, and we desire that the dignity of our country may not be lowered. But with a disjointed feudal system how are we to preserve the Empire intact?

Some one may say, let us not discuss the comparative merits of the feudal system and centralization. If the authority of the sovereign is effectual throughout the Empire, and the proper principles of Government are not lost sight of, the Empire will be peacefully ruled. If the right principles of Government are lost sight of, the country would assuredly be split up into fragments, even though the centralization system existed, and the evil would be the same as under the feudal system.

Sublime princes and sage rulers do not appear in every age, and it is now a long time that "virtue alone"† has been insufficient to carry on the Government; but supposing that unfortunately we had princes of only mediocre capacity, still, if the principle of a solid constitution had been devised and the government of the country thereby made easy, it would be quite possible to preserve the Empire intact. King Hsün (of Chi) was essentially a regenerator, and Confucius was one of the greatest sages in history, but they could not revive the decaying dynasty of Chou. The emperor Yün of Chin,‡ and Kao-tsung|| of the Sung dynasty, were not up to the level of mediocrity as regards talent, and yet they were able to preserve and guard a corner for themselves, and hand down their thrones to their posterity for several hundred years. This was because the system of internal rule was different under them, and because they judged that the centralization system was the best for defence against foreign attack. It is not for an insignificant person like myself to conjecture whether the present policy of the Imperial Court favours feudality or centralization; and besides to change in one moment a state of things which has endured for several hundred years is no easy and trifling matter. Even supposing that it is the intention of the Imperial Court to effect this change, it must take several years to carry out; there must be no attempt to make it a morning's work. In this age of progress, in which the distances which separate the five great continents are now very small, things are very different from what they were a century ago, when we knew no other countries besides Japan but China, Corea and Holland. Everybody who has any strength of mind at all knows that we cannot keep Japan all to ourselves, and sit down quietly to take our ease. Boys only three feet high well understand that we ought not to pride ourselves on our poor, weak, and solitary condition, and brandishing an empty fist, look upon foreign countries as our enemies, when they have given us no occasion to do so.

Since the ancient Bakufu (government of the Shōguns) misgoverned the country and brought the national credit into contempt, the empire has been thrown into confusion. The supreme authority has returned into the hands of the Imperial Court, and in perfecting the restoration of the ancient régime it has been naturally impossible to entrust to other hands the duty of working to develop our resources, the responsibility of home government and of foreign intercourse. His Majesty has to plan how to preserve equality with the rest of the world, how to protect and assure the national dignity, how to nurse in tranquillity the people of the whole country, and how to preserve the divine provinces entrusted to him by his ancestors.

Even during the period when the government was entrusted to the charge of the Bakufu, the Imperial Court naturally felt anxious for the welfare of the State. And now, when both domestic and foreign affairs, of various degrees of importance, are again administered by the Imperial Court, that anxiety becomes still greater, nay, is double what it was. Wherefore the personal superintendence of the affairs of the Empire by the Imperial Court consists not in appropriating the whole

authority; it merely consists in planning the tranquillity of the Divine Provinces. Leaving aside for a while the question whether it is the intention of the court to centralize or not, it has to do this; simply to unify the strength and wealth of the empire, to provide against the danger of dismemberment, to bring all hearts into accord, to wash away the old habits of vacillation, to advance into the regions of enlightenment and civilization, to break down one-sided and obstinate shallow views, to set up the great pattern of freedom and independence, to repair the deficiencies by which we fall short of foreign countries, and to maintain those superiorities which we possess over them. Thus the object on which its eyes are set lies abroad and not at home; and the work to which it has to lay its hand begins with domestic arrangements, the effect of which must extend to our foreign relations. What else can it have to do but to protect the national dignity, and to endeavour not to bring the national credit into contempt.

Since His Majesty has taken a direct share in the Government we have been expecting that the most earnest endeavours would be made to establish without delay the best possible rule. During the last seven hundred years the Empire has been like a man afflicted with paralysis. The business of to-day requires that this general decrepitude be reinvigorated. The five continents are all marching in the path of progress; our country must to-day commence what it did not possess in antiquity. The world deplores the hurried reformations which are made, because it does not understand the reason why they are necessary. This might be compared to advising a man, the performance of whose duty depends on his rising early in the morning and lying down late at night, to lie down flat on his back and let his four limbs be idle. Is not this a mistake?

Since the return to the ancient régime, the footsteps of the empire have advanced an inch, only to fall back again the same distance, and it cannot get away from the point where it originally was. What is the reason of this? It is because the strength of the Imperial Court is limited, and the mind of the Empire is full of obstinate prejudice. I will try to point out roughly what the obstacles are. The forces of the Empire are in themselves great, but nothing can be weaker than their divided state; the wealth of the Empire is in itself multitudinous, and nothing can be more poverty-stricken than its divided state. Suppose that houses which possess each a hundred pieces of gold are working their business; they cannot give so much effect to their efforts as a single house which possesses a thousand. Ten provinces of ten thousand *koku* each, organizing their military forces separately, cannot effect as much as a single province of a hundred thousand *koku*. Since the wealth is divided, the forces cannot have the effect proportioned to their amount. Three hundred *han* divide the Empire between them, and the Imperial Court is but one amongst them all. It is merely a little bigger than the rest of the clans. The wealth of the Empire amounts to twenty millions of *koku*, of which the share of the Imperial Court does not exceed seven millions; the remaining ten millions and odd are scattered here and there, and divided into several hundred parts. The *Samurai* of the *han* eat seven million *koku*. Thus the wealth of the Empire is divided in three, between the Imperial Court, the *han* and the *Samurai*.

In the year of the dragon, (1868) the four *han* of Satsuma, Chōshū, Hizen and Tosa led the way in restoring their registers to the throne, and the princes of the Empire were thereupon converted into *Chiji* of *Han*; they have been placed on the same footing as the *Fu* (cities) and *Ken* (domains), and there is nominally one government formed of a combination of elements. This is supposed to be a reunion of the wealth and forces of the Empire in the hands of the Imperial Court; and yet if we consider what the actual fact is, we shall find it is the same condition of things as before. The property of the three hundred *han* is applied to their use only, and the Imperial Court cannot make use of even a hundredth part of it. In every *han* the offices are hereditary. Everything from the homage of the *Samurai* and common people, the management of the wealth and resources of the clans and the

† Menc. Bk. IV. Pt. I. Ch. I. § 3.

|| Kao tsung 1127. end of dynasty 1279.

command of the military forces, down to the direction of the administration and the enactment of laws, is considered a private right appertaining to each individual clan. The authority of the Imperial Court is confined to the *Fu* (cities) and *Ken* (domains), and in the *Han* (clans) there is nothing but the mere semblance of submission. The clans never refuse to obey the orders given by the Imperial Court, but they never carry them out. The Imperial Court desires to bring forward the talent of the whole Empire and appoint it to office; but in the clans the offices continue to be hereditary. The Imperial Court desires to make use of the wealth of the Empire in order to provide for the requirements of the whole Empire; but the clans still have their system of hereditary pay. The Imperial Court desires to organise the military resources of the Empire, but the Samurai of the clans, who enjoy hereditary pay, are all soldiers; soldiers in name, but without the reality. Out of the ten thousand Samurai, there are not more than twenty or thirty per cent. of effectives; the remaining seventy or eighty per cent. merely turn up their eyes gratefully and eat. The object of the Imperial Court is to recruit among the four classes of Samurai, peasants, artisans and tradespeople, and by selecting those who are most fit for the duty, to form an army of well disciplined troops; but it has no funds wherewith to feed them. Seven million *koku* are devoted to feeding the sham soldiers of the Empire, and none of them are fit to fight in earnest. Besides, the method of drill and instruction, and the system of pay and rations is different in each clan, and there is no uniformity. Should we unfortunately ever be exposed to foreign aggression, what means would the Imperial Court have at its disposal for the protection of the country? And yet the Samurai of the Empire are not in the slightest degree ashamed of their disgraceful conduct in sitting quietly down to eat seven million *koku*. Is it that their consciences approve of it? It is the system in all the clans which makes them act thus.

The Imperial Court wishes to assimilate the land tax throughout the Empire to one standard, but the clans do not care about it. It desires to establish a uniform law of land tenure, but the clans do not care about it. It desires to have one system of official appointments for the whole Empire, but the clans do not imitate it. It desires to establish a uniform currency throughout the country, but the clans have all different currencies. Not only is it different in each case, but they counterfeit and forge, and try to make the Imperial Court bear the responsibility. The Imperial Court desires to have one system of instruction for the whole of the Empire; and each clan has its own system. The Imperial Court desires to enact a uniform code of penal laws for the whole country; and each clan has its own separate code. Every means of strengthening and enriching the Empire is thus entirely beyond the power of the Imperial Court, the whole system of civil and criminal law is torn and divided and wanting in conformity.

What the Empire absolutely stands in need of is wealth and troops, and the Imperial Court has no means of obtaining them. Alas! is it not a hard position to be in? Some one will say the treasure is in the hands of the clans and the Imperial Court derives wealth therefrom. The troops are in the hands of the clans, and the Imperial Court leans upon their power. This is the view taken by retrograding Chinese scholars and men of ordinary learning. The treasure ought to be in the hands of the Court and the clans to derive profit from it; the troops ought to be in the hands of the Court and the clans to lean on its strength. For troops and treasure are advantages which ought to be fairly shared by the whole Empire, and it is the fundamental principle of Government that these should all be united. Just try to think about it. The Empire ought not to be left one day without an army. At present the necessary funds are wasted, men of no use to the Empire are supported, and the name of troops is given to them in defiance of reason. The essential principle of an army is not that it should be numerous but that it should be well trained. It is not that the troops of the clans are few in number, but they cannot get rid of the old abuses which have soaked into them; supineness has become consecrated by precedent, and

there are few who can be rendered effective soldiers and made of use. Under the pretence of being troops, they eat up the bread of the troops. The Imperial Court cannot sift them and make a selection from them; and it has nothing with which to feed new levies of efficient troops. The latter are what the Empire cannot dispense with for a single day, and yet, although we know their uselessness, we cannot reform the former. This evil arises from not having a uniform principle of action. It is not only the Imperial Court which is affected by this evil; all the clans and the whole Empire must also suffer from the disease. This is sufficient by itself to prove all the rest.

Such is the earnest desire of the Imperial Court to obtain wealth and strength, and yet up to the present time the Empire has refused to consent. This is how the strength of the Court is limited, and shall we not say that the mind of the Empire is full of obstinate prejudice? The people of this Empire cannot comprehend the current of the events of ancient and modern times. They fancy the Court is merely enamoured of novelty and fond of hasty reforms; they are soaked to the core with old habits of mind, they are obstinate in their prejudiced views, they only think of their own personal and family advantages, and know not how to sympathize with the griefs which oppress the state.

The Empire is like a man's body. The head is the most important part of the body. If the brain be diseased, the limbs and the bones cannot move. The Court is the brain; the Empire is the limbs and the bones. Suppose now that disease and outer pestilence come to attack it, if the court which is the brain cannot be protected, how can the limbs and bones be preserved by themselves? A verse of poetry says:

"Though brethren squabble by the fence, they resist aggression from without."

This is speaking merely of our ordinary state of affairs; but when we come to affairs of state, we find that foreign aggression usually takes advantage of domestic disputes; in the twinkling of an eye a hundred misfortunes burst forth, against which there exist no means of defence when foreign aggression is threatening. If Sovereign and subject mutually preserve their selfish sentiments and the state be thereby brought to destruction, there will be no opportunity for domestic squabbles, even if any one desired them; still less would it be possible to resist aggression from without.

When the late Bakufu (the Shôgunate) did not obey the Imperial court, two or three clans fortified their provinces and assisted the Court. Why was it that the Court was then supported by two or three clans? It was because there were people in this country who resisted the Court. Thus two or three clans were able with their two or three provinces to decide on the fate of the Court. But now when the Shôgunate has been abolished, when the Imperial Court has grasped the general government and finds itself in the face of myriad foreign countries, the two or three clans are no longer able to give weight to the Imperial Court; and the Court cannot make itself of weight in the Empire by the aid of merely two or three clans. Unless the strength of the Empire be united and combined into one body, it cannot be maintained in security. Why? Because it is no longer opposed to a domestic antagonist, but to a foreign one. It is not that the Imperial Court is not earnest and faithful, or that the two or three clans have no weight; it is because the state of affairs has enormously altered both internally and externally, and the aims of the Empire are not the same. It is therefore impossible under present circumstances to preserve our independence and sovereign rights, and the strength of the Japanese Government is broken; in consequence of which the whole country suffers from disease; and in spite of the men of the present time desiring to keep their wealth to themselves and enjoy the advantage of it, they cannot do so.

The four clans, in returning to the Crown their registers, showed that they had profoundly appreciated the tendency of events in the empire. They desired to lead the empire, to wash away the old habits of several hundred years, to assist and support the Imperial Court, and thus to renovate the national *prestige*. But during the

two or three years which have elapsed we have not seen any great act worthy of being considered the successor of that one. During last year the clans of Yamagata (Midzuno) and Morioka (Nambu) resolutely resigned their Chiji, and prayed that they themselves might be abolished. Wakayama (Kishiu) has made great changes in his provinces: the Chiji has vacated his castle and retired to his private residence; he has demolished the temple of his ancestors and removed the monuments of his founder to the family shrine; has amalgamated the *Samurai*, agricultural, artisan and trading classes and has equalized their burdens; has selected men of talent from amongst the mercantile and medical professions, and has raised them to a share in the administration. The *Samurai* of Naegi (in Mino) have all resigned their hereditary pay, and have been reinscribed on the agricultural register. Nagaoka Clan has been abolished; the Clans of Mariyama and Ohama have been amalgamated. Although the changes made by each of these clans are not all of an equally decisive character, they show that in principle they have well weighed the spirit of the times, have understood the difference between the public welfare and private interest, have kept in view the necessity of establishing the Imperial Court and of supporting the Government, and have thus maintained right principles. Truly they have sufficed to be an example to the Empire. I cannot help being privately of the opinion that if all the men in the Empire would imitate these sentiments, the Empire would really become rich and strong, without having to wait so long as a hundred years.

A short time ago the *Samurai* of the *Kochi han* (Tosa) were released from their civil and military functions, and amalgamated with the common population. Pay-bonds were made out, and given to the *Samurai* for their livelihood. The troops were selected from the *Samurai*, agricultural, artisan, and mercantile classes, and the pay of the *Samurai* cut down in order to feed the troops. The whole province underwent a transformation, which was expected to extend over the whole Empire. I believe that in this way at last the restoration of the registers to the crown has been rendered genuine. Ah! Each of the myriad countries of the five continents, numerous as the checkers on a board or the trees of a forest, polishes and exerts its strength, and endeavours thereby to obtain the glory of being free and independent. Just lately war has broken out in Europe, and France and Prussia have been fighting a long time. It is also said that disputes have arisen between Russia and Turkey. The state of Europe affects the whole world, the changes at the remotest end of the ocean are scarcely to be calculated. What an age is this! The return to the ancient régime is beautiful only in name, and the reality has not yet been brought to pass. The inhabitants of this Empire look upon each other's prosperity or misfortune with the same indifference as the men of Chin looked on those of the men of Yue. Is not this because of the one-sided prejudices which deform their minds? More than this, men who obstinately maintain the views of their own little corners, as if they had eyes no bigger than beans, and know nothing of the political questions which concern the whole Empire; who are ignorant of the changes which have taken place in all ages, who look on great principles as small; and who fancy that proposals for the public welfare are prompted by private selfishness, are spread widely through the Empire. They talk of "closing the country" or of "expelling the barbarians," and living in the present age wish to go back to the principles of ancient times. They unite in gangs and delude the foolish people. The foolish people may be forgiven, but as for those who give themselves airs, who are recipients of the respect and reverence of the Empire, and who might share equally the blessings of peace with the rest of the nation, they cannot be forgiven for stirring up excitement. They care not what is the high intent of the Imperial Court, nor what the condition of the Empire, nor what the work which the times requires. On the contrary they brew infinite trouble and calamity for the Courts, and wound the energies of the Sacred Provinces. They believe in their own ridiculous one-sided views, and are ignorant of the changes in the spirit of the times which have come upon them unawares, and of

the fact that they themselves have fallen far behind the age. Their stupidity is worthy of our commiseration. Their idea of plotting against their country may be compared to that of the whelk who fancies to keep himself safe from harm at the hands of men by shutting the lid of his shell, and does not know that he is lying in a fishmonger's shop; the conduct they pursue for their supposed advantage may be compared to that of the wily rat, who builds his nest, and then gnaws at the foot of the post, without knowing that the post will fall and kill him. I pray that Japan may not become like the whelk, or its people like the wily rat; that they will look on the whole country as one with their own bodies, that they will sympathise with its pains and sufferings, and will obey the wishes of the Imperial Court; that the Imperial Court on its side will abate its haughtiness, will tread in the just principles of heaven and earth, will open its eyes and ears to every quarter, will be ready to listen to every petition and look on all classes with the same benevolent feelings, will act with perfect sincerity, and convince the hearts of all of its honesty, will keep up its own dignity, and so vindicate the laws; will neither hesitate nor prevaricate, will clearly make known and firmly adhere to those principles which the good of the Empire absolutely renders necessary; will not be shaken from its purpose, or stoop to shifty compromises, will not be satisfied with a delusive calm, and will thus seek the means of placing Japan on an equality with all nations; that high and low may be of one mind, and the principles of justice and right be practised in perfection, thus going before the good laws of the Divine Ancestor. Of old, King Wuling of Chaou, took to wearing the light clothing of the barbarians, and made his country strong. Let the Japanese now become as ardent and as earnest, and be animated by the same feeling as he was; let them not ask whether the intentions of the Imperial Court are in favour of the centralization system or the feudal system, but let them fully appreciate the banefulness of the last and the excellence of the first; let the forces and the treasure of the Empire be concentrated, let each give up the exclusive interests of his own person or family, break through all obstinate prejudices, use his endeavours to support the government of Japan, and thereby maintain her honour as an independent and sovereign state. Let every man in the Empire live by his own exertions, let us have no more eating the bread of idleness; and let us have no useless people. Let our troops be well organized, our treasure sufficing: let production increase daily, let new mechanical appliances be daily brought into use, let learning advance daily, let knowledge be daily extended, so that His Majesty's rule may be supported, continued to all future ages, and made to shine beyond the seas. This is the object of the Imperial Court, this is the most pressing duty Japan has to perform, this is the principle which ought to actuate Japan, this is what the honour of Japan requires.

#### Postscript.

I do not know who Seibioshi (the author of the pamphlet) is. A friend of mine bought this pamphlet in a shop, and sent it to me. I found the matter and the style were not of the ordinary sort. It seemed to display great sympathy for the feelings of others; and there is a tone of indignation and dissatisfaction, and a feeling that the world is wrong, running through it. Perhaps what is so well put forth cannot be equally well carried into execution. But it is easy to see that it is not merely a re-echoing of other sentiments by one who feels no pain himself. I copied it out, and placed it on my table, and praised it with participants in my own likings, desiring to make the reputation of the author.

Read attentively and afterwards copied in the end of the winter of the year of the horse (1870) when the falling flowers of the late plums at Yûgenau (the "obscure cottage") were floating white around.

The Student of three Provinces.

The undersigned publishes, for the information of British subjects in Japan, the following translation of a note from the Japanese Ministers for foreign affairs, which

instructed to avail themselves, to the utmost possible degree, of the opportunity which this Exhibition will afford them of studying the industries, the products of the arts, and sciences, of Europe, and the condition of European progress, so far as it can be inferred from the Exhibition. But they must go as students, not as loungers and idlers. Every means must be taken to secure to them such services as shall make their visit instructive and useful, and instil into them such ideas as shall render it not only a source of temporary gratification, but the means of benefitting Japan on their return. They must remember the Prater and the spire of St. Stephen's in connection with the greatest lesson of their lives, and endeavour to apply this to the advancement and enlightenment of their own country.

#### RECENT PROCEEDINGS IN THE U. S. CONSULAR COURT.

THE amount of power entrusted to the executive officers of the United States government is very large; larger than it is with us, and than we should consider compatible with our strong sense of personal freedom. But the theory which confers it is not without advantages, and sometimes gives strength to the executive when under similar circumstances our own would be deficient in power. But when abused, and when this abuse is justified by judicial sanction, it becomes a terrible instrument of tyranny. An occurrence of Saturday last illustrates this, and must not be allowed to pass without notice. It was shortly as follows.

WM. M. DAVIS, the deputy-marshal of the United States Consular Court, who, we believe, is a retired prize-fighter, and whose name may be familiar to the public in connection with a charge of biting a man's nose off on the occasion of the last regatta, (*vide Japan Herald* June 29, 1871) was directed to arrest a man named MCGREGOR on a charge of misdemeanour. MCGREGOR, who had the character of being a violent man, who had previously been in prison, and had, as was alleged by DAVIS, expressed threats of violence against any one who should arrest him again—although MCGREGOR denied this latter allegation—was in a boat in the harbour, and heard his name called. He turned and saw DAVIS in company with another man whom he had brought to assist in the capture. DAVIS swore that MCGREGOR said he would bed—if he would come, but MCGREGOR denied this, and KENT, the other constable with him, also denied having heard it. DAVIS did not read his warrant to MCGREGOR, and did not even show him the warrant until long after the arrest was made; he simply called on MCGREGOR to follow him. To this MCGREGOR appears to have made some demur, surely not unnatural under the circumstances, upon which DAVIS jumped on board his boat, and, unjustified by any show of resistance, at once struck him over the head with his stick, which was broken by the force used, struck him subsequently with his fist, and then threw him bodily into his own boat and took him on shore. The attendant policeman seems to have remonstrated with him for this outrageous violence, but not apparently with any effect. All this is strange enough, but stranger still what follows. MCGREGOR brings a charge of assault against the deputy-marshal in the United States Court, and the charge is dismissed on the ground that MCGREGOR, being within the knowledge of the Court a

violent person, the officer was justified in guarding himself against any possible, (not any offered) violence, by stunning the man first and arresting him afterwards! The only evidence of MCGREGOR's violent character was that on a former occasion, when arrested by the deputy-marshal, he threatened the latter. What power the American law may confer upon a deputy-marshal we know not, but we cannot congratulate ourselves too heartily that we are under no danger of becoming subject to it. A more outrageous and unjustifiable proceeding never was recorded. Both it and the charge that arose out of it are calculated to excite the gravest misgivings in American subjects, and as such we have called attention to them. According to the law of England and all European States, a police officer may only use violence to prevent a crime or retain a prisoner endeavouring to escape, and even then only when violence is necessary. The previous ill character of the person arrested, however bad it may be, is only one fact among others by which violence may be shewn to be necessary upon a justifiable occasion, and is no excuse whatever for violence used upon an occasion not justifiable. American subjects are nearly concerned in this matter, and were it to pass unnoticed, there is no saying to what lengths force might not be resorted to in carrying out the behests of the United States Court on future occasions. We are willing to think that the extreme jealousy which characterizes the view of Anglo-Saxons in respect of personal liberty and the infringement of it by officers of the executive, may be somewhat relaxed by distance from the hearth of their institutions. In England such a case could not occur without raising a spirit which would make itself heard from Land's End to John O'Groat's house, and if we know anything of the tenacity with which many of our old traditions are still clung to in America, a strenuous resistance would be offered there to proceedings so arbitrary and tyrannous. But here we require, perhaps, to be reminded that they are so, and on this view the subject has been taken up.

We cannot afford to omit the last scene of this curious drama, though it descends from the large subject of the freedom of the subject to a purely ridiculous and farcical anti-climax. Mr. DICKINS, who conducted the case we have referred to above, was called before the United States Court, as an officer of it, for contempt, and the evidence before the Court shows clearly that the only ground for this proceeding was, that Mr. DICKINS, after the case was ended and the Court adjourned, made a remark in answer to some question from his client or one of his client's friends, from which a bystander inferred disrespect to the Court, which inference he repeated at a hotel table d'hôte. This by-stander could not swear to the words used, except that he had heard the word "justice," and Mr. DICKINS was dragged up before the Court, to answer, not for any words uttered by him, but because a particular person made and repeated a particular inference from a remark made by Mr. DICKINS in answer to some question which witness did not hear. Our only astonishment is that Mr. DICKINS should have thought it necessary to appear on such a purely frivolous and vexatious charge. The United States Chargé d'Affaires said something about "the dignity of the Court" being maintained, nor is it much our business to put him right as to the best means of maintaining it. But he may rely upon this that the

dignity of the Court will be little assisted by such proceedings as we have recounted, proceedings which are utterly at variance with the spirit and manliness of the Common Law of England and therefore of the United States. This law has been the defence of twenty generations of Englishmen against the tyranny of kings and their nominees. It was the most precious inheritance which their alienated American children received from them at the time of that separation, which, but for perseverance in a demonstrated folly, should have come in peace and and by mutual consent. American civil servants indeed, by reason of the very variableness of their fortunes, should be the most jealous to guard against any infractions of this noble code of laws. They are soldiers to-day, consuls to-morrow, civilians the week afterwards, and Heaven knows what within the next six months. If Englishmen have every interest in jealously guarding their rights against oppression, much more have Americans who may at any moment become the objects of those very laws which they are fortuitously called upon to administer. If Mr. SHEPARD wishes to produce the idea of dignity in connection with the Court over which he presides, he will do well to order its proceedings in such a manner as to avoid the criticisms which his utterances in it have already called forth now on more than one occasion, and to see that in future they are conducted with due regard to the spirit of a tribunal which has at least this merit in it, that it administers laws which are fundamentally English in their spirit and incidence.

Addison somewhere tells a story of a little girl whose ordinary demeanour rendered her a general favourite, but who suddenly surprised her parents and friends by exhibiting a singular and unaccountable arrogance of manner. The cause of this eluded all their sagacity, until it was found, on putting her to bed, that she had been wearing a new pair of garters all day. The anecdote seems to furnish a moral not inapplicable to the proceedings which have elicited from us the preceding observations.

### JAPANESE NOTES.

The *tan* (of 300 *tsubo*) of arable land pays a tax of about half a *boo* annually, half in summer and half in autumn; and sells from 10 to 15 *riō* according to quality. Rice land is much dearer, because its produce is more valuable and it requires less labour. The tax per *tan* is about 5 to 2 *shō*, or about 3-10ths of the actual produce. The estimated produce is 13 *to*, 11 *to*, or 9 *to*, according to the quality of the land, about one half of which is paid as tax. The *hata* or arable land is estimated to produce 7 *to*, 5 *to* and 3 *to* of rice. These figures only apply accurately to one village, and vary slightly in the case of every village all over the country. The rent and value of hill or forest land, which is not ploughed or sown are immensely less than in the case even of arable land. The owners of the land can build as they like, without applying to the lord of the soil for his permission, so long as the consent of the other villagers is obtained, but objection is usually made to building on fields, because the allotments are so small that a house erected on one of them would keep the sun from the crop in the next. The houses of the peasants are therefore usually erected on what is called *yashikichi* or building land, which pays a slightly higher tax than arable land. It is estimated that an investment in paddy-land brings a profit of about 8 per cent. per annum to the cultivator. The sale is unrestricted. Rice land is about five times as valuable as arable land.

In reply to a question whether the government could not resume possession of the land at will, the *murayakunin* replied with much indignation that though it could act arbitrarily in almost anything else, it could not touch the lands of the pea-

sant, which were his absolute property. The upper classes were dependent on the lower, not the lower on the upper. If the peasants did not cultivate the land the upper classes would simply starve.

I asked whether they had found any change in their condition since the restoration. He replied that the only difference was that the *Okura shō* was vexatiously particular about the quantity of rice paid in as land tax. He confirmed what I had observed about the erection of schools in the villages, adding that there was to be one near enough for every child to attend. He agreed with me that they were dirty and ignorant, and that they did nothing but play from morning till night.

The *nanushi* or mayor, and the *murayakunin* collect the taxes and pay them into the local treasury, and circulate all notices and proclamations of the government. Civil and criminal cases all go before the local authorities, the mayor and his subordinates merely arrest the offenders. The peasant can appeal always to the *kenchō* against the proceedings of the *nanushi*, so that the authority of the latter is very little. Marriages are reported to him simply for record.

### HISTORY OF THE HOJO FAMILY.

A FRAGMENT FROM THE NIHON GUAISHI OF RAI SANTO.

(Concluded.)

Yasuiye having thus sent away Moritaka, desired himself to escape. He disguised himself as a man badly wounded returning to his native place, lay down in a mud-basket, and covered himself with blood besmeared garments. Nambu Kageiye and Date Tadahira bore him on their shoulders, and made two common soldiers ride on horseback to show the way, with the crest of the Nitta family tied on to them. The flight was into Mutsu. The rest of the troops, amounting to over three hundred men, judging the journey too long, set fire to the palace, and killed themselves. The Nitta people arrived, and fancied that Yasuiye was already dead. Kamakura and Rokuhara were thus completely destroyed within fifteen days of each other.

Tokinawo, the Governor-general (Tandai) of Nagato, was the fifth son of Tokefusa. He was attacked by the Doi and Tokuno families. He put to sea and fled eastwards. Hearing that Takatoki was dead, he desired to return to Tsukushi.\* The Governor of Tsukushi, Hojo Hidetoki, had been attacked and killed by Sadatsune the Shoni.† Tokinawo sent in his submission through Sadatsune. His life was spared, and his fief restored to him; shortly afterwards he fell ill and died. Aikawa Tokiharu was the grandson of Tokifusa. He had before this collected men in Echizen and had obstructed the Hokurikudo.‡ After the death of Nagoshi Tokiari, Governor of Etchū, in battle, the priest troops of Hiraidzumi came and attacked Tokiharu. Tokiharu with his wife and children committed suicide. The destruction of Tokinawo and Tokiharu happened in the same month as that of Kamakura and Rokuhara.

This month Kisaragi Takanawo, Nikaido Sadafuji, Nagasaki Takasuke and others raised the siege of Chihaya, and retreating, garrisoned the southern capital. In the seventh month, they planned an attack on the capital. The loyal forces came and attacked them. Takanawo and the others shaved off their hair, and gave in their submission. Their heads were cut off on Amida mine. As Sadafuji on a certain occasion had remonstrated with Takatoki, his life was spared and his fief restored to him, as a special exception. Shortly after he plotted treason, and was put to death.

In the following year Akahashi Shigetoki, the Buddhist priest Kempo and the Homma, Shibuya, Kikū, Itoda and other families all arose together; they were all defeated, and died. But Yasuiye came secretly from Mutsu to the Capital, where he found shelter with Fujiwara Kimmune. Kimmune was a descendant of Kintsune, and had relations with the Hojo family of old date; they closely watched the Imperial Court together. At this time the Court was misgoverning, and the soldiers and people of the empire thought with regret on the Hojo family.

\* The present provinces of Chikuzen and Chikugo.

† Of the Dazai.

‡ The strip of country along the north coast from Wakasa to Echigo.

Yasuiye hereupon let his hair grow and changed his name to Tokioki. At this time Kijiu was in Shinano, and he also changed his name to Tokiyuki. They agreed on a date for attacking the capital. The affair became known. Kinmune was punished with death. Tokioki escaped and fled away, and the end of him was never known. But Tokiyuki together with Sawa Yorishige called their partisans and old adherents, and in ten days obtained fifty thousand men; [with these] they marched eastward and attacked Ashikaga Tadayoshi in Kamakura, whom they put to flight. Takanji came from the capital to attack them. Tokiyuki sent Nagoshi Tokimoto in command of thirty thousand men to meet the attack. As he was on the point of setting out a great gale broke the roof. Tokiyuki again had the day fixed by divination, and marched night and day. They fought at Hashimoto. Many of the rear guard decamped. Now they fought and now they retreated, and they encamped with the Sagami river between them. The water was just then full to overflowing. Tokimoto took no precautions. The Ashikaga family crossed during the night. Tokimoto was severely defeated, and fled back with three hundred men. Yorishige caused Tokiyuki to escape, and then, with more than forty others, flayed his countenance and killed himself. The Ashikaga people arrived, and thought that Tokiyuki was already dead. Tokiyuki raised troops, but was defeated after twenty days. The world nicknamed him "the last generation of twenty days."

When Tokiyuki arose, Nagoshi Tokikane also arose in the northern provinces, but when Tokiyuki was defeated, he was attacked and destroyed by the Kaga officers. In the 2nd year of *Yengen* (1337) Tokiyuki sent a messenger to the Emperor's temporary residence at Yoshino, and memorialized him, saying: "Your Servant's father submitted to the punishment of heaven, and your servant bears no ill-will therefor. The person against whom he bears ill-will is Ashikaga Takanji. For generations his ancestors have received favours from your servant's family, and in the end has revolted against them. And now also he troubles the Son of Heaven. Your servant prays that he may be allowed to subjugate Takanji, and so atone for his father's offences." The Emperor made a decree, granting permission to do so. Thereupon Tokiyuki set out from Idzu with five thousand men; followed (the banner of) Minamoto no Akiye, general of the loyal forces, attacked Ashikaga Yoshinori at Kamakura, and put him to flight. He retired as far as Mino, and fought with Uyesugi Noriakira at Awonobara. He fought his way onward to Idzumi. When Akiye was defeated, he got at last to the Emperor's temporary residence. He was appointed Sama no Gon no kami. In the third year (1338) he followed the banner of Muneyoshi Shinno to Totomi, where he attacked and defeated Imagawa Noriuji at the posting-station of Hikuma. Following the prince, he sought shelter with Ii Takanari: nor is it known how he ended.

The author of the *Guaishi* remarks: The Hojo family was to the Minamoto family what the Fujiwara family was to the Royal House. Both families possessed themselves of the realm as they sat on the mats, without being obliged to have recourse to arms. Why was this so easy to them?

Human nature knows perfectly well that it is right to love one's kindred, and yet on reflection imagines that no persons are so fit to be relied on as connexions made by marriage. Hereupon (men) curb and weaken the influence of their brothers and keep their other relatives at a distance, fancying that by so doing they ward off trouble

blood to fight and cut off their own hands and feet. They secretly grasped and silently stole their power, whilst pretending that they had never moved a hand. When they succeeded in obtaining the power, they were still only coadjutors and advisers, and did not venture to occupy the seat themselves.\* They refused the name and kept the reality. They threw away the profit, while they grasped the handle, of power. In this way they prevented the Empire from having any pretext for censuring their conduct. Their descendants preserved the policy bequeathed to them, and added thereto many refinements. In the end they succeeded in making the deposition and elevation of the Sovereign, and the action of the regent, to depend entirely on themselves; but they pretended that these things concerned them not, and that they took such measures as they did, in spite of themselves. This was the hereditary policy of the Hojo family, and the means by which they were enabled long to hold the balance of the Empire.

When we come to discuss the care bestowed by them on the interests of the people, we find it was such as has been seldom seen in the military families which preceded or followed them. For they were aware that their wickedness and treason were such as neither men nor the gods could pardon, and, fearful for the consequences, they manœuvred by this means to atone for the former. This was especially so with Yasutoki. The opinion ordinarily held in the world is that it is impossible to find a flaw in Yasutoki's conduct. My opinion is that Yasutoki was the ringleader in the crime of *Shokiu* (1219-1221). Why? Because, if Yasutoki had really been as virtuous as tradition represents him to have been, then when he had put an end to the calamity [which had befallen the Empire], surrounded the throne with a large force, and every great measure without exception proceeded from himself, nothing would have stood in the way of his regulating a right the intercourse between the court and the Bakufu. He could have led them by reason or have constrained them by force. He never gave a thought to this, but led his father into the commission of great wickedness. Even though his administration were good, how could it atone for his crimes? Thus we see how to appreciate what the old histories tell us, namely that Yasutoki counselled his father to present himself before the throne and offer his submission; but that the latter refused that. That when Yasutoki was about to set out, he asked what he was to do if he met the Emperor at the head of his army, and that the reply was to submit in that case; but otherwise, to advance resolutely. All these statements are simply embellishments of a crime, and are unworthy of belief. When we come to consider his elevating Go-Saga,† to the throne, we find that the motives of that act were private feelings of gratitude and resentment. Those who discuss these matters, say that this event was decreed by Heaven and in accordance with pure reason: which again is giving [the Hojo] more praise than they deserve. Of the seven generations of the Hojo family, the only one who can be said to have resembled a human being in his conduct is Yasutoki; all the rest were serpents and fiends; it is not worth while to pass censure upon them. It is related by somebody that Yoshitoki punished a certain Fukami with death, and took his son into his private employ; in the end he was killed by this person.‡ This is likely enough to have been the case. In ancient times Taira no Kiyomori and Minamoto no Yoshinaka both levied troops and strove with the ex-Emperor, simply with the object of expelling slanderers from his confidence, and nothing more. They never were bold enough to carry out a design which involved his confinement in prison; still they did not escape punishment and destruction. Yoshitoki was a traitor such as has never been surpassed; but he was able to avoid the reputation of a traitor with the world. Heaven borrowed the hand of his retainer to kill him. His descendants fell under the axe of the Nitta family, who raked out their lurking place, and exter-

\* Yoshitsune's fate is here alluded to.

† They never became Shōgun, but always obtained some one from Kyoto, who became nominally the heir of Kamakura.

‡ This is not the account given elsewhere. The author thinks it possible that such a seconded should have met with such a death.

§ The justice of Heaven is tardy but overtakes the evil-doer at last.

¶ Go-Saga was a son of Tsuchi-Mikado and was set on the throne by Yasutoki because his father had not approved the attempt to destroy the Hojo. Vide *Koku Shi riaku*, Vol. III p. 4.

the Fujiwara family ever attained to. They made flesh and

§ Acting Master of the Horse.  
¶ Prince of the Blood.

minated the ugly brood. The net ‡ of heaven is wide; its meshes are coarse, but it does not let anything escape. We cannot refuse to have faith in it.

The author of the *Gnaisi* remarks: The repulse of the Tartar barbarians by Tokimune and his preserving the dominions of our son of Heaven were sufficient to atone for the crimes of his ancestors. For the barbarians came here to practise on us the arts of intimidation which had been so successful with the Chao of Sung. ¶ We sent back their envoys and refused to admit them. Up to this moment there was no question of which was right and which was wrong. When they came with troops to attack us, and wasted our frontiers, then the wrong was on their side. Their envoys came a second time. We were obliged to arrest them and put them to death; we broke their wicked pride, confirmed the resolves of our own people, we robbed them of their self-confidence, and awaited their attack, ready to die if necessary. After this the dealings of the Kikuchi family alone with the Ming were almost equivalent to engaging in actual warfare. The Ashikaga Family bent the knee and looked abroad, a course ineffably base. The Toyotomi Family|| well avoided disgracing the national honour, and in that surpassed the Ashikaga Family a myriad, myriad fold. But when we come to look at its fighting with the Ming, we find that while it displayed great powers, on the other hand there was trouble and sorrow at home. Although the powers required for attack and defence are very different, yet it did not come up to the Hojo family. The Hojo Family's plan was to stand on the defensive by setting men on the spot, and not to call out unnecessarily large levies; nor did it allow its military necessities to be mixed up with the ordinary expenditure.\* It left everything to the leaders, and did not direct their movements from the centre. In fighting the plan was to hold the shore and draw the enemy on, to go to attack them in swift cutters, and for the troops lightly armed to fall on them at close quarters, all of which tactics should serve as a pattern for later ages. I once saw a book which had been inherited by a Samurai of Kiushiu, entitled "Roll depicting the invasion of the Tartars." The barbarians rushed at us fiercely with cannon, and our troops brandishing their swords rushed on with alacrity, so that the barbarians had not time to fire; for at that time we had not any firearms to oppose to theirs. From this I learn that the secret of victory or defeat lies in the spirit of the men, and not in their weapons. We have a quality in which we naturally excel, and in that we should put our trust.

#### TRAVEL IN THE INTERIOR.

##### ABOUT FUJI.

Murayama is the village on the south side of the mountain from which the ascent is made. From the inn there is a fine prospect of the alluvial plain, and beyond it the sea. If the traveller wishes to tarry about the mountain, and to visit its opposite side, he will find a path from Murayama which winds up along the brown moorland, where there are no trees, and where the lava stones thickly cover the ground and the dry beds of torrents, as the road mounts. On looking backwards one sees high mountains in the distance, the highest range tipped with snow. The path then continues between Fuji and the jagged peaks of Ashidakayama, and a halt can be made at a solitary house, tenanted by a hunter and his family; finally, after about ten miles Jiurigi is reached, a miserable hamlet in a sheltered hole. A little further on, there is a wood of mountain maple, a few pine and other trees, and on emerging from it, the traveller obtains two views, one to the left, of the eastern side of Fuji, the other in front, of gently sloping land, covered with a species of straw grass leading down to a broad valley, which is backed by the Hakoné mountains, the summit of the Utô pass, on the way from Gotemba to Miyanoshta, being plainly visible. To the left in the extreme distance, are lofty mountains of the province of Kôshiu. Some seven miles from Jiurigi is the little

village of Inno, where the traveller can be accommodated at the *Nanushi's* house, and where he finds himself once more among pines, farming, habitations and human beings.

The following description of a lovely effect seen in the month of March close to Inno by two Englishmen may here be not out of place.

"Strolling up into an adjacent wood three quarters of an hour before sunset, we stood in a clearing, the mountain filling up the back-ground, and being as it were set in a frame by two trees of the *arbor vit* species. Beyond them, the middle distance was cleared ground, and then a line of dark-firs and other trees. Fuji itself, mostly covered with snow, was of a pearl-greyish colour, and where, here and there, the rock was bare, it had, owing to the peculiar inflection of the sun's rays, assumed a light colour, which blended singularly with that of the snow. But the whole thus harmoniously blended resembled a pearl of enormous size rising up into the clear blue sky. Clouds there were, here and there, but while the top of the mountain, and sometimes the whole mass that was visible, was perfectly clear, ever and anon there fitted across its surface light fleecy clouds, which, tipped with fire from the setting sun, contrasted vividly with the colour on Fuji, and added to the singular beauty of the scene. The jagged peaks of Ashidakayama were bathed in glowing red, and on turning round we could see the range of hills bounding the valley, with the Hakoné mountains towering aloft, all warming up in response."

From Inno it is a good ten miles down to Gotemba in the valley. Here are houses where the traveller can sit, and stare at Fuji whilst he rests a-while. Gotemba is so named from having been the seat of the hunting lodge of the great Yoritomo, when he came from Kamakura to hunt in the neighbourhood of the great mountain.

From here there is a choice of routes. Further on round the mountain, to Subashiri and Yoshida, both points from which the ascent is made, or across the Utô pass to Hakoné or Miyanoshta.

The road from Gotemba to Miyanoshta is already pretty well known. It is a long steady pull of from two to two and a half hours, up the of Utô pass, but the view from the summit amply repays the traveller. Fuji is displayed from head to base like a huge giant, but it is better to take this road from Miyanoshta, so as to come suddenly upon the view, after surmounting the steep zigzag ascent on the other side. On that side, to the right, are the Hakoné not in nities range a strip of the lake, and a faint outline of Idzu mountains in the far distance. Soon after reaching the bottom a little village called Sengokubara is passed, the *Nanushi's* house being only a spacious, dirty hovel. It used to possess a barrier. It is said to be three *ri* from Gotemba, and two *ri* down the valley to Miyanoshta. After following the valley for some time, a stream is crossed by a bridge from which, on a clear day, the very summit of Fuji is visible over the top of the pass. Half an hour's hard walking then brings the traveller to his destination.

In the month of March a curious sight can be seen in these parts. The hills are mostly covered with a species of straw grass, which is purposely burnt at that time, and the whole country seems in a blaze. After this burning the straw grows again, but stronger, and is eventually cut down, and used for thatching the roofs of cottages.

¶ The Sung dynasty founded in 960 R. D. by Chao Kuan-Yun and destroyed in 1279 by Kublai.

|| When Taiko Sen's forces invaded Corea the latter sought aid from the Ming dynasty, at that time rulers of China.

\* Tokimune had a war-fund.

The scenery of the road between Yokohama and Odawarra and near Osaka is well known to many foreigners both here and in the southern settlement; but the rest of the journey has been

so seldom undertaken by any that the following narrative cannot but possess considerable interest to our readers. We may mention that the journey was performed entirely on foot. The writer left Yedo *en route* for Kobe on the 15th January, and came first to Yokohama, which he left on the following day. He then proceeds:—

January 16th. Left Yokohama, and rode to Odagawa; the road to Kanagawa being very indifferent, but beyond that very good. Every preparation was made for my reception, and I rested that night in an excellent tea house.

January 17th. Bar. 30° 42; ther. 36°. Leaving Odagawa we reached Totsuka at 11.20 A.M., having walked three hours and accomplished four *ris* and twenty-nine *chōs*. The walk was most enjoyable, the road following the undulations of the surrounding country, shaded in many places by overhanging trees, and walled in by high banks thickly planted with bamboo and fir, and covered with ferns of all descriptions. In the distance were well cultivated fields; rice, corn and other grain being the principal crops. At 2.30 P.M. we arrived at Fujisawa, where the roads were in a very bad state, felled trees blocking up the path in every direction. Passing through Fujisawa we arrived at Hiratzka, the road as far as the river Banya having proved very indifferent, but improving between the river and Hiratzka. This latter is a clean and well-to-do village, and the surrounding country, which is flat, is well cultivated. In the horizon are lofty hills with Fujiyama in the distance.

January 18th. Bar. 30° 50; ther. 28°. Stayed at Hiratzka the previous night, and at 9.30 A.M. started over a fair road towards Odawarra, which was reached at about 2.30 P.M. The country between Uiesima and Odawarra was very beautiful, the road in places leading through an avenue of pines and firs, and surrounded on three sides by hills, and on the fourth by the sea. Up to this day the weather had been very fine, and the roads improving, so that I looked forward to a most enjoyable journey. At 3.45 I left Odawarra by a bye-road which outside the town became rough and hilly, and narrowed to a mere bridle path. This portion of the walk was hardly satisfactory, and it was with much pleasure that I reached, at 6 P.M., the poor village of Sekunodo, seven *ri* from Hiratzka and twenty *ri* from Yokohama. It is about 150 feet above the sea, and lies at the foot of the mountain Tagurasawa which bids fair to afford us some exquisite scenery. The kindness which I met with at every turn was most gratifying, and the utmost courtesy was experienced at every village or city, the authorities being apprised of our coming and having everything in preparation for us. As our party neared each village every one was on the *qui vive* for our approach; pack horses, carts and people were drawn up on each side out of our way, and the men removed the covering of their heads.

January 19th. Bar. 30° 60; ther. 28. At 9.30 A.M. we left the village and commenced the ascent of the Yugurasawa mountain which lies to the N. N. W. of Fujiyama. The road, which was frozen hard, afforded anything but pleasant walking, but it may be compared to many of the streets of the Hague twenty years ago—paved with round stones about four inches in diameter, which were, to say the least, very trying to the feet. This mountain is about 2,500 feet above the level of the sea, and the incline on both sides averages from 1 in 50 to 1 in 80. The ascent took us about three hours, and although I waited several times to allow the coolies to come up, yet, on arriving at the summit, they were far behind, and I lost the chance of making a good observation. This was disappointing, as I had hoped to determine the exact position of the mountain. The view from the summit was really charming; the fields cultivated in terraces up to the very top, streamlets and miniature waterfalls of clear limpid water in all directions, and here and there a clump of green trees, looking so fresh that were it not for the snow and the piercing wind it would be difficult to imagine that we were not in spring but in mid-winter with the thermometer at 26°. At the top of the mountain a small tea-house afforded us breakfast. At this house is an old woman who, as far as could be learnt from her descendants—she having forgotten almost every circumstance connected with her life except that she was once married—is over ninety-six years old.

Her name is Ketcho. She is, notwithstanding her failing memory, active and in full possession of other faculties, but she never leaves the locality, and is held in great respect by the natives. Here we changed our guard, the four who had previously accompanied us being replaced by thirteen. Having rested, we descended on the other side of the mountain, the road being very tortuous, a characteristic which, although fatiguing, had the merit of affording many changes of scenery, and finally leading through an avenue of green trees to our next resting place at Gotemba mura, twenty-five *ri* from Yokohama.

January 20th. Bar. 29°; ther. 25° 50. The weather was still fine, and starting at 9.30 A.M., we pushed onward over a vast moorland, which should offer good cover for game. The road was not good, and for two miles walking was very laborious; but it improved on reaching level ground with well cultivated fields on each side of the road. At 12.15 we reached Founkaramara; but owing to the baggage being behind I lost another observation. Breakfast disposed of, we again started, and passing through country similar in character to that last described, joined the Tokaido about two miles from Numadzu, where we were met by the authorities of the place and conducted to our tea house. We had on this day walked about twenty miles.

January 21st. Bar. 30.55; ther. 33. We left Numadzu at the usual hour (9.30 A.M.), and for the first time there were appearances of the approach of rain. The road was good, and the scenery as beautiful as the most ardent admirer of nature could desire. Our path led through avenues of trees bounded by well cultivated fields, although the villages we passed through were poor in the extreme and equally uninteresting. At Harah we halted to visit the gardens of Wiamatzu, belonging to the Mikado. They are well worth a visit, being filled with varied and curious specimens of shrubs, trees and cacti, some of them quite unknown to me. Two of these cacti are worthy of mention, one being shaped like a shrimp and the other like a tortoise. Leaving the gardens we followed our route till noon when we arrived at Kasewabara-anno and there had breakfast. This village is very poor and could only supply us with rice and eggs, vegetables being apparently almost unknown. Again marching onward we neared a range of mountains, at the eastern foot of which flows the river Fusigawa. The approach to these mountains was really grand, and the scenery through which the road passed was romantic in the extreme. At 6 P.M. we halted at Kambara, seven *ri* from Numadzu.

January 22nd. Bar. 30.20; ther. 28.35; 300 feet above the level of the sea. We started on this occasion somewhat later than usual, every one but myself being almost exhausted by the exertions of the day. A European who was with me expressing his fears of a breach established it is for the defendant to show that it occurred through no fault of his. This he has not attempted to do.

But Mr. DICKINS argues that this clause impressed on the Bill of Lading "merely contains a promise by the Captain not wilfully or negligently to refuse delivery when demanded."

This construction of the contract makes the words in question mere surplusage, for the Captain would be liable in a case like the present for some damage if he wilfully, or negligently refused delivery when demanded, when without these words upon the Bill of Lading. They must mean something and the construction is for the Court. The construction I put upon these words is this—that the master engages to deliver these sample parcels within a reasonable time dependent upon the circumstances of the ship, the harbour and many other surrounding facts. (This is substantially the same construction as seemed to be put upon the clause by Mr. Whittall).

Now it is manifest that there has been a breach of this contract. I have stated. Such is the legend; I leave my readers to judge of its truth.

January 23rd. Bar. 30.45, ther. 26.50. At 10 a.m. we started for Fujiyeda, the road being very fair, crossing the river Ahegawa. The scenery was grand in the extreme, the road traversing a series of hills, the highest being about 500 feet above the level of the sea. On the way I noticed several mulberry plantations, and I also observed traces of silkworm rearing. At 1.45 P.M. we reached Fujiyeda and found all prepared to stop the night there, most of the party being utterly worn out.

January 24th. Bar. 30.63; ther. 28.35. This morning we

started early to make up for lost time; but the roads were bad and led over hills some four or five hundred feet high, which although affording some magnificent views added greatly to the fatigues of walking. On this day I began myself to feel the effects of the journey and suffered considerably. The view from the summit of one of the mountains was superb. At our feet lay a small village where the people could be seen creeping about looking in the distance like ants. In every direction were cultivated fields with patches of green shrubs and trees; while for a background, on the one hand, were ranges of mountains with Fujiyama looming up far above his neighbours, and on the other was the sea, the rippling waters glistening in the sparkling sun-light. At 4.45 we reached Kakegawa where we remained all night.

January 25th. Ther. 28. We left Kakegawa, which appeared to be a very poor town and certainly possessed very inferior tea houses, early in the morning, and arrived at Mitzke a little after noon. The road near the town are good, but the scenery is uninteresting, the country being flat and uninviting. Breakfast disposed of, we started, and crossing the Tendugawa reached Hamamatz at 5 p.m. The country which we passed through during the afternoon was flat and uninteresting. I noticed, however, that at some of the villages tanning was carried on, while the spinning wheel was to be seen at work in almost every house. Hamamatz, where we stayed the night, was the largest town we had yet entered and presented every appearance of wealth.

January 26th. Bar. 30.61; ther. 34.50. With the snow falling heavily on every side and covering the ground to the depth of three or four inches, we started on our day's journey. I never spent a more miserable hour than when crossing a lake. It was perishingly cold, and the snow falling in gigantic flakes completely shut out all view, and added to the discomforts of the passage. However, at 1 p.m. we reached Arrai where we thawed ourselves, and leaving again at 3 p.m., when the weather cleared up, reached Yoshida at 6.45 p.m., having walked twenty-one miles.

January 27th. Bar. 30.57; ther. 30. We left Yoshida which evidently enjoys great prosperity, next morning, and crossed the river Toyogawa by a well built wooden bridge. Here, as elsewhere in this portion of the country, the fields were well cultivated, although flat in the immediate neighbourhood of the road, with ranges of hills bounding the view on the horizon. At noon we reached Akasaka, and again setting forth at 2 p.m., travelled over a good road which led along the base of a range of hills to Fusigawa, which we reached at 4.30 p.m. The town was poor and uninviting; but the tea-house was moderately good, and here we rested all night.

January 29th. Bar. 30.65; ther. 27.50. We left Chiru'u at our usual hour, and travelled through a flat but well cultivated country. At Narumi I stopped for half an hour to inspect some silk goods. This town, I am told, is one of the chief emporiums of silk and cotton goods in Japan. The houses are well built; the roads well made and the town generally possessed an air of being under the control of well-to-do people. We left at noon, and after a walk of four miles reached Mia where we had breakfast. Here, for a wonder, we had a table and chairs placed at our service, a welcome change after squatting on mats for several days. I must not forget to mention while alluding to foreign innovations to be seen in the interior, that

we purchased some European potatoes at Chiru'u. Later on we left Mia and in two hours reached Nagoya, the road on each side being lined with houses the whole way.

January 30th. Bar. 30.65; ther. 28. On leaving Nagoya the road was lined on both sides with houses for a distance of five miles; but having passed these, the road led through the open country with newly ploughed fields on each side. At noon we reached Itchinomeia, and after tiffin started for Gefu. When near that town we crossed the river Risugawa and on arriving at the other side were met by two *yakonin* with long staves who escorted us into the town, crowds of natives rushing out to see the unwonted spectacle. At Gefu I incidentally learnt that the telegraph office for the new line has been built entirely at the expense of the native merchants. This is a liberal spirit, truly. I was told that this town is another great depôt for the silk trade.

January 31st. Bar. 30.70; ther. 25.50. During the night there had been a heavy fall of snow and the roads were covered some six inches deep in the morning. However, we started, our way lying through a very flat country, everything around being covered with snow. We crossed the river Nagaragawa and Entomi Kigawa, the first a broad and the other a narrow stream, and arrived at Miegi at 2 p.m. Three o'clock saw us once more *en route* for Tairu, our halting place for the night. We crossed the river Rokugawa and arrived at Tairu at six o'clock. The roads we had travelled were abominable, being six inches deep in mud in many places, and when dry being uneven and stony; indeed, I felt more fatigued at the end of the day's journey than on any previous occasion. On our way one of the company procured some fine specimens of crystals at a town called Akasuka about two miles from where we crossed the Rokugawa.

February 1st. Bar. 30.50; ther. 28.50. We started a little after nine, the roads being almost as bad as on the previous day, and arrived at Hikone in the evening.

February 2nd. Bar. 30.30; ther. 29.50. The road at this place was much better, only one hill having to be crossed, the country being for the most part flat and abounding in rice fields. At noon we reached Ichigawa, and after luncheon again started, the country being rather hilly but the roads good. In the evening we arrived at Moriama, nine *ri* from Hikone. I may remark, however, that they were the longest *ri* I ever walked.

February 3rd. Bar. 30.17; ther. 33.37. Early morning saw us again on our journey; the road being good and the surrounding scenery very fine. Tiffin was obtained at Oatz, into which town we were escorted by a local guard, and again traversing some most villanous roads which, however, led us through a very beautiful country, we arrived at Kioto. On our way we passed an execution ground where a forger, who had been found guilty of manufacturing 140 bad *ri*, had been executed two days before. His head, stuck on the top of a tall bamboo, presented a most ghastly sight.

February 4th. Bar. 30.60; ther. 26. Without having time to explore Kioto, we set out for Yodo. The road was good, but the country was flat, although there were ranges of hills to be seen in the distance. At Yodo we had tiffin and passing through country very similar to that seen in the morning we reached Herakata late in the evening.

February 5th. Bar. 30.75; ther. 75. This day was to see us at Osaka, the end of our trip, and we started forth with most pleasurable anticipations. The roads were all that could be wished; the surrounding scenery romantic and charming, and we journeyed onward till the chimney of the Mint at Osaka appeared in sight as we entered Morewictu where we rested at noonday. From there to Osaka the road led along an embankment, and crossing the Yodogawa we entered Osaka at 4 p.m.

I had arrived at the end of my journey, and although there were many disagreeables to be met; many obstacles to be overcome I enjoyed the trip much. It was extremely interesting; each day brought some new scene, some novel sensation; everything was new to one who had never before travelled beyond treaty limits, and when at some future time some enterprising pedestrians undertake the trip they will find much to requite them for their exertions.

## Correspondence.

TO THE EDITOR OF THE *Japan Weekly Mail*.

Sir,

I venture to think that the political economy of your article of last week on the export of rice is unsound. You say that if Rothschilds were to buy up all the Japan silk of any given crop they could not obtain more for it than could a number of holders of it, were they to sell it without concert. It seems to me to stand to reason that the whole supply of any given commodity, if held in one hand, can command a larger price than if held, say, in fifty different hands. If I am wrong in this, I share the delusion with the Japanese, and, I may add, with many others.

I am, Sir, Your obedient Servant,  
A MERCHANT.

Yokohama, 28th February.

• We were quite prepared for this divergence from the doctrine laid down in the article referred to. No delusion is more common than that which our correspondent confesses to. But as our own explanation of the matter might produce in him less conviction than the *dictum* of a great authority, we subjoin a passage from Mr. J. S. Mill's "Principles of Political Economy," from those decision we imagine our correspondent will hardly care to appeal.—ED.

Among persons who have not much considered the subject, there is a notion that the gains of speculators are often made by causing an artificial scarcity; that they create a high price by their own purchases, and then profit by it. This may easily be shown to be fallacious. If a corn-dealer makes purchases on speculation, and produces a rise, when there is neither at the time nor afterwards any cause for a rise of price except his own proceedings; he no doubt appears to grow richer as long as his purchases continue, because he is a holder of an article which is quoted at a higher and higher price: but this apparent gain only seems within his reach so long as he does not attempt to realize it. If he has bought, for instance, a million of quarters, and by withholding them from the market, has raised the price ten shillings a quarter; just so much as the price has been raised by withdrawing a million quarters, will it be lowered by bringing them back, and the best that he can hope is that he will lose nothing except interest and his expenses. If by a gradual and cautious sale he is able to realize, on some portion of his stores, a part of the increased price, so also he will undoubtedly have had to pay a part of that price on some portion of his purchases. He runs considerable risk of incurring a still greater loss; for the temporary high price is very likely to have tempted others, who had no share in causing it, and who might otherwise not have found their way to this market at all, to bring their corn there, and intercept a part of the advantage. So that instead of profiting by a scarcity caused by himself, he is by no means unlikely, after buying in an average market, to be forced to sell in a superabundant one.

As an individual speculator cannot gain by a rise of price solely of his own creating, so neither can a number of speculators gain collectively by a rise, which their operations have artificially produced. Some among a number of speculators may gain, by superior judgment, or good fortune, in selecting the time for realising, but they make this gain at the expense, not of the consumer, but of the other speculators who are less judicious. They in fact, convert to their own benefit the high price produced by the speculations of the others, leaving these the loss resulting from the recoil. It is not to be denied, therefore, that speculators may enrich themselves by other people's loss. But it is by the losses of other speculators. As much must have been lost by one set of dealers as is gained by another set. (*Book IV. Chap. II.*)

## Law Report.

IN H. B. M.'s SUPREME COURT FOR CHINA AND JAPAN.

Wednesday, February 28th.

Before Mr. Acting-Assistant Judge HANNEN,

WILKIN & ROBISON *versus* Captain JAPP, of the *Connaught*.  
Mr. F. V. DICKINS represented the defendant.

The Court delivered the following decision in the above case. This is an action by the consignees of cargo against the master of the vessel on which the goods were shipped, for short delivery and breach of contract, and the plaintiffs claim special damages over and above the value of the goods.

The master had signed bills of lading in the ordinary form for "one hundred bales merchandise, one truss, and one parcel samples."

On the bill of lading the following words were stamped: "The within-mentioned sample packages and pattern parcels the master engages shall be delivered immediately on arrival."

The ship arrived on the 28th of December; the plaintiffs

immediately sent for their sample truss and pattern parcel, but were only able to obtain the latter.

Owing to their not having the sample truss, the plaintiffs allege that they were unable to sell the goods until the 6th of January, when, a portion of the goods themselves having been delivered, they were able to realise the full market value; but this latter had fallen when they actually effected a sale to \$4 30 per picul. Of all this the defendant had notice, and the plaintiffs claim the value of the sample truss, and the difference between the price actually obtained for the goods and their market value on the day of the arrival of the ship.

The defendant denies his liability for any damage caused by the non-delivery of the goods, and further denies his liability for the truss itself on the ground that he is a gratuitous bailee.

Now, by the 3rd section of 18 and 19 Victoria, c. III, it is enacted, "that every bill of lading in the hands of a consignee, or endorsed for valuable consideration representing goods to have been shipped on board a vessel, shall be conclusive evidence of such shipment as against a master or other person signing the same notwithstanding that such goods or some part thereof may not have been so shipped with certain exceptions within which the present case does not come.

We have, therefore, conclusive evidence that the goods were shipped. And the fact that no freight was paid for this specific parcel, even if clearly established, will not avail the defendant, for two reasons—first, because I think there was a consideration for the carriage of these goods similar to the consideration which a railway company receives for carrying a passenger's luggage; and, secondly, because the law is, that the confidence induced by undertaking any service for another is a sufficient legal consideration to create a duty in the performance of it. (See *Coggs and Bernard*, 1, *Smith's Leading Cases*, p. 193; *Shillibeer v. Glynn*, 2; *Meeson v. Welsby*, 143; *Whitehead v. Greetham*, 2, *Bing*, 464.) And in this case the onus is on the bailee to prove that it occurred through no want of ordinary care on his part. (See the notes to *Coggs and Bernard*, p. 205, and *Reeve v. Palmer*, 5, *Common Bench, New Series*, p. 84.) No attempt was ever made in the present case to show that the parcel was lost through no want of ordinary care, and I am therefore clearly of opinion that the defendant is liable for the value of the truss.

The plaintiffs contend that the defendant has contracted not only to deliver the truss safely to the consignees, but he has moreover contracted to deliver it immediately. All had evidence to shew that "immediately" meant a reasonable time or about 3 to 5 days from arrival.

As to this portion of the claim the defendants say first, that they did not contract as alleged and secondly that there was no consideration for the promise.

The questions for the Court are:—

1.—Was there any binding promise.

2.—What was its exact nature.

3.—Supposing these two questions to be answered in favour of the plaintiffs was there a breach of such promise and lastly for what damages is the defendant liable. For the reasons I have given for holding that there was a sufficient consideration to support the promise to carry safely I am of opinion that there was a sufficient consideration to support the promise to "deliver immediately on arrival." Once the valid contract and breach established it is for the defendant to show that it occurred through no fault of his. This he has not attempted to do.

But Mr. DICKINS argues that this clause impressed on the Bill of Lading "merely contains a promise by the Captain not wilfully or negligently to refuse delivery when demanded.

This construction of the contract makes the words in question mere surplusage, for the Captain would be liable in a case like the present for *some* damage if he wilfully, or negligently refused delivery when demanded, when without these words upon the Bill of Lading. They must mean something and the construction is for the Court. The construction I put upon these words is this—that the master engages to deliver these sample parcels within a reasonable time dependent upon the circumstances of the ship, the harbour and many other surrounding facts. (This is substantially the same construction as seemed to be put upon the clause by Mr. Whittall).

Now it is manifest that there has been a breach of this contract for no special circumstances were alleged in explanation of the fact, while was admitted that the sample truss had never been delivered at all. There is therefore, in my opinion, a valid contract and a breach, and the next question is as to damages. I confess that I have been in a great difficulty as to this last question, but as it is one which must be determined on the merits of each case as it arrives, my conclusion, even if erroneous need not bear any bad fruit hereafter.

Were I sitting with a jury I should direct them, in the words of Baron Alderson delivery of judgment in the case of *Hardley v. Baxendale* 9 ex 341, to consider "damages might fairly and reasonably be considered either arising naturally, that is—according to the usual course of things, from the breach of—contract itself, or might reasonably be supposed to have been—in the contemplation of both parties at the time they made—the contract as the probable result of the breach of it."

Bearing this principle in mind myself sitting as a jury, I cannot say that the damages here claimed are such as can be considered as the natural result of the breach of contract. The non-delivery of the sample truss was possibly a *causa sine qua non*, but it was not the only one, and it was not the *causa causans* of the loss. The direct cause of the loss was the falling state of the market, and one of the causes of the inability to sell was the disinclination of buyers to settle upon the production of the pattern parcel only, and the damage caused by this, as well as the fall of the market, was not in my opinion in the contemplation of the parties at the time of making the contract.

I have thus distinguished between what is to be taken as my ruling of the law and what may verdict sitting as a jury, because the first is subject to appeal, and the second is not, except under peculiar circumstances, and also because I wish it to be understood, that I do not say that such a claim as this could not by proper evidence, be substantiated; what I wish to be understood is that when such a claim is made it is dependent upon the surrounding circumstances and the evidence presented to the jury or the Court, whether the loss alleged to have occurred comes within the Rule in *Hadley versus Baxendale*.

Looking at the circumstances and the evidence before me in this case I cannot say that it does, and the damages will therefore be the value of the sample truss only.

There will be verdict for plaintiff with \$10.29 damages and costs.

His Lordship said in connection he should like to add that on one hand owners if they do not wish to expose themselves to such claims, they should come to a clear understanding with shippers as to the engagement entered into or the liability entailed by the insertion of these clauses on the Bills of Lading and as these matters were now being discussed at home very fully, it was a good time to make a representation on the subject. He also added he would have been able to have given his decision much sooner if he had had the assistance of Counsel on both sides and he thought it was a case in which they might have advantageously been employed.

### Extracts.

#### FRENCH FINANCE.

(Saturday Review.)

It is now possible to form some notion of what the late war has cost France, of what annual revenue has to be raised, and of the mode in which it is proposed to raise it. But although M. Poyer-Quertier's financial statement is allowed on all hands to be singularly clear, comprehensive, and straightforward, the estimates which it embodies must necessarily be accepted with some reserve. It is impossible as yet for the Government to have ascertained what the whole cost of the war will be, what the amounts to be paid for indemnities to the devastated provinces will reach, what will be the effect of the loss of Alsace and the ceded districts of Lorraine, or how far the new taxation imposed will itself dry up the sources of taxation. In June last M. Thiers thought that 488 millions of francs of new taxes would be all he should have to ask; he now wants 650 millions. Still the figures now given by the Government may be taken as approximate, and it is due to the Government to say that M. Poyer-Quertier has furnished the materials for calculation in a simple and lucid form. Assuming for the moment that the total cost of the war may be taken at 340 millions sterling, 213 millions have been already provided. The sale of certain stores and rentes and the proceeds of a special temporary tax have produced 9 millions, and 204 millions have been borrowed, 130 having been received from the two loans of 1870 and the new Five per cent. Loan of 1871, 61 having been borrowed from the Bank of France, and 13 being owed to the proprietors of the Eastern Railway. There remain, therefore, 127 millions to be raised, and 120 of these millions are not payable until 1874, although interest on them is payable meanwhile to Germany at 5 per cent. The Government estimates the annual revenue necessary to meet all charges at 110 millions sterling, of which 13 millions are for departmental outlay, leaving 97 to be raised for the public service. The last Imperial Budget showed an expenditure of 74 millions; but reductions in expenditure to the amount of 6 millions are to be made, 1 million less being spent on the navy, and 3 millions less on public works. But the taxes existing before the war are now estimated to produce only 72 millions, so that the total to be made up by new taxation is 23 millions more expenditure and 2 millions of deficiency in the products of taxation, or 25 millions in all. It is not clear whether this deficiency of 2 millions is to be ascribed to the loss of Alsace and Lorraine, or to the diminished product of taxes owing to the distress of the country, or to the fact that the Imperial Government, which was always getting into debt, may have arranged to spend 74

millions, while only receiving 72. As the loss of Alsace and Lorraine must involve a loss of at least 2 millions of revenue, if the deficiency of 2 millions above mentioned does not arise from this source, the rest of France must now be taxed 2 millions more than the 25 needed for the new expenditure, and must have a total burden of 72 millions of new taxation thrown on it. Stated shortly, it may be said that France is spending 23 millions more than before the war, and has to make up a deficiency of taxes of 2 millions, and thus has to find 31 millions more altogether, but this is reduced to 25 millions by the reductions of expenditure.

The Assembly had already voted before the prorogation 15 millions of additional taxes, and is now asked for 10 millions more. The two questions which France, through the Assembly, has to decide are—first, whether these 10 millions are really wanted; and, secondly how they are to be raised. The Assembly, under the guidance of the Government, has chosen to discuss the latter question first; but as some of the more intelligent French journalists point out, the former is the question that ought to be discussed first if it is to be discussed at all. Indeed, not to discuss it now, is to close the door to discussion of it hereafter. If it is decided how two millions more taxes are to be raised, it will seem absurd to debate afterwards whether they need be raised. But it is impossible to understand the present position of French finance, unless it is understood how it happens that these 10 millions of new taxes are thought to be necessary. In the first place, 2 millions more are to be spent on the army, which is now to have 13 millions devoted to it; and 3 millions less are to be spent on public works. To foreigners the first thing to ask would seem to be, whether it is wise to stint public works in order to spend more on the army; but as no French party or other journal of any influence appears in doubt about the expediency of incurring this vast amount of extra unproductive expenditure, there is no use in discussing the question whether it is wise. If the army had had merely the old sum spent on it, there would have been only seven millions more to find; whereas as things stand there are ten millions. Of these ten millions eight are to be applied to the repayment of the advances of the Bank of France, and this sum of eight millions is to be paid annually for eight years, until the whole of the advance is paid off. There is also a sum considerably exceeding a million to be applied to the repayment of sums advanced by the Departments and Communes for the expenses of the mobilized National Guard. It may be said therefore that these ten millions are to be raised to make repayments. We may omit the sums destined for repayments other than those to the Bank of France; for to discuss the repayments to the Departments and the Communes would require a knowledge of the local needs of different parts of France which no foreigner, and perhaps scarcely any Frenchmen out of the Government circle, can pretend to possess. But the question whether France is wise in submitting for eight years to raise eight millions a year to pay off the advances of the Bank of France, is a question, although of some intricacy, of great practical importance.

No misnomer could be more delusive than to speak of this repayment as a sinking fund. It constitutes a fund that will pay off a debt, but its primary object is not to pay off a debt. The bank now receives only three per cent. interest on its advances, and will soon receive only one per cent, and it would be the height of folly to cripple commerce and burden the people in order to pay off a debt bearing one per cent. interest. But the object of the Government is not to pay off a debt, but to bring back the country to a metallic currency. The advances of the Bank have been made in paper money, not exchangeable for bullion; and the Government wants the country to go through a great and painful effort in order to make the notes of the Bank once more convertible into coin. The authorised issue of the Bank is now 96 millions sterling, and the Government wish the limit to be extended to 112 millions sterling. Under an arrangement made in the course of last summer, the Bank is bound to advance 16 millions more to the Government, and there is therefore no doubt that the amount of paper money must be increased. But the present issue did not much exceed 93 millions until a day or two ago, and it was contended that no more need be issued than the 16 millions to be lent to the Government, and that the legal limit might therefore be fixed at a point under 112 millions. But this is a very minor matter, as, if the Bank could keep within the limit now, there is no reason why it should not do so after the limit has been extended. The real question is, how much must be repaid to the Bank in order to keep the notes of the Bank up to their nominal value. The Government plan is, as we have said, to borrow 16 millions more, and then to begin repaying the whole advances by instalments, which will extinguish it in eight years. To this it is objected that if in the current year 8 millions are to be repaid, it can be of

## BIRTHS.

On the 19th Instant, at No. 215, Bluff, the wife of J. FURNISS, Esq., of a Daughter.

On the 21st instant, at No. 149, Bluff, the Wife of C. R. SIMPSON, Esq., of a daughter, which only survived its birth a few hours.

On Friday, the 22nd instant, at No. 2, British Legation, Yokohama, the wife of NICHOLAS J. HANNEN, Esq., of a Daughter.

## Notes of the Week.

AN earthquake shock of more than ordinary severity, lasting about thirty seconds, was experienced about half past twelve o'clock on Saturday night.

On the evening of the 22nd about eight o'clock, a fire broke out in the rear of the houses on the Homura road known as No. 166. The flames rapidly spread to the front, and by the time the engines got into play the houses were past being saved. However, by the exertions of the Steam Fire Engine Brigade, the fire was kept under in the rear, while the American engine, which threw a very powerful jet of water, aided by the Y. F. B. and the Japanese engines, eventually extinguished the fire.

THE state of the currency is perplexing. It has fluctuated much during the past few months, and the silver *yen*, which but a short time back stood at six and seven per cent premium, has now fallen to three and three-quarters discount. It is difficult to ascertain the causes of this great fluctuation, and impossible to give anything like a satisfactory analysis of them. But there is always one unfailing resource in Japan, when matters are contrary. It is expressed in the formula, "When in doubt, blame the Government." It is as certain of success as the ace of trumps, and the special advantage of the manoeuvre is that every one can hold the same crushing card and play it over and over again. The philosophers who resort to this explanation always remind us of the couplet in the "Rejected Addresses"

Who makes the penny loaf and Luddites rise?  
Who fills the butchers shops with large blue flies?

As some misapprehension seems to exist on the subject of the invitation sent to the Rev. Mr. SYLE to fill temporarily the vacancy which will be made by Mr. BAILEY's departure, it may be well to set the question at rest by a few words.

It was, of course, very desirable to make some arrangement by which the services in Christ Church should be carried on until final measures for the permanent appointment of a Chaplain could be taken, and as Mr. SYLE had expressed his intention of coming to Japan in May next, and had further intimated that if he could be of any service to the community in its present need, he would gladly leave Shanghai earlier than he at first determined, it seemed well that the community should avail itself of his offer. Far from Mr. HOWELL's motion having taken the shape of a request that Mr. SYLE should be permanently appointed it was he who opposed a proposition made to that very effect. The objection raised that Mr. SYLE is a Clergyman of the Church of America is undoubtedly a very valid one as against his permanent appointment, because the Foreign Office might naturally demur to it on these grounds, even should it be desired by the community, and should it fall in with Mr. SYLE's views, of which there is no evidence. But when it is remembered that we were in real danger of having no Clergyman to officiate here after Mr. BAILEY's departure, and that every effort to secure the

services of one had failed, we can hardly consider ourselves too fortunate in being able to secure those placed at our disposal by Mr. SYLE. Anything more ungracious to Mr. SYLE and to those who have simply been desirous to have the services continued, than the remarks the meeting has called forth, cannot possibly be conceived. The question of the permanent appointment of a Chaplain is still entirely in the hands of the congregation, and all that has been done is to secure temporary assistance in what promised to be a serious emergency.

THE season is now coming round when the Public Gardens should be well patronised by the community. Last year we had the Band of the Xth Regiment in the early part of the summer, and during that period, or, indeed, during all the hot weather, many persons resorted to the Gardens for an evening promenade. This year we shall unfortunately be deprived of the assistance hitherto rendered by the Band of the Regiment in Garrison, though the expected arrival of the *Hertha* may again afford us this source of amusement; but, at the same time, great efforts have been made to render the Gardens more attractive than they were last year, and the public, it is to be hoped, will respond willingly. It is perhaps true that a visit to the Bluff Gardens at this moment would not be very amusing; but it would show, what we are anxious to point out on this occasion, that great improvements have been made, and that there is now an opportunity of establishing a good Archery Club. There have been, however, no very great alterations. A few new beds have been made; seeds have been plentifully sown; maples of a variety of kinds have been planted; shrubs will, in a few weeks, cover all the bare and unsightly patches which might offend the eye, and there has been a general renovation of everything in the Gardens. Mr. SMITH, we feel bound to say, has left no stone unturned to, ensure the ultimate success of the project, and we shall be disappointed if the public do not, on their part, support him by patronising the Gardens.

The Archery ground should, if properly managed, form a prominent feature in the program for the present season's amusements; but, in order to secure this, some one must organise a Club, and in this community, where every one is anxious that certain things should be done, but themselves refrain from taking the initiative, we fear the project will be one surrounded by many, though by no means insurmountable obstacles. It has often—and with some justice—been said, that the interests of the fair sex in Yokohama are not sufficiently cared for. Men have their shooting, their horses, paper hunts, rowing, bathing, rackets, billiards, cricket, bowls and a dozen other means of recreation, while the ladies—or at any rate the majority—have only "calling" to employ their leisure hours. Here then is the opportunity for some one to undertake the task—it should be a pleasurable task—of organising some amusement in which ladies and gentlemen could equally find recreation. Such an association may fairly take the form of an Archery Club, and we see abundant opportunity for its formation. The ground which has been made is really excellent. One hundred yards in length, turfed from end to end, and as level as a billiard table, with high butts at either end to prevent any danger from stray arrows, it is in every way suitable. Bows, arrows and targets are easily procurable even if we are not within hail of Picadilly; Japanese bows and arrows and home-made targets can at least fill the

gap until the proper articles from home shall be procured. And what more is wanted? Only some enterprising gentlemen who will endeavour to interest the ladies in the scheme, and with their assistance once secured we are gallant enough to believe that failure is impossible. We need not here enter into the details of the Club, but we may presume that there would be some principle of admission which would render it sufficiently exclusive, and should it be found that its numbers were too small to warrant its formation, Croquet, might be united with Archery, and popular as is the former of these two we feel assured that there would be no lack of members. The Croquet lawn is in excellent condition; the turf is well laid, and the ground is of sufficient width to allow of a full sized game being laid out. To assist in the organisation of the Club we appeal to the ladies. It is for their amusement, and to take away the reproach of neglecting them which some say hangs over the community that we make the proposition, and we trust that the advent of the warm weather will find the ladies armed with bow and arrow and mallet and ball ready for the friendly fight.

Let us now turn to the coming Show, a subject which we are well assured has considerable interest for our readers. We may now say with confidence that the Show will, in every way, be a thorough success; the entries have been even more numerous than the most sanguine of its supporters could have supposed, and as the list has remained open until to-day, instead of closing at the time originally named, we may look for an extensive catalogue. It would be perhaps somewhat premature to enter at any great length into the various objects which will be exhibited; we should rather defer our remarks until the publication of the catalogue; but we may say a few words on the matter. The first class which the visitor will see on entering the grounds will be the dogs, which are to be arranged, each in a separate pen, along the terrace, convenient places being assigned to the monkeys and cats near the same spot. There are, we understand, about eighty dogs entered, and we look forward with some curiosity to the judges' awards in this class. On the Archery ground will be placed the birds in cages, and the mice and rats will also find a location there. The pheasants, and other game birds will be placed on an open plot near one of the butts, and a path parallel with the shooting ground will be assigned to the geese, duck and other fowl. On the Croquet lawn will be placed the plants, and as these number some three hundred, we may expect to find this a most interesting class. At this season of the year there cannot be many flowers, but cherry trees and similar flowering trees will form the staple, most of the exhibitors being Japanese, foreigners contributing the dogs and animals. On the carriage stand are to be the cattle, the carriages, and the numerous list of articles which come under the denomination affixed to class 20. In the band-stand will be a collection of stuffed birds, and some Chinese curios which require to be under shelter.

This is the list of exhibits which will be shown on the 3rd of next month, and, for a first attempt—that is of an exhibition comprising so many classes—it bids fair to be a success. We understand also that Mr. SMITH has applied for the use of the band at Yedo, and although not yet granted it has been hinted that no difficulties will be made, and weather permitting we shall probably have our first experience of Japanese musicians. Of visitors we hope there will be an abundance. Yokohama will, of course, contribute largely, and as posters in Japanese character have been placarded in the important streets of Yedo we may expect a number of visitors from the Capital. Altogether we have no fear of failure, and if only the weather prove favorable Mr. SMITH need have no misgivings as to the result of his new enterprise.

We believe that the removal of the butcheries from their present site at Homoko has been frequently mooted, but they still remain there, and this ought not to be. Summer is approaching, and the whole air surrounding them is tainted in the hot season. If the wind blows from certain quarters, this horrid taint is wafted up over the East bluff, and the occupants of the more distant houses on it are subject to an annoyance which is detrimental to health and inexpressibly offensive.

On behalf of these residents, we urge the removal of the slaughter houses with as little delay as possible, and should no immediate steps be taken by the authorities in this direction, we hope a remonstrance against their continued existence at Homoko may be sent in to the Board of Consuls, and the subject be dealt with before the hot weather comes on.

WE are far too much interested in our civilized and polished neighbour across the water, Shanghai, to be indifferent to the reports of their concerts which are to be found from time in the local journals. But it seems to us that they have not yet developed a musical critic, which in the midst of so much enlightenment and music combined seems to us strange. At the concert it is reported that Beethoven's Symphony in C was performed. But whether it was the C major or the C minor, we are not told. Nor is there any clue afforded us by an analysis of the work which was actually performed. If it was the C major, something might have been said about the young giant—it was Beethoven's first—its evidence of undeveloped yet vast power, its vigorous minuet and trio, its melodious and graceful, but nowhere profound, slow movement, its final movement which opens with so much originality, and is pursued with such charming fancy. But if it was the C minor, we, who are denied these philharmonic feasts here and are forced to be content with mere descriptions, might at least have been told so. Was nothing to be said about the mysterious and striking opening, the marvellous art displayed in rearing upon it and out of it such an edifice as the first movement? Might not something have been said about the Adagio, with its subject opened on the violincellos, and gradually more and more fully harmonised and extended until it flows on like the volume of a mighty stream? Or of the masterly, and except by Beethoven altogether unparalleled *Scherzo*, which opens with the double basses and leads through a *crescendo* which makes one think that the very Alps are rising beneath one's feet, to the Triumphal March which could not be grander if the conquest of Death and Hell were its theme?

We should be well pleased to see some more solid efforts at musical criticism in the Shanghai papers. A journal like the *Courier* cannot justly to itself spare these, and Shanghai, itself the most musical place in the East, has an unfilled niche which we should be glad to see occupied by some one worthy to fill it—though only by such an one.

#### THE TREATY BETWEEN CHINA AND JAPAN.

WE give elsewhere the text of the Treaty recently signed between China and Japan, the ratification of which, with some possible modifications, will in all probability take place immediately. It presents a few points of interest which it may be well to glance at. In the first place, it is clear from the two introductory clauses that China is anxious to draw the bonds of her old amity with Japan somewhat closer, in view of the pressure which she occasionally feels put upon her by the Western Powers. In their present form these two clauses involve a treaty offensive and defensive between the two nations, and, if not modified at the time of ratification, we may fairly conclude that China is not unwilling to look to Japan for friendly assistance in case of any difficulty arising with the European Powers. This exhibits China in a new light to us. Her pride has seemed hitherto to exclude the idea from the minds of her statesmen that she could ever require, or would ever accept, external assistance from any nation. The universe was made for her; all other States were, potentially if not actually, her tributaries; and she was content to stand alone in majestic isolation and ignorance. She now turns to the "Kingdom of the Rising Sun," not unwilling to recognize in the mouse an ally who might some day, by gnawing through the toils which the hunters might throw over her, render

some substantial assistance in her hour of need. How futile any such idea would prove is clear upon the face of the position. In the first place, Japan would be far too wise to allow herself to become embroiled with the West for the sake of assisting China in maintaining a policy of obstruction and exclusion, the entire folly of which she has wisely recognized. Japan is committed beyond the danger of relapse to a policy of progress, and no difficulties are likely to arise between China and the Western Powers on any other subject. How could Japan side with China in her refusal to concede the right of audience to the Sovereign, a right which Japan has conceded long since? There is no chance of any misunderstanding arising upon territorial questions. All that we ask China to do is to put aside the ludicrous assumption of superiority to the Western nations, and to remove the restrictions which a bigoted conservatism has placed upon her intercourse with them. But Japan is not likely to bolster up China in her old follies, and would assuredly not be listened to were she to advocate a policy of progress. As to her material assistance in the case of any appeal to arms forced upon the Western powers by the insolence, treachery or obstinacy of China, Japan knows her interests far too well to side with her new ally. The fate of her little fleet would be sealed in half an hour after her expressed determination to risk it, nor would she venture a single transport in the Yellow Sea to assist China against a combination of the European powers.

Certain provisions are made for the advancement of trade between the two countries, and it may fairly be presumed that the Chinese will increase their business with Japan. They are restless and insatiable traders, and both countries will benefit by the increased facilities which the Treaty will afford. We do not see that any tariff has been agreed upon, but this will be easily adjusted hereafter. Indeed, most of the articles of export from both countries have most likely been already embraced in the tariffs of the other Treaty Powers, so that little remains to be done in this respect. Both nations are customers of the West, and we have no wish but to see them grow more wealthy and prosperous by extending their commerce.

As we have endeavoured to show that China can gain no assistance from Japan in any policy which plainly militates against the interests of the Western Powers—and it must be understood that diplomacy deals with interests alone—it may be well also to show that no reactionary party in Japan, should such a party arise, would gain anything from an alliance with China. The Power of the Court of Peking for any offensive measures against foreigners, either here or in China, is simply *nil*. It has no fleet, and no army which could for a day withstand a brigade of European soldiers. Whatever may be the value of the raw material out of which its troops are made, China knows nothing whatever of the art of war, and no one can fail to see that it is by mastery in this art that one nation proves superior to and can conquer another. China could give Japan no assistance in any emergency arising out of complications with foreigners, and in the event of internal trouble Japan would, of course, submit to any difficulty rather than invite assistance from China. If this country imagines that proximity to China or any alliance with it would avail it in any such conjuncture as this treaty seems to contemplate, it could not labour under a more fatal delusion.

The intercourse with the East has, during the past twenty years, become a great part of the world's business. It has taken root as firmly as the intercourse between England and France, or between Germany and Russia. Twenty years ago one mail a month only was despatched to Hongkong; Japan was closed and unknown; California was known only to travellers; and the sole steamer on the China coast was that which bore the London mail to Shanghai. Now, these eastern waters are covered with sailing ships and steamers; four mails a month reach Hongkong from Europe; San Francisco sends one steamer a month to Japan, and will shortly send two. All this means that West and East are intimately and indissolubly united. No effort can avail to restore the old condition and the old isolation of these Eastern Powers. They must accept the inevitable, and so utilize the new forces, connections, and ideas, with which they have been brought into contact, as to raise themselves in the scale of nations, and show that, like the Europeans, they can bend these new powers to their own advantage and master instead of fearing them. It is not far a progressive nation like the Japanese to be coquetting with China and looking sidelong towards her, as if they doubted whether they were after all right in their brave and wise course. We would not indeed have Japan showing a filial ingratitude and irreverence towards China, to whom she owes so much. But we would have her see that China is a gigantic anachronism, representing in the world that strange Laputan race which Gulliver saw, and which, cursed by a protracted and interminable longevity, became only more opinionative, covetous, morose, vain, talkative and preivish, incapable of friendship, dead to natural affection, envious and impotent. Japan must realize this, and recognize in the European nations a spirit of vigour, of enterprize and progress, which she must also acquire and cultivate, and utilize to the welfare of her millions of people. It is well that she should have a treaty with China, drawn up somewhat after the form of such high contracts between the leading Powers of the world. But she will do well to understand that this must not be looked to serve her in any halting or obstructive policy. There must be no looking back. One pillar of salt is enough for the world's warning. She must rather display to China the advantage she derives from a courageous and enlightened policy, and prove that she who was once the pupil is rapidly qualifying herself to be the teacher of her former instructor and guide.

#### THE BLUFF GARDENS.

AS we are to have a flower, animal, and bird show at the Bluff Gardens, it would be well if we could make it instructive as well as amusing. Every naturalist who has yet visited Japan has left it with the conviction that a rich mine of undiscovered floral wealth exists here, and it is more than probable that if we could prevail on the Japanese to take an interest in our show, they might exhibit some rare if not hitherto unknown varieties of birds or animals. Now that Darwin's "Descent of Man" is in every one's hands and every one's mouth, society is characterized by a livelier interest in animated nature than it has ever hitherto felt. It may not be pleasant to abandon beliefs in regard to our origin which certainly have had the effect of inspiring us with a thousand in-

centives to virtue, and which undoubtedly, if withdrawn from the list of our prerogatives, will leave us bereft of our greatest source of pride. But *a priori* objections weigh little against a severe induction from facts, and though Darwin's views contain only a theory, it is a theory which is finding greater acceptance every day amongst those most qualified to judge of it. Be all this as it may, careful observation ought to detect variations in the representatives of species in this country, and we hope that some among us may be qualified to make it. The ignorance in which the majority of men are brought up in respect of natural history never forces itself more lamentably upon us than on occasions of this kind, and it is then, through not only then that the memory of hours of which no account whatever can be given, rise up reproachfully and tell us how we have wasted them. In Bacon's "Atlantis" a curious anticipation was made of the quasi-scientific gardens now so common in the great cities of Europe. His idea was that it should be a "trial place for beasts and fishes" where their habits could be observed, nor is it without special interest to us here that he places the site of his new Atlantis in or near Japan. We may not be ripe for the conversion of our experimental lounge on the bluff into a zoological garden, or even for making there a choice collection of rare plants, trees and shrubs. But we certainly do well in making it as attractive as possible, and Mr. SMITH's idea—for we believe it is his—of having shows of animals, fruits and flowers, is one not only creditable to his fertile brain, but which really promises to prove of service to us. That there are some strange varieties of the anthropoids here is abundantly clear to any one who will be at the pains to look for them. The scintillations of intelligence which distinguish them in Borneo have been somewhat more developed here, and we have only to review the published gibber of one of them which has lately appeared under the signature "Mumpo," to assure ourselves that if a missing link between the Bushman and the pithecoïd ape has not a furtive resting place here, we are, at all events, not far from some trace of his habitat. We must trust that the Committee will do their utmost for the advancement of science on this occasion, and that a cage and clothing will be appropriated to this object, if money or roots will avail to allure him. Perhaps there is no object within the sphere of natural history so eagerly looked for as an example of our progenitors in their more ambitious yet still simious stage, and however shocking to our sensibilities the view of this odious relative may be, no intelligent and enquiring mind can be otherwise than instructed by the sight of an object which informs us equally of the degradation we have escaped by the infinitely wise law of natural selection, or that to which we are still subject by the law of reversion, should we fall away into habits calculated to induce such depravation.

It is understood that the entries for animals have been unusually numerous, and there has of late been an appalling abundance of little black and tan terriers about the settlement. Whether the coming exhibition is the cause or the consequence of this, is a question worth consideration, but one upon which we have no certain data for forming a conclusion. It is well known that in England changes of the ministry are invariably preceded by strong northerly gales, and enormous hailstones equally invari-

bly succeed the dissolution of Parliament. What a mysterious message nature may intend to convey to man by these evident yet inscrutable sequences of cause and effect, transcends our philosophy at present. It is enough that we note the facts, and wait humbly and patiently for some subsequent explanation of their import. But we cannot forget the salamanders of Japan, portentous batrachians inhabiting the warm springs which abound in this country. They used to be seen in Nagasaki years ago, and certainly were objects of high interest. What temperature they can withstand, or what may be their conduct under an excessive temperature, is unknown. Experiments might be made on these subjects of enquiry. A boiling cauldron could be fitted up and the salamanders placed in it. If they survived, they would rank with the various worthies who have passed unscathed through a similar ordeal. If they died, their cooked remains could be advantageously disposed of in the refreshment rooms. It is always wise to have an alternative.

The mouse that always trusts to one poor hole  
Can never be a mouse of any soul.

Then again as regards rats. These rodents increase here in a most remorseless manner, and set man at utter defiance. But whether our enemy is the *mus rattus* or the *mus decumanus* is not known to us. Judging from the prodigious noise and scuffle constantly heard among the rafters and over the ceilings of our houses, it is more than probable that the *mus giganteus*, which is so well known in India, inhabits this country. No animal of the size of the ordinary rat could possibly account for the noise we speak of, and it might be well of some light were thrown on this matter.

As regards the *Simiade* or apes, Darwin is very clear that the present race of mankind springs from the Catarrhine branch, or the apes of the Old World, as distinguished from the Platyrrhine branch, or apes of the New World. Whether the Japanese are prepared for the announcement of this discovery or not, it is impossible to say, but if they heard the impolite allusions constantly made to the police as they now appear in foreign clothes, the shock of the announcement might be somewhat broken by showing that suspicions of a common progenitor have already crossed the minds of many who have no pretensions to be naturalists or philosophers. Now, it is pretty certain that the *Troglodytes niger* is confined to Africa, and it is hardly possible that the Asiatic orang-outang (*Simia satyrus*) should be found in this country, though, as he before hinted, the gibber of "Mumpo" announces the existence of a domiciled pithecoïd, who, if we could only discover him, might be found to bear some resemblance to an extremely low and repulsive human type. But the existence of the mandril, (*Simia maimon* or *mormon*) although it is of African origin, must in all probability be recognized here. We do not wish, however, to weary our readers with a scientific nomenclature. It is better to recal something to them which, at least pictorially, they can remember, and thus we may remark that the well-known "Happy Jerry" of Exeter Change belonged to this species, and that this genial and aspiring creature was inordinately addicted to spirits and water, a characteristic which—we speak in all seriousness, and without doubting that the reflection is a sound one—Darwin adduces as one among a thousand other evidences of a common origin to man and the apes.

There are some pretty analogies, too, in nature, which would be very pleasing and instructive could we but be brought face to face with them. There is a delightful insect called the *Coccus*, which attaches itself to a plant, sucks the sap, but never otherwise moves; quite like some of the foreign servants of the Japanese Government. Some effort should be made to procure a few of these insects, or any others which might afford analogies for many of the strange anomalies we witness every day in this country.

#### YOKOHAMA AND ITS CHANGES.

THERE are probably very few among those who now constitute the foreign population of Yokohama who ever give a thought to the past days of this settlement, who ever trouble themselves to picture the stirring scenes in which the earlier residents took part, and who know nothing of the early history of Yokohama except that which found a chronicler in Sir RUTHERFORD ALCOCK, or which is given in other contemporaneous works on this country. In this nineteenth century, we live at too great a pace to trouble ourselves about such sentiments; we travel by railroad, we converse with absent friends by electricity, and we live on without casting a thought to whom and what went before us. The market gardener passes through Covent Garden; the lawyer's clerk rushes madly through the Temple or Gray's Inn; the drover plods wearily along the Smithfield market; but none think of the past, they wot not of Dryden and Pope, Selden, Bacon or Spenser; their thoughts are of to-day and so are ours in Yokohama. We pass down the Main Street at Benten without thinking for one moment of that 23rd February, 1860, when a few residents, hearing of a murder committed by Japanese, went down and by the faint glimmer of a lamp found first a dead body, and then, guided by a trail of blood, a human hand; and then further on another body hacked and mutilated. These were two Dutch captains cut down in cold blood. Indeed, here in Yokohama, as in the rest of the world, we have lost our regard for things of the past. Not that Yokohama has any "past" which of itself demands regard; but that in a new country, in which foreigners with difficulty made good their foothold, the early history is sure to be replete with interesting if not important memories.

Let us glance backward, and take a retrospect of the changes which Yokohama has undergone. We see the settlement now with large houses, well filled godowns and shops; we see railways and telegraphs; we see the natives exchanging the produce and manufactures of their country for those of others: let us look back at what it was in 1860—twelve years ago. Yokohama had just been opened; the fruits of Commodore PERRY's expedition were to be gathered, and some fourteen persons were to be found in Yokohama in the January of that year. We need not go into the contests between the Ministers and Consuls on the one hand and the residents on the other; how the first were determined that Kanagawa should be the settlement, and the latter were equally determined that Yokohama should be the favoured spot. Backed by the Japanese, who were anxious to get us away from the

Tokaido, and who saw a possibility of making Yokohama a second Desima, we all know that the residents gained the victory. At that time, as may be imagined, Yokohama was but a small settlement. Along the Bund, then a shingly beach, were a few poor fishermen's huts; the settlement itself being comprised in four sides, one extending from the corner of No. 1 to the further corner of No. 2, thence away from the sea to No. 52, down Main Street to No. 50, and then joining with No. 1. In this small square lived fourteen foreigners. Where now is the Chartered Mercantile Bank and the surrounding houses was then all rice and wheat fields, with pleasant lanes shaded by large trees; open country extended in every direction; and between the Bank and the Creek lay the village of Homura, inhabited by a few well-to-do farmers and agricultural labourers. The advent of foreigners brought the Japanese merchants, who, more astute or more speculative than the officials, early forgot their anti-foreign prejudices, and they settled in what is now the native town. At that time, and indeed, for long after, foreigners used to make short excursions on to the Bluff to shoot a few pheasants.

But let us go back a little. Before January 1860, the first foreigners were murdered by Japanese. A Russian lieutenant, accompanied by a steward and a sailor, were coming up the road where now is the Main Street of Benten, when they were set upon and murdered. After these came the murder of the two Dutchmen, who were killed almost in the same place as the Russians. It is reported that the Governor of Kanagawa refused to attend their funeral on the ground that it would be *infra dig.* for him, an official, to attend the funeral of persons who, at the best, were only equal to merchants. However, the threat, said to have been made by the Russian officer in command, to the effect that if he did not go willingly he would bring him between the bayonets of his men, had the desired effect. About this time, or rather a little previous to this murder, the Japanese seemed to have conceived the idea of isolating the foreigners as they had done at Desima. On the plea that they were fearful lest ronins should attack the foreign settlement, they dug the canal and built a picket fence twelve feet high from the canal to the sea, passing along the road which runs between the Saibanasho and the native town. It is needless to say that this isolation was never carried into effect, for some turbulent spirits quickly destroyed the gate at the head of the Main Street, as well as those which shut off the settlement from the surrounding country, and otherwise rendered these obnoxious enclosures unavailing.

As time progressed so did the number of residents increase, and though there are no records at our disposal to show the number of settlers, we know that they were far too numerous to remain long content with the confined space already allotted, and the consequence was that the land between the settlement and the Chartered Mercantile Bank was laid out in lots. At that time many persons were doubtful if Yokohama would ever assume any real importance in the commerce of the world, and on that account would not take land, a want of discretion and foresight which they now repent. A house was built at that time on lot No. 6, and so completely was that out of bounds,

that Mr. Field, the then representative of the firm, was subjected to some banter because he had built his house "out in the country." This was about September 1860, and by this time the settlement had grown greatly; people flocked from all parts, and the first races were held in Japan, the course being of a horse-shoe shape and situated on the other side of the creek. Who were the owners, and what were the ponies, the chronicles of Yokohama do not tell us; but we may be sure that there was much amusement, if the science displayed was but small. Before leaving the first year of the opening of Yokohama (1860) we must note the erection of the fort in the bay. This, it was said, was to guard Yokohama, but from its position it seems almost questionable if the intention was not to cover the settlement. However, the guns were never used, and at this time we need not concern ourselves as to the use to which it was intended they should be devoted.

Notwithstanding the recent increase in the size of the settlement, the authorities soon found that more land had to be set apart. The French took that portion extending from the Chartered Mercantile Bank to the Hongkong and Shanghai Bank and through in a straight line one way to the sea, and the other to where is now the Homura road. Even then it became evident that this was not enough, and the land between No. 10 and the Creek was sold, and as the Japanese thought that land was becoming valuable they placed an upset price of \$350 on each lot, which was to be sold at auction. The foreigners, on the other hand, thought this too high a price, and having convened a meeting, drew lots for the various plots of land, with the understanding that the person fortunate enough to draw a lot was to buy it without opposition. In this way all the lots went at \$360 each. We should like to know what persons would think of giving only \$360 for lots like No. 11 and No. 20. The idea seems, at this time of high prices, to be almost fabulous. The sale of this land necessitated the removal of the village of Homura to the other side of the Creek where it now stands.

With this we will bring our remarks upon Yokohama, as it was, to an end. We have attempted to describe the ancient state of Yokohama, and not only this but the feelings of the natives towards foreigners. Twelve years ago the whole Japanese nation was anxious to isolate the few foreigners whose respective Governments had recently made treaties with it. They hampered their actions on the one hand, and yet gave them land and built them houses with the other; the people were almost neutral, the officials hostile. Now the people are friendly, the officials are courteous, and instead of the small handful of settlers then, there are now about eleven hundred resident foreigners in the settlement. Twelve years ago with the Tycoon in power, the civil war had yet to come to change the nature of Japanese affairs; the fire of 1866 had to change the face of Yokohama. Both have brought improvements, and it may be safely said that were any one of the old residents of 1860 set down in Yokohama in 1872, without having seen it during the intervening twelve years, he would be at a loss to know the place where he first assisted in bringing the Japanese into contact with the outside world.

## THE TREATY BETWEEN JAPAN AND CHINA.

(Translation.)

China and Japan have long been friendly; but now desire to improve their relations and to render them more permanent. There have therefore been appointed on the part of China as Plenipotentiary, His Excellency Earl Li Hung-chang, Commissioner for Commerce, Guardian of the Heir-apparent, Chancellor of States, President of the Board of War and Viceroy of Chihli; and on the part of Japan, Tsung High Minister of State, in conjunction with E and Tah, each in accordance with instructions from their respective Sovereigns to confer together and deliberate on articles of agreement to be observed perpetually and without infringement, by each State and they have agreed as follows.—

### I.

Henceforward China and Japan shall draw closer to each other; and to render their friendship enduring, the behaviour of each towards the other shall be that of mutual respect, without depreciation on either side. Thus lasting peace shall be maintained.

### II.

China and Japan being friendly, either shall, in case of experiencing injustice or wrong from another State be entitled to assistance or good offices from the other.

### III.

The laws of the two countries being different, neither shall seek to impose its own views on the other; but each shall afford mutual protection to merchants and people, and no violation of the law by residents in either country shall be allowed.

### IV.

The Ambassadors of each country shall, with their families and suite, have access to Peking and Yedo respectively, either for permanent residence or on a visit. Each Ambassador shall bear his own expenses; and shall be at liberty to rent houses or land for official purposes. Each shall have facility for the carriage of his effects, and for sending despatches, &c.

### V.

Although the officials of each country have grades of rank, these do not exactly correspond. It is agreed therefore that those who are about the same rank shall correspond on terms of equality. Those in subordinate positions shall give precedence to those in higher rank, and shall accord to them the due ceremonies. Despatches shall be addressed, by either side, to an officer of corresponding rank with the writer, and not to a higher official. In case of interview, the rank and name of the visitor must appear on his card. When a Japanese official first arrives in China, he shall at once address to the local authorities a communication bearing his seal, to guard against forgeries, and vice versa.

### VI.

Correspondence between the two States shall be carried on henceforward, by China in the Chinese character, and by Japan in the Japanese character with a copy in Chinese, or in Chinese alone as the Japanese Government may find convenient.

### VII.

The two States shall indicate to each other, respectively, the ports in each which are open to foreign trade; and to which subjects of either may go for trade, subject to regulations which shall be conformed to.

### VIII.

The two States may appoint Consuls at each of these open ports for the control of their respective subjects. All questions, of litigation, administration of property, &c., arising among their own nationals, shall be determined by the Consuls according to their own laws. In questions where subjects of both countries are concerned, the complainant shall address a petition to the Consul of the accused, who shall first endeavour to bring about a settlement of the case; and failing this, shall acquaint the Local Authorities, who will investigate it, arrest offenders, and recover debts; but who shall not be required to make good the losses of individuals.

### IX.

If either State have no Consul at a Treaty Port, its subjects who may be resident there, shall be subject to the Local Authorities. In case of offences being committed, the Local Authorities shall investigate them and arrest culprits, so far as their own subjects are concerned; or on the other hand submit the case to the nearest Consul for adjudication.

### X.

The subjects of either State residing at the open ports are to maintain friendly intercourse. They are not to carry swords nor other weapons. Those offending in this respect shall be punished, and

their arms confiscated. Subjects of either State residing in the territory of the other must each mind his own business; and, whether his stay be long or short, he shall be subject to his Consul's control. He shall not change his costume, nor present himself at the competitive examinations, causing confusion.

## XI.

Subjects of either State flying from justice to the territory of the other shall be sought for by the local authorities, who shall give information, in case of capture, to the fugitive's Consul, and arrange for his deportation.

## XII.

Subjects of either country, residing at the treaty ports of the other who are guilty of crime, or who go into the interior with fire arms and kill people, shall be arrested by the Local official, and handed over to their Consul with a statement of their offence. If they resist the officer sent to arrest them, they may be slain on the spot; but their Consul shall be informed of the circumstances and be given opportunity for investigation. If such cases occur in the interior beyond the Consul's cognizance, a complete statement shall still be sent to him. Offenders arrested at an open port shall be tried by the Local official and the Consul acting conjointly. If an offender be arrested in the interior, the Local official shall try him, informing the Consul of the circumstance. If subjects of either State assemble riotously in the territory of the other, to the number of ten or upwards, and persuade or invite the natives to co-operate with them, to the public injury, the Local Authorities shall forthwith apprehend them. In such a case the Consul shall be informed and shall co-operate. If it occur in the interior, the Local Authorities shall adjudicate on the spot, informing the nearest Consul of their proceedings.

## XIII.

The war-vessels of either State may resort to the open ports of the other, for the protection of their nationals; but not to other ports, nor to inland waters, unless driven to do so by distress. Infraction of this prohibition shall be punished.

## XIV.

If either State shall be at war with another Power, it may close its ports and temporarily suspend trade, on giving due notice. Vessels coming or going must not suffer intentional harm. Chinese residing in Japan, or Japanese residing in China, shall not, in such case, take side with either of the belligerents.

## XV.

Each State agrees to prohibit its Consul's from engaging in trade: neither shall they be allowed to act as Consuls for other Treaty Powers. If a Consul misbehaves, his Minister shall recall him, upon due evidence being furnished of the fact; so that no individual may disturb harmony between the two countries.

## XVI.

Each country having a distinguishing flag—if a vessel belonging to either employ the flag of the other, such vessel and its cargo shall be liable to confiscation. If the offender be an official he shall be degraded.

## XVII.

The books of either country may circulate freely in the other; and may be purchased by its subjects.

## XVIII.

These articles are agreed on, in order to prevent misunderstanding, and preserve friendly relations. In token whereof, the Plenipotentiaries affix their respective seals. When the treaty has been approved by the Emperors of China and of Japan, and ratifications have been exchanged, it shall be promulgated throughout each country, in order that the officials may become acquainted with it, and uphold its provisions.

In the 10th year of Tung Che.

In the 4th year of Ming Chi.

—N. C. Herald.

## Law & Police.

### IN H. B. M.'s SUPREME COURT FOR CHINA AND JAPAN.

Monday, March 18th, 1873.

Before Mr. Acting-Assistant Judge HANNEN.

FRANCIS GRANTLEY, seaman on the *Barrosa*, was charged with interfering with the police in the execution of their duty. PRISONER pleaded not guilty.

P. C. CLOWS, a constable, said that at about ten o'clock on the previous night he went into the "*Britannia*" on matters connected with his duty, and on coming out prisoner asked him

where he was going. Some conversation ensued and prisoner caught hold of him and said he would lock him up. Witness then took him to the Police Station. Prisoner had been drinking, but was sober.

PRISONER asked witness if he had a glass of grog; but the constable denied this, and also in answer to another question asserted that prisoner laid hold of him in the street.

P. C. KENT, said he was with the previous witness, and he confirmed what he had said.

P. C. BRAWN, also corroborated the previous witnesses.

HIS HONOUR fined prisoner \$3 or to be kept in prison till the ship starts.

CAPT. MARTIN was sued by Japanese for \$95 due on a contract for discharging freight. Part of the case had been previously heard. It appeared that Capt. Martin refused to pay a portion of the demand, because the number of tons claimed for had not been landed. To day Tomotgi stated that the lighters held only six tons, whereas the plaintiff averred that they carried ten tons.

HIS HONOUR eventually gave judgment for the plaintiff for 16 tons. The price was said to be \$1.80 cents a ton, but it was subsequently explained to us that the rate was cts. 18 a ton, the verdict therefore amounting to \$2.88.

### IN THE U. S. CONSULAR COURT, AT KANAGAWA.

Monday, 18th March.

Before GEO. N. MITCHELL, U. S. Vice-Consul.

C. A. FLETCHER *versus* ALEXANDER MARKS.

MR. D. DAVIS appeared for the Defendant who had left for Australia.

Claim for \$74, being for food and lodging supplied to M. Rosenthal whilst at the Yedo Hotel.

Captain FLETCHER, formerly manager of the Yedo Hotel, stated that this claim was brought against Mr. A. Marks as the young man Rosenthal was his nephew and lived with him, and Mr. Marks, as he understood, was his guardian and had brought him up from Australia with him, and it was under these circumstances that he had given him credit. He should call Mr. Lichtenstein who would prove the relationship of the boy to Mr. Marks.

L. LICHTENSTEIN sworn stated:—I know Defendant and the young Rosenthal, the latter is the son of Mr. Marks' sister and he is Mr. Marks' nephew. I do not know if Mr. Marks brought him here at his own expense. I know the boy lived at his house.

To Mr. DAVIS. I should think Mr. Marks paid the boy's passage up here as his parents are poor. I should have trusted the boy for a small sum as I knew his parents, but if he had wanted things to a large amount I should have consulted his uncle before giving them to him.

Capt. GEORGE E. LANE, sworn:—I remember the boy Rosenthal. Thought he left here in the steamer *Japan* in January last. Mr. Marks came to the office and told me there was a poor boy here that had nothing to do and he wanted to get him away to America where he might obtain employment. He brought the boy and showed him to me. At first I said I could not take him at lower than the usual rates, but Mr. Marks spoke for a long time to me, and thinking it was a case of real charity I at last consented to take the boy at half the usual steerage fares. Mr. Marks paid me, amounting to \$42.50; we had on board another man for whom a passage had been paid for at the same rate. He was a distressed seaman. During our interview Mr. Marks never mentioned a word that would lead me to think the boy was a relation of his. If I had known Mr. Marks was the boy's uncle I most certainly should not have taken him at a reduced rate.

To THE COURT:—I am certain he made no mention of the boy's relationship to me.

W. DAVIS, U. S. Deputy Marshal, sworn:—I knew the boy Rosenthal. He acted as Agent for Mr. Marks. I rented a house from Mr. Marks and Rosenthal always collected the rent. After a typhoon here in August last the house being damaged I refused to pay the rent and Mr. Marks brought Rosenthal and said he was his Agent and that I had refused to pay my rent to him.

To THE COURT:—He said before the Consul the boy was his Agent.

To Mr. DAVIS.—At the same time Rosenthal lived with Mr. Marks.

D. DAVIS, sworn.—To plaintiff. Knew Mr. Marks. Saw Rosenthal at his house. Had heard Mr. Marks say he would not be responsible for any debts he incurred. Do not think Mr. Marks ever led any one to believe that he would pay the boy's debts. If the boy had been my nephew I might have treated him different to what Mr. Marks did. The boy was in debt all over Yokohama. He was registered at H. B. M.'s Consulate. I had sold him goods when he was in the employ of the railway.

Captain FLETCHER said he was certain that a portion of the amount claimed in the account was for food and board supplied to Rosenthal during the time he was in Mr. Marks' employ and

was in Yedo doing business for him. He had spoken with Mr. Marks about it at the time and he made no demur. The boy was universally known to be under the guardianship of his uncle at whose house he lived, and it was on this understanding that he furnished him with board, &c., fully thinking Mr. Marks was liable for the amount.

His HONOUR said he must dismiss the charge as the evidence establishing Mr. Marks' liability was insufficient.

#### IN THE U. S. CONSULAR COURT, AT KANAGAWA.

Before GEO. N. MITCHELL, U. S. Vice Consul.

Thursday, 21st March.

Consular enquiry into certain complaints made by the crew of the Am. ship *Itasca*.

R. ALEXANDER. I shipped at Cardiff. I was not half an hour aboard when I was subjected to violent treatment by the first and third mate and it has continued during the whole passage; the Mates struck me. The Captain has seen me struck. I was struck on the head when aloft by the third mate, he likewise struck me on the fore yard and caused my head to bleed. The mate promised to kill some of us.

W. CRANE.—I shipped at New York. I have been struck four times during the passage by the mates. I am afraid to go on board the ship again as I am sure murder will be committed.

C. BROWN.—I have been at sea 20 years. The first and second mate have both struck me. I have not seen any of the officers drunk. The first mate has sworn to kill me; the officers have never called me my proper name, they have always used some bad epithet to me.

A. GLYN, Carpenter.—I have been struck by the chief mate directly we left Newport, with a rope, because he said I got him into trouble before the Captain. The second mate has not struck me. I have made a club by the chief officer's order to hit the sailors with; it contains a pound of lead. I swear he told me to make it for him to beat the sailors with. He has not used it.

Mr. ADAMS, gave like testimony, as also did H. Schmidt, J. Holson, C. Homer, P. Grose, F. Nitchie.

J. LEDGER, Steward.—I have been at sea 23 years. I have seen the sailors struck. I never have been struck myself. The crew is a middling one; it might have been a better one had they been treated well. I do not consider the officers have treated the sailors well. I consider my life would be in danger to go on board again. I have heard the chief mate threaten to kill some sailors and I have not the least doubt but that he will carry out the threat. I knew the club was made but I have not seen it used. The old crew deserted when they arrived at Newport.

Mrs. LEDGER.—I went on board with my husband. I have to complain of bad language, and my child being threatened. I have heard the chief mate tell the third mate to push one of the witnesses overboard as he was no good. I have seen the mates strike witnesses. The crew are quiet. I have been at sea 12 years and I have not seen a quieter. The Captain has treated me well; he left everything to the chief mate.

E. A. CORROX, the chief mate, said he would admit slapping one of the witnesses. Told the carpenter to make the club but never had any real intentions of using it. He never gave any instructions to push witness overboard. It was a very bad crew; the men had been used well, and prior to arrival here seemed happy; he might have sworn sometimes but it was a natural thing for a seaman to do.

J. FROST, second mate, denied using violence towards the crew, but admitted slapping the men occasionally because they were slow, with his open hand.

J. D. ROBINSON, third mate, likewise denied using violence and considered the complaint of the sailors a got up thing.

The witnesses were then severally asked if they would go on board, but they all declined on the ground that they were afraid of their lives.

A. LASSEN, Sailmaker, stated.—I have been at sea two years and six months; we have not been treated well. I have been struck by the mates once or twice when doing my work; also once when at the wheel and at sundry other times. I have seen the other men struck. I knew the man who fell from aloft. I was in my room at the time when he fell. The mate asked me to seduce the stewardess' daughter. He came in my room and asked me to see if I could not get a chance to do so. I do not know why he wanted me to do this. I refused. He only asked me this once. I do not know his reason for doing this. Never sailed under the American flag before.

Mr. CORROX, chief mate, stated:—He never had done as witness stated or ever had such an idea, the girl being nothing more than a child.

A Swedish seaman said he had been struck many times and had been threatened to be thrown overboard.

Captain RUSH, duly sworn.—The men accuse me of intercepting a letter. I have not done this. The men have not been abused and none of them have ever come to me with any complaint. The mate has told me that the carpenter had tried to annoy him. I never heard of any men being kicked by the third mate when aloft; it would be a difficult job for him

to do so as the officer would have to get out on the yard and so would endanger himself more than the man. The first complaint was made to me on Tuesday. Harry is the only man that has ever been reported to me for refusal of duty. No man has ever come to me with any complaint, many of the men have different names to those they give when shipped. Sailors often go by many names. The man who fell from aloft I knew as F. Whiskey.

The Carpenter swore that the first and third officers had both struck him.

TURNER stated that they had first written a letter to the Consulate about their complaint and hearing nothing had then applied for leave to go on shore, which was granted them by the Captain.

His HONOUR made an order that all persons on the ship with the exception of the officers be discharged and the wages due them be paid into the Consulate.

## Extracts.

### A MINING ADVENTURE.

The following amusing letter signed "G." appeared in a recent issue of the *Pall Mall Gazette*:—

I observe that mining and its vicissitudes are occupying such portions of the public mind as are not engrossed by drains and alcohol; and I cannot but think that some early experiences of my own may prove instructive. For I have been a miner myself. I record with satisfaction that for a hideous period of six weeks I, then in my teens, had sole charge of a British gold and copper mine in the west of England. To gratify the hobby of the best of fathers, I had selected for myself a scientific career, and had prepared myself by learning how to analyze and assay in a well-known public laboratory. I then started a private laboratory of my own, with all arrangements brand new and complete, and waited for work, which was not long in coming to my hands. At that period a gold-mining fever raged over England. Old forgotten copper mines suddenly pretended to be gold ones, found people foolish enough to start companies about them, and take shares and work them all over again for the more precious metal. Rival quartz-crushing machines came over from America, and went about crushing the ore with quicksilver, which as you may or may not know, has the faculty of swallowing up all the gold it meets and disgorging it in the form of a little button if properly treated. Two of these crushing machines were especially popular. They were called, if I recollect rightly, the Perkes and the Berdan. The Perkes consisted of four immense rollers that ran after each other round a pivot in an immense iron pan full of quartz and quicksilver, and sucked up the gold which used to come and wash away the pounded quartz. In Berdan's machine the pan itself used to revolve, and two or three enormous iron balls were left to themselves to work their own sweet will with the quartz. As soon as the pan began to go round they would begin to dance and roll and tumble about in a way no quartz could stand; the quicksilver did its work as in the other machine, and water washed away the refuse. Then when tons of ore had been treated in this way the quicksilver was drawn off and put into an iron still and distilled away into a condenser. The residuum contained the gold, which was submitted to a process called cupelling. I could cupel in perfection, but have now completely forgotten the art. The result was sometimes a little or big bright button of pure gold.

Now there was a certain mine called the Barathra Gold and Copper Mine, to the directors of which a very influential friend of mine had given me an introduction. It had been a copper mine for some time, and worked, I believe, with tolerable success—a good kind of steady-going respectable mine, without ambition, but safe and sure. One fine morning it caught the prevailing fever, and began to fancy it had got gold inside it as well as copper, and from that fatal day it knew quiet prosperity and gentle peace no longer. It changed its name from the Mary Ann, and called itself Barathra, induced an immense number of people to take shares, set up one quartz-crushing machine after another, invited all the first analytical assayers to come and test it in succession, sent up specimens to London to be tested there (which specimens always contained a good deal of gold), and, in short, behaved with such energy that in an incredibly short period of time it spent six thousand pounds of the money subscribed, if it did nothing else. At the time I was introduced to the board matters stood thus. A Perkes gold quartz-crushing machine had been crushing night and day for the previous three weeks. Tons upon tons had been yielding up such gold as they contained into 40 lb. of the all absorbing mercury. Moreover, a carefully sampled specimen of the same "gossan," or ore, was in London, waiting to be tested by a tried and trusty assayer. Why or how I

should suddenly become that person I cannot understand. Perhaps on account of the influential friend who presented me; perhaps because I was cheap; perhaps because I was young and tender, like little Billie in Thackeray's ballad, and therefore likely to prove amenable to wise counsel and authority. At all events, the precious sample was entrusted to me, and from it, to my great delight, I, in the presence of witnesses, elicited a sufficient amount of pure gold to justify any mine in considering itself a *bona fide* concern. I had used 'a miniature Perkes' machine to obtain this brilliant result. A full-grown machine had just been established on the mine, and had been working on the same substance on a large scale. What more natural than that I should be sent down to obtain a proportionate result from the stupendous operations down in D—? I was sent.

Before starting for the mine I had a long and solemn interview with the chairman of the board of directors, a wise man and a worldly, and he said unto me many momentous things which I failed to comprehend. I do not say it in a boastful spirit, but I believe I possessed at that time an extremely intelligent cast of countenance; in spite of which it would have been difficult to find any one of my age more childlike in the ways of the world, more utterly unsuited to my then profession, or more peculiarly unfit for the particular business on which I was bound. My good father, aware of these characteristics, instructed me to look as profound as possible during my interview with the chairman, and receive my instructions in silence. I followed his advice, and was duly commissioned to start that very evening. Stupid as I was, I fully understood that if the three hundred tons of gossan that had passed through the machine yielded gold equal to sample, it would be all right. If it yielded none, it would be of no use making further search. I may have discovered this for myself, or my father may have told me; anyhow, it seemed plain sailing enough in spite of the chairman's eloquence, so I started on my journey innocent and happy.

Next day I arrived at my destination. I had never seen a mine before, and rather liked the look of this one. It was situated in a lovely valley, and there were two or three other mines in the immediate neighbourhood. These were of the quietly cheerful and plodding sort, and stuck as if they rather fought shy of my mine, which had a flushed and excited appearance. The gigantic Perkes' machine sent its thunder through the valley. I ordered it to be stopped at once, had the mercury drawn off, put into an enormous iron still, which was duly luted and sealed to prevent all tampering; a fire was lighted, and two trusty miners were set to work to watch the distillery. I then made a simple calculation, and found that if the residuum contained gold to the value of £300 the mine was worth working for that metal. If it contained less it would be useless to attempt further operations unless they could be devised on a cheaper scale. I took the captain of the mine into my confidence, and he ingenuously owned that my calculations were correct. The distilling occupied about twenty-four hours. All the men employed in the mine were present next day when I solemnly opened the still and collected the deposit which encrusted its bottom. This was first fused in a large crucible, and then submitted to the process of cupelling, amid the breathless interest of some thirty or forty stalwart Cornishmen. The result was a small button of gold worth 3s. 6d.

There was just time to save the post. I wrote a note to the board describing the result of my operations, assuring them that there was no more gold in the Baratheas gold and copper mine than was to be found in every substance in the world, including even sea-water, and stating that, as it was quite useless for me to be spending any more of the company's money (my salary was half-a-guinea per diem), I awaited their orders to return. I felt rather proud of this feat, settling in twenty-four hours, at nineteen years of age, a large concern that had puzzled the most eminent mining engineers in England for more than six months.

Strange to say, the board of directors took a very different view of my performance. I received an indignant letter, telling me that gold-mines could not be disposed of in this off-hand manner, and that if I could devise no experiments of my own I must at any rate remain on the spot, and perform such experiments as they should dictate to me by letter. I was more than willing to do so. The spot was healthy and picturesque, the miners not bad company, and the experiments turned out to be of a simple and amusing nature. Every morning's post would suggest a new one, which was conscientiously carried through; but as for gold, no more was seen after the production of that first famous 3s. 6d. button. These amateur tests soon became a joke. Being of a lively turn, I had a facetious way of conducting them, which endeared me much to my rude

friends, and we had on the whole a very pleasant time of it. So we went on for about six weeks, when one day several of the directors came down in a body, and satisfied themselves that everything had been done by me that they had suggested—that there was indeed no gold in the mine; whereupon we all dined together at the hotel, and a very pleasant and lively dinner it was. The wise and worldly chairman actually sang a comic song; another gentleman, who was an M. P., and possessed a sweet tenor voice, warbled a plaintive ditty about "Little Nell" in a manner that made me shed tears. I contributed my share to the night's amusement by performing feats of strength and agility: they seemed to consider me a simple and engaging youth, and to be rather fond of me than otherwise; I made them feel like boys again, they said. Later on in the evening the chairman confided to me that, although a wealthy man, he had one sorrow. He had no son, and felt particularly drawn towards me: after which he told me to call upon him in London before the end of the week, so that we might together prepare a report of my proceedings for the benefit of the shareholders, and we then parted with warm expressions of mutual regard.

Next day I bade farewell to the Baratheas; she had a sad demoralized expression. The miners had evidently made up their minds that it was all over with her, and seemed inclined to desert her in a body for her unostentatious neighbours. I returned to London and called on my friend the chairman; we prepared our report together; it was a most elegant composition. I contributed the facts and figures, the chairman contributed the style, and by the time it was finished most of the facts and figures had lost their original significance; but it read splendidly. "There, my boy," said the chairman, "the board will meet on Wednesday next; you will be present, and if you read that steadily out it will cast oil upon the troubled waters." I took it home and read it to my parents. My mother thought it quite a charming piece of English composition; my father withheld his commendation, but borrowed the manuscript.

By the following Wednesday he had prepared for me another document of a far simpler and sterner nature, in which facts and figures preponderated, and style was left to take care of itself. This composition he instructed me to read instead of the former one. Fathers come before chairmen; I promised to obey. He accompanied me to the office of the Baratheas Gold and Copper Mine, where it was evident that a very stormy meeting was being held. There were shareholders in the street, in the lobby, in the ante-room, in the board-room itself. My two great confrères were there, who had analyzed the mine before I did, and found such promise of gold in it. I was introduced to them, although they did not seem to perceive it. My appearance seemed to give comfort to such of the directors as had come down to the mine. The gentleman who sang "Little Nell" winked at me. The chairman made an impressive speech, mostly about myself, although I was too nervous to understand much of its flattering import. He then called upon me to read my report. I did so with a tolerably firm voice, amidst perfect silence. It was very short, and the effect it produced was terrible. Rage and hatred gleamed out on me from the eyeballs of the chair and the rest of the board; the faces of my confrères were livid; a storm of hisses and curses rose from people standing about and in the next room. I almost thought I should have to display more feats of strength and agility. Suddenly a firm hand grasped me by the arm, and a firm voice shouted, "Silence!" It was my father's. He said, "Gentlemen, my son's time is precious. If you wish to ask him any questions, say so at once." The people standing about wanted to ask all manner of questions, and terrible confusion prevailed. The chairman called us out to order, but in vain. I felt that it was inconsistent with the dignity of science that I, one of its votaries, should remain any longer in such a scene. So we bowed ourselves out of the room with as much haste and as good a grace as we could.

Thus ended my connection with the Baratheas, whose brief career as a gold-mine was brought to an untimely end by my unlucky agency. Its affairs were wound up, and I heard no more about it. I do not know if many people were ruined, or what became of the other participants in its rise and fall—chairman, directors, board, miners, machines, and quæ-silver are all portions and parcels of the dreadful past as far as I am concerned. So, indeed, is the profession which led to my making their acquaintance, for I did not prosper as an analytical chemist, and I have not seen a mine since. But I am still interested enough to wonder sometimes how that unhappy Baratheas could thus deceive and take in, not only the public, not only responsible and wealthy gentlemen of position like my friend the chairman and his brother directors, but the two most respectable and best-known analytical chemists and mining engineers of the day, who had probed, and sounded, and tapped, and

auscultated her, if I may so speak, from head to foot, and all to have her imposture revealed in twenty-four hours through the marplot stupidity of an ignorant hobbleddehoy!

#### ALCOHOL AS MEDICINE.

(Spectator.)

The little professional fight which has been going on among the Doctors as to the value of alcohol in medicine, or rather as to the value of professional "round-robins" about drugs, will, we should say, be productive of a great deal more evil than good. The state of the case, as we outside laymen understand it, was pretty much in this wise.—Observers, not being doctors, noticed a tendency in English society to revert in a quiet and unobtrusive way to the old hard-drinking habits supposed to have been abandoned fifty years ago, and and really so far abandoned that the new generation, sedentary from habit, dyspeptic by temperament, and full-blooded from proper feeding, dared not indulge as its fathers, uncles, and grandfathers were accustomed to do with apparent impunity. Nobody, however, would have said much about the matter, the people who watched being pretty well aware that although drunkenness had become obnoxious, drinking had never ceased; that nearly as much liquor was swallowed as ever, allowance being made for impaired physique; and that the diseases arising from over-drinking were still frightfully prevalent, though slightly changed in type. But an idea spread among them just at the same time that the habit had extended itself, that women, who during the drinking cycle were as abstinent as Hindoos, were beginning to drink, or that, at all events, some false idea about drinking had taken possession of their minds. Men, even drinking men, are very sensitive about women drinking, partly because they hate to see their own vices reproduced in the sex which they wish to be different from themselves, partly from a traditional idea not worth discussing just now, probably false in part and true in part, but at all events, very old and very difficult to remove. They consequently inquired, and found, as they thought, that the Doctors, who share with the Priests the empire of interior society, were in the habit either of ordering alcohol too freely, or allowing their patients to think alcohol exceedingly beneficial. And we must say, after reading and hearing a good deal on the subject, we are inclined to believe the social impression was well founded. The profession as a profession may have known as much about alcohol as it did about aloe or reduced iron, but individual members of it had fallen into the habit of sanctioning its use a great deal too freely. We should not say that excessive doses were often ordered. Dr. Anstie, who is rather fierce upon those who signed the declaration against alcohol, reports two cases in his own practice, in one of which a lady in delicate health had been directed to drink "to the verge of intoxication," and in another a man had been prescribed fourteen ounces of brandy—that is, seven-eighths of a pint—a day; it is certain that the late Dr. Todd, a man of inquisitive genius, aware that the old system of starvation was erroneous, sometimes tried heroic doses of alcohol; and we ourselves have heard in three separate cases of very extravagant prescriptions. Still these were exceptions; but the general tendency to "strengthen" women through alcohol undoubtedly tended to develop a craze which, in a heated, over-worked, over-vitalized civilization like ours needed no artificial development or justification. A great many doctors prescribed alcohol because they believed that, in the doses they prescribed, it would be beneficial, and held themselves no more responsible for a voluntary overdose than for a voluntary overdose of morphia or chloroform; and a great many more prescribed it because their patients wished for it, and patients, being scarce, must be humoured. The prescriptions of each circulated from mouth to mouth, and the idea of alcohol as a necessary nourishment spread till ten per cent of the sick world was taking liquor as medicine, and ten per cent of the healthy world was accounting for drains by the imaginary orders of a non-existent doctor. There was a patent evil, the laity made a fuss, and about two hundred and fifty physicians and surgeons of standing formally condemned the existing want of caution in giving such prescriptions.

The Circular was not perhaps quite unobjectionable. It was got up, we fancy—quite accidentally—in rather a hole-and-corner kind of way; it assumed that knowledge began and ended with those who were to sign it, whose very names were previously unknown—for the writer could not know who would or would not sign it;—and it roused the instinctive and justifiable professional dislike to any authoritative rule which discredits the use of special or exceptional cases. Particular doctors, too, thought themselves hit; there was a fight in print, and altogether the Circular was not wholly a success. Still it was very well intended, and would, we believe, if

unopposed, have produced considerable good, if only by enabling fathers, husbands, and confidential friends to oppose to the prescriptions of the family adviser the general opinion of the medical profession, and so deprive alcohol of the false air it had momentarily acquired of general utility. Of course after the fight very little good will be effected. The man or woman who likes alcohol will obtain an opinion that it is in extreme moderation beneficial, will interpret moderation according to his or her ignorance or caprice, and will consider himself or herself released from consequences by a half-fraudulent reliance upon a grossly exaggerated version of doubtful scientific advice. We shall hardly hear of a bottle of port a day being prescribed for a young lady, but we shall hear of "port," with no particular rule as to the beneficial quantity, the point upon which, we repeat, for the second time, the profession has left the lay public in unpardonable ignorance. There ought to be a general consensus upon the subject, and there is absolutely none, nor any idea that there can be such a thing as a general rule. Of the fact which we recently quoted from the *Practitioner*, that about two glasses of sherry a day is the full amount which the system can absorb beneficially, the public is as ignorant as ever it was, for a statement of that kind in a scientific journal is never seen, and in a popular journal is forgotten in a fortnight, while on the equally important subject, the equivalents of those two glasses, the lay public is hopelessly at sea. Nobody knows anything about the proportion of alcohol in liquor. Ask any man without special knowledge how much beer, port, brandy, or claret is equal to two measured "glasses" of sherry, and he will reply vaguely that beer and claret are quite safe, that port is heady, and that brandy should always be "qualified" by solawater. "Qualifying" strychnine would strike him as absurd, but he would think two ounces of neat brandy much stronger than the same quantity in a bottle of solawater. We remember one day hearing a man of the old school declare himself no drinker because he never took anything but a bottle of raisin wine after dinner, the notion in his mind being that "home-made stuff like that" could not possibly be injurious. If he had been told that he had drunk two bottles of sherry or best part of a pint of proof spirit, he might have been induced to moderate his dose. As to women, we firmly believe the majority of them think a wine weak in proportion to its sweetness, and while they will believe any evil of brandy or sherry, see none in cool claret or "filipping" champagne.

There is another point connected with drinking, if not with alcohol, upon which we suspect, though of course we do not affirm, that the profession might with advantage create a kind of public opinion. Is it not true—we do not affirm it, but we incline strongly to believe it—that different liquors produce specific moral or mental effects,—that is to say, effects partly independent of the temperament of those who imbibe them? Is the popular French notion that white wine is morally more injurious than red wine wholly baseless, or based only on the fact that it is a little more treacherous? We doubt it, having observed for years, and among men placed in curiously different circumstances, that an overdose of sherry will produce quivrelisme, or in extreme cases homicidal drunkenness, more certainly than any liquor in the world except arrack, which, as all Indian doctors know, is the cause of at least half the murders in Indian cantonments, and ports frequented by sailors. Champagne has the same effect, though it is less observable, because this wine is so seldom drunk to excess; and so, as we suspect from reports—we have never seen it drunk—has the strong cider of the West. Port, on the other hand, affects the moral nature in another way; while beer, and more especially the hard, sour beer of country districts, seems to unite in itself every conceivable form of mischievous result, except diminution of nervous strength. We would ask the *Alliance News*, if it were not so prejudiced as to be hopelessly untrustworthy, whether it could not show from evidence given in Court that four-fifths of all the murders and rapes committed in England are committed under the influence of beer,—beer as distinguished from other liquors. The effect of claret, again, the wine the gentlemen trust, is more difficult to ascertain, because the alcohol in it is so much less; but the French, who know, say the consequences of excess in claret, particularly very new clarets, are very dreadful, that it "cuts the nerves to pieces," and that no wine has so many suicides to answer for. The speculation may be merely fanciful, and of course there is no liquor which is healthy in excess; but still the subject is a very curious one, and there is no *à priori* foolishness in our query. The moral effect of some sleepifying drugs certainly differs greatly. Bang, the preparation of hemp eaten by the Ghazees or fighting Mohammedans of India, by the "dellis" of the old Janissary army of Turkey, by the serfs of the Old Man of the Mountain, and, as we

imagine, by the ancient Scandinavian Berserkers, who got the hemp from Finland, certainly produces homicidal mania, while opium in its Indian and Chinese preparations as certainly does not, its effect, according to Dr. Eison, a very high though slightly prejudiced authority on the subject, being less deleterious than gin, and producing rather inertia than vice. He did not take into account sufficiently its awful effect upon the character as a solvent of the will—some drunkards can speak the truth, but opium-eaters always lie—but still he is notorious'y right as to the apparent external result. If such difference can arise from the action of drugs so analogous in stupefying power, why not in the action of liquors alike only in this,—that in them all the motive power—the mordant, as we might call it, of the die—is alcohol?

### Shipping Intelligence.

#### ARRIVALS.

March 16, *Ottawa*, Brit. Str., Hockin, 1274, from Hongkong Mails and General, to P. & O. Company.  
March 16, *Itasca*, Am. Ship, Rush, 1397, from Newport, Coal, to Messageries Maritimes.  
March 22, *Candali*, Dutch Brig, Campbell, 200, from Rotterdam via Kobe, General, to Carst, Lels & Co.  
March 22, *Oregonian*, Am. Str., Dearborn, 1914, from Shanghai, General, P. M. S. S. Co.  
March 22, *Solent*, Brit. Ship, Meldrum, 732, from London, General, to Aspinall, Cornes & Co.  
Mar. 23, *Princess Amelia*, Dutch schr., Driest, 232, from Chefoo, February 13th, Beans, to Carst Lels & Co.

#### DEPARTURES.

Mar. 16, *New York*, Am. steamer, Furber, 2,117 for Shanghai and Ports, General, despatched by P. M. S. S. Co.  
Mar. 18, *John Milton*, Brit ship, Richard, 618, for New York, Tea and Curios, despatched by Walsh Hall & Co.  
Mar. 18, *Lothair*, Brit. ship, Peacock, 794, for Kobe, Re-exports, despatched by Strachan and Thomas.  
Mar. 19, *Phase*, French steamer, Such, 960, for Hongkong, Mails and General, despatched by M. M. Co.  
Mar. 19, *Barrosa*, H. B. M.'s frigate, Moore, 17 guns, for South Sea. The *Cerulea*, went down the Bay in Company.  
Mar. 20, *Ellen Morris*, British brig, Sillich, 195, for Kobe, Ballast, despatched by Walsh, Hall & Co.

#### PASSENGERS.

Per Steamer *New York* for Shanghai.—Messrs. Watson, Taylor, and 3 Japanese in the cabin, 5 in the steerage. For Nagasaki, one Japanese in the cabin, and 15 in the steerage. For Hiogo, Messrs. E. A. Bird, E. Strachan and M. Herren, with 10 Japanese in the cabin, and 82 in the steerage.

Per *Oregonian*, from Shanghai &c.—Mr. Lacon and wife, Messrs. P. W. Eckfeldt, T. A. Annett, C. J. Melhuish, L. Danie, C. J. Illies and servant, Mr. Mills and wife, Capt. and Mrs. Kirby, Mr. A. J. Bauduin and servant, Messrs. Paul Gutschow, J. W. Beauchamp, Geo. Gray, and 29 Japanese officers, and 134 in the steerage. For San Francisco.—Messrs. E. H. Lavers, Wm. Duncan, and O. Leng.

#### CARGOES.

Per *Phase*, for Hongkong &c.—

Raw Silk	392 Bales.
Waste Silk	34 "
Rice	2,500 Bags.
Copper	526 Packages.
Treasure	\$20,000
Sundries	200 Pkgs.

#### REPORTS.

The British ship *Solent*, Captain Meldrum, sailed from London November 20th, and passed the Downs on the 25th, landing the Pilot the same day. Going down Channel had very thick weather with Easterly and S. E. gales, heavy squalls and rain, and cross sea the same weather continuing up to 30 deg. N., thence had light E. S. E. winds and foggy weather to the Equator, which was crossed December 18th in 24 deg. West. Met the S. E. trades in 2 deg 30' South, and carried them to 27 deg. South in 30 deg. West. Afterwards experienced a succession of southerly gales, with heavy cross sea and foggy weather as far as Gough's island which was passed January 9th; two other vessels in company, thence to 99 deg. East, strong Northerly winds, with thick foggy weather and a very heavy S. W. sea. Moderate S. E. trades to Sandalwood island, sighted February 18th. Heavy squalls from W. to N. W., while passing through Timor and Manfra Straits, were becalmed for two days in the latter; afterwards light airs and calms to Geby, passed on the 26th. Thence to Yokohama, had heavy squalls and rain for some time; latterly light variable winds and fine weather until the 18th instant, when a heavy gale came on from the E. S. M. and S. S. W., on the morning of the 19th the wind veered suddenly round to the N.N.W. and blew with terrific violence for some time, moderating again in the evening. Fine weather after-

wards into Port; took a pilot on board on the morning of the 21st, and anchored at Yokohama the same evening at 8; 122 days from London Dock.

Vessels spoken on the voyage:—

<i>Star of Scotia</i> ,	London to Calcutta	December 3rd.
<i>Isabel Groom</i> ,	do. Bombay,	same day.
<i>City of Hankow</i> ,	do. Melbourne,	December 14th.
<i>Burlington</i> ,	do. Merina gulf	" 17th.
<i>Gen</i> ,	Cardiff to Hongkong,	Feb. 28, 136 days out.
A Dutch ship, Ghent "	" "	" 29, 129 "

### ANIMAL, BIRD & FLOWER SHOW.

## BLUFF GARDENS.

THE day for the above Exhibitions has been fixed for WEDNESDAY, 3rd April next (weather permitting).

#### ADMISSION:

Foreigners	\$1.00
Natives	1 Boon.

The Show will be open from 1 to 6 P.M.

Refreshments may be had on the ground.

Exhibitors will please take notice that all Exhibits must be sent in between 6 and 9 o'clock in the morning of the day of the Show, and must be taken away the same evening after 6 o'clock, and that the Committee do not hold themselves responsible for any loss or damage. It is suggested that Exhibitors should send an attendant to feed and look after live exhibits.

Further particulars may be had of the Hon. Secretary, 23, Water Street.

Yokohama, March 16, 1872.

FRENCH.—Segond				Gun-boat	Captain Cûnte
AMERICAN.—Idaho	8	3,700		Store-Ship	Lieut. Commander Watson.
Alaska		1,122		Corvette	Captain Blake.

With the details little was done; the basis of the scheme was good; and the arrangements might have been easily made and a good system of police ensured. But, unfortunately for Yokohama, ISEKI left us and MUTSU filled his place. The former, in this matter, at all events, appeared to understand and appreciate our wishes; the latter seemed too full of his own personal importance. As Governor of Kanagawa he could not allow any such thing as divided control. He was the man. "Hand over your dollars" he might have said "and I will provide you with a police"—a police that would probably have cost us five times as much as that of Hongkong, and yet been almost useless, whilst as to the elucidation of the accounts we should have had to retain Babbage, or, at all events, his machine, to help us in our difficulty. Japanese control of a police force supported in part by foreign money, of a force, too, without the slightest idea of the liberty of the subject—at least of an European subject, and with very hazy ideas of right and wrong—would have been the result. The absurdity of MUTSU's demand was pointed out to him. He was told that foreigners would not give their money for him to spend as he pleased, and he was reminded that, when asked to subscribe, they would point to the adage "a burnt child dreads the fire," and that any such scheme would be an absolute failure. But still the Chiji was firm. Ignorant of our ways, he refused to allow any one but himself to have the disbursing of foreign dollars, and, when again remonstrated with, gave his hearers to understand that if they persisted in annoying him about the police question, he would do away with the existing force altogether. And, indeed, he might have done so for all the good it ever did. Was ever any thief arrested? Did any of our readers ever recover their stolen property? Did any one ever see more than half a dozen police during the day—and even these congregated about the grog-shops at night in the hope of "squeezing" some poor Jack who had taken more alcohol than was good for him? Such a police force might, indeed, have been abolished without inflicting much harm upon the community. But, plainly, the Consuls could do no more. They had pressed the matter almost to dangerous lengths, and had to retreat as best they could.

Their bread, however, was cast upon the waters. The local Government saw that the foreigners would not give them money to pay for their crude experiments, and being fully aware that, for their own safety, a strong police is a necessity in Yokohama, they raised a force numbering 424 constables and 24 sergeants. This, at all events, should be sufficiently large to control the disorderly spirits of the place; but the fact is that the police trust more to their presence than to their vigilance to terrify the would-be thieves. If it rains at night, one and all creep under the shelter of some friendly portico, and the godown next door may be rifled twice over before the guardians of our property would be any the wiser. If it is fine, they stand about at the corner of one street for hours together, and, if in the neighbourhood of a hotel or billiard room, stare through the windows at the strange—to them—antics of the foreigners, until the warning lantern of the sergeant on his rands compels them momentarily to assume a semblance of attention. But, again, on the other hand, it is fairly urged that we cannot, at once, make trained constables out of newly enlisted Japanese. They are, as we

said before, totally unversed in the duties of policemen; they are apt to commit mistakes by going too far or not far enough, and the inquisitiveness of many of them is a source of annoyance to foreigners. Yet, we must take all things into consideration, and if we cannot get constables equal to the A division of the metropolitan police, we must do the best with the material at hand. For this we require the assistance of about ten trained constables from home, two sergeants and an inspector, and this, it must be remembered, would involve a heavy expenditure. The policemen would involve an expense of £100 a year each and quarters, the sergeants double that, and the inspector as much as £800 a year. To provide this sum of money, the residents of Yokohama would have to impose upon themselves a tax of no small proportions, and the outlay could not be undertaken without serious consideration. But if we are to have a good police force, that is the only way to obtain it, and the money must not be grudged. The Japanese would, of course, on their part, have to pay their share, and the control of the force would have to be confided jointly to the Chiji and the Consular body, or a Consul elected by them. At present this is refused; but Ministerial representations will, we do not doubt, be soon made to the central government, and our object should be obtained without much difficulty. With a staff of European constables the present force could be thoroughly trained, and as it would afford an excellent basis, we might soon have a capable and experienced force. But until this improvement is made, Yokohama will still be liable to the depredations of the gangs of plunderers who infest the place during the winter months. The police are more numerous than they were last winter, they are far more capable of repressing crime, but they lack professional training, without which they are *pro tanto* of less use, and the money which the Japanese Government expends upon their support fails to secure an adequate return. We have some reason, however, for believing the Japanese understand this, and are desirous of taking steps to provide for a foreign inspector of police. If so, they can learn much from Hongkong, and as they have now in their possession the books and papers relative to the force in that colony, they can see that the establishment of a good Police does not consist only in posting a number of unskilled and comparatively useless sentries at the corners of the streets, a plan which, however excellent in the eyes of the Chiji, is anything but satisfactory to foreign residents.

#### THE CHRISTIAN QUESTION.

(Continued from our last.)

AFTER all that has been said, there is, then, no real impediment to the introduction of Christianity into Japan; nothing in its doctrines, nothing in the disposition of the Japanese people to hinder the preaching of the Gospel in this country, and consequently nothing can justify the violence with which a cruelly absurd policy is now opposing it. The introduction of Christianity into Japan is not only possible, it is even desirable, and I see, moreover, that it is necessary.

What is, in fact, the actual situation of Japan? Only a few years ago, Japan was as if exiled from the rest of the world. But at length she had to open her gates to the stranger, and to emerge from the egotism of her isolation. There were at first ignorant and foolish prejudices which produced a reaction, and caused her to try to purge her soil from the defilement of the stranger, but any attempt of this

kind could only fail, and did so in reality. Very soon, by a marvelously spontaneous change, this hatred was succeeded by an infatuation for everything European. The Government itself now marches at the head of the movement with an ardour which some think inconsiderate, and in a few months the country, renouncing its antique traditions, aspired to take its place among modern nations. It is no longer possible to isolate ourselves, said the Japanese statesmen; we also, will play our part in the world, and Japan shall appear with honour among civilised nations. This is undoubtedly a noble aim, but what have they hitherto done to attain it? It seems to me that it is the custom to commence an edifice by the foundation; the Japanese have done the contrary, they have taken, and still take from our civilization, all that is external and superfluous, but they have refrained from laying the foundation. It is a good thing, no doubt, to have railways, telegraphs, to have a fleet and an army; but all that is not exactly civilization. Civilization is that indefinable something which does not assert itself, but which is felt; it is the substitution of the reign of right for that of might, it is, in the governing power, the subordination of itself, and its entire devotion, to the interests of the people over whom it is exercised; an authority based upon respect for the obligations to do right which every man has by nature.

In the governed, civilization consists in the respect which is due to those powers to whom the safeguard of society is entrusted; it is the development of the faculties of the soul, the mind, and the heart; and it is to be found in the search for truth, and in doing good. Civilization, says a learned man of the present day, is the respect, love and devotion due from man to man, as recognised by custom and established by law; barbarism is, on the other hand, the contempt and abuse by man of his fellows. But the foundation of civilization is Christianity. Before the word of Christ had spread throughout all lands, great nations were in existence; there were learned men, inventions of practical utility had been made, but there was no civilization. And, whatever may be said, Rome—subduing and commanding an enslaved world—is not to be admired. Upon the ruins of the Roman empire, overflowing with corruption, Christianity raised a new world, and the barbarian, becoming Christian, left his desert plains to advance in the front rank of the nations of the world. What were we eighteen hundred years ago? And what are we at this moment? We are what Christianity had made us. Christianity has liberated our minds from the tyranny of error and has freed our will from despotism. Without Christianity Japan may be great and prosperous, but never civilized.

And what does the Japanese government desire? Does it wish to make use of our laws and our customs? But all our modern lawgivers have pointed to the principle of religious liberty as the keystone of their code. As God has given each his individual liberty, so have our legislators allowed each to follow the dictates of his conscience. And with respect to the religious belief of any nation, all religions, equally with that professed by the majority, have power to build temples, to inculcate their doctrines, and to augment the ranks of their followers. And, even, if the Buddhists or Shintoists should, at some future period, desire to raise their standards on the banks of the Thames or of the Seine, they would find no law to prevent them, no jailor to imprison them.

And, again, what do the Japanese wish? Do they desire to command respect, to make for themselves a name among nations? It will be admitted that their soldiers manoeuvre well; that their railway overcomes the difficulties of distance, that our dress is suitable for them. But how can we admire the arbitrary nature of their power, the intolerance of their edicts, and the injustice and barbarism of their legal procedure? What would they have? The Neros have never possessed our esteem, nor has mankind withheld its sympathy from their victims.

And, yet again, what is it the Japanese desire? Do they seek our confidence? We are on the eve of revising the treaties between Japan and the various countries of Europe and America. The experience of several years has shown the Japanese the inconvenience of having, in their country, communities of strangers, living their own peculiar life, and independent of native laws. I acknowledge

the incongruity of such a state of affairs, and sooner or later it will have an injurious effect upon those people who live under its influence. And, still further, it is a question of honour, for this evidence of our independence naturally wounds the *amour propre* of a government which respects itself. The Japanese desire to place both natives and foreigners under the same authority. They see that when they go to Europe they are subject to its laws and are liable to its judges, and they say,—why should it not be the same in Japan, why should foreigners not submit to our laws, and be amenable to our tribunals? Why? It is because we are Christians and the Japanese are not; because we are conscious of the rights and nobility of man, and if we may judge from what we see, the Japanese are not. Our governments are anxious that we should find our home in this foreign land, and cease only to guard and protect us when they can rely on our liberties being respected, our rights secured, and when our position as strangers shall not act to our detriment. And, from all time, the Christian nations have alone inspired this confidence, for there only where there exists an identity of religion, is there identity of manners, and there only, justice and love. For instance, what is there to inspire confidence in the Japanese? Do they respect and esteem our civilization? That which we hold much dearer, much more holy—our religion—is covered with infamy, and is proscribed. Have they feelings of humanity? In prison and in exile they have killed numbers of our brothers in faith by famine and misery. Do they hold out promises? When have they kept them? And what if, at some future time, the Japanese Government should wish to make us suffer inexpressible torture on account of our Christian religion? The difference of religion between those who are and those who are not Christians, has hollowed out an abyss only to be bridged by the introduction of Christianity into Japan. Christianity is the forerunner of our civilisation; it is the basis of our laws, and it unites with a fraternal bond of respect, nations which are divided by political feeling.

## NIHON GUAISHI.

### ACTUAL HISTORY OF THE MINAMOTO FAMILY.

#### PART. I.

(Continued from our last.)

The Minamoto family sprang from the Emperor Seiwa.<sup>1</sup> One of his attendants (herself a member of the Imperial family) bore three Prince Tadazumi, who was raised to the rank of Shihon and was appointed Hiōbu kiō. He went by the name of 'the Prince of Momozono.' This prince had two sons named Tsunémoto and Tsunénari, to both of whom the surname of Minamoto (Gen) was granted. Tsunémoto had a warlike genius, and was skilled in horse-archery. From the fact of the Prince [his father] having been the sixth son of the Emperor, he was usually called Roku-son-ō (or, "the sixth-grandson-prince"). During the period called Tengio (938-46) he became Vice-Governor (*saké*) of Musashi, and when Taira no Masakado revolted, he travelled secretly to the capital, in order to report the event. He consequently received the rank of *jū-go-i no gé*, and followed Fujiwara no Tadabumi to smite Masakado. He also followed Ono Yoshifuru to smite that rebel's associate, Fujiwara no Sumitomo. Finally the rank of *jū-shi-i no gé* was conferred upon him, and he was appointed Chūjūfu Shōgun. His descendants were military vassals from generation to generation, and they used a white flag.

Tsunémoto had eight sons, the eldest of whom was Mitsunaka,<sup>2</sup> born at Tada in Setsu. He succeeded to his father's functions and rank, and won the hearts of the

(1) 850—880.

(2) Only those sons, brothers and grandsons of the sovereign to whom the title was specially granted by patent were called Shimo or Princes of the Blood. There were five grades amongst them called Ippon, Nihon, Sanbon, Shihon and Muhon Shimo, of which the first, Ippon, was the highest. Princes of the Blood were eligible for the following appointments, namely, Minister of the Imperial Household (Nakadzukasa Kin), Lord High Chamberlain (Shikibu Kin), Minister of war (Hiobu Kin), President of the Censorate (Daini no Iru), and the governments (Taishin) of Kozuke, Katsuzo and Hitachi. The princes of the blood were not supposed to discharge the duties of these offices, that burden being taken off their shoulders by the *Taijin* and *Shōgo* (Vice-Ministers and Assistant Vice-Ministers) of the Departments of State and by the *Saké* and *Jū* of the provinces respectively. Under the Shōguns these rules were still respected as far as the granting of the titles went.

(3) Vulgarly called Tada no Manjin.

warriors of the Kuantō. In the second year of Anwa (969,) in the reign of the Emperor Reizei, Tachibana no Shigenobu, Assistant Vice-Minister of the Household,<sup>4</sup> Fujiwara no Chiharu, formerly *suké* of Sagami, and others secretly conspired to seize the person of Taméhira Shinnō, to abscond to the Kuantō and stir up civil war. Mitsunaka was a partaker in the matter, but afterwards fell out with Shigenobu, and ended by confessing. At the desire of the Regent Fujiwara no San'yori he and his younger brother Mitsunuyé arrested Shigenobu and Chiharu, and sent them into exile. It is said that there was as great a commotion in the capital on this occasion as when the civil war of Tengiō took place. Mitsunaka once thought to himself that a military vassal could not dispense with a sharp sword in watching over the safety of the Son of Heaven. He therefore summoned a certain skilful smith who dwelt in Chikuzen, and made him forge for sixty days. He thus obtained two swords called Higékiri<sup>5</sup> and Hizamaru, which he transmitted to his posterity. The highest office which Mitsunaka ever held was Sama no kami (master of the horse), and when he died the posthumous rank of *Sō-jiu-sam-mi* was conferred on him.

His four sons were Yorimitsu,<sup>6</sup> Yorichika, Genken and Yorinobu. Genken became a monk. Yorichika was condemned for fighting with the monks of Kōbokuji,<sup>7</sup> and was exiled. His descendants lived in Yamato, and were called the Yamato Genji. Yorimitsu was celebrated for his military talents, and became Tōgū no Daishin.<sup>8</sup> In the period called Yōyō (987—8), the Regent Fujiwara no Kan'eiye, having constructed a new palace, gave a feast in honour of its completion, and Yorimitsu sent thirty-three horses to be divided amongst the guests. Kan'eiye's son Michitaka succeeded him as Regent, and his younger brother the Udaishō Michikané disputed the power with him. Yorinobu, who had always been in the service of Michikané, addressed Yorimitsu, saying: "I am powerful enough to murder Michitaka and put my master in his place." Yorimitsu covered the speaker's mouth with his hand, and said: "Do not speak wildly. If the affair fail, your brains and liver will besprinkle the earth. And besides, how could your master escape the consequences?" Yorimitsu had three sons. The eldest was Yorikuni, whose descendants lived at Tada for generations, and were called the Setsu Genji.

Yorinobu was extremely brave and daring, and understood well the management of troops. During the period called Chōgen (1028-1038) he became *kami* of Kai. It happened that Taira no Tadatsuné, *suké* of Kadzusa, having made a disturbance, the Imperial Court ordered Taira no Nawokata, *suké* of Kōdzuké, to take command of the troops of the Tōkaidō and Tōzandō, and punish him. Three years having elapsed without his being able to subdue Tadatsuné, Yorinobu was made *suké* of Hitachi and sent to supersede him. As soon as Yorinobu heard the order he started, although he was advised to await the assembling of the troops before advancing. He refused, and then advanced as far as Kashima,<sup>9</sup> taking his son Yoriyoshi and others with him. Tadatsuné seized the boats, and planted a line of palisades on the seashore, so that it was impossible to cross. Yorinobu planned to lull him into security by a show of weakness, and sent a messenger to ask for peace. Tadatsuné refused. Hereupon Yorinobu assembled his followers and held a council of war. His followers were of opinion that even without the aid of boats or rafts, they might advance to

the attack along the seashore. Yorinobu said: "It will not do. The rebels presume on the advantageous nature of their position. If I cross straight, and attack them unprepared, I shall be able to take their position in a single engagement. I hear that there is a shallow place, where one can cross on horseback. There must be some one in the army who knows it." There was a certain Takabuni who declared that he knew. He galloped into the sea, and as he went he planted rushes to mark the shallows. Yorinobu marshalled his army and followed him. Tadatsuné feared and trembled, and coming forth surrendered. His head was cut off, and sent to the capital. For this service the rank of *jiu-shi-i no jō* was conferred on Yorinobu, and he was appointed *suké* of Kōdzuké and Hitachi. He declined with gratitude, saying: "Your servant has been enabled to make a power-ful rebel surrender without imbuing his sword with blood, by borrowing the aid of the heavenly prestige. What merit has he? Your servant is old, and cannot support the fatigues of a distant post. He prays to be appointed *kami* of Tamba instead, though he scarcely ventures to urge his wish." His request was not granted.

His son Yoriyoshi was quiet and resolute, and possessed of strategical talent. He was the *hō-guan-dai*<sup>10</sup> of the Ko-Ichijō-In,<sup>11</sup> and constantly followed him to the hunt. He could make good use of even a weak bow, and shoot down fierce animals therewith. Taira no Nawokata admired his talents and accomplishments to such an extent that he gave him his daughter to wife. Yoriyoshi having subsequently dreamt that the god of Hachiman<sup>12</sup> gave him a sword, his wife became pregnant and bore a son. Yoriyoshi rejoiced and said: "This boy will certainly raise up our family," and he consequently named him Yoshiyū.<sup>13</sup> When he came to man's estate he put on the cap<sup>14</sup> in front of the shrine of Hachiman, and was called Hachiman-tarō. Yoshiyū was of an energetic and persevering nature, and shot well with the bow. Whenever an expedition took place he accompanied his father, without missing a single occasion. Yoriyoshi having become *kami* of Sagami, a province in which the military profession was very popular, he and Yoshiyū tried to win hearts by their munificence and personal dignity, so that all the men of mark eagerly submitted to them and delighted to do their bidding.

At this period Abé Yoritoki, one of the powerful men of Mutsu, had united under his authority numerous districts, until he became chief of six departments. The *kami* of the province and the governor of the castle of Akita<sup>15</sup> combined their forces, and marched against him, but he anticipated their attack and defeated them severely. From the Shirakawa<sup>16</sup> barrier northwards to the sea the whole country revolted and joined him. The court decided to make Yoriyoshi *kami* of Mutsu, and to send him with Yoshiyū and his second son Yoshitsuna at the head of some troops to smite Yoritoki, but a general amnesty happening to be proclaimed, the latter disbanded his troops, surrendered and became Yoriyoshi's vassal. Yoriyoshi now received the additional appointment of commander-in-chief of the Chinjiufu. In the seventh year

(10) The *hō-guan-dai* was the third officer of the ex-Emperor's council, corresponding to the *Daijō* in the eight departments of State.

(11) This person was Prince Atsuakira, a son of the emperor Sanjo, who was adopted by Go-Ichijō as his heir, but set aside in favour of Go-Ichijō's younger brother, in order to gratify the ambition of the Regent Michinaga, who was the grandfather of Go-Ichijō and his brother.

(12) The origin of the name Hachiman is enveloped in considerable obscurity. One thing is certain, namely that it is the Chinese translation of the Japanese word Yawata or Yahata, meaning literally "Eight Banners." The probability seems to be that Yawata was the name of the village in the province of Bizen where the first shrine was erected in honour of the Emperor Ojin, his mother Jingō-ko-go and Tamayori himé [mother of Jimmu Tenno] in the year 550 A.D. In the year 859, in the commencement of the reign of Seiwa, the shrine at Iwashimidzu on Otokoyama in Yamashiro was founded in honour of the same three deities. The village underneath, on the road from Osaka to Fushimi, is also called Yawata.

(13) Yoshi was a part of his own name, and *iyū* means house or family.

(14) Putting on the cap was a part of the ceremony called *gembuku*, or coming of age.

(15) Called Akita-jo no *suké*. The office was held by the *Suké* or vice-governor of Dewa. The castle seems to have been constructed in the year 716, then abandoned for a time, and to have been reconstituted a military post in 780. The Hiechiu Shokugensho and Kuanshoku Biko differ in their statements of the date, but the latter is perhaps the better authority of the two.

(16) In the extreme south of the province formerly call Mutsu, and now Iwaki, close to the frontier, a most important strategical point in Japanese civil warfare.

(4) Nakadzukasa no Shōyū.

(5) The origin of these names is given in the introductory volume of the Taiheiki Kōmoku which treats of swords—When the swords were finished Mitsunaka had them tried on two criminals who were sentenced to death by decapitation. One sword (Higé-kiri) cut off the head of the victim after severing the head from the body, and the other (Hizamaru), after cutting through the neck, also divided the neck. That these feats are possible with a good weapon will appear evident, if it be remembered that in Japan the criminal subjected to capital punishment has to kneel down and bend his head forward to receive the blow, which falls perpendicularly upon the back of his neck. *Maru* is a corruption of *maru*, itself a corruption of *maru*, self, a suffix to men's names used in ancient times out of self-deprecation, then added to children's names, and afterwards also to objects which were highly prized by the possessor.

(6) Commonly called Rai-kō.

(7) In Sō-no-kami department in the province of Yamato; founded by Tankai kō of the Fujiwara family.

(8) Tōgū is a name for the heir-apparent. Tōgū is the collective name of the officials of his household, amongst whom the Daishin was third in rank.

(9) A department in Hitachi at the mouth of the Tonegawa.

of Yōjō<sup>17</sup> (1052) his term of office having expired, he was on the point of returning, and visited the Fu<sup>18</sup> in order to transact business, on which occasion Yoritoki entertained his troops magnificently. When his business was over he returned towards the capital of the province<sup>19</sup>. At Akurikawa, where he lodged, the quarters of Fujiwara no Mitsusada were attacked during the night. Some time previously Yoritoki's eldest son Sadatō had begged Mitsusada to let him marry into his family, but his request was refused, and consequently he endeavoured to take his revenge in this manner. Hereupon Yoriyoshi became desirous of arresting Sadatō, and Yoritoki consequently took up arms and revolted, occupying the barrier of Koromogawa. Yoriyoshi sent up a petition to the Emperor asking to be re-appointed, and set his troops in motion to smite Yoritoki. Yoritoki's sons-in-law Fujiwara no Tsunekiyo and Taira no Nagahira came and joined the loyal forces. Some one having denounced Nagahira for having secret relations with the rebel, Yoriyoshi arrested him and cut off his head. Tsunekiyo feeling anxious on his own account, also fled and rejoined Yoritoki. Tomitada, a kinsman of the latter, was brave and had a number of followers, and Yoriyoshi endeavoured to persuade him to ally himself with the loyal forces, by representing to him that he was acting by the Emperor's orders. Yoritoki having also gone in person to persuade him, Yoriyoshi ordered Tomitada to put troops in ambush and to attack Yoritoki by surprise. He thus caught Yoritoki and put him to death, but Sadatō's forces, however, still maintained their ground. Sadatō himself was a man of eminent talent, and understood perfectly how to handle troops, so that the loyal forces were unsuccessful on several occasions. There had been a succession of bad harvests, and no provisions having been supplied to them, Yoriyoshi asked the Emperor in the fifth year of Tengi (1057) to let him make requisition on the people for food for the troops. In the 11th month he took command in person of one thousand eight hundred men and attacked Sadatō at Kawasaki.<sup>20</sup> It happened that there was a high wind and snow, so that men and horses were starved with cold. Sadatō with four thousand picked troops engaged them at Tori-no-umi,<sup>21</sup> and throwing out his wings right and left inflicted a severe defeat on our forces. Six horsemen alone survived, and the rebels quickly surrounded them. The arrows fell like rain, and Yoriyoshi and Yoshiyū both had their horses wounded. Their followers dismounted and offered them their horses. Yoshiyū Fujiwara no Noriakira and others fought so valiantly all over the field that the rebel troops warned each other, saying: "It is Hachimanarō," and finally retreated. Having escaped, Yoriyoshi reported to the Emperor that the supplies for the troops had not arrived, from any place [in the province] either distant or near; and further that the *kami* of Dewa did not combine his efforts with him. Hereupon a decree went forth depriving the *kami* of Dewa of his office, and a new *kami*<sup>22</sup> arrived; but he also never came to the rescue. Sadatō's prestige continued to increase. He ordered Kiyotsunē to levy Government property with a private tally of his own. The law says: "Use a white tally, not a red one." The red tally was that of the Government. Yoriyoshi was in greater straits than ever, but he maintained his position against Sadatō for several years. In the fifth year of Kōbei (1062) his term of office expired, and a decree was issued to Takashima Tsumeshigé appointing him his successor, but the people of the province loved Yoriyoshi and would not submit to Tsumeshigé, so that the latter was compelled to leave. Hereupon Yoriyoshi took an oath that he would certainly destroy the rebels; and he sent a man to speak to Kiyowara no Mitsuyori, a Dewa chief, and to his younger brother Takénori, and to convince them by appealing to their feelings of loyalty to the Emperor. In the seventh month Takénori arrived at the head of his friends and adherents to the number of more than ten thousand men, and Yoriyoshi met him in con-

ference at Tamura-no-oka<sup>23</sup> with three thousand men. He formed seven divisions, and made Takénori and the rest commanders of separate divisions, while he himself commanded the fifth division. He then advanced as far as Haginobaba, and was about to attack the stockade of Komatsu,<sup>24</sup> but did not carry out his purpose, as the day was unlucky. It happened that a mounted scout of the Kiyowara family set fire by accident to the houses of the people, and a great clamour arose in the stockade. Yoriyoshi addressed Takénori, saying: "The opportunity is not to be lost. What does it matter about the day!" He replied saying: "My troops are as angry as fire. Let us make use of them at this very moment." He then sent some mounted troops to obstruct the road most liable to attack, and the foot soldiers pressed up to attack the stockade. Fukuyé Korénori and others climbed a precipice with some determined warriors and entered the stockade, causing great confusion among the rebels. Sadatō ordered his younger brother Munētō to issue forth and fight, but Yoriyoshi attacked him in the flank with his body-guard, and routed him. The rebel reserves on the other hand attacked our seventh division, but we fell on them and defeated them severely. At last the rebels abandoned the stockade and fled. Our troops then burnt it, and were going to retire but it happened that rain fell continuously, and they were detained more than ten days. The whole country south of I-wai<sup>25</sup> having allied itself with Munētō and robbed our convoys, Yoriyoshi sent a part of his troops to protect the communications. In the ninth month, Sadatō, perceiving the paucity of our troops, came with eight thousand crack horsemen to surprise them. Takénori said: "Our provisions are scarce. Our advantage lies in fighting at once. Their coming to fight instead of sitting down quietly and leaving us to our misfortunes is giving their heads into our hands." Yoriyoshi rejoiced greatly, and forming his men in "long snake" order<sup>26</sup> anticipated the attack. After half a day's fighting he defeated them severely, and pursued the fugitives to the river I-wai. He said: "I wish to profit by this opportunity to pound their den to powder at last." He therefore gave orders to Takénori to pursue them during the night with eight hundred horsemen, but Takénori chose instead fifty determined warriors, and proceeding along bye-roads, set Sadatō's quarters on fire. The combat raged inside and outside, until the rebel army, falling into confusion, fled and occupied the steep at Koromogawa. Yoriyoshi and Yoshiyū advanced and attacked them. The river happened to be full of water. Takénori and his companions fought and were worsted, but seeing that there was a tree on the river bank which overhung the water, Takénori sent a strong and active fellow to climb it, and crossing the river, to set the rebel camp on fire. Sadatō was frightened and fled. Yoriyoshi pursued him, and took two stockades one after the other. He then advanced and reduced the stockade of Tori-no-umi, after which he assembled his officers to drink. He addressed Takénori, saying: "It is owing to your efforts that I have been thus far successful. How does my face appear to you?" He replied and said: "Your servant took up his whip for the commander in chief. What efforts has he made? The commander in chief has displayed the most complete fidelity to the Son of Heaven, and for more than ten years has exposed himself to the inclemency of the seasons in the open fields. The hairs of his head were all white. Heaven and earth were moved, and the officers and men were inspired with enthusiasm on his behalf, so that he broke through the rebels like a river rushing through an opened dam. When your servant looks at the Commander-in-chief, he sees that his hair is half black again. If he catches Sadatō, it will all be black." Yoriyoshi rejoiced, and advancing again broke down three stockades, and pursued Sadatō to the stockade at the Kuriyagawa.<sup>27</sup> This stockade lay in a

(29) In dept. of I-wai, prov. of Mutsu.

watery swamp; its parapet was high and the ditches were deep. Swords had been planted in the ditches, and the place was defended with such desperation, that several hundred of our troops were killed. Yoriyoshi ordered the houses of the people to be torn down and thrown into the ditches in order to fill them up, and dismounting from his horse worshipped the capital afar off. He took fire in his hand, and calling it sacred fire cast it at the stockade. It happened that a wind arose at the moment, and the stockade was completely burnt. Our troops consequently surrounded it in haste, and the rebels fought with mortal desperation. Takénori opened an angle, through which the rebels escaped, but Yoriyoshi attacked and annihilated them. Satatô then came forth to fight alone. Our troops crowded together and stabbed him. Before he was quite dead, they placed him on a large mantlet, and six men bore him along for Yoriyoshi to look at. His loins were seven feet round, and he was tall in proportion. Yoriyoshi reproached him with his crimes and cut off his head; as well as those of his son Chiyo and his younger brother Shigétô. Tsunékiyo was also brought in bound. Yoriyoshi ordered a blunt sword to be used in decapitating him, and said: "Will you be able again to use a white tally?" Munétô and the rest all surrendered. Yoriyoshi saw in the stockade several tens of beautiful women who had been stolen by the rebels, and he divided them all among his officers. In the second month of the sixth year (1863) he sent men to bring the heads of Satatô and the others and lay them at the foot of the throne. A decree of the Emperor raised him to the rank of *Shôshi-i no gé* and appointed him *kami* of Iyo. Yoshi-iyé was raised to the rank of *Jiu-go-i no gé* and appointed *kami* of Dewa. Yoshitsuna became *Shôjô* of the Sayémon Guards, and Kiyowara no Takénori was made Commander-in-chief of the Chinjiufu. In the eighth month Yoriyoshi built the shrine of Hachiman at Tsurugaoka by Kamakura, in gratitude for the exploits he had achieved in battle.

(To be Continued.)

#### BRITISH CONSULAR TRADE REPORT FOR YEDO FOR 1871.

BRITISH VICE CONSULATE,  
YEDO, February 15th, 1872.

SIR, I have the honour to report herewith on the trade and other matters of public interest of this district for the past year.

*Trade and Commerce.*—By Clause VI of the "Arrangements for the Settlement of Foreigners at Yedo" of the 26th November 1867 it is provided that as Yedo is not an open port, no Foreign merchant vessel can anchor there and all goods belonging to Foreigners must be entered at the Custom House in Yokohama, according to the regulations of trade attached to the Treaties, and must pay duty there, or at some other open port, before they can be imported into Yedo. The same clause also provides in the same manner for the payment of duties at Yokohama on all goods exported from Yedo, before they can be shipped on board any foreign vessel at the former port. Thus, in the first place, all goods imported into, and exported from, Yedo will be included in Mr. Consul Robertson's report for the district of Kanagawa, and in the second place there can be no foreign shipping at this port,—two circumstances which naturally deprive my own report of all importance as far as statistical information is concerned.

I have however endeavoured to obtain, through the Custom House at this port, as much information as possible respecting the amount and the nature of business carried on by foreign merchants. Unfortunately the exact quantities and values are wanting.

*Return I* shows the goods imported by foreign merchants into Yedo during 1871.

*Return II.*—The goods exported by foreign merchants during the same same period, and

*Return III.*—Contains a list of the re-exported goods from Yedo. However incomplete these returns may be, it has cost me a great deal of difficulty to obtain them from the inexperienced officials in charge of the Yedo Custom House.

These Returns do not include the goods brought up to Yedo by native merchants from Yokohama. If it had

been possible to collect exact information relative to the latter imports, it would doubtless have afforded valuable information to the foreign merchant as to the market for foreign goods of this district. Neither have I been able to obtain even an approximate idea of the native produce exported from Yedo by Japanese merchants.

The consumption in Yedo of foreign goods appears to be very considerable. Almost in every street a certain number of shops may be seen where nothing but foreign articles are offered for sale. It would be idle to speculate on the future of direct foreign commerce in this district; changes of every kind occur so suddenly and so unexpectedly in Japan that I hesitate to express any decided opinion in this respect. It is however natural to conclude that where the actual consumption is, there will eventually be direct commercial transactions between the importer and the consumer, whatever may be the obstacles that have to be overcome. Yokohama, no doubt, has, as yet, every advantage over Yedo. It has a spacious and convenient harbour, its Banks, its Insurance Companies, its Mail Steamers; in fact every facility and convenience as a foreign market. Another consideration—and a very important one—in favour of Yokohama is, that it is a well built compact place where life and property can easily be protected, in the event of internal disturbances breaking out, by the ships of war usually on the station; whereas the defence of the foreign settlement at Yedo would be utterly hopeless.

But in spite of all these disadvantages I incline to the belief that in consequence of the opening of the railway, which, I understand, is shortly to take place, there will be more direct foreign trade with the capital than hitherto has been the case. Moreover the establishment of a Bank on the foreign principle, which the *Tokai-Fu* are at his moment organizing, will afford to the Yedo merchants facilities for engaging in mercantile operations with foreigners, hitherto unknown to them.

*Native Shipping and Navigation.*—The port of Yedo, as stated at the beginning of this report, not being open to foreign shipping, I have thought it desirable to procure from the Custom House a return of the number of Japanese vessels that have entered the port during the past year. This return, however, is far from being complete in as much as it does not give the tonnage of the vessels.

The arrivals of foreign-built ships, but owned by Japanese, are given as 357, whereas those of native coasting junks are stated to have amounted to 7,741. These vessels have to lay off Shinagawa, a very inconvenient anchorage at from two to three miles from the shore, and the goods landed there have to be carried a distance of from five to eight miles before they reach the heart of the commercial city. I understand, however, that a scheme is under the consideration of the Government for making a harbour opposite the foreign settlement, so as to enable their sea-going vessels to anchor at the entrance of the river.

This scheme, if carried out, might be of the greatest importance to the foreign concession, as in the event of the port being opened to foreign shipping, it would doubtless displace a considerable portion of the trade from Yokohama to Yedo; but such a work bears on the face of it very considerable difficulties.

The information I have obtained on the subject, from a competent engineer, is to the following effect.

From the present anchorage (Shinagawa) to the neighbourhood of Hama-goten is as nearly as possible four miles, and this space is a mud flat with from one and a half to three feet of water on it. There is a channel slightly deeper through it which is used for the present navigation, and which also no doubt serves as the outlet for the river Todagawa. In this channel, however, there is not more than two feet in many places at low water. To enable vessels to reach Yedo therefore, a channel say 18 feet deep would have to be cut through this mud flat. It must be at least 100 to 150 yards wide, and there would have to be excavated from four to five million cubic yards of soil. This could only be done by dredging machines, and, at an average price of one shilling per cubic yard, would cost about £250,000. But this open cut would be exposed to the sea caused by the wind blowing from the south and eastward, and the waves which come rolling over the shallow water, would carry the top surface of the mud with them, and fill

up the cut in a single storm. To prevent this, banks would require to be formed on each side of the cut, and, to make these of sufficient strength to stand, would probably cost another £250,000.

The river would then be confined between two banks, but its scour would have no beneficial effect because the ground is too level, and the shallow is too far out to sea.

After this is all done, there is the difficulty of the wash from steamers' screws and paddles breaking in the banks, the danger to the banks from storms, and the constructions of docks or basins for vessels to lie in at Yedo.

However with an expenditure of from £600,000 to £700,000 a harbour could be made; but it would be a long and tedious work to execute, a most expensive work to maintain, and with a commodious harbour at Yokohama and a railway between the two places an undertaking of doubtful advantage.

**Foreign Concession.**—The land set apart for the foreign concession under the "Further arrangements relative to the foreign settlement" of May 4th 1870, consists of 52 Lots measuring on an average (with the exception of a German lot of 3,000 tsubos) 450 tsubos each, or in the aggregate 26,162 tsubos—being equal to about 22 acres.

Out of these 52 lots only 24 have as yet been sold, and the number of foreign residences on the Concession is limited to 6 only. Therefore, although the city has now been open to foreign trade for three years, the settlement is still in its infancy, and so far as one can judge, a thorough failure. The main reason for this no doubt is that in the absence of a regular trade with the natives, there is no inducement for foreigners to invest their money in land and buildings which are not likely to yield to them any return. But there are also two other causes which are unfavourable to the foreign settlement, namely, the excessive ground rent which has been fixed under Clause II of the Convention of the 4th May 1870, being a *Bu* and a half per tsubo per annum, with a liability under Clause VI of the same instrument, of an additional half *Bu* per tsubo for municipal purposes, if required. This annual ground rent of two *Bu* per tsubo is equal to about £175 per acre in a city, which, as will be seen in another part of this Report, contains over a thousand acres of unoccupied land. The most valuable part of the town is the quarter known as the "Nihon Bashi," and there the natives, I understand, pay only ten *tempos* per tsubo i. e., not quite 20 per cent of what foreigners have to pay in a much less valuable part of the city. And I am informed that in Tsukiji—the native town adjoining the foreign settlement—the natives only pay four *tempos* a tsubo, or about one-thirteenth part of the rent demanded from foreigners.

The second cause is the facility given to foreigners, under clause I of the Convention of the 4th May 1870, to rent houses from Japanese in the native town at Tsukiji, for which they pay considerably less than they would have to pay for houses in the foreign concession. It is true that the Japanese can only let their houses to foreigners for five years; but since they have the option of renewing the agreement, there appears to be little difference between that arrangement, and a permanent lease.

The number of registered British residents in the district is thirty-six, but these are nearly all in the employ of the Japanese Government, British trade being as yet only represented by a druggist. The British population I believe, exceeds that of all other nationalities taken together.

The large Hotel at Tsukiji which, by Clause V. of the Convention of 26th November 1867, the Japanese Government engaged to push on with all possible expedition in order to be completed before the opening of the city to foreign trade, was closed on the 31st December last, and has turned out to be a losing speculation to those who built it. It is said to have cost \$100,000, and it has been sold to the Naval Department, I am told, for \$20,000.

**Public Works.**—The Railway between Yokohama and Yedo, which is being constructed by English engineers and with English capital, but for the Japanese Government, is now almost completed, and its opening to the public is expected to take place at no distant date.

The first line of Telegraph which when constructed two years since met with so much opposition on the part

of certain narrow-minded Japanese, has now become so popular that telegraphic wires are springing up in all directions within the capital. Already the Mikado's Palace, the Foreign office, the Board of Works and the Tokei-Fu are in telegraphic communication with the Kanagawa Ken, and eight stations are to be opened to the public in various parts of the town.

The Government have engaged for that purpose the services of Mr. George, an English engineer, who with a staff of English superintendents is deeply engaged in constructing the line to Hiogo and Nagasaki, whence Yedo will soon be in direct communication with the whole world.

**Agriculture.**—The Japanese Government have engaged an American Agricultural Mission, or Scientific Commission as it is called, of which General Capron, late Commissioner of Agriculture of Washington, is the head. The object of this mission is to improve the breeding of animals and to bring the soil of Japan under scientific cultivation. Their field of operation is to be the Island of Yezo.

The harvest has been remarkably abundant, and rice is now so cheap and plentiful that the people hardly know what to do with it. Japan rice which in 1868 had run up as high as \$5 per picul, can now be had for \$1.50, and in the country for still less, it appears. The great abundance of rice has induced the Government to remove the Treaty restriction regarding the export of grain as far as Government rice is concerned, and they are exporting a large quantity of the estimated surplus on their own account through the agency of an American firm, and they are also selling rice to foreigners at Yokohama by tender.

The total produce of rice is given as follows:

Rice 18,497,123 Kokus; Other grain 9,118,115 Kokus.

The Government revenue in rice is stated to be 10,076,345 Kokus, and the disbursements on account of salaries to Government officials &c., are assessed at 8,769,861 Kokus, which leaves a surplus of 1,306,484 Kokus or about 3,266,000 piculs.

Japan rice is worth in the foreign market from \$1.70 to \$2 a picul.

**Population.**—The population of this enormous city has been set down by various writers on Japan at from 1½ to 3 millions; but from the information supplied to me by the Tokei-Fu (Municipal Government), it will be seen that even the lowest of these estimates is considerably exaggerated. According to the last census, taken since the Restoration, the population consisted of:—

416,812	...	Males, and
363,509	...	Females

or 780,321 ... Souls in all.

The former number includes 5,151 priests. The disparity between the number of men and women is owing to the presence of a large number of homeless creatures whom we call coolies, and who perform all the rude manual labours for the citizens. Yedo is no doubt large enough to contain three millions of inhabitants, but except in the commercial part of the town, it is very thinly populated.

The population of Japan is given as follows:—

16,733,698...	...	...	Males,
16,061,199...	...	...	Females,

32,794,897... ...In all.

The area covered by the capital is given as follows:—

Military Quarter	...	11,692,591 Tsubos.
Temples &c.	...	2,661,747 "
Commercial town	...	2,690,060 "
Do. suburbs	...	546,921 "
Unoccupied ground	...	1,334,199 "
Do. Borrowed for Commons.	...	477,216 "

Total... ...19,402,734 Tsubos.

This statement does not include the streets, canals, rivers, and moats; taking these, as a rough estimate, to cover one-eighth part of the town—which they certainly do—the whole extent of Yedo will be 21,828,076 Tsubos = to 18,040 acres, or 28 square miles; and this city is therefore, in point of extent, next to London, the largest in the world.

What is called the Military Quarter includes the Mikado's palace which, by itself, must cover nearly a

square mile of ground; the various Government Departments, barracks, parade grounds and such of the residences of the ex-Daimios and Hatamotos (the Nobility and Gentry of Japan) as have not been taken possession of by the Government on the abolition of the feudal system. The Temple grounds consist chiefly of the burial places of the ex-Shōguns or Tycoons, namely *Shiba* and *Uyēno*, each of which is almost a small town in itself. The unoccupied ground is that where formerly stood the princely dwellings of the nobles, which have either been demolished by the Government, or have been abandoned by their owners who are now no longer in a position to keep up such expensive residences. Some of these properties covered from twenty to thirty acres of land, and the most wealthy of the nobles possessed half a dozen of such places in Yedo. Such of them as are not yet wanted for Government purposes, are being used as vegetable gardens and as mulberry plantations.

The appearance of the city has certainly not improved by the late changes, and it must take some time before the old splendour of the capital can return in some modified, and it is to be hoped, improved shape.

**General Remarks.**—Important changes are taking place in the capital. I have already alluded to the disappearance of the yashikis or Palaces of the ex-Daimios; those that have not yet been demolished by the Government, which has taken possession of them, are allowed to tumble down in a most reckless manner—an ordeal from which, I am sorry to say, even the Imperial castle itself and the magnificent Mausoleums of the Shōguns, do not appear to be exempted. Thus, that portion of the Palace called the Citadel which was formerly the residence of the Tycoons, threatens soon to become a mass of ruins. Already the imposing and numerous gateways and bridges leading to it, are left to take care of themselves, and a foreigner, who a few years back hardly dared to look at this wonderful strong hold, may now freely ascend its towers overlooking the residence of the Mikado, without meeting even a gatekeeper. It is difficult to understand what object the Government can have in view in allowing monuments once the pride of Japanese of all classes, and on which all the money and labour the country could produce seem to have been lavished, to go to wreck and ruin; unless, perhaps, it be intended as an imitation of the "Communeux" of Paris, who imagined that they could obliterate the history of their country, by the destruction of the *Colonne Vendôme* and other costly monuments.

The ex-Daimios, since they became dispossessed of their estates, have hastened to part with what they no longer considered necessary to their dignity. Thus all the costly articles of furniture and ancient arms which once adorned their princely dwellings, may now be seen in the shops of dealers in antiquities, and may be bought for a mere trifle. Many of these nobles have availed themselves of the leave given to them by the Mikado to travel abroad, and ere long the majority of them will be seen visiting Europe and America with their families.

But the most remarkable change is the rapid adoption of foreign dress by all classes of the people. The fashions, however, that have hitherto been copied or invented by native tailors, are so varied, and in many instances so ridiculous, as to defy the keenest imagination. This certainly is to be regretted, but the substitution of foreign for native dress has been productive of a most important result, namely, the general disarmament of the two-sworded class by peaceful means. The moment the "samurai" began to clothe himself in what he believes to be European garments, he found he could no longer wear his murderous swords, and consequently he left them at home. The swashbuckler of the old type has now become a very rare sight. Again, the moment natives of distinction themselves appeared in the dress of the "barbarian," the people could no longer look down upon him as an inferior being, and the offensive cry of "Ke-tōjin" (hairy foreigner) or the more expressive epithet of "tōjin baka" (foreign fool) with which one was greeted everywhere in former days, is now seldom to be heard.

Security to life and property in this city, where scarcely two years ago a foreigner dared to visit his neighbour unless he was escorted by a strong guard of native soldiers, is now as efficient as in any other large city in Europe or

America; and I may here mention that since my arrival here in September last, I have almost daily taken walks unattended through every part of the town without my presence among the people evincing the least curiosity or ill-feeling. This improved state of security has enabled the Government to remove all the guard-houses which had been erected in the native town and around the foreign settlement, and a police force of 3,000 men has been substituted for these guardhouses.

At the same time I should remark that the want of discipline in the raw youths who form the present garrison of Yedo, if not corrected, may lead to trouble. On holidays, especially, numbers of these youths may be seen wandering about in a jovial mood after their midday meal, and inclined to indulge in reflecting on passers by, which, if resented, might end in their using their side-arms which they very needlessly are permitted to wear when off duty.

In the style of building the Japanese in Yedo have as yet made little progress, but a few houses of brick have been erected. Fires have been as frequent during the winter, as ever, and the thousands of wooden dwellings thus destroyed, are being rebuilt of the same inflammable material and in the same shabby style. The Government, however, see the advantage of adopting the foreign style of building. For this purpose they have engaged the services of English engineers and architects, and here I wish to say a few words regarding the constructions now in course of erection.

Mr. Waters, Surveyor General, is building for them two barracks after the European style, one for four battalions and the other for three battalions of infantry. The works are of brick, and are to be heated with steam and lighted with gas throughout. Mr. Waters is also engaged in constructing a suspension bridge over a ravine in the Mikado's private grounds.

Mr. McVean and Mr. Joyner have been engaged by the Government to make a regular survey of the country, somewhat on the plan of the Ordnance Survey of Great Britain, as well as of the Capital; and while awaiting the arrival of the necessary staff and instruments required for that purpose, are making designs for a technical school on a very extensive scale. The school is to accommodate about 360 scholars, and foreign teachers are to be appointed to give them instruction. The building is to be in the Lombardo-Gothic style. In the meantime these gentlemen also give instruction to a number of Japanese pupils in mathematics and other branches of technical education for the purpose of employing them as assistants in the various works in contemplation. It is also contemplated when the plan of Yedo is finished, to effect great improvements of the streets and bridges which are now in a very neglected state.

While on the subject of education, I may mention that there is among the Japanese of all classes an universal desire for acquiring foreign languages, especially English, and other branches of learning. The principal establishment where foreign instruction is given in Yedo is the Kaisejo (school) under the Superintendence of the Rev. Mr. Verbeck, an American Missionary. The number of pupils is about 400, of which 200 are instructed in the English, and the other 200, in about equal proportions, in the French and German languages. The number of foreign teachers is 14 besides Mr. Verbeck, namely, 4 Americans, 3 Englishmen, 4 Frenchmen and 3 Germans. Besides languages all other branches of elementary education are taught, and if the scholars go through the various classes regularly, they will doubtless acquire, at the Kaisejo, a sufficient knowledge of what is necessary to carry on intercourse with foreigners, and with foreign countries. Besides the establishment above named, there are a number of independent schools, both under native and foreign management, in which foreign languages and mathematics are taught.

Great progress is also made in the art of studying Medicine, 186 pupils receive instruction at the Eastern School (Uyeno) under the Superintendence of Dr. Müller, Staff-Surgeon of the Prussian Army, and Dr. Hoffmann, Staff Surgeon of the Navy.

Another school where medicine and surgery are taught, is the Naval Hospital, at present established at Takanawa in the building which was formerly the British Legation.

Dr. Wheeler, the present Medical Officer of that Legation, visits the patients and delivers lectures daily at his hospital. The total number of Japanese boys frequenting schools in Yedo amounts to 39,181. This, out of a population of not quite 800,000 inhabitants, shows that nearly every Japanese is being taught to write and to read.

It only remains for me to allude briefly to the rapid progress which has been made in the organisation of the army and navy.

The garrison of Yedo, which perhaps constitutes as yet the Army of Japan, consists of 10 Battalions of Infantry, 1 squadron of Cavalry and 2 Batteries of Artillery. The troops are equipped and drilled after the French principle, and are being armed with chassepots. Hitherto there have been only two French instructors attached to the War-Department, but I hear that a new *mission militaire*, composed of 10 officers and 16 non-commissioned officers, is now on its way to Japan.

The Imperial Navy, though yet in its infancy, has likewise made considerable progress since the Restoration of the Mikado. The fleet consist of 10 Ships of which two are iron-clads.

The ships look as well as European men of war, and their internal arrangements are the same as in the British Navy. This result has, however, not been brought about without the greatest difficulties, and the highest credit is due to Lt. Hawes of the Royal Marines, whom the Japanese Government have engaged as Marine Gunnery Instructor, and who has hitherto had sole charge of the organisation of the Navy. Mr. Hawes has likewise succeeded in forming a Battalion of marines. Both the marines and sailors are dressed in the English style.

A Naval school has also been established for the education of young Japanese in the art of navigation. The building is in the European style. There are at present 226 boys receiving instruction from 20 native teachers. The boys are dressed like English midshipmen and are on the whole good looking. At present there is only one foreign instructor attached to that establishment, namely, Lieut. Brinkley, R. A., who has charge of the Artillery branch. But I understand that is the intention of the Government to engage some 18 English naval officers and non-commissioned officers for the purpose of putting the establishment on the footing of a naval college. Mr.

Fenton, late Bandmaster of H. M. 1/10 M. Regiment, is also attached to it as Bandmaster to the Marines.

This report would not be complete without saying a few words in regard to the means of conveyance of this city. The Japanese possess as yet very few carriages, but this want is fully compensated by a large number of vehicles called *jin-riki-sha*, which are of quite recent invention, and which are unknown in any other part of the world. The *jin-riki-sha* is a two-wheeled carriage or chair, the size of which is a little larger than a children's perambulator, from which the pattern appears to have been copied. It is just large enough for one man to sit in it, and it is drawn by a coolie instead of a horse. Their number in Yedo alone is 10,820. This gives a proportion of one carriage to every 72 inhabitants. They are very convenient, and especially very cheap. The Government Tariff, I am informed, is  $\frac{1}{4}$  *bu* per *ri*, which is something like 2d a mile. Foreigners, however, are made to pay more. The *jin-riki-sha* are drawn at an average speed of about 6 miles an hour. Unfortunately the occupation of the poor wretches who have to draw them is a very unhealthy one as it leads in many cases to consumption. All these carriages have been introduced in on year. The Government revenue derived from them, by way of license, is eight *monme* or about 6d. per month each.

In conclusion I wish to state that if I have introduced in this Report matters which have little or nothing to do with commerce, my apology must be that I am anxious that those who are engaged in the trade of this country should have a more correct idea, than they hitherto seem to have had, of the Capital of Japan, which undoubtedly possesses all the elements for becoming the great Emporium of foreign Trade, if the work of progress which the present Rulers have inaugurated, is not disturbed by any internal dissensions.

I have the honour to be,

Sir,

Your most obedient,  
humble servant.

MARTIN DOHMEN,  
Vice-Consul.

F. O. ADAMS, Esq.

H. B. M.'s *Chargé d'Affaires*.

to pay his tribute to the civil power, and ordained that the things of Cæsar should be rendered unto Cæsar. But not only has Christianity respected rightful authority in the world, it has honoured and exalted it. In the political economy of Christianity, God is the first King, the presiding Chief of human affairs, and legitimate monarchs are, in temporal matters, his representatives. "By me kings reign, and princes decree justice" says God, by the mouth of Solomon, and this divine delegation of power gives to human authority a cogency and a sanction which neither force nor error could ever bestow. Human laws, so long as the legislator does not trespass beyond the boundaries of justice, become religious obligations, and the temporal crime of *lèse-majesté* becomes a treason towards The Highest. On this basis our society rests, and it is only the forgetfulness of this principle which precipitates the calamities of which we are the witnesses. The disturbers of society have in all times understood these principles even better than its governors, and in their hatred they have never been able to separate religion from authority. In order to destroy the throne, they have invariably attacked the altar. Happily for our world, the Christian principles of authority survive the surrounding tempests, and resist all the blows which socialism has levelled at it. But in Japan, where God himself is proscribed, together with his divine laws, who will save the country, who will avert the calamities of a more or less distant future brought about by the introduction of vague and ill understood theories of our civilization? What can raise a rampart capable of containing in orderly submission that spirit of independence which must increase day by day, and the expansion of which will ultimately become all the more terrible on account of the former restraints imposed on it?

Once more, Japan is not what it was twenty years ago, and what was possible then is possible now no longer. It is no longer a question of reigning through the enslavement of the masses. Our European ideas have to be reckoned with, and, above all the exaggerations attaching to them. Under penalty of ruin it is necessary to replace the tottering base of antiquity by the only and immovable foundation of Christianity.

When we Europeans come in the name of humanity and reason to plead the cause of Christianity at the bar of the Japanese Government, it is in the interest of this fair country that we plead. May the Government understand this, and setting aside prejudices which are no longer of our age, seek to do justice and mercy to the unfortunates who are expiating in prison and exile their fidelity to their God. May we see the speedy fall of those barbarous edicts dishonouring to the authority which conceived and which maintains them. And lastly, may Christianity, freed from its shackles, rally round itself in Japan all hearts and aspirations, to the welfare of this noble people and their union with us in the bonds of a common faith, and to the prosperity and progress of this country to which our sympathies and our vows are alike pledged.

#### NIHON GUAISHI.

#### ACTUAL HISTORY OF THE MINAMOTO FAMILY.

#### PART I.

(Continued from our last.)

In the spring of the seventh year (1064) Yoriyoshi and Yoshiyé went to Court bringing with them the rebels who had surrendered, and Yoriyoshi presented a memorial asking that the officers who had done good service might be rewarded. The Court consulted, but did not grant his request, for which reason he delayed in proceeding to his post. There were bad harvests in the province to which he had been appointed, and he made good the deficiency in the taxes out of his private property, during two years. He then sent in a memorial asking for re-appointment, saying: "Your servant has heard that 'when a subject performs brilliant services he receives favours and rewards. This custom has been the same in Japan and China in ancient times and modern. In this way a man may rise from the condition of a common fellow to wear gold and purple,'<sup>(31)</sup> may issue from

(31) That is a golden signet attached to the girdle by a purple cord, worn only by the Daijō Daijin.

"the ranks and become a general or minister of state. Yoriyoshi being the descendant of a subject" who had done good service has carried to its perfection the virtue of reverent performance of duty during a long period. Some time ago the eastern savages arose in swarms, overran the country districts and plundered the people. Six whole departments no longer submitted to the imperial glory, during several tens of years. Of late years their unruly conduct having grown worse, Yoriyoshi received the appointment to that province in the sixth year of Yōjō (1051,) and during Tengi (1053-7) united to it the command of the Chinjiufu. Your servant bearing the phoenix decree turned towards the land of the tiger and wolf. He wore hardness and took sharpness into his hand.<sup>(32)</sup> He received arrows and stones on his body, was exposed to the inclemency of the seasons more than a thousand ri away from home, and encountered ten thousand mortal perils. Borrowing the prestige of the Son of Heaven and the aid of the officers and soldiers, he was at last enabled to report that he had been successful. The rebel ringleaders Abé Sadatō, Fujiwara no Kiyotsuné and the rest have all undergone the penalty of the law, and their heads have been brought to the capital. The remaining chief rebels, such as Abé Munétō and the rest, folded their hands and came to surrender. Their den was swept out and handed over to the civil authorities, and the treasonable rebels all became the people of the sovereign. His (the petitioner's) services were recognized, and he received the appointment of *kami* of Iyo. Your servant was deeply grateful for the Holy bounty of which he became the unworthy recipient, and remained in the Michinoku<sup>(33)</sup> to subdue the remaining embers. During the time occupied in the subjugation of the rebels more than ten men performed meritorious services. He asked for special rewards for them, but as yet has got nothing settled. For this reason he has not yet proceeded to his post, and not a whit the more when he received his commission in the ninth month of last year. He has committed the crime of delay, because he could not help himself. Of a four years charge two years have been passed in idleness. He was unable to collect the government and pay them in, but as the landowners and revenue officials continued to urge and press him without ceasing, he made good the deficiency out of his private property. He hears the officials of that province say that every year there are drought and a bad harvest. There is no autumn fruit in the field and the people wear the look of starvation. Your servant, taking other precedents into his respectful consideration, finds that many men have had the period of tenure of their posts lengthened, in order to enable them to succour the distress and poverty of the whole province under their charge. Much more then should they who have performed services rare in any age enjoy special indulgence in this matter. In ancient times Hanchō<sup>(34)</sup> (Pan 'hao) took thirty years to pacify the eastern marches, while Yoriyoshi has destroyed the eastern savages in twelve years. It is not difficult to discern the difference of merit between slow and quick. If he cannot receive a fief of a thousand houses,<sup>(35)</sup> why will you not permit him to hold the post a second time. I pray for the celestial bounty and that Your Majesty will have compassion on the sentiments of his servant. If Your Majesty will graciously grant his consent, his servant will be enabled thereby gradually to organize a plan for reviving the prosperity of the province, and thus perfect the means of paying the arrears. Your servant is animated by the most earnest sentiment."

Previously to this all the rebels who had surrendered had been sent into exile. Yoshiyé admiring the valour

(32) He means Tsunenoto who assisted in the subjugation of Masakado, the false Emperor of the Kwantō.

(33) I.e. armour and swords, etc.

(34) The ancient name of Mutsu or O-shiu. The etymology is *nichi no oku*, that part of the road which lies furthest back, most remote.

(35) Panchao flourished under Ming Ti, Chang Ti and Huo Ti of the eastern Han dynasty. He returned to the capital in 102 A. D. and died there after thirty years active service, vide *Jihashishiraku* vol. 111. (Shih-pa Shi-liao).

(36) The *Jikata Taisei* says (vol. I, p. 7) that in ancient times the size of a village was measured by the number of houses it contained; later by the number of tsuboos of land under cultivation. At present the *oku* of rice produced is taken as the basis of calculation.

of Munétô placed special confidence in him. One night he went in his car to call upon a woman with whom he had an intrigue, followed by Munétô alone, who planned secretly in his heart to avenge his wrongs. He drew his sword, and looked into the car, but seeing that Yoshiiye was asleep, did not like to strike. After this he served him with his entire heart. Yoshiiye once called at the palace of Fujiwara no Yorimichi, and conversed about the fighting in the Michinoku. A Professor (Hakasé) named Oyé Masafusa was in another apartment, and hearing what he said, observed: "He is a fine fellow, but it is a pity that he does not understand military science." Munétô secretly heard this, and feeling indignant, told Yoshiiye, who replied: "It possibly is so." On seeing Masafusa go out he thanked him, and finally went to him to study. In the third year of Jô-riaku (1079)<sup>37</sup> a disturbance having broken out in Mino, a decree was issued to Yoshiiye to proceed thither and restore order. When the authors of the disturbance heard this, they all fled.

In the third year of Yenkin (1071), a disturbance broke out in Mutsu. The *Kami* Minamoto no Yoritoshi chastised [the rioters] and restored tranquility. Yoritoshi was the grandson of Yorichika and second cousin to Yoriyoshi.

In the second year of Yô-bô<sup>38</sup> (1082) Yoriyoshi died.

In the third year (1083) a decree was issued appointing Yoshiiye *Kami* of Mutsu and commander-in-chief of the Chinjiufu. Kiyowara no Takénori had had two sons called Takésada and Takéhira. Takésada begot Sanéhira, and afterwards marrying the widow of Fujiwara no Tsunékiyo, begot Iyéhira. He also adopted Kiyohira, the son of Tsunékiyo, but made Sanéhira his heir. Iyéhira, Kiyohira and the rest all served the latter as his retainers. Yohiko Hidétaké, his aunt's husband, conceived a spite against Sanéhira for some reason or other, and taking up arms revolted against him. Sanéhira marched to attack him, but Hidétaké having sent messengers to persuade Iyéhira and Kiyohira to attack him in his absence, Sanéhira returned to the rescue. Hearing subsequently that Yoshiiye had arrived, he went to meet him and feasted him, and then went forth again to attack Hidétaké. His two younger brothers having come a second time to attack his house, Yoshiiye entered Sanéhira's castle at the head of his troops, and defending it against the enemy, drove them off. Yoshiiye marched himself into Dewa to attack Iyéhira, but being unsuccessful returned. Takéhira rejoiced, and coming to Iyéhira, addressed him, saying: "Your having vanquished Hachimantarô is an honour for our family, and I will unite my efforts with yours." They then combined their forces and attacked the stockade of Kanazawa.<sup>39</sup> Yoshiiye was very angry, and in the ninth month of the first year of Kuanji (1087) went in person at the head of several tens of thousands of horsemen to attack them. As he was as yet several leagues from the stockade, he beheld some geese flying in disordered line, and said: "There are ambuscaders." He threw out his troops on all side to search, and finding them as he had expected, killed them all. He addressed his followers, saying: "Military science teaches that when birds are thrown into confusion there is an ambush. If I had not studied I should have been in danger." He then advanced and surrounded the stockade. A Sagami man named Kamakura Kagémasa offered battle. One of the enemy shot and hit him in the right eye. Kagémasa did not draw out the arrow, but searched for the man who had shot him, and whom he found him, shot him dead. Takéhira was posted on a height and fought desperately, and wounded a large number of our troops. He also sent a footsoldier named Chitô with an insulting message to Yoshiiye, saying: "Your father surrendered his muster-rolls to us, and thereby was enabled to vanquish his enemies. I still have his muster rolls. Why do you turn traitor to me?" Yoshiiye was wroth and attacked him, but was unable to take his position.

(37) Vulg. called Jô-reki.

(38) Vulg. called Yei-hô.

(39) In the dept. of Semboku, prov. of Dewa (now Ugo), not far from the boundary of Mutsu.

(40) This means that Yoshiiye had become a vassal of Takénori, the father of Takéhira, the reverse of which was the truth.

Yoshiiye's younger brother Yoshimitsu, named Shinra-Saburô, like Yoshiiye was brave, wise and highly accomplished. At this time he was *jô* of the Uhiyô Guard, and was at the capital. On hearing that his brother's army had been worsted, he memorialized for leave to go to his aid, but permission being refused to him he threw up his office, and went off to Yoshiiye. Yoshimitsu was very fond of music, and one time studied the *Shô* under Toyowara no Tokimoto. At the time I am now speaking of Tokimoto was dead, and his orphan son Tokiaki escorted Yoshimitsu as far as Mount Ashigara. It happened to be a bright moonlight night, and Yoshimitsu profited by it to blow his *shô* and impart to Tokiaki all he had learned. He then parted from him and finally arrived in Mutsu. Yoshiiye wept for joy and said: "When I see you, it is like seeing our father." They thereupon advanced to the assault in company, but the stockade was strong and could not be taken. Yoshiiye at meal times divided the courageous and fainthearted into two ranks, so as to excite the enthusiasm of the fighting-men. Koshi Suyékata, a follower of Yoshimitsu, was every day ranged in the ranks of the courageous. Yohiko Hidétaké who had surrendered, and was with our army, advanced and advised [Yoshiiye] to lengthen out the siege so as to bring the enemy to straits. Yoshiiye followed this advice, and gave orders to cease fighting. Takéhira sent a man to him to say: "My army grumbles at having nothing to do." "Now I have a lusty boy named Kametsugu, and beg you to give me a strong man to wrestle with him." Yoshiiye thereupon sent one Onimusha (Demon-warrior) who vanquished and killed Kametsugu. The rebels were moved with shame and wrath, and came forth to fight. Then their provisions came to an end, and they sent forth their worn out troops to come and surrender. Hidétaké said: "This is to make their provisions last longer. Better cut off their heads." Yoshiiye followed this advice also. The situation of the rebels became more and more hopeless, and they asked through Yoshimitsu to be allowed to surrender, but the offer was refused. They asked again, and begged Yoshimitsu to come within the stockade to make the conditions. Yoshimitsu desired to go, but Yoshiiye stopped him, and sent Hidékata. The rebels received him withdrawn swords, but Hidékata was calm and collected. Takéhira tried to bribe him with offers of money, but Hidékata put it from him and said: "We may make booty of it at any moment. I will not give you the trouble to bribe me," and stroking his sword went out. About this time the weather became gradually colder and the soldiers were afraid of being frozen. One night Yoshiiye issued orders throughout the army, saying: "Burn our camp, so as to obtain warmth." "The rebels' stockade will fall this evening so that we shall not want the camp again." When the day dawned fire broke out in the stockade. Iyéhira escaped. Takéhira hid himself in a pond, but Yoshiiye caught him, and rebuked him, saying: "Your father served my father and distinguished himself greatly by his exploits, and my father asked and obtained the grant of office and honours for him. What excuse have you for requiting kindness with hatred? Where are his muster-rolls after all?" He then took Chitô and having pulled out his tongue by the roots ordered him to cut off Takéhira's head. Takéhira begged Yoshimitsu to have mercy on him and Yoshimitsu pleaded for him, saying: "Those who surrender ought to be spared." Yoshiiye flushed with anger, and replied: "Those only can be said to surrender who like Munétô regret their faults and come to submit. One who is made prisoner and then asks for life has not surrendered." Finally he cut off his head. Iyéhira was killed by his own followers. Yoshiiye desired to present the heads of Takéhira, Iyéhira and the rest to the Emperor, and memorialized, praying that a proper commission might be granted to him. The Court council was of opinion that it was a private feud, and refused to grant his request.

(41) The *shô* is a wind instrument consisting of from thirteen to nineteen bamboo tubes set in a wooden hemisphere, in which is the mouth piece. The sounds are produced by the vibration of thin plates of metal covering the bottom of the tubes.

(42) Yoshiiye set out on this expedition without obtaining a commission from the Emperor, without which his proceedings were illegal, and he wished to get a commission antedated far enough back to legalize all his acts.

For this reason he did not reward his officers, and finally threw the heads away on the road and returned home.

Yoshiiye inherited the position created by his father and grandfather, and was skilfully won the hearts of the officers. His first expedition against Mutsu lasted nine years, his second three years. All the warriors and common people of the eastern provinces so admired his beneficence and sincerity, that they united together in praying him to leave his younger relatives behind as chiefs over them, and called themselves his vassals. To Yoshiiye they applied the title of Hachiman Kô<sup>43</sup>. At this time the influence and fame of Hachiman Kô were spread abroad in the court and throughout country. The cloistered Emperor Shirakawa being once tormented by nightmare, issued an order to Yoshiiye to present him with some of his weapons in order to quiet the vision. Yoshiiye presented him with a black lacquered bow, which he placed upright above his pillow, after which he no longer suffered. The Cloistered Emperor inquired of him saying: "Is not this the bow which you carried in your eastern expeditions?" He replied, saying: "Your servant does not remember." The Cloistered Emperor sighed with admiration [of his modesty.] Still Yoshiiye's office and rank were very low, no higher than the grade of *Shô-shi-i no gé* and *jô* of the Uyémon guards. He died in the first year of Tennin (1108) at the age of sixty-eight.

He had six sons, Yoshimune, Yoshichika, Yoshikuni, Yoshitada, Yoshitoki and Yoshitaka. Yoshitada was the most famous, and his employments went as high as *jô* of the Ke-bi-hi-shi. His younger uncle Yoshihito envied him, and induced one Kashima, a retainer of Yoshitada, to assassinate him. Before this Yoshitada's uncle Yoshitsuna and Yoshiiye had been on bad terms, and had prepared for hostilities. A decree forbade the troops of the two houses to enter the capital, and the affair came to an end. Subsequently, when *Kami* of Mutsu, Yoshitsuna attacked and subjugated a turbulent man named Taira no Morotae in Dewa, and for this service was raised to the rank of *jiu-shi-i no-jô*. His partisans gradually increased. When the assassination of Yoshitada occurred the Court Council found that his death was the act of Yoshitsuna's son Yoshiakira, and troops were despatched to kill him, upon which Yoshitsuna took up a position on Mount Kôga. A decree having been issued to Minamoto no Taméyoshi to chastise him, Yoshitsuna shaved himself and surrendered, and was exiled to Sado. Yoshihito's descendants dwelt for generations in Kai, and were styled the Kai Genji.

Taméyoshi was the son of Yoshichika, who had been *kami* of Tsushima, and was put to death for his crimes, leaving Taméyoshi a young orphan. Yoshiiye thought him very clever, and wished to make him Yoshitada's heir. After his victory at Kôga he was appointed *jô* of the Sahiôyei guards, at the age of fourteen. In the following year Yoshiiye died, and Taméyoshi then inherited directly from him. Five years later, when the priest-troops of Nara attacked Hiyeizan, orders were again given to Taméyoshi, who with seventeen horsemen anticipated their attack at Mount Kurusu, and put them to flight. More than ten years afterwards he was promoted gradually to be Daijô of the Ke-bi-hi-shi and of the Sâyemon guards, with the rank of *jiu-go-i no-gé*.

(To be continued.)

## JAPANESE NOTES.

TRANSLATION OF A PAPER GIVEN TO VISITORS BY THE BONZE AT TÔKOSAN OR JÔDOJI CONCERNING ADAMS'S GRAVE.

(The paper itself is modern, but the block from which it is printed is very much worn.)

A SHORT ACCOUNT OF THE ORIGIN OF ANJIN'S TOMB.

Tôkusan or Jôdoji was a sacred place of the Tendai sect a long time ago. In the middle ages the foreigner called Anjin, who was the last descendant of the Korean kings, came to our country and having been employed as musketry instructor by the first military ruler Tôshôgu, he was given two hundred

and fifty *loku* for his salary, and Hammi village in Miura in the province of Sagami was part of his property. He resided at Nihon bashi in Yedo—now called Anjin Chô, and he used to go twice a year to worship at Jôdoji, which he had selected as his burial-place. When he died his funeral took place at Jôdoji and his body was buried on the hill called Yoshi-kawa-saka. A stone monument was erected at his tomb which still exists under the name of Anjin tenka.

The name given to him [by the Buddhists] after his death was Jiushômanin Genzui Koji, but we do not know when he died. His wife's name was Kaikiôin Mioma Bikuni, and having died she was buried on the 16th day of the 7th month of the 11th year of Kwansei.

A book which Anjin carried as a charm for his protection, an image of Kuanon made of copper and a leaf of the haitara tree—which he used during his life have been kept at Jôdoji. Kuanon's image was placed in a special shrine, and it is honoured as the twentieth of the thirty-three Buddhist temples in the district of Miura.

POEM ON WORSHIP AT KWANON'S TEMPLE.

The brightest bliss is surely thine  
O thou who prayest at this shrine.

Fearful lest a full account of all the treasures should be tedious, we limit ourselves to this short account.

## Law Report.

IN H. B. M.'s SUPREME COURT FOR CHINA AND JAPAN.

Before Mr. Acting-Assistant Judge HANNEN.

Wednesday, 12th June, 1872.

SOWERBY & Co. by their Attorneys COCKING & SINGLETON, versus A VERNEDÉ & Co.

— Singleton, who represented the plaintiffs said the action was brought to obtain an account of a quantity of glass ware consigned to defendant, valued at £133,9.0. It had been shipped by Messrs. Sowerby & Co. of London and they, after applying through the plaintiffs for accounts, gave them power of attorney to take legal proceedings. He read correspondence to prove these facts.

Mr. Vernede handed in a letter which accompanied the consignment signed by — Buchanan, defendant's agent. He did not know Sowerby & Co. in the transaction.

His Honour non-suited plaintiffs on the ground that there were no proofs that Sowerby & Co. were the real shippers; but as Mr. Vernede had not complied with the regulations of the Court in making an answer to the plaintiffs, he would have to pay costs.

IN THE U. S. CONSULAR COURT.

Before Mr. Vice-Consul MITCHELL.

Wednesday, 12th June.

W. CARSEL versus H. PAGDEN.

This was a claim for \$206.47.

Plaintiff in his petition alleges.—"That on or about the 27th May 1871, one W. J. Carroll was foreman for said plaintiff and that while in his employ entered into an agreement with the said defendant to do a certain amount of work on the schooner *Independence*, and which when completed amounted to the sum of \$463.47.

That the said plaintiff has frequently presented a bill for the above amount to defendant who has paid thereon the sum of \$257, leaving a balance due and unpaid of \$206.47; the last instalment being paid on or about September 2nd 1871 as per bill attached.

That since that date plaintiff has frequently urged defendant to pay the balance due viz: \$206.47 either in whole or part, but the said defendant has failed, neglected and utterly refused to pay said amount.

That plaintiff therefore prays that judgment be rendered against defendant for the sum of \$206.47 with interest from Sept. 2nd 1871, together with costs of this action and also, such other relief as the case may demand."

W. Carsel, sworn.—About May last, defendant gave my foreman notice to do sundry repairs to the schooner *Independence*; the repairs were done and some instalments on account have been paid. Defendant has not refused to pay the bill, but he has put me off on several occasions. Afterwards I saw him, and he said he only owed me \$70. I replied that he owed me over \$170. This conversation took place in December 1871. I told him, I should take him to the Consul. I have received six instalments. I did not consider Carroll my partner, he was only my foreman, who told me he had got a job from Pagden. All the money has been paid to me.

(43) Kô is a Chinese char. usually considered equivalent to the English Duke, but Lord, or my lord, seems a more natural rendering.

(44) In the dept. of the same name in Omi.

(45) In the dept. of Uji, prov. of Yamashiro.

H. Pagden stated:—I engaged one Carroll to do sundry repairs to the *Independence*, for which he demanded \$175. As he was a man on whom I could place no reliance, I told him I should not pay him any money till the job was finished; but it was subsequently arranged, as he wanted the money, that he should send some one to receive it, in order that he might not buy drink with it. I do not know Carsell in the matter.

By the Court: When I made the contract I did not know Carroll was at work for Carsell.

T. Meldrum: I recollect Carroll ordering timber of Messrs. Wilkie & Laufenberg. He told us to charge it to Carsell.

W. Carroll, sworn, stated; I made a verbal agreement with Pagden for the repair of his schooner, I did not tell Mr. Pagden that Mr. Carsell had nothing to do with it. I did not say this to any one else. I made a statement at this consulate in January last; it was not true what I said on that occasion. Mr. Pagden asked me to make the statement. The statement I made was untrue.

To the Court.—Mr. Pagden offered me no money to make a false statement. I had no reason for doing so.

To Mr. Pagden.—You asked me to speak the truth when I was before the Consulate.

Judgment for the full amount claimed, \$206.47, with interest and costs.

W. J. Carroll was then recalled and

His Honour said he was astonished that a man of Mr. Carroll's age would come before his Consul and make such a false statement as he had done, and he should commit him to prison for 30 days and also fine him \$10 for non-registration, or ten days in default.

#### IN H. B. M.'s SUPREME COURT.

Before Mr. Acting-Assistant Judge HANNEN.

Saturday, 15th June, 1872.

REGINA *ats.* S. PARRY *vs.* F. BEVILL.

This was a charge of cruelty "ill-treating, torturing, and abusing, or causing to be ill-treated, abused, and tortured, a certain animal—to wit, a pigeon" at the Hawking Exhibition at the Bluff Gardens on Saturday last.

On the defendant being called on to plead to the charge, he applied to know under what section of the Act for the Prevention of Cruelty to Animals the charge was laid, as he had looked over the statute and could find no section under which the charge (which specified none,) could be laid.

His Honour thought that the name of the statute under which the information was laid would be sufficient for the purposes of prosecution without any particular specification of the section. It would, however, be necessary for the prosecutor to point out, later on, what section he intended to go upon.

Mr. Bevill again objected that neither of the Acts applied to the case before the Court, as a wild pigeon did not come within the scope and meaning of either.

His Honour considered that it would come within the meaning of the interpretation clause at the close of the second Act.

Mr. Bevill.—It says there "any domestic animal," and I most respectfully submit that a wild pigeon is not a domestic animal.

A question as to procedure having here been raised, His Honour observed that the question should have been raised in this way. The word "pigeon" ought in the summons to have been so qualified as to show it was not a wild pigeon: that would have been the way in which a lawyer could properly raise the objection.

Mr. Marks replied that he had followed the form of summons given in *Archbold's Criminal Precedents*, in which the word "domestic" was not used. The form of summons was quite sufficient and included everything, in the same way as Section III. in the second Act was to be construed to mean any domestic animal whether or not specially and particularly enumerated. A fighting cock was not a domestic animal; but it clearly came within the meaning of the Act, beside which he was not confident the bird in question was a wild pigeon—indeed he rather thought it was not.

Mr. Bevill.—I am prepared to prove it was.

Mr. Marks.—It's just as well for the accused to get off on a technical point like this, if he is to get off at all.

His Honour thought the form of summons was sufficient, but it would be for Mr. Marks to prove by evidence that the animal which he said was cruelly ill-treated, abused and tortured was an animal such as came within the meaning of the Act.

Mr. Bevill.—Cannot I bring evidence to prove it was a wild pigeon first.

His Honour.—No, Mr. Marks must bring evidence before you can do anything else. Having then read the rule as to summary jurisdiction; the Judge asked if the defendant admitted the truth of the charge, and the defendant having replied, "Certainly not,"

Mr. Marks observed that this prosecution had been instituted by Mr. Parry, who was in the Japanese Government Service against the sub-editor of the *Japan Mail*, and was based on

the 92nd chapter of 12th and 13th Vic., and the 60th chapter of the second act for the prevention of cruelty to Animals. In England and the colonies a vast legal machinery was employed to carry the purposes of these Acts into effect, and here in Yokohama a short time since a Society had been formed for the like purpose. Unfortunately this latter was not properly qualified, or, as its Prosecuting Officer, he should have personally brought the charge in its name. Mr. Parry was uninfluenced by any personal vindictiveness or ill feeling against the accused, and whether the latter were convicted or not, would have incurred considerable expense, much loss of time and perhaps unenviable personal notoriety, all of which he was prepared to undergo that he might vindicate the principles of law—moral and proper—so anxiously contended for by many at home, though by none more anxiously than himself. It remained for us in the close of this 19th century to see one Englishman renewing one of these obsolete and barbarous sports, and another revelling in them. Perhaps Mr. Smith was the *causa causans* of this charge, but he ought to mention that an opportunity had been afforded to the accused to avoid these proceedings had he been so disposed, by making a proper expression of contrition, but this course he utterly declined to adopt. The facts of the case were these:—on Saturday last the accused attended an exhibition of hawking at the Bluff Gardens; where, to render more secure and certain the chance of a savage falcon catching a half starved tame pigeon taken out of a basket, the accused directed the operation of having a pigeon's eye sewn up or "seeled," rendering it as subject as the accused would be if he had a roaring lion put after him. It was unfair, and un-English to deny the quarry a fair chance for its life. He believed the accused had it in head that this so called "seeling" the quarry was countenanced by the rules of Hawking. But this was not so, nor could he find precedent for such unmitigated cruelty. It was laid down in *Stonehenge* that for the purpose of training the hawk itself its eyes should be sometimes seeled to make it soar straight, and it was stated in the *Encyclopædia Britannica* when a hawk was wild a duck's eyes were sometimes seeled to afford the hawk an easy bait. This was, however, only for the purpose of training. Now on Saturday the visitors were brought to see the results of training. It was a display, not for the purpose of an exhibition of training, but for exhibiting skill in hawking, and the results of careful training and skill in teaching, and his client had but fulfilled his duty in bringing this prosecution, which all lovers of sport and fair play must sympathise with. He might say more hereafter.

His Honour: No, you have no further right of addressing the Court at all.

Mr. Marks submitted that he had, under the orders in council.

His Honour ruled that this was a summary proceeding and that he was not entitled to a reply.

Mr. Thomas Wallace was the first witness called. He deposed he was at the Bluff Gardens on Saturday last, at which was an advertised exhibition of Hawking. To the best of his belief the Gardens were divided into three terraces; from the lower of these the hawks were being flown. He went to the booth whence the pigeons were flown; saw some loosed and the hawks started in pursuit. He saw Mr. Bevill with a pigeon in his hand. A needle was being put through the eyelid, but he did not know if the eyelid was being sewn up. As soon as he saw what was being done he called Bevill "a d—d brute," and said that they all ought to be transported. Then he walked away. He believed the Japanese put the needle through the eyelid, but Mr. Bevill held the bird. The pigeon was alive. Afterwards Mr. Smith came up, took the pigeon, wrung its neck and threw it away. Witness could not say that he was a good ornithologist, but he should have thought "it was almost a tame pigeon." It looked like one. He couldn't say whether it had any white about it; he didn't sufficiently notice it, but should think it was a tame pigeon. Pigeons were, however, different here to what they were in England. They are a kind of dove. He thought he had seen a difference between a wild and a tame pigeon. It was very marked. What was called a tame pigeon was more a dove than a pigeon. A wood-pigeon was very much larger. This pigeon he should think was tame.

To Mr. Bevill.—He believed the Japanese were sewing up the eyes of the bird whilst the defendant had it in his hand. He noticed defendant more than anyone else. He did not know if the Japanese took the pigeon from him, and did not notice what defendant did with the bird afterwards. There were several people around him but he could see the bird in his hand. He might have seen some pigeons let off whilst he was standing in the booths—was sure they were not sparrows, but was not certain they were tame pigeons. He believed they were. He did know the difference between wild and tame pigeons. What was it? He had mentioned before.

To His Honour.—I cannot say whether or not this sewing up of the eyelid causes great pain to the pigeon. I should rather imagine it would. All I saw was somebody putting a needle and thread through the eyelid of the pigeon, and Mr. Bevill holding the bird.

The next witness called on was Mr. W. H. Smith:—

Yedo was followed immediately by the erection of wooden boards at the entrances of some of the principal shrines and temples, bearing the word *Sekkiô*, or "exposition of religion," in gigantic Chinese characters, with a slip of paper at the side announcing the day upon which the lectures would begin. A great many rumours had been circulated with reference to the unwonted activity of the Kiôbushô, or Department of Religion (*Ministère des Cultes*), which had summoned priests of the despised Buddhist faith to Yedo, to confer with it upon the best means of awaking the people of this country from their religious apathy, and of giving them a new creed calculated to strengthen the hands of the administration; for it is the avowed opinion of the ruling class that religion, though beneath the contempt of an educated man, is an absolutely necessary instrument for keeping the people in order. As the Department of Religion was merely the old Jingishô, or Shintô Board under a new name, and with rather extended aims, the propagation of Shintô was also provided for by the appointment of several learned Shintôists of the Hirata school to expound the new creed, after their lights, and it was a sermon delivered by one of these at the Shrine of Shimméi, the "Divine Brightness," that the writer was led by curiosity to attend.

The hour notified for the commencement of the proceedings, being noon, it seemed no very hazardous thing, judging from the usual punctuality observed by Japanese, to arrive at the shrine about one o'clock; but on approaching the steps at that hour, the only signs of a congregation were a few pairs of clogs, which turned out to belong to some shock-headed students who had come there to idle away a spare hour or two. Placed close to the papered windows at one end of the long front chamber which is intended for the use of worshippers, was a table draped with camlet of an extremely gorgeous pattern, surmounted by a reading desk of pure unpainted wood; and behind this were three men engaged, probably, in discussing the discourse to be delivered, since one of them afterwards took the first turn on the rostrum. The great advantage of being so early is that one can secure a seat in the immediate vicinity of the speaker, but this turned out to be a needless precaution, as the congregation, when it was *au grand complet*, did not exceed thirty persons at the outside, of whom several looked like municipal officials compelled to be present in order to set a good example. Every five minutes a couple of persons would ascend the steps, cast a few copper cash into the grating which occupies the centre of the floor in front of the actual shrine, then bend down on their knees with the head to the mats in profound silence, and, after remaining in that posture for ten seconds, turn their backs to the god and depart. The more knowing ones, amongst whom were the wardens of the shrine, repeated this ceremony on each side of the paper-crowned wand, clapping their hands twice, as if to call the attention of a sleeping deity, a practice which seems to be very ancient and in much estimation. This sort of thing continued until two o'clock, when at last the preacher, who had been putting on his robes in a vestry, came in and mounted on to the table, squatting behind the reading desk. He was dressed in flowing garments, such as are worn by the attendants about the Court, adorned with thick silken cords passed through the cuffs, and his head was surmounted by a high black cap or *mortier* of a material resembling paper. It was easy to see that he had not given way to the degenerate method of dressing the hair now so common, but had it tied into a bunch at the back, like a true patriot and believer in the gods. After bowing to his audience, who reciprocated the compliment, he communicated to us the gracious intentions of His Majesty to spread abroad amongst his people a true knowledge of religion; that he had to that end caused certain articles of belief to be promulgated, and had committed to the speaker and other unworthy persons the glorious charge of expounding them to his people, who were now adjured to listen with reverence. After this exordium he unwrapped the paper on which the creed was written, lifted it respectfully to his forehead, and then read its contents in a loud and sonorous voice.

#### ARTICLE THE FOUR.

Thou shalt honour the gods and love thy country.

#### ARTICLE THE SECOND.

Thou shalt clearly understand the principles of heaven and the duty of man.

#### ARTICLE THE THIRD.

Thou shalt revere the Emperor as thy Sovereign and obey the will of His Court.

The preacher proceeded to say that the task of expounding the first half of article the first, namely, 'honour the gods,' had fallen to him, and that he would be succeeded by more learned speakers who would explain the remainder of what he had just read. In the first place, then, there were people who disputed the existence of the gods, because they could not see or feel them, but that was an idiot's argument. He should proceed to show, by three methods, the certainty that the gods exist. Firstly; reason showed us that our bodies, for instance, with their wonderful organization, must have been made by some one; they could not possibly have come into being spontaneously. At first sight we should be inclined to ascribe their production to our parents, but if we went backwards and inquired who made our parents and so on, we should arrive at the gods, who made us and everything in the world. Secondly, there was documentary evidence, namely, in the ancient books called the *Kojiki* and *Nihonshoki*, which contained undisputed facts, showing beyond the possibility of a doubt that the gods existed. Thirdly there were the miracles performed by the gods in answer to prayers offered at their shrines, in illustration of which point he told a long story about a little girl who had been exposed when quite an infant by an unfeeling stepmother. This little girl was discovered by the warden of the shrine of Kibi Daijin in Bizen, who took her to his bosom and adopted her. Unfortunately she lost her eyesight, and in order to place her above what he taught her at the expense of much pains to play upon the harp, after which he died and left her alone in the world, being then some fifteen years of age. The girl used constantly to pray to Kibi Daijin (the supposed inventor of the Katakana alphabet) to be restored to her natural parents, for she knew herself to be a castaway, and at last she was rewarded. One day it happened that her real father, being a pious man and full of veneration for the gods, came also to visit the shrine, and pitying the wretched condition of the poor blind girl, took off his mantle and threw it to her, when to his surprise, instead of uttering a few words of thanks, she burst into tears. On demanding the reason of her extraordinary behaviour, she told him her story from beginning to end, and finished by saying that her tears were caused by the joy she felt at the prospect of being able to offer up sacrifices to the gods with the proceeds of his gift. Upon which the father demanded her charm-case, and finding a piece of paper with the inscription "Sayémon Nawotô's daughter" therein, became convinced of what he had already surmised, namely, that she was his long lost child, and so they were reunited again after fifteen years of separation. This happy event was entirely due to the faith which had animated both, and to the diligence with which they had sought the help of the gods. After this could any one venture to deny their existence?

This point having been thus proved to the entire satisfaction of the preacher, he proceeded to show what was meant by honouring the gods. It was not merely coming to the shrine duly with offerings and prostrating oneself before it that was intended. True reverence for the gods consisted in endeavouring to purify the heart so that no stain might remain on it to offend them. Let no one suppose that his heart was pure and stainless because he discharged what he imagined to be his duties towards his neighbours. The best of us were liable to transgress, and the only means of attaining to perfect goodness consisted in constantly calling on the gods for their help in this matter, and in attending diligently to the expositions delivered by the teachers whom His Majesty had, out of his great goodness and mercy, appointed to lead his people in the right way. Gratitude to the gods was also a part of the reverence which was demanded from human beings. It was *Ukénochi no kami*, for instance, who created for our use the rice, that king amongst the grains of the earth, which forms our daily food; but who ever thinks of this duty of gratitude? We all go out in

spring time to gratify our senses by contemplating the cherry and the plum in blossom; but, alas! no one ever goes with a grateful heart to look upon the rice when it is in blossom. We merely say: Ah! this is fine weather for the rice blossom, without giving a thought to the beneficent deity who provides us with our daily sustenance. Having spoken in this strain for about an hour and a half, the lecturer stated that after a short interval another would take his place and go on with the rest of the Three Articles. It is worthy of note that during the whole of this long oration, the audience listened with the most perfect gravity and deep interest, and with so little sign of fatigue that they remained for the second course. Their conduct was probably more decorous than that of many a western congregation, and the words they heard went so deep to their hearts that several of them shed tears, especially during the pathetic history of the little blind foundling.

As a contrast to the Shintô sermon, the preaching of the Buddhists at Zôjôji, close to Shimmei's shrine, was worth visiting. Here the space allotted in the great central hall, called the Hondô, was much larger, and a correspondingly numerous congregation had assembled, chiefly composed of women, old men, and shaven-headed priests. At the sides of the dais, before the altar, were seated venerable bonzes in gorgeous robes with chaplets in their hands, and in front was the ottoman, occupied by the preacher, with a reading-desk and cushion in the orthodox style. A space enclosed by a red lacquer railing separated him from his audience, but he spoke so clearly that his words were distinctly heard throughout the building. His topics consisted chiefly of the reciprocal duties of parents and children, master and servant, treated in the style with which the public has been already made familiar by Mr. Mitford, in the pages of the *Cornhill Magazine*. A bland smile constantly hovered over his countenance, and the jokes with which he illustrated his doctrines were rewarded with repeated merriment, especially when he said that husbands were bound to give their wives a due proportion of tortoise-shell hair-pins, rice powder for their cheeks, and red dye for their lips. Some of his witticisms were so broad as to be quite untranslatable into English. The gist of his discourse was that above all things we ought constantly to call upon Buddha, and in illustration of this, when he came to the end he bowed his head repeating, *Namu Amida Butsu*, over and over again, accompanied by all his hearers. The effect of his chant was extremely fine. After his descent from the pulpit this paternoster continued for at least five minutes, to the accompaniment of shrill gongs, beaten by the attendant priests. During the whole of his discourse children were playing about the steps of the temple; now and then a maid servant would lounge in behind with a squalling infant on her back and disturb the general serenity, and there was an air of irreverent levity about the whole of the proceedings which certainly gave the impression that people attended more for the sake of amusement than for instruction.

From the small number of hearers present on these two occasions, it may be inferred that the movement does not excite much interest among the hundreds of thousands who inhabit this city. Various explanations are given by natives of the objects contemplated by the Government. Some say that it is their intention to amalgamate Shintô, Buddhism and the Confucian philosophy, as a bulwark against Christianity; but this measure would probably be attended with a good deal of difficulty, considering the contempt which the professors of these schools of doctrine entertain for each other. The Buddhists alone are split up into as many as eight recognized sects, which hate each other as only sectarians can do, condescending to quarrel about whether they shall say *Namu Amida Butsu* or *Nam-miô Hôrenge Kîô* when they call upon the Founder. Others think that the ruling powers, seeing that ere long these effete religions must be replaced by Christianity, wish to let them have a trial and a public failure before according tolerance to the creed hitherto so hated and despised, but which is every day making strides in the good opinion of many of the better educated and intelligent. It is coolly suggested by some that the present Buddhist *personnel* could easily be converted into priests and deacons by an Imperial fiat.

# NIHON GUAISHI.

## ACTUAL HISTORY OF THE MINAMOTO FAMILY.

### PART. I.

(Continued from our last.)

Yoshitomo's third son was called Yoritomo, and went by the appellation of Onimusha (the Demon-Warrior.) At this time he was only thirteen years of age, and held the office of *shô* of the Uchiyuei Guards. He advanced, and addressing Yoshitomo, said: "I hear that Kiyomori and the rest will be back soon. Why not anticipate his attack? Are you going to sit down quietly and wait for him?"

Yoritomo's elder brother Yoshihira was at Kamakura. Once upon a time he had a quarrel with his uncle Yoshikata, fought with him at Okura<sup>(63)</sup>, and cut off his head. People nicknamed him Akugenda<sup>(64)</sup>. Upon hearing of the crisis in affairs he came galloping day and night. Nobuyori wished to confer an office on him, but Yoshihira declined saying: "Some years back my uncle Hachirô<sup>(65)</sup> declined to accept the office of *Kugenda*. He understood the difference between urgent matters and those of inferior importance. I am contented to use the title of Akugenda for the present. As I hear, the Heishi are about return. I pray you, lend me a detachment of troops, and I will lie in wait for them at Atsuno<sup>(66)</sup>. I will pillory the heads of Kiyomori and the rest, and then only will I obey your order." Nobuyori refused. Shortly afterwards Kiyomori entered the capital. The Emperor and ex-Emperor, profiting by the night, made good their escape, and betook themselves to the palace of the Heishi. Nobuyori discovered this when he rose in the morning, and felt that he was undone. Yoshitomo mustered his troops and found they were deserting him one by one, scarcely two thousand horsemen remaining. He then divided them to guard the gates of the palace, and gave the sword "Beardcutter," which was a family heir-loom, to Yoritomo, who carried it with him to the battle. Nobuyori was not accustomed to ride on horseback, and as soon as he mounted he fell off again. His attendants supported him, and defended the Taiken<sup>(67)</sup> Gate. But when he saw Taira no Kiyomori come to the attack, Nobuyori deserted his post and fled. Shigémori broke in the gate and entered with five hundred horsemen. Yoshitomo observed this said abusively: "That rascal [Nobuyori] has ruined our affairs!" and called to Yoshihira to fight on the defensive. Yoshihira, with Kamada Masaiyé, Miura Yoshizumi, Taira no Hirotsumé, Hirayama Suyéshigé, Kumagayé Nawozané and other horsemen, sixteen in all, made their horses prance, and issued forth. Yoshihira pointed to the enemy's cavalry and said: "He in red armour on a yellow horse is Shigémori. You must take him alive." They advanced and fought in the great courtyard. All the horsemen fixed their eyes on Shigémori and pursued him round seven times. Shigémori took to his heels, and came in again with fresh troops. Yoshihira attacked him again and put him to flight. Yoshitomo sent a messenger galloping to rebuke Yoshihira; saying: "Why do you not defend better, instead of letting such a number of the enemy enter." Yoshihira then went out, and came to the Oniya Street, where he charged straight into the lines of the Heishi, who scattered in confusion. Shigémori fled with two horsemen, pursued by Yoshihira, who was just about to catch them up when his horse stumbled. Shigémori jumped over the ditch, and Masaiyé shot at him, but his armour was so hard that the arrow did not enter it. Yoshihira said: "Shoot the horse." He shot the horse, and Shigémori fell off. They pursued him and were coming up, when the two horsemen obstructed their passage, and fell fighting. Shigémori just managed to escape with his life. Yoshihira bethought himself of Yoshitomo, and went back to his aid. Yoshitomo was just engaging Taira no Yoritomo at the Ikubô<sup>(68)</sup> Gate, and defeated him wit-

(64) Akugenda: One. Meaning to hit Taira no Nobuyori, the last Minamoto head.

(65) Taira no.

(66) Being a descendant of Hachirô, the ancestor of the Minamoto family.

(67) The name of the gate which was the entrance to the palace. A place where the Emperor and ex-Emperor fled to in the 11th year of the reign of the Emperor.

(68) The famous gate to the south of the city, on the side of the Palace.

great loss. Yoritomo shot two men dead and wounded another. Yoshihira came up, and replacing his father, advanced to fight. The army of the Heishi was entirely defeated and put to flight. It retreated and held the palace of Rokuhara, pursued by our army. Nobuyori followed it out, but turned and fled when he had got half way. The troops of the Heishi profited by the absence [of the Genji] to enter the palace, while Yoshitomo advanced straight forwards and attacked Rokuhara. Yorimasa was encamped by himself on the dry bed of the river at Rokujō, and Yoshihira, divining that he was a traitor, charged into him with fifty horsemen. Yorimasa fled, and gave in his adherence to Kiyomori. The latter, hearing that our army was at hand, was greatly afraid, and so lost his presence of mind, that he put on his helmet hindside before. One of his followers told him of it, and Kiyomori replied: "The Emperor is behind me. I cannot turn my back on him." He then shut the gates and made a firm resistance. Yoshihira fought with energy, pushed open the gate and entered. The enemy divided their troops into detachments which fought in turns. Our troops had fought more than ten separate engagements from dawn to the midday: their swords were broken and their arrows exhausted, while both men and horses were wounded. Yoshitomo wished to decide the issue of the fight in person, but Masaiyé stopped his horse, and expostulated saying: "It is manifest, without our putting it to the test, that their men are in greater numbers and in fresher condition than ours. Which is worst, to flee for a while to the eastern provinces and so lay a plan for the future, or to die at the hands of a common soldier, and disgrace the reputation of your house?" Yoshitomo then rallied his troops, and retreated to the dry bed of the river at Sanjō, where the enemies' troops came and pressed them hard. Hiraga Yoshinobu, Sasaki Hidéyoshi, Sudō Toshimichi and others aided in the fight, and the latter lost his life. Yoshinobu was the grandson of Yoshimitsu. Yoshitomo took advantage of the interval and fled towards the Kwantō with thirty horsemen. The priests of Hiyeizan, hearing of his defeat, lay in wait for him on the road with three hundred men. Yoshitomo was alarmed at this, but Saitō Sanémori, a Musashi man, took off his helmet, and, addressing the priests, said: "Sama<sup>69</sup> is already dead. We are newly raised troops, and are merely returning to our homes. If your lordships desire to possess yourselves of our armour and weapons, we attach no particular value to them ourselves. I observe that you are by far more numerous than we, so that we cannot give to all of you, but I beg leave to throw this to you. Do your lordships pick it up?" So saying, he threw his helmet, and the priests trampled on each other in strife for it. The thirty horsemen then charged through them, and passed on. On arriving at Yase<sup>70</sup> they looked back and saw Nobuyori coming up. He called to Yoshitomo and said: "Why have you abandoned me?" Yoshitomo replied scornfully: "You, rascal, were the head of the plot, and the first to flee. How do you dare to present yourself before me?" and lifting up his whip, struck him on the face, left him there, and proceeded. When they arrived at Ringé<sup>71</sup> he again encountered some priests lying in wait in the way. All dismounted from their horses, and breaking through the stockade, passed on. Yoshitomo's granduncle Yoshitaka<sup>72</sup> was hit by an arrow and killed, and his son Tomonaga was shot in the thigh, but pulled the arrow out and fought again. Yoshitomo was wrath, and fighting energetically put the priests to flight. He came to Katada<sup>73</sup> where he saw the head of Yoshitaka. He wept and said to his horsemen: "Of the seed of Hachiman kō this man alone remained, and this is the end he has come to." Having sunk the head in the lake, he was about to cross it, but it happened that the winds and waves arose, obliging him to take the

road by Seta.<sup>74</sup> He then persuaded Sanémori and the rest, to the number of more than twenty, to disperse and leave him. Only Yoshihira, Tomonaga, Yoritomo, Yoshinobu, Masaiyé, and Kounō, the page of Minamoto no Shigénari, followed him. Yoritomo, who was on horseback, fell asleep and dropped behind. During the night he passed through the post-town of Moriyama,<sup>75</sup> where the peasants collected, and were about to capture him. Yoritomo then awoke, and drawing his sword, cut off the heads of two men. Yoshitomo was alarmed at the absence of Yoritomo, and sent Masaiyé back to search for him. [Masaiyé] having found him, [they proceeded and] when [the party] arrived at the post town of Kagami,<sup>76</sup> on hearing that the Heishi were defending the barrier at Fuwa,<sup>77</sup> they turned into a side road and went eastwards. It happened that a great deal of snow fell, and the horses were unable to advance. All took off their armour and went afoot. Again they got separated from Yoritomo. On arriving at the post town of Awahaka,<sup>78</sup> they found shelter with the Mayor of the town, whose daughter, named Yenju, had formerly been beloved by Yoshitomo, and had borne him a daughter. Yoshitomo then sent out Yoshihira and Tomonaga separately to levy troops in Shinano and Hida. Tomonaga's wound was very painful, and he returned before arriving at his destination. Yoshitomo said: "Though Yoritomo is but a boy, he is not faint-hearted like you;" and he felt inclined to go away and leave him behind; but Tomonaga besought his father to kill him, in order to prevent the pursuing troops from capturing him, and Yoshitomo thereupon put him to the sword. The peasants hearing that Yoshitomo was there, assembled in large numbers and surrounded him. Shigénari gave himself out to be Yoshitomo, and shot more than ten men dead. He then flayed<sup>79</sup> his face and killed himself. Yoshitomo fled, and again despatched Yoshinobu to levy troops. Yoshinobu said: "Where does your lordship desire to go?" He said: "I desire to go to Utsumi, and take refuge with Nagata Tadamuné." (Tadamuné was the father-in-law of Masaiyé) Yoshinobu said: "That will not do. His disposition leads him to side with the victor, and I fear lest he should prove a traitor to your lordship." Yoshitomo would not listen, and parted from him. The road was blocked up, so that he could not get on. Having heard that a certain sturdy fellow named Genkō was the maternal uncle of Yenju, he sent Kounō to consult with him. Genkō then embarked Yoshitomo and Masaiyé in a boat, and covered them with brushwood. They proceeded towards Utsumi,<sup>80</sup> by the river Kuizé. Some officials posted on the bank observed them, and shouted to them to stop; but Genkō pretended not to hear, and went on. The officials pursued, and shot at them. Genkō brought the boat back to shore. The officials entered it, and removing the brushwood, began to search. Genkō said: "Although Yoshitomo has been defeated, he is still followed by twenty or thirty horsemen. Why should he turn to a fellow like me in order to save his life? Even if he were here, he would only be sure to commit suicide. How could he fall into your hands?" Yoshitomo whispered in Masaiyé's ear: "Genkō hints to me to perform suicide. What do you think?" Masaiyé replied: "Wait a little." The officials left again without completing their search. On the following day they reached Utsumi, where Tadamuné treated them most cordially. Yoshitomo wished to depart immediately for the east, but as it was the last day of year, Tadamuné urgently pressed him to stop, and he stopped three days. Tadamuné's son Kagémuné secretly advised his father to kill Yoshitomo, and Tadamuné followed his advice. He placed three powerful warriors in ambush in the bath-room

(74) Lower down the lake, where it is so narrow that a bridge has been thrown across.

(75) Is the next post-town to Kusatsu on the Nakasendō, coming from Kiōto.

(76) Also on the Nakasendō, halfway between Moriyama and Musa.

(77) The remains of this barrier are still to be seen halfway between Inasu and Sekigahara, on the road which Yoshitomo was travelling. It took its name from the depart, in which it was situated.

(78) In the Dept. of Fuwa, province of Omi.

(79) The object of disfiguring the countenance was to prevent the enemy recognizing his identity and boasting of having taken his head.

(80) A port in the dept. of Chūa in the prov. of Owari.

(81) A tributary of the Kiso-gawa, which discharges into the bay of Owari. Yoshitomo would therefore have to cross the bay to reach Utsumi by water.

(69) Yoshitomo was Sama no kuni.

(70) Yase lies on the left bank of the Takanogawa about five miles above Kiōto.

(71) In Omi, just over the boundary of the province.

(72) Sixth son of Yoshiyé.

(73) On the western shore of the Biwa lake. Yoshitaka's head had been cut off and brought away by his own party, to prevent it from falling into the hands of the enemy.

and offered him a bath. Konnô took his sword and waited on him in the bath, and the powerful warriors did not dare to act. Yoshitomo then called for a bathing-gown, which did not come, and Konnô went out himself to fetch it. The powerful warriors then entered. Yoshitomo knocked one of them down with his bare hand, and the other two stabbed him at the same moment and killed him. Konnô hearing a disturbance in the bath room came back, and cut off the heads of all three. Masaiyê at the moment was drinking with Tadamunê, and hearing of this terrible event, was about to rise, when the man who was pouring out the *saké* drew his sword. Masaiyê took it from him and cut him down, but Kagémunê cut down Masaiyê from behind. Tadamunê's daughter who was married to Masaiyê fell upon her husband's sword and died. Konnô and Genkô desired to wreak vengeance upon Tadamunê and his son, but could not catch them. They kill several tens of men, and seizing horses, escaped. Tadamunê then presented the heads of Yoshitomo and Masaiyê to the Heishi. Both Yoshitomo and Masaiyê were aged thirty eight. Nobuyori and the rest all suffered the penalty of the law.

Yoshihira was in Hida, and the number of those who came and joined him was very large, but on hearing of Yoshitomo's death, they all dispersed. Yoshihira wished to put an end to himself, but remembering that he ought to avenge his father's death and then die, disguised himself and went to the capital. Here he chanced to meet Shinchi Kagézumi, a former retainer, and profited by this circumstance to assume the disguise of a servant of the latter, so that he had ingress and egress at the palace of the Heishi. He lodged in Sanjô-Karasumaru. The landlord observed from the manners of the servant that he was not an ordinary person, and was surprised that the master and servant always took their meals in private. He secretly spied upon them, and found that they changed dishes before eating. He thereupon ran and informed the Heishi, who sent Namba Tsunéfusa with three hundred horsemen to surround the house. Yoshihira drew his sword, and issuing forth, cut down several men. He then jumped upon to the roof, and disappeared, no one knew whither. Tsunéfusa then arrested Kagézumi and went off with him. Yoshihira lay concealed during the day and walked abroad at night, in order to watch for a chance against the Heishi. Wishing to find shelter with a former man of his who lived in the east of Omi, he went off to Auzaka<sup>(82)</sup>. Tsunéfusa was paying a visit to the Shrine close to the barrier, and on the way seeing Yoshihira lying down fatigued, he surrounded him with fifty horsemen. Yoshihira stumbled in getting up. An arrow hit him in the elbow, so that he could not wield his sword. He was finally bound, and brought to Rokuhara, where he was made to sit on the verandah of the palace.

He was wroth, and said: "Why should I sit here?" and rising entered the building. Kiyomori came out to see him and addressing him said: "You escaped out of the hands of three hundred horsemen, and were taken by fifty. Why were you so valiant on the first occasion and so faint-hearted on the second?" Yoshihira laughed, and replied: "It was simply my luck. When your luck comes to an end, you also will come to this. I am a great source of anxiety to you, and would like you to kill me at once." He was thereupon decapitated on the dry bed of the river at Rokujô<sup>(83)</sup>. When Yoshihira was about to undergo his penalty, he lifted up his head, and glaring at the palace of the Heishi, said: "When the civil wars of Hôgen (1156-58) took place those who were sentenced to decapitation were executed at night; and now you decapitate me in broad day light. How wanting in decency are these Taira brigands. If my advice had been acted upon, none of your slavish tribe would have been left." He was then decapitated, being twenty years old at the time.

When Yoritomo missed his father and elder brother, he wandered by night and lost his way. He came out by Ohirayama<sup>(84)</sup>. There was a fisherman who, recognizing

him to be no ordinary person, gave him a lodging, and dressed him up as a girl. He wrapped his sword in a piece of matting, and bearing him on his own shoulder brought him to Yenjin's house at the post-town of Awobaka. Yoritomo placed the sword 'Beardcutter' in the charge of Yenjin, and departed towards the Kuantô. He fell in with Taria no Munékiyo, a Heishi commander, and being taken prisoner, was sent back past Yenjin's gate. A girl begotten by Yoshitomo, aged twelve years, heard of this, and said with tears: "I shall hereafter be subjected to disgrace. I would prefer to follow my brother now, and die." She was on the point of running out, when Yenjin's people stopped her. Afterwards she went alone and drowned herself. When Yoritomo arrived at Rokuhara, a day was fixed for his execution. Munékiyo addressed him and said: "Do you wish to live?" He replied: "Yes. Both my father and elder brother are dead. Who but I can pray for their happiness in the next world?" Munékiyo went to Kiyomori's stepmother, the Iké no Ama, who quietly asked him: "How about Yoritomo?" He replied: "He resembles prince Uma." (Uma was the son of the Ama, who had died early.) The Ama felt pity for Yoritomo, besought Kiyomori in his behalf several times, and obtained remission of the sentence of death. He was exiled to Hiraga-Kojima<sup>(85)</sup>. The spectators at the side of the road, on seeing his noble countenance, spake to each other and said: "This is simply like setting a tiger loose in the fields." All his former retainers advised him to shave off his hair; but Chiehibu Moriyasu alone leant over to his ear, and addressing him said: "My young prince had better preserve his hair, and await future events." Yoritomo nodded his head and departed.

Yoritomo had six younger brothers, namely Yoshikado, who died early; Maréyoshi, who lived in Suruga, and being taken prisoner was exiled to Tosa; Noriyori, who adopted by Fujiwara no Norikidé, and went by the appellation of Kaba-Kuanja; the Heishi made no inquiries about him; and Imawaka, Oto-waka, and Ushiwaka, three boys, who were all the offspring of Yoshitomo's mistress Tokiwa. They all followed their mother, and concealed themselves in the village of Rumon. The Heishi searched for them, but without success. They then arrested Tokiwa's mother, and Tokiwa gave herself up. Kiyomori was delighted with her beauty, and secretly tried to seduce her, but she refused. Her mother wept floods of tears and represented to her the misery which would follow on refusal and the happiness which the other course would assure to her, and thus she was forced to obey. Kiyomori then pardoned the three children, and all became monks. Imawaka changed his name to Zensô, and abode at Chuigo. Otowaka changed his name to Giyen and entered the service of the Cloistered Prince Yenyô. Ushiwaka was but two years old. He lived at the temple on mount Kurama and went by the name of Shonô; but he did not shave off his hair.

(To be continued.)

## Law Report.

### IN H. B. M.'s SUPREME COURT FOR CHINA AND JAPAN.

Before Mr. Acting-Ass't. Judge HANNEN.

Wednesday, the 26th Jan., 1872.

FINDLAY, RICHARDSON & CO. versus PIERMAN & CO.

Mr. Davidson appeared for the plaintiffs.

Mr. F. V. Dickens for the defendants.

This was a claim for \$1,500 for non-delivery of 15 to 1,800 pels. of copper according to contract. Mr. Davidson said that part had been paid by the defendants, to the sum of \$224.50, and that therefore that part was not insisted upon. The defence contained a statement to the effect that the payment of the \$1,500 was to be conditional on its being obtained from the native merchant. Proceedings against the native merchants had been commenced, and as soon as the money was obtained the \$1,500 would be paid over. On further enquiry, Mr. Dickens

(82) On the road between Kioto and Omi, just inside the province of Omi.

(83) At the end of the street in Kioto called Rokujô.

(84) Yoshihira had passed the river, and was on the mountain of Awobaka, just outside the province of Kwantô.

(85) Probably near Hiraga, about 80 miles from Kioto, in the province of Omi, just within the borders of the latter.

(86) The name of the village was Rumon.

(87) The name of the temple was Kurama.

# THE Japan Weekly Mail.

A POLITICAL, COMMERCIAL, AND LITERARY JOURNAL.

VOL. III.—No. 27.]

YOKOHAMA, SATURDAY, JULY 6, 1872.

[PRICE \$24 PER ANNUM.]

## Notes of the Week.

THE Empress leaves Yedo shortly for the baths of Atami.

On the afternoon and evening of July 3rd an exhibition was given at the Bluff Gardens by a company of Japanese acrobats, numbering some five performers. For some reason the attendance of visitors in the afternoon was very small; but it is probable that the second performance in the evening attracted many persons, while many knew nothing of it, the notice given being so short. The band of the *Colorado* was in attendance, and enlivened the proceedings with a variety of pleasing airs. The performance of the company which took place under a lofty mat shed erected on the Croquet Ground, commenced with the usual feats of sleight of hand. The usual box with double drawers was made to conceal or exhibit eggs at the will of the performer, who was fairly skillful. Next followed a far more sensational feat. A four-legged stool, about four and a-half feet high, was surmounted by a pile of cabinets, altogether some twelve feet high. One of those small boys, whose bones appear to have been long since extracted, was mounted on the summit of the tottering pile, and after securely balancing himself, he commenced to roll himself into a ball. Leaning back, he gradually forced his head through his legs—there was only a space of about six inches square for his feet to rest upon—and there flattened himself out till it was hard to tell which was his back and which his front. He then unwound himself, and descended, being loudly cheered. One of the older performers then went through the feat of balancing a screen on his feet. This was well done, the performer showing considerable aptitude. Then we had the slack-rope performance, which was good, but nothing very wonderful or exciting, and after an interlude, the last act, which comprised the feat of putting a child on the top of seven tubs, kicking the latter away, and catching the child as he fell. This was well done and was loudly applauded. The screen act in this portion of the performance was, for some reason, omitted. But before this was the feat of balancing a long bamboo while a child goes through a variety of performances at the top. This was also well done. Nor must we forget to mention the juggling and balancing by a man who appeared to be the head of the company. His tricks with sticks, balancing swords on his chin, catching balls thrown some twenty feet high on his forehead or on the point of a stick were all remarkably well performed, and this though not the most sensational was certainly the best portion of the entertainment. Altogether the performance was all that could be wished.

The performance of the Y. A. D. C. on the evening of July 4th took place under most propitious circumstances. There was a good house; a good band to fill up the interim between the acts, and in the principal piece of the evening, there was no lack of dramatic talent displayed.

The entertainment commenced with "Two in the Morning" a farce which under the protecting wing of Charles Matthews achieved some success: but none but that celebrated comedian could, we feel sure, save such a miserable combination of absurdity and dreariness from being utterly "damned." There is an absurdity which loses half its folly by the amusement it affords; but "Two in the Morning" is utterly devoid of everything which should characterise a good farce. Captain Walsh

and Mr. Vandyke de Brown did all they knew to save it: the former threw into it as much fun as any amateur actor would be capable of doing but the piece fell flat on the audience, notwithstanding that they were very generously inclined.

In Woodcock's Little Game, which followed, we had an entirely different style of piece, depicting the miserable attempts of poor Woodcock to induce his wife and mother in law to settle down in Stow-on-the-Wold. It is eminently suited to the requirements of amateur performers, and yesterday evening the most undoubted success was attained, the falling of the curtain at the close of each act being the signal for loud and prolonged applause. As "Woodcock," Mr. Doleful was pre-eminent. The character suits him far better than anything we have previously seen him in, and his conception of the part was really good. He was well dressed, his reading was excellent, and his gesticulations, while they bordered on the line separating comedy from farce, were yet sufficiently suppressed to avoid all extravagance. From first to last Mr. Doleful showed himself the true artist, and we hope that in future selections he will be as successful as in "Woodcock."

Of Mrs. Trotter what shall we say? She improves her rendering of female character at each representation, and last night succeeded *à merveille*. Her dress was suitable, and she wore it with a feminine grace which could hardly be expected when we think that "she" is a man and not a woman. Where all was so good we would not wish to select any portion, but we may instance Mrs. Carver's little oration on the pleasures a London life and the headlong manner in which she, under the wing of Woodcock, intended to plunge into the "whirligig" of fashion as exceptionally good. In this she showed dramatic power, and if it had not been that she was here evidently a little doubtful as to the effect of throwing a little more force into it she would have achieved even a greater success than she did. As it was she was rewarded by well earned applause.

Next, but not inferior, was Miss Julia Brani. Her make up like that of every lady who performed yesterday evening was excellent, and the dresses, especially her ball costume, were in good taste. Miss Brani also manifested a thorough conception of the requirements of the character and with proper dramatic instinct acted with excellent judgment and talent.

Miss Matthews had but little to say, but she said that little well, and if he might suggest that she should face the audience rather than turn her back, we have written the only depreciatory sentence for which we can find necessity. Of Miss Godfrey we saw but little; her voice is against her; but her figure is *petite*, and she may succeed with practice in a heavier character.

Harking back to the male characters, Lieut. Wright as Mr. Larkins, Mr. Piando as Mr. Swansdown, and Mr. Oddson as David, were all that could be desired. The parts were but comparatively small, but at the same time failure in either of the first two would have much tended to mar the success of the piece. We need not say that no such catastrophe took place. The most unqualified success was obtained, and though the first act was decidedly better than the second, yet the applause so freely bestowed throughout was well earned.

For the music we will say but little, though much might be said. Being entirely amateur talent it does not behoove us to criticise it narrowly; but it was evident that the efforts of those who had so kindly devoted themselves to the public entertainment were

well appreciated. There need be no fear of failure when audiences are kindly disposed and we do not doubt that with steady practice the band will attain that excellence which we are sure each member is desirous of reaching.

THE views we hold on the subject of theatricals are too decided to allow of our passing by the performance of last Thursday evening without a few words of remark. We shall, however, confine ourselves entirely to the general question, leaving the merits of the actors totally on one side. Nor shall we take any pains to conciliate such opinion as could tolerate for one moment such pieces as the two performed on Thursday. We are utterly and *in limine* against them. To our mind they represent the English stage in its most degraded condition at the most degraded period of its history, at all events since the days of the Restoration. Anything more vapid, stupid, and vulgar could not be conceived than the writing in the two plays. To say that they violate probabilities, and are untrue in every respect to human nature, that the characters are ludicrously inconsistent with themselves and with each other, is nothing. To all this we are accustomed on our stage. It may be doubted whether any writer of real elegance and genius would now waste his time in appealing to English audiences by dramatic efforts. The admirable critique on the great French actor Regnier which we published last week is evidence of this. If our readers will turn to it they will see there enumerated the causes of our present degradation, and if they can recall the plays of Thursday evening they will find illustrations of all that is there said. Take, for instance, the first piece—"Two in the Morning." On what stage on earth but ours would an audience tolerate the first ten minutes of such a play, even though Mathews and Compton were the actors? A deafening noise outside, a man getting out of bed and forced for mere decency's sake to put on a dressing gown before appearing, a conversation lasting some five minutes carried on between one character with his back to the audience and the other outside in the street, and the entrance of the latter, cursing and swearing like a drayman, under circumstances which would have inevitably produced a collision between himself and the idiot who admitted him—but which does nothing of the sort—here are materials for the opening scene! "Cela n'est il pas galant et bien spirituel? Et ceux qui trouvent ces belles rencontres n'ont ils pas lieu de s'en glorifier?"—as Molière says, on much the same subject. We shall not attempt to analyse the piece. It would be too absurd and too cruel. There is certainly one situation in it which creates interest—though it may well be doubted whether this is of a very legitimate nature—and this is the only thing which rescues it from utter contempt. In the hands of actors who can play with their audiences as men play with children, the success of "Two in the Morning" may be possible—but under no other conditions.

"Woodcock's Little Game" is more ambitious, and though farcical and ridiculous as a play, makes some little approach to comedy. But how? We have a *Mrs. Larkins* introduced, a pleasant woman of the world, devoted to her husband, sound in her domestic views, and a good worldly-wise friend (although far too young for such an office) to *Woodcock*. She appears in the scene early and *Woodcock* greets her. "Is that you *Mrs. Larkins*?" says the surprised bridegroom. "*In propria persona*" rejoins the lady! This is promising for comedy, is it not? The Latin Grammar in the mouth of a nice well-bred young fashionable woman! Conceive or attempt to conceive this in society. Yet comedy is or should be a reflection of society. *Mrs. Carver* is from first to last a purely farcical personage, monstrous, (we mean morally) impossible, odious and intolerable. Still she is the widow of a Lieut.-Colonel in the army, is presumed to be a lady, and occupies a certain position in society. Yet *Woodcock* addresses her constantly as "*Carver*"—as *Box* or *Cox* addresses *Bouncer*. If this is either comedy or fun, our studies have been thrown away. *Woodcock* is supposed to be a man of the world, who has sown many bushels of wild oats, and learnt so much address at least as ought to have enabled him to face fifty *Carvers* without difficulty—though he is at best a poor back-boneless creation. Yet this *Lothario* goes down before *Mrs. Carver* like a boy of

nineteen—a man of forty who is presumed to have seen and done everything, before a middle aged woman who never betrays that she has the veriest scintillation of a mind. He cowers under the dread of his dressing gowns, slippers and smoking-caps being discovered, while if he really wished to keep them from the eye of the intolerable *Carver*, he would have ordered *David* to remove them, forbidding her to examine the parcels. It is not to the point that he is afraid of her. It is from the first impossible that such a woman should make such a man fear. Can farce more utterly crush out all sense of comedy than in the interview between *Woodcock* and his servant? *David* constantly uses some honest rough colloquialism of his class, and *W.* repeats, not once, but half a dozen times, "I said nothing about so and so, *David*, I limited myself to the expression so and so." Does any human being—did ever any human being—talk thus to his valet or his man-servant? The situation is not farcical, but the language is. What but the sense incongruity can result from such a combination of circumstance and language? It is farcical euphuism in "*Box and Cox*." In "*Woodcock's Little Game*" it is misplaced and absurd. What you want is the play of ideas, not preposterous collocations of words. The one excites the delightful sensations engendered by wit; the other excites contempt, and will do so to the end of time under similar circumstances.

Then the violation of all reasonable probability in the duel, which occupies about three minutes, *Woodcock* being forced off the stage to act as second to both parties. It is no answer to say that this is the farcical part of the piece. You cannot bring in the possible incidents of life and dispose of them in this absurd manner. Your assumed basis is one of reality, as the basis of comedy must be. When *Mrs. Bouncer* lets a room to two men, one of whom works by day and the other by night, and makes the head of the bed for *Mr. Box* the foot of the bed for *Mr. Cox*, a farcical basis is at once assumed and established, and the mind is at once prepared for any subsequent amusing folly. But the basis of "*Woodcock's Little Game*" is one of reality, and you cannot, without producing a ludicrous sense of incongruity, dispense with the ordinary limitations imposed by time and place on the movements of the characters. Of *Woodcock's* polygamous aspirations at the end of the play, of his *double entendres* before his bride and his mother-in-law, the least said is soonest mended. They belong to our stage, and we must take them as we find them until they are replaced by something better. But it will be a never-ceasing source of wonder to us how one set of men can write such things, and another listen to, laugh at, or applaud them.

We have spoken of the degradation of our stage. One word in illustration of this.

The progress of society has interdicted anything like an oath, a *double entendre*, or an indelicate allusion before women. Nay, more, it must be confessed that it has immensely modified and purified the conversation of men. As a general rule, it may be safely stated that a dialogue between two gentlemen of moderate culture and refinement of feeling who have cut their brains and got beyond the talk of schoolboys, might be overheard by any married woman without danger to her modesty. We shall not pretend that it is always talk for school girls; but it is never gross or coarse; no oath disfigures it; and the acquired instinct engendered by good society preserves it from indelicacy, or at least from indecency. And the cause of this seems to us obvious. The newspapers, magazines, and the teeming press of the day, place before men, in an endless succession and variety, matters of great general interest, and these being fresh on the mind, become spontaneously and without effort subjects for thought and the interchange of views. The faculties exercised in conversation become active; the mind expands; larger interests attract and occupy it. Local, or at least purely personal gossip, gradually gives way before subjects of greater and more permanent interest. Questions arising out of politics, science, religion, morals, literature, art, or discoveries of one kind or another, are those which form the basis of such conversation, and, as we have said, the dialogues between two intelligent men deal mostly with such questions, and rarely even turn in directions which would be forbidden in

a mixed society of the sexes. Particularly is this the case where the mind has been refined by the active cultivation of literature, science, or art. The special pursuit may have become a hobby, and third persons, or the world, might be slightly bored by it. But, at all events, it is cleanly, decent, purged of vulgarity, and, if not very profound, yet clothed and presentable.

Now, the English stage defies this condition of the mind of society. It intersperses oaths without hesitation in the dialogue, and now and then admits a *double entendre* which no gentleman would dream of uttering before women, and which, if any ruffian were to obtrude it upon a dining or drawingroom, would involve his instant expulsion. Of the applause which such allusions gain it is impossible to speak without loathing and disgust, or of the writer or actor who degrades himself to seek it. The coarseness of our last century manners still clings to this century's stage, and is a disgrace to it; and it may safely be asserted that audiences out of harmony with those manners will take but small pleasure in, even if they do not entirely abjure, modern theatres, so long as they are exposed there to the language of dray-men and the allusions of the stews. With all its faults the French stage is utterly before us in all these matters, and the German not less so; while if looked at from its best side, the former is like that of a superior order of beings. Its elegance, its appeals to the best part of our emotional nature, its liveliness, its occasional pathos, the charm of its dialogue, the sprightliness of its wit, all combine to produce results of which we seem to have no conception, and too often, alas! no power of appreciation.

We shall be sincerely sorry if these remarks give any pain to our amateur theatrical corps, which deserves well of the community and takes more pains to amuse it than can be imagined by those who have never joined in such efforts. But our impression is very strong that houses cannot be drawn and exchequers cannot be filled by this kind of performance, and amateur theatricals are very expensive amusements.

We shall only add that the acting and the management generally seemed to us excellent.

We cannot allow the first public appearance of the Amateur Musical Society, though only in the humble part of orchestra at the theatricals on Thursday night, to pass without a word of congratulation; not, indeed, upon its performances—that would be premature,—but upon its formation. We shall not insist here so much upon the pleasure it may eventually give to the public, though we trust it will always be well disposed in this respect when it has attained greater proficiency. But no young musician without experience of them has any conception of the pleasures such a society opens up to him. If he will only give a moderate amount of time to his instrument between the intervals of concerted practice—time spent properly on Spohr or Kreutzer—he will find himself advancing rapidly, gaining power at each step, and at each step approaching new scenes of beauty and enchantment. He must be content, perhaps, to totter at first through such music as was performed last Thursday evening, glad if he only gets some little variety in the shape of selections from operas and adaptations of one kind or another. Very shortly he will make the acquaintance of the old Italian masters, Corelli and Geminiani, passing through whose easy concertos he will be ready for some of the simpler overtures of the French and German school. From these he can enter the vast territory occupied by the symphony, beginning perhaps with Romberg, and passing on through the simpler scenes laid out by Haydn and Mozart, until he arrives at the feet of Beethoven's Alps, the scaling of which will require all his powers. But his labour will open up to him besides these the boundless field of the quartett and quintett, the forms into which the great composers have thrown their choicest if not their loftiest thoughts, and of the pleasure he will derive from them, no one can give him any adequate idea. But he may rely that in cultivating the power which places them within his reach he has gained a fresh defence against "the slings and arrows of outrageous fortune," has extended the horizon of his pleasures, enlarged his acquaintance with man's diviner faculties, and opened up

for himself scenes and sources of enjoyment of the purest and most exquisite nature.

While on this subject we may mention that good musical instruction is now to be had here, and that no great proficiency is required to join the newly formed society. With two hours a day of practice for six months, any apt pupil now commencing a stringed instrument would be able to take his part in the orchestra, and it need hardly be said that in a small place like this, performers are not very numerous. Violoncello and tenor players are wanted to bring up the balance of the band, and gentlemen who play or will take up these instruments will be cordially welcomed among its members. At least some knowledge of music is now becoming the essential complement to a modern gentleman's education, and we have rarely met with a person of ordinary sensibility in whom it has been neglected who did not greatly regret the circumstance. The narrower the sphere to which these regrets are limited the better it will be for all of us.

THE reasonable probability is that the account by Mr. Pershine Smith of his presentation to the Mikado which has found its way into the American papers and been reproduced here, formed the substance of a private letter, and was never intended for the public eye. But there is nothing that a thorough-going democrat loves so dearly, and is upset by so entirely, as an interview with a real blue-blooded monarch, and if Mr. Smith has not managed to keep his balance under the circumstances, no great blame should attach to him. The first folly in this whole matter was the real folly, and that was Mr. De Long's. There is, of course, something exquisitely amusing in the idea of importing an International Councillor from a country which has just made the most gigantic international blunder of the century, but it may be doubtful whether anything that Japan could offer would tempt a really great authority upon international law to come to this country, either from America or England. Whether Mr. Fish, with a full appreciation of the extreme absurdity of Mr. De Long's despatch, sent Mr. Pershine Smith here as a stroke of practical irony, we have no means of judging, though it must be allowed to be an admirable joke. It is quite certain, however, that Nature has opposed an irremovable bar between Mr. Smith and greatness, and Rochester must be content with the honor of having sent to the Court of the Tenno a gentleman whose diplomatic *finesse* will most probably be limited to an attempt to palm off upon it his Chinese shoes as black silk stockings.

If Mr. De Long had learned, while in good company, to exchange the small shrewdness of a country lawyer for the wisdom which should characterise a Minister, he would have warned Mr. Fish against sending a man to Japan with any such idea in his head as the controlling of its foreign policy. Of all other things, he should have pointed out to Mr. Fish the danger which any such foolish ambition would involve, and requested him to interdict to his nominee the smallest tendency to meddle with the foreign politics of the Empire. In wise and far-sighted words he would have shewn that in this very direction lay the perils besetting the appointment, and that by rigid abstinence alone from any such attempts or any such ambition, could the holder of it do credit to himself or service to this Empire. He should have insisted on this with an earnestness and honesty which would have more than redeemed the faulty grammar of his communication, and gained for himself at once the respect of his countrymen and of other foreigners in Japan. Instead of this, we have—well, it is enough—what we have.

There is or was some years ago, a Club in Calcutta called *The Jewabed*, the membership of which was limited to men whose matrimonial proposals had been refused. They wore, in all probability, a grin set of fellows, though it speaks well for them that their philosophy was stronger than their wounded vanity. Could not something of the kind be established here for the authors of rejected contributions to the *Japan Mail*? They are many and sad, and poor "Pen and Ink" would make them an excellent chairman. They have already a

worthy organ, but do not seem to work well in concert. A weekly "Contributors Dinner" might produce more unity of design in their work. They should have an uniform—foolscap with red ink facings—and a band of rejected second fiddles playing on one string would make sympathetic music for them. "Dull dogs, Sir, dull dogs" as Johnson used to say.

THERE would appear at last to be some possibility—rather distant, perhaps—of inducing the local Government to drain and cleanse the Swamp. The matter has long been agitated; the holders of Swamp lots have long fought for what they, equally with ourselves, believe to be their rights according to treaty, and it was not very long since that we announced that the owners of Swamp lots were about to present an address to the Board of Consuls, calling upon them to place the matter before the Governor.

That address was signed by, we believe, every owner of Swamp lots, and has been eventually placed officially in the hands of the Consular Board. It has been discussed by them, signed by each individual Consul, and presented to the Governor. He, with a rare amiability, has apparently been inclined to view the matter in a favourable light, for we hear, unofficially, that he has applied to Yedo for an appropriation to carry out the work.

Thus much has been done towards carrying out the wishes of the owners; but whether or not it will result in any practical good remains yet to be seen. The money required to carry out any scheme of drainage and for properly grading the roads will probably be found to be very large; while if the evil is only temporarily remedied, it is but postponing the evil day, to come at last, probably under more unfavourable circumstances than before. If the improvements are to be made at all, let them be carried out thoroughly and without any shirking; if not, let strong measures be taken to enforce those rights which we consider are ours by treaty.

At the same time that we believe ourselves entitled to these improvements in consideration of the high ground rents we pay, the Japanese Government authorities maintain that they are not obliged by treaty to make these repairs, and, in this view, they may possibly refuse to stir in the matter. But one course would then remain for owners of Swamp lots to adopt. Let the English owners combine in action as they have already done in signing the letter, and one and all refuse to pay their ground rents, unless the required improvements are made. The immediate consequence will be their appearance before the Acting-Assistant Judge to answer to a summons; and the question as to whether or not the Government is bound to make these repairs will then be settled by indisputable authority, and if favourable to the defendants, the repairs will be made, or they will be able to hold their lots rent free. The issue will be easily attainable and quickly settled. But we hope there will be no necessity for this course of action. If they are wise, the authorities will carry out the work thoroughly, and without further hesitation. The Swamp is in such a state that delay will not longer be borne patiently, and we advise the Government to yield gracefully while this is yet in its power.

AMONG the passengers per the P. M. Str. *New York*, from Hiogo, was Chang, the Chinese giant. He has for some days past been exhibiting at Kobe, Osaka, and Kioto, the latter place only two days, on account of the interference of the authorities. We understand he purposes holding levées here and in Yedo, and thence proceeding to India; by that time he will have been all over the world, and, we presume, having acquired a certain competence, will retire. Chang was lately interviewed by the representatives of our various local journals and received his guests in European clothes. He wears a pig-tail, and during his exhibition we understand he wears Chinese garments, a costume which would tend to increase his height. He is over eight feet high, but is rather slenderly built for so tall a man, and weighs only 370 lbs. Opinions may be divided as to the wisdom or propriety of exhibiting giants and dwarfs, and other freaks of nature; but there is no question that Chang is a great curiosity and worth visiting.

JULY 4th, the anniversary of the Independence of the United States, was kept here with all due solemnity. All the American houses were closed, and the U. S. *Chargé d'Affaires* received his friends at the Legation. At noon the United States men of war in harbour fired a national salute, and the *Benicia*, which left in the morning, went out fully dressed, from deck to masthead. All the vessels in harbour were also dressed in honour of the occasion. During the day there was a constant firing of crackers, and in the evening several American houses were illuminated. Altogether, the day passed off very satisfactorily.

WE are glad to announce that the fares charged by the railway authorities have been considerably reduced. The change was one much needed, and will, we feel well assured, be thankfully received by those who make frequent use of the line. The fares may seem to be somewhat singularly arranged, but it will be found they are stranger in appearance than in reality. Thus 93.75 sen is a dollar less one quarter of a bu; 56.25 sen is half a dollar and a quarter of a bu, and 18.75 three quarters of a bu. The only difficulty will be the necessity of making change, a quarter of a bu being a somewhat unhandy coin.

HAWAIIAN CONSUL AT HAKODATE.—By the last mail for Hakodate, Mr. B. T. Lathrop went North as Hawaiian Consul. He was appointed by the U. S. *Chargé d'Affaires*, under instructions from the Hawaiian Government. It is only recently that we noticed in one of the Hawaiian papers a motion in the House to reduce "His Majesty's salary." Cannot the Hawaiian Consul-General, who has always acted as if he had the interests of his Government at heart, remonstrate with it on the extremely ludicrous figure it cuts in commissioning Consuls at Hakodate, whether paid or unpaid?

The *Iron Duke* and the *Salamis* arrived yesterday. Salutes were first exchanged between the *Colorado* and the *Iron Duke*, and she was afterwards saluted by the other men of war in port.

A thunderstorm of more than ordinary severity and duration passed over their settlement this afternoon. It was impossible to ascertain before going to press whether any damage was done by it.

THE RUSSIAN CONSULATE AT HAKODATE.—We hear the Russian Consulate at Hakodate is to be abolished. Mr. Olarovsky, who has long held the post of Russian Consul at that port, is at present unattached, but will be shortly assigned some new post, probably the consulate at the first new port opened after the revision of the treaties. Yokohama is to be a vice-Consulate, and Mr. Weber is shortly to arrive for this post.

PERSECUTION OF CHRISTIANS IN THE NORTH.—Among the persecuted Christians at Hakodate were two servants of the Russian Consul. They were arrested by the authorities who have now to tender a full apology to the Consul for their unwarrantable interference.

#### THE BANKRUPTCY ACT, 1869.

LONG residence in countries distant from and not directly under the paternal Government, is apt to engender in men a certain feeling of apathy and indifference towards the new institutions of their native land. A declaration of war, the Geneva Convention, dissolutions of Parliaments, the passage of reform bills, or the establishment of new laws, are usually received with that phlegm which was and is the distinguishing characteristic of Englishmen, and especially of those swarms from the parent hive which have chosen the smaller colonies and treaty ports for the new fields of their labours. Nor is this apathy calculated to cause any expression of surprise, for men who have chosen a resi-

dence abroad gradually lose that interest in public affairs which is so strikingly developed amongst our brethren at home. All our readers will have observed the excitement caused by a telegram announcing the failure of the cotton crop, a disease amongst the silkworms in Europe, or an increased demand for tea in the United States. This excitement is to the stranger and uncommercial man wholly incomprehensible, but to us and to the majority of our readers, not without explanation and reason. When a telegram announces the passage of a new bill through Parliament—a bill affecting us individually and collectively—we regard the message as unimportant, and entirely secondary to that portion, which, treating of articles of commerce, is to us the aim and end of our daily struggles in business life. The Journalist, however, is bound to do his utmost to watch the progress of new and improved laws, to note their changes and operation, and to bring the more important before his readers in a form calculated to give them as clear an insight into their general application as is possible within the limited space conceded by a newspaper.

The subject of our present article is the Bankruptcy Act of 1869, which, differing, as it does, from all former Acts, and being, moreover, of great importance to commercial communities, can scarcely fail to command a portion of public attention and interest. The great strides commerce has made during the last decade of years have caused finance to become a science. Sir JOHN LUBBOCK'S returns show the total value of clearances in the Clearing House for the year ending 30th April, 1872, to be the almost fabulous sum of £5,359,722,000, as against £3,257,411,000 for the same period in 1868, showing an increase over that year of more than two thousand one hundred millions sterling. The rapid development of commerce made manifest the fact that laws which tended to punish the reckless and dishonest, and protect the honest, yet unfortunate trader, were of increased importance; while the necessity of placing some check upon private and unauthorised liquidations or compositions with creditors, and the generally-admitted failure of the Bankruptcy Act of 1861, drew the attention of the law officers of the Crown to the want of an improved system of legislation, resulting in the framing of the new Bankruptcy Bill which is now in force.

An article upon a subject like this must be necessarily didactic and heavy: several of our subscribers will pass it without even glancing over it, and we regret that these matters should be without interest for them. In a place like Yokohama it is every man's duty to make himself acquainted with the progress of, and the improved or changed relations between the law and himself, for it is part of the progressive education of a gentleman to follow and understand the laws made by his forefathers or co-temporaries, and which he himself may some day be called upon to support or amend; and this duty ought not to be neglected until an emergency arises when the ignorance or the simplicity of the parties interested, may render them a helpless and easy prey to unprincipled practitioners who, unfortunately for the world at large, disgrace even the most honourable professions.

Having now stated our objects in bringing this important subject forward, we will, without further preamble, proceed with our task. One of the latest writers on this

subject says "There can be little doubt that the fact of our laws authorizing imprisonment for debt gave rise to the necessity of bankrupt laws; and the object of those laws has always been to protect the honest trader from the consequences of unavoidable misfortune, to punish fraudulent traders in a manner proportionate to their offences, and to secure for creditors as much of their demands as the estate of insolvent persons could reasonably pay."

A law embracing and carrying out all these features would be perfect, and it remains to be seen how the Act of 1869 treats them. Under the old *régime*, the expense and uncertainty of proceedings in bankruptcy tended to render inoperative the law then in force: distinctions were drawn between traders and non-traders, and undue privileges were accorded to private arrangements and compositions with creditors; the former were unjust and were abolished in 1861, (some distinctions, however, still exist, but they are slight) while the latter opened the door to the fraudulent and dishonest, to the manifest disadvantage of the unfortunate but honourable trader. In explanation of this we quote the following paragraph "Under that Act, (1861) debtors obtained their discharge so easily that the greatest encouragement was given to reckless trading, while the expense of winding-up an estate was so great that creditors usually succeeded in obtaining only a very small dividend out of their claims," and referring to the "private arrangement clauses" the same writer adds, "By those clauses a certain majority of creditors could bind all the creditors of a debtor to accept a part of their debts in discharge of the whole, or could bind them to any other terms that they pleased to impose. At the same time no means were afforded of ascertaining whether the debtor was insolvent or not, or whether the terms were favourable or even reasonable. Moreover, no means were afforded of ascertaining whether the list of persons given by a debtor were creditors or not, or whether the alleged debts were owing; and as there was no power to examine either creditors or debtor, and as no public meeting of creditors was required, a system grew up, on the part of fraudulent debtors, to furnish a list of fictitious persons as creditors." In 1868 a supplementary act made the much wanted reform by providing for the examination of both debtor and creditors when required.

With regard to the first part of the new Act treating of the expense of winding up an estate, a considerable change has been made. In lieu of the former expensive process which, when a petition in bankruptcy was lodged, brought about innumerable charges, and removed the management of the debtor's affairs from himself and his creditors to the hands of paid officials who were *ex officio* indifferent to the dividend the estate might yield, we have an improved system which provides that, as soon as the order of adjudication of bankruptcy is made, the Court shall summon a meeting of creditors who will proceed to nominate one or more trustees to act under a committee of inspection of not more than five persons, to be composed of the creditors qualified to vote at the meeting. The committee of inspection must be appointed by an ordinary resolution. It is, however, optional on the part of the creditors to appoint such committee of inspection, and it is also optional with them to require the trustee to give security for the due performance of his duties. It would

be well here to state that no person can now become bankrupt on his own petition, and the petitioning creditor or creditors, must singly or collectively, represent a claim of not less than £50. Six acts of bankruptcy are defined by the Act and these may with advantage be quoted here as one or more of them must be alleged in the petition: they are:—

1.—That the debtor has made a conveyance or assignment of his property for the benefit of his creditors generally:

2.—Or has made a fraudulent conveyance, gift, &c., of his property, or of any part thereof:

3.—Or has with intent to defeat or delay his creditors, departed or remained out of England,\* or *being a trader* has departed from his dwelling house or otherwise absented himself, or suffered himself to be outlawed:

4.—Or has filed in the Court a declaration that he is unable to pay his debts:

5.—That execution issued against a debtor *being a trader* to recover not less than £50 has been levied by seizure and sale of his goods:

6.—That the creditor presenting the petition has served on the debtor a debtor's summons requiring him to pay a sum due of an amount not less than £50, and that *if a trader* he has for seven days after such service, or, not being a trader for three weeks, neglected to pay such sum, or to secure or compound for the same.

These are the acts of bankruptcy defined by the statute, and the petition must be presented within six months of the commission of the act alleged.

We will now for the sake of our argument suppose that a petition has been presented and the debtor adjudicated bankrupt; that the first meeting has been held and a trustee and committee of inspection appointed, (for it is from this period that the management of the bankrupt's affairs virtually passes into the hands of the creditors, and the Court ceases to exercise active control unless on the application of the bankrupt, "or any creditor, debtor, or other person aggrieved by any act of the trustee.") The duties of the trustee are to take over the property of the bankrupt, to examine into and sift the good from the bad, to retain the former for the benefit of the creditors, and to disclaim the latter. Property which may be disclaimed includes encumbered estates, unmarketable stocks and shares, the completion or execution of contracts, or any property which is not readily saleable. He is also to receive and decide upon proofs of debts, he may carry on the business of the bankrupt, or institute or defend any action at law, or sell the property of the bankrupt, and is generally authorized to act as the bankrupt could have done previous to his bankruptcy, save and except the following which can only be done by and with the consent of the Committee of inspection (or failing the appointment of such Committee by the sanction of the Court.)

1.—Mortgage the bankrupt's property.

2.—Refer to arbitration or compromise any debts, claims, or liabilities.

3.—Make any compromise or other arrangements with creditors, or with respect to claims arising out of or incidental to the property of the bankrupt.

4.—Divide among the creditors any property not capable of being advantageously sold.

5.—Employ a solicitor or other agent.

There are two acts which can only be performed by a special resolution passed at a duly notified meeting of creditors, such resolution to be ratified by an order of the Court, and these are to accept a composition or any scheme of settlement offered by the bankrupt or to make an allowance to the bankrupt. If it is borne in mind that the Court, in almost all cases, has the authority of the committee of inspection when such committee has not been appointed, much repetition will be saved. To provide against loss from the *laches*, criminality, or insolvency of the trustee, he is required to deposit all monies received by him into such bank as the committee shall appoint, and in no case is he to retain a larger sum than £50 in his hands at any one time. And his accounts are to be audited by the committee and finally submitted to the comptroller in bankruptcy. Any breach of these rules renders the trustee obnoxious to the law and its penalties.

From the foregoing it will be observed that the creditors have unusual power vested in their hands, and it is clearly shown that the new law grants to them authority to act as liquidators of the estate in such manner as may seem to them best calculated for their interests. By the appointment of a trustee in whom they have confidence everything connected with the winding-up is performed with their direct privacy and sanction: delays which, not very many years ago, used to be vexatious because wholly inexplicable and unnecessary, and the enormous contingent costs have been abolished; and official liquidators and official assignees are no longer indispensable, for the creditors themselves supply their places.

We have now reached that stage where the bankrupt's affairs are controlled by the trustee and committee of inspection, and it will be well to examine cursorily the positions of the bankrupt and his creditors. Section 19 rules that "the bankrupt shall, to the utmost of his power, aid in the realization of his property, and the distribution of the proceeds amongst his creditors" and generally that the bankrupt shall give such material assistance to the creditors as they may reasonably require. Any refusal to perform the duties imposed by this section subjects the bankrupt to punishment for contempt of Court. Section 17 provides for the close of the bankruptcy when the whole property of the bankruptcy is realised, or so much thereof as can, in the opinion of the trustee and committee, be realised without needlessly protracting the bankruptcy. When these have been done the trustee shall make his report, and the court, if satisfied, will make an order that the bankruptcy has closed. The trustee can then with the consent of his creditors apply to court for his release, and the court will, after hearing what, if any thing, can be urged against the trustee, grant or withhold the release accordingly. The order of release shall discharge the trustee from all liability for any act done or default made by him in the administration of the bankrupt's affairs.

The liability of the bankrupt is also much changed by the present act, for, whereas he was formerly entitled to an order of discharge whatever the amount of the dividend paid, now, "by the 48th section of the act of 1869, a bankrupt is not entitled to a discharge from his past debts unless—either a dividend of not less than 10s. in the pound has been paid, or might have been paid but for the fraud or negligence of the trustee; or that a special resolution of his creditors has been passed to the effect that

his bankruptcy or the failure to pay 10s. in the pound has, in their opinion, arisen from circumstances for which he is not responsible, and that they desire an order of discharge to be granted to him." Should the bankrupt fail to pay 10s. in the pound and to obtain the creditors' consent to his application for discharge, section 54 defines his status. If during three years from the close of the bankruptcy he pay to his creditors such additional sums as may be required to make up 10s. in the pound, he will be entitled to an order of discharge as he would have been had a dividend of 10s. in the pound been originally paid.

At the expiration of three years, and the bankrupt being without his discharge, any balance due to his former creditors will be considered as a subsisting claim and may be enforced against the property acquired subsequent to the close of the bankruptcy, subject to certain conditions and the sanction of the Court.

We therefore see that a bankrupt renders himself liable to a payment of 10s. in the pound, and his creditors can retain their right upon any property he may acquire for an indefinite time, as the Court has no power to grant a discharge until this condition has been complied with, or the creditors voluntarily release the debtor from further payments. Now, if any regulation is calculated to check reckless trading, wholesale speculation without capital, and all other transactions which men have been known to engage in without the means which they have known to be absolutely necessary to carry them out, it is the fear of being constantly harassed by the debts resulting from their former misdeeds. Creditors who have suffered losses that can be traced to the reckless carelessness, criminal or not, of the bankrupt, are not only justified but called upon for the protection of commercial morality to punish the debtor as he deserves, for such punishment can be apportioned to the offence, and can be commuted whenever they think proper to release the offender.

The further rules and orders of the act are lengthy and important, and embrace almost every feature which can be desired, but as they treat principally of procedure and other technical matters they are irrelevant to this article, which is intended to convey only the gist of the Bankruptcy Act relating to ordinary business.

A portion of the Act is devoted to rules and regulations of private compositions with creditors and is of considerable importance; we may therefore at some subsequent period have a few remarks to make upon that subject.

In conclusion, it becomes our duty to express the obligations we are under to the valuable treatise on the Bankruptcy Act of the writer from whom we have taken the liberty to quote so freely.

#### THE OUTBREAK AT NIIGATA.

WE have recently published in these columns a translation of the Government proclamation in respect to the late rising at Niigata. The information then conveyed was, although satisfactory, anything but complete, and, furthermore, gave no particulars as to the causes, political or social, which led to the outbreak. The following narrative, derived from most reliable sources, will be found to give every information connected with the affair. To enable our readers the more easily to comprehend the position as it existed in Niigata at the time of the outbreak, we will, in the first place, give such experiences as were actually afforded to the foreign residents at the port. It appears, then, that on the 10th of May

the *banto* in the employ of Messrs. Weber & Leysner urgently advised Mr. Weber not to open the shutters of his house, as there was a large number of disaffected men in town, who were inclined to make an attack upon foreigners. Mr. Weber, however, did not think fit to act on the advice of his *banto*, and proceeded with his business as usual, nothing happening for two days to justify the caution suggested to him. But on the following Sunday it became evident that the *banto* had not spoken without cause. Mr. Weber expected Mr. Evrard, a Roman Catholic priest, to visit him by appointment; but that gentlemen arrived late at the house, and apologised for his delay by saying that the *Kenrei* had sent him a guard on account of an extensive rising among the peasantry, who were laying plans for the attack of Niigata. This served to put Mr. Weber on the alert, and he at once communicated with the *Kenrei*, who confirmed the report brought by Mr. Evrard, and promised to send him a guard for his own protection. At the same time, the *Kenrei* did not appear to look upon the insurrection as anything very serious, although it gave much trouble. The officials also told Mr. Weber that he need not entertain any fears as to the safety of the life and property of the foreign residents.

Further than this, nothing was heard of the rising beyond the arrest of a number of suspicious characters who were loitering about the town, until Tuesday, when the preparations for resistance by the authorities were completed, and a force of 408 men, with two field-pieces, marched out of Niigata to Hijima, a distance of one *ri*. At the same time the authorities ordered steam to be got up on a small steam lighter, and notified Messrs. Weber and Evrard to hold themselves in readiness to go on board should the Government troops meet with disaster, of which they would receive due notice. On the evening of the same day news arrived that the insurgents had been defeated; but it was not till exactly a week later that it was ascertained that all danger was past.

Such was the course of events as they presented themselves to the foreigners resident in Niigata. We have now to retrace our steps to seek the causes which led to the rising, and the details of the contest, which ended in a victory for the Government. In February last doubts began to be felt among the authorities of the Kashiwadasaki and Niigata *kens*, who had undertaken the carrying out of the Terodomari cutting, as to the completion of the work, on account of the difficulty of obtaining labourers, and about a month after, the *Kenrei* of Niigata proceeded to Terodomari, and there found that the work had been much delayed. He therefore issued an order calling for ninety-three men per 1,000 *kokus* from the villages of Echigo to work at the cutting for two months, from April 27th to May 26th. This order, it may well be imagined, gave great dissatisfaction, the more so that the peasantry looked upon the work as unnecessary, and its completion as causing much distress in calling away the labourers from their own homes, where their own crops needed their services. For two years the inundations which originally led the Government to undertake the work had been very slight, and this immunity from danger, combined with a fear that the Government—who had promised that not more than one inch of water should pass through the canal at a time, in order to prevent a drought, which would affect the cultivation of the crops—would not carry out their contract, and also the fear that, after all, the embankment would not hold, and thus create great distress, caused the peasants to look upon the work with anything but satisfaction. Added to this was the discontent caused by the high taxes levied, and the result of all was a great scarcity of labourers.

However, the levies of labourers were made, and all went on satisfactorily, until on May 12th the labourers struck work, and to the number of 2,000, with the farmers of Tsubani and Nakanoguchi as their leaders, marched to Kashiwadasaki Kencho, and represented a petition. This appeal comprised four requests. It prayed that the taxes should be reduced to the rate levied during the reign of the House of Tokugawa; that the Shintô and Buddhist religions should not be interfered with; that foreigners should not be allowed to reside in Japan; and, most important of all, that Government should discontinue the levy of peasants to carry on the work,

employing coolies collected in various parts of the country. The petitioners were very properly informed that it was necessary that their prayer must be forwarded to Yedo, and that, awaiting answer, they should return to their work, six only remaining to receive the answer of the Government.

We have already alluded to the distress caused by the forced levies of peasantry to carry out public works, and there appears to be no doubt that this distress is real. A peasant working at the cutting receives from 1,000 to 3,000 cash per diem, a sum hardly sufficient to furnish subsistence, far less to employ substitutes to till his own ground. The natural result is that the families of these men are reduced to the direst straits to obtain wherewith to support themselves. A minor cause of discontent, but also connected with this portion of the subject, is the fact that the overseers at the work make each man carry more than his due proportion of sand without adding to his wages. The next portion of the petition is one which refers to the taxes, and we find that those taxes raised for the carrying out of the cutting are divided into four portions. Those owning the lowlands contribute two portions, those on the highlands one, and the Government the remaining portion. Those on the highlands pay two to five *rios* per 100 *kokus*,\* while those on the lowlands pay 500 to 700 *rios* per 100 *kokus*.† This last levy is about equal to the value of the land itself, and many, unable to pay so heavy a contribution, have had to leave their homes, and, without money, seek some less heavily taxed district. We may mention that these taxes are to be in force for six years, commencing in 1870. Now, if we contrast these taxes with those levied during the times of the Tokugawa, the comparison is much in favour of the latter. The only tax beside that on rice and land, was that upon *saké*, whereas under the present arrangement it is proposed to increase the tax on *saké*, and to levy taxes upon oil, fish, etc., besides a variety of licenses.

That portion of the petition referring to religion is probably founded on the fact that many Shintô and Buddhist priests have been removed to make way for fresh incumbents nominated by the Jingikwan.

The last clause recommending that foreigners should not be admitted to Japan, seems to prove conclusively that some influence other than that originating in the dissatisfaction felt at the taxes and other local grievances has been brought to bear upon those connected with the outbreak. The circumstances under which this influence was employed, we shall presently show.

We will premise by saying that in the first month of the Japanese year (February—March) a round robin was signed by some farmers in the villages on the Nishigawa and circulated among the surrounding villages. It called on the people to assemble near Niigata on the 23rd March, assigning as a reason that the Government proposed to readjust the holdings of the farmers of Echigo. The Government hearing of this made every enquiry as to its origin, but failed to obtain any information of real importance. This round robin, although undoubtedly part of the proceedings which eventuated in the outbreak, seems according to all reports to stand isolated. To find the real source of the trouble we must look to the proceedings of one Watanabe Kôikô. Some three years since this man, with his wife and adopted child, settled in a small village some nine *ri* from Niigata, and for some time past had earned a livelihood by selling tobacco at the cutting. From his intimate relations with the peasants at work there, he soon learned that they were greatly dissatisfied towards the Government, and, assisted by one Ansoji, a priest of Tskioki, an Aidzu retainer, and four others, attempted to increase the ill feeling of the peasantry and neighbouring farmers, urging them to attack Niigata. He gave as one of the reasons for adopting this course that Satsuma and Chôshû were displeased with the present Government; would overthrow it, and be themselves upset by the foreigners, who, being favourable to the supreme Government, would thus obtain exclusive control of the country. The argument had the effect desired. Watanabé seized the occasion of the presenting of the petition alluded to as a favourable opportunity for prosecuting his designs, went to the priests at

Gobo, and demanded quarters for 100 soldiers and 1000 peasants, who were to arrive on the 11th May. On being questioned, he gave his name as Murakami iki‡, and that of his companion the priest as Matsudaira mino, while he said the other five were his retainers. The expected soldiers and peasants did not arrive, and the party proceeded on the 12th May to Shironimachi, a distance of five *ri*, together with a few followers they had collected. At Shironimachi they remained till the 14th of May, their followers being daily augmented, till their number reached about 1,000 strong. Leaving their quarters, they advanced, destroying everything on the way, till they arrived at Hijima, on the 14th May, at noon.

We must now turn to the other side, and see what the Government was doing to counteract this rising. Even before the authorities had precise information of what was in progress, Matsudaira Sanji and Daido were sent to Teradomori with eighty troops, and finding the place deserted, they returned; but the two officials immediately set out to Sanjo, where they heard the rioters were stationed. The opposing parties, however, met at Yoshii, four *ri* from Niigata, on the Nakanoguchi. The officials asked the rioters to state their grievances, but Watanabé ordered his men to attack and kill the officers without parley. His order was carried out. One officer escaped, but Daido and a village official were butchered. On this the local Government sent a battalion 408 strong, with four field-pieces, to resist the insurgents. They met at Hijima, and after but a short parley the attack was commenced. The troops opened fire upon the peasants, who, after offering a very short resistance, fled in a body. It appears, however, that notwithstanding there were only seven fighting men among the rebels, and that very few had firearms, sharpened bamboos being the weapons chiefly used, the result of the contest was some time in doubt. Watanabé, who was wounded, fled to Shironé, where four officers attacked him. One, Kumiya Shôsakwan, was wounded and the others retired, Watanabé making for Niida, whither he was followed by the four officers and captured. The other six fighting men also fled, but were all captured. There was in all eight Government officials killed and wounded, Yamamoto Shôso, a military officer, being among the killed. Yatsu, a *tenji* of Niigata, had been wounded, while Watanabé had received three severe injuries.

We learn that in addition to the fact that the peasants were out-manœuvred by the military, Watanabé made a great mistake in his plans. Had he avoided the paddy fields, where his operations were restricted to a narrow path, and sought, instead, the sea-shore, his force, so much larger than that of the Government, might have proved successful, a result which would have placed the residents in Niigata in a very perilous position. Indeed, during the few days when uncertainty prevailed as to the result, the residents of Niigata were in a state of great alarm, increased by the large influx of villagers from the surrounding hamlets who fled to escape the outrages of the rebel mob. Beyond this, it was well ascertained that the rebels had determined to attack the foreigners, and this doubtless gave rise to considerable anxiety on the part of the *Kemrei*. As soon as the trouble had somewhat subsided, the wife and adopted child of Watanabé were arrested. Watanabé himself has also been questioned by Matsudaira, Sanji of the Niigata *ken*. On being asked to give his reasons for leading the rising, he at first refused to answer, saying that his questioner was too young; but on being told that the Sanji was a high official, he consented to give a reply, of which the following may be taken as the substance: He said his reasons for heading the uprising was the existence of a general feeling of discontent throughout the country, and that Satsuma and Chôshû were at the head of the dissatisfied. They, he said, had decided to overthrow the Mikado, and as they themselves would be in turn conquered by foreigners, Japan would eventually fall into the hands of the victors. He desired to give a signal for a general rebellion against all "unworthy officials" in Government service, and thus rescue his country. He also regretted that he had not succeeded, and would willingly meet any death, trusting only that he should not be exposed to the degradation of hanging.

\* 9s. 6d. to 22s. 6d. per 41½ bushels.

† £112 10s. to £157 10s. per 41½ bushels.

‡ Iki is the name of a small island near Tsushima.

Since then a deputation of about one hundred farmers who have in past years suffered most by the inundations, have presented a petition praying to be relieved from the exorbitant burdens put upon them for the completion of the works at Terodamari.

Such appears at present to be the end of the riot, but the causes which led to the rising still exist in all their force, and there may be as desperate and determined characters as Watanabé ready to seize a favourable opportunity to stir up the peasants to rebellion. Many of the agriculturists were previously retainers of one or other of the daimios—especially of Aidzu—and of these many must regret the change which has been carried out to their great disadvantage. Should such an attack take place at any future time, it may be that, warned by the past failure, other measures may be adopted and success be the result. In that case, should the weather be favourable, and the steam lighter able to lie at Niigata and cross the bar, the danger to foreigners would not be great, but should the boat be absent, the worst results might be expected, and the lives of the foreigners resident at the port be in imminent peril.

## JAPANESE NOTES.

EXTRACTS FROM THE SHINBUN ZASSHI.

(Budget of News.)

No. 41.

We hear from the Western provinces that various abominable stories had been got up in Aki, Nagato, and those parts concerning the telegraph now in course of construction by the Imperial Government. It was firmly believed by the people that this arrangement for facilitating communication by means of wires was simply what is called "Kiristan."\* It was also stated that the fresh blood of unmarried girls was used to paint the wires with, and that the girls were gradually to be arrested according to the order of the numbers affixed to the doors of the houses. In consequence of this evil report being circulated, the girls suddenly blackened their teeth and shaved their eyebrows, while some of the men destroyed the posts and wires, and the popular mind became highly excited.

A student named Nagai Nawayasu, writes from Germany to say that Japanese conduct themselves very irregularly on board of the Pacific Mail steamers. They smoke in their cabins, sing songs in a loud voice, and behave otherwise in a disorderly manner; and there is a report that in consequence of the annoyance caused to the Captain, Japanese will probably be refused as passengers in future. The papers say that a certain Japanese merchant tried to seduce a waitress at one of the hotels in America and drew obscene sketches on walls. Now newspapers circulate these reports far and wide, and it is a great pity that we should be disgraced in the eyes of the world by the acts of a single merchant.

No. 42.

The Yokohama Mainichi Shinbun complains of derangement caused in business by letters which have been entrusted to the post not reaching their destination. The same sort of irregularity has occurred in this city also, and has caused some complaints to be made. People trust the post because by its means the transmission of letters is effected without the slightest error between places lying thousands and thousands of miles apart. But to allow such inconvenience to arise in a city not more than ten miles in any direction, is to invite the mistrust of everybody, while His Majesty's object in establishing the post, namely, the convenience of his people, is frustrated and disappointed. Besides, although a letter may only consist of a slip of paper, its contents are often of the highest importance to a man's interests. We can only humbly desire that the persons whose business it is will carefully look to it.

\* This is the word used in all the public notices prohibiting Christianity, which are permanently exhibited in every village throughout the Empire, and even at the gates of Yokohama, under the very noses of foreigners.

The following are the names of the ringleaders in the late insurrection near Niigata:—

Watanabé Teizō, of the Aidzu clan.  
Kondō Keiji, of the Aidzu clan.  
Yoshida Tōda, of the Aidzu clan.  
Murakami Tōji, of the Aidzu clan.  
Tsukioka Tatēwaki, of the Kuwana clan.  
Yohida Zenzaburō, Mayor of the village of Uchino.  
Ichizamon, mayor of Kamo Shiuden.  
Sendai Genjirō.  
Yoshikawa Tsuké, one of the Shōnai clan.  
Kurōji, of the village of Koiké.  
Takénouchi (personal name unknown) of the Yonézawa clan.

## NIHON GUAISHI.

ACTUAL HISTORY OF THE MINAMOTO FAMILY.

PART. I.

(Continued from our last.)

The power and glory of the Heishi increased every year and grew every month. Yoritomo was at his place of exile, and just managed to escape want because his foster-mother Hiki no Zenni kept him supplied with provisions. Itō Sukéchika and Hōjō Tokimasa, men of Idzu, exercised surveillance over him by order of the Heishi. His former retainers in the Kantō, Saitō Sanemori, Oba Kagéchika, Hatakéyama Shigéyoshi, and others all revolted from him, and served the Heishi. Those who still remained attached to Yoritomo did not dare to keep up communication with him. Sasaki Hidéyoshi alone came from Omi and lodged in Sagami. He found shelter with Shibuya Shigékuni, and sent his son Sadatsuna and others frequently to inquire after Yoritomo. Adachi Morinaga, Katō Kagékado, and several others, also went to and fro, and served him. Yoritomo was self-contained and very astute. He was of a hardy and enduring nature, and betrayed neither joy nor anger in his countenance. He was respected and loved by all. One of the Empress' (Chiu-gū) followers named Miyoshi Yasunobu had formerly been one of his men, and thrice a month sent a messenger to inform him of the state of affairs at Kiōto. Kiyomori advanced step by step to be Daijō Daijin (Chief Minister of State). His wife's elder sister was beloved by the cloistered Emperor, and bore a prince, in whose favour the throne was eventually abdicated. He was the Emperor Takakura. Kiyomori gave him his daughter, and she was raised to the position of Chiu-gū. Previously to this his affection for Tokiwa had died away, and she had left him to marry another. Ushiwaka was then eleven years old. On a certain occasion he was looking at the pedigrees of the different families, and learnt about his own ancestors, to his prolonged pain and anger. After this he studied his books during the day and took lessons in fencing at night. He was small of stature, but of a very fiery nature. His face was fair and his teeth protruding, and he was so strong and active as to be a constant source of annoyance to the priests. His teacher advised him to shave off his hair, but he replied: "My two elder brothers have become priests, and I am ashamed of it. Am I to imitate them too?" The point was urged on him with persistence, but he still maintained his refusal. At this time Hidéhira, the grandson of Fujiwara no Kiyohira, was Commander-in-chief of the Chinjia Fu, and Ushiwaka conceived a desire to go thither and find shelter with him. It chanced that an iron merchant named Kichiji was in the habit of going backwards and forwards to Mutsu, and he happened to visit the monastery. Ushiwaka thereupon secretly spoke to him, about his wishes, and Kichiji said: "The matter is very easy; but if I take you away with me, I am afraid I shall incur the anger of the priests." Ushiwaka laughed and replied: "They are tired of me, and if I go away, that will be just what they wish for." It also happened that Fukasu Yorishigé, a Shimōsa man, came to visit the monastery. Ushiwaka became familiar with him, and hereupon the three started eastwards in company. At the post-town of Kagami Ushiwaka put on the cap himself, and took the name of Yoshitsuné, and Kurō<sup>28</sup>

(89) That is Ninth.

for his ordinary appellation. Finally he reached Shimōsa. Some months [after his arrival] it happened that a burglar stole a horse, and everybody went in pursuit. The robber placed his back against a tree, and no one dared to approach, but Yoshitsuné took him prisoner empty-handed. Again, there came several tens of robbers and began to plunder. Yoshitsuné went to the rescue, and cut down four on the spot. Yorishigé admired his valour, but feared public gossip, and gave him a few warnings. Yoshitsuné then left him, and passing through Kōdzuké, found Yoshimori, a man of Isé, with whom he entered into a compact as lord and retainer. He came to Mutsu, and communicated with Hidéhira through the medium of Kichiji. Hidéhira treated him with great kindness. Yoshitsuné asked him for some money, in order to requite Kichiji. Whilst he was in Mutsu he also took into his service Satō Tsuginobu and his younger brother. It was then the fourth year of Jō-an (1174.)

At this period, with the exception of Mutsu and Dewa, the whole country was under the jurisdiction of the Heishi. The Genji in different parts were all driven out by other individuals. Yorimasa, the Hiōgo no kami, alone made up his mind in Biōji (1159) and joined the loyal army. He had great talents and accomplishments, and was granted the right of audience. One occasion, at the Emperor's command, he shot at a strange bird on the Imperial sleeping chamber, and killed it. The Emperor was pleased and applauded this. Afterwards he came to be raised to the rank of *jin-shi-i no gé*. In the first year of Jishō (1177) the priests of Iliyeizan carried the god's car forth in their midst and attacked the Palace. A decree was issued to all the military vassals to resist them. When the priests came to attack, Yorimasa, who guarded the Tatchi Gate, took off his helmet and knelt down to worship. He then sent one his lieutenants to them, saying: "Yorimasa has revered the god of the mountain for years. Unfortunately he is invested with the Emperor's orders. He does not venture to draw his bow against the car of the god. Formerly the Gen and Hei guarded the Imperial court conjointly. Since Hōgen (1158-8) the Hei have flourished and the Gen have decayed. How much less can Yorimasa, an old and decrepit man, with few troops and armour out of repair, be sufficient to resist your lordships? Taira no Shigémori, the Taishō of the Sakonyé guards, guards the Yōmei Gate with a large force. It cannot be called a valiant act to avoid him, and attack me. Let your lordships reconsider this. If his request is not granted Yorimasa and his men will simply die in a line before the car." The priest troops then turned towards the Yōmei Gate, and being defeated returned home. The world said that Yorimasa had escaped a disaster by his wise eloquence. About this time the priest-troops desired to make a second attempt. Orders were given to the Dainagon Fujiwara no Narichika to chastise them. Narichika had previously pretended that he had received the secret instructions of the cloistered Emperor to plot secretly against the Heishi and he availed himself of the pretext thus afforded to him to collect troops. There was a man named Yukitsuna, one of the Setsu Genji, who shared in his plans, but afterwards considering that the preponderance in numbers was too great to be successfully resisted, he confessed to Kiyomori. Kiyomori arrested Narichika and the rest, and put them all to death. In the second year (1178) Kiyomori's daughter bore a Prince, who was acknowledged as heir apparent. In the following year (1179) he made his second son Munémori take command borrow, but he refused. Yorimasa was alarmed, and made him give his consent. Munémori borrowed and did of some troops, and carry off the Cloistered Emperor to confinement at Toba. In the third year (1180) he deposed the Emperor and set up the heir-apparent in his stead. This was the Emperor Antoku. The Heishi, standing in the relation of maternal grand-father to him, usurped the power more and more. Yorimasa became *jin-sam-mi*, shaved off his hair and retired from public life. His son Nakatsuna became *kami* of Idzu. He had a famous horse which Munémori several times tried to

not return it. He assembled a large party of guests, brought out the horse and branded it with the two characters Nakatsuna, saying: "I ride on Nakatsuna. I beat Nakatsuna with my whip." Nakatsuna spoke with his father about this, and both felt indignant. Yorimasa had always been on good terms with the Prince (ō) Moohi-hito, the second son of the Cloistered Emperor, who had a palace in Sanjō Takakura, and went by the appellation of Takakura no Miya. Yorimasa went one night to Takakura and smiling blandly said: "Your Highness is the illegitimate elder brother of the ex-Emperor, and uncle of the reigning Emperor. You have talents and virtues combined in the highest degree; heaven and man both favour your claims. You have already reached the age of manhood, but have never yet been recognized as a Prince of the Blood." Your servant secretly looks upon this as an insult to your Highness. How does your Highness, on the other hand, regard Kiyomori? Deposition and raising to the throne, life and death are all regulated by his individual choice. At the present moment your Highness is actually unable to assure yourself against a violent death. Since the Heishi usurped the power the Genji in every province are reduced to the level of the common people, and are all treated like slaves. Their indignation and resentment are wrought up to the highest pitch. When I count them on my fingers, I find Yoritomo, Yorituné and some forty more. I say, if your Highness wishes to take your stand on justice and right, and to publish the crimes of the Heishi, you will send out proclamation to all these men and bring them here. Will you not, Prince, at once publicly set about the great work, of drawing the Cloistered Emperor from his confinement on the one hand and of helping the people out of their misery on the other?" The Prince was delighted, and at last gave his consent. It happened that Minamoto no Yukiie came from Kumano, and Yorimasa recommended him to the Prince. Yukiie was the tenth son of the late Taméyoshi. In the fifth month of the fourth year (1181) Yukiie was appointed Kurando. He secretly sent the orders of the Prince to be made known to all the Gen. Yoritomo was recognized as the head of the family, and a separate letter was sent to him. Yukiie also secretly treated with the priests of Shingū to give their aid. When Yukiie had started the priests spoke to each other about it, and the design leaked out. The Bettō of Kumano, who belonged to the party of the Heishi, heard of the matter and attacked them, but was defeated and had to go home again. He galloped off and informed the Heishi, who did not know how the affair had arisen, but sent troops to surround the Prince's Palace. Yorimasa's second son Kanetsuna belonged to the Ke-bi-hi-shi, and was amongst those sent. He at once informed Yorimasa, who then sent a messenger galloping to the Prince's Palace, to inform him, saying: "Let your Highness fly at once to the monastery of Onjō-ji. Your servants will proceed thither after you." The Prince's servant Hasébe Nobutsura dressed him up in female clothing, and having sent him off, opened the gate and waited. Before the dawn of day officials and common soldiers entered the gate, and sought for the Prince with loud shouts. Nobutsura taunted them loudly, and slew more than ten men, but was then arrested. He refused to say where the Prince was. Yorimasa burnt his own palace, and taking with him Nakatsuna, Kanetsuna and others to the number of more than fifty, went off after the Prince. An old retainer of his, named Watanabé Kison, lived behind the palace of the Heishi and the men wanted to call him to go in their company. Yorimasa said "Do not so. He will come without being called." Shortly afterwards Munémori heard of Yorimasa's flight, and sent men to spy out Kison. He was found. Munémori then summoned him to his presence, and inquiring of him, said: "The *Summi* has departed. Why did you not follow him?" Kison pretended to laugh and replied: "Your servant of late has been on bad terms with the *Summi*, and therefore they have no communications with

(90) This was the chief of a sub-department called Hiōgo Riō, in which the all military weapons were stored up in time of peace.

(91) This is a mistake for the 'fourth' year, (1181), which is the reading of the edition published by Iai Sanyō's heirs.

(92) Shinnō.

(93) Near Kumano in Kishin.

(94) Yorimasa. These ranks are often used by the holders as personal names, or titles, and are so applied by their acquaintance, especially in speaking to their retainers.

each other." Munémori tried to seduce him by the offer of high pay. Kisou pretended to be glad, and consented. He then said that he would shortly devise a plan to requite the favour, but regretted that he had no horse. Munémori presented him with a favourite horse of his own, and Kisou thereupon returned to his house. Having made his preparations he mounted the horse, passed by the gate of the Heishi and called out, saying: "How should Watanabé Kisou, a former retainer of the Gen family change his opinions and serve their enemies? I am now proceeding to give aid to the *Summi*. Why do you not attack me on the road?" None of the Heishi ventured to come forth, and he succeeded in reaching the monastery of Onjōji. Nakatsuna was much pleased, and cutting off the horse's mane and tail, braided it with the two characters "Munémori"; and when night came he made a man drive it into the palace of the Heishi. The horse went into the stables, and kicked and bit with the other horses, causing alarm and commotion throughout the palace. Munémori was ashamed and angered. Thereupon Yorimasa invited Hiyeizan and Nara to aid the Prince, and then proposed a plan of action, saying: "Let us send a thousand indifferent troops to set fire to Sanjō so draw out the troops of the Heishi. Let them retreat, fighting as they go, and then with a few hundred picked troops we will make a circuit and attack Roku-hara. We shall be sure to win." A priest named Shinkai was a secret adherent of the Heishi, and therefore started a different opinion in order to embarrass him. The day at last broke. The Heishi, on their side, tried to bribe the priests of Hiyeizan by an appeal to their cupidity, and they having revolted, tried to attack Yorimasa. Yorimasa then carried off the Prince and fled towards Nara. The Prince was not accustomed to riding, and fell off six times, so that he had to take rest at Biōdō-In, whither Taira no Tomomori came in pursuit of them with twenty thousand horsemen. Yorimasa tore the planks off the bridge at Uji and defended it. It happened to be a foggy morning, and the troops of the Heishi came on to fight along the bare beams of the bridge. Watanabé Kisou and others made a good defence, and their loss in killed and wounded was much less than that of the enemy. Shortly afterwards the enemy forded the stream and came on in great force. Yorimasa was hit by a random arrow, which wounded him in the knee. Kanétsuna also died fighting. Yorimasa having then taken leave of the Prince, assisted him to escape, after which he went back into the fight, and shot so wildly that the enemy did not dare to come near. He then went into the monastery, and taking off his armour sat down. He addressed his horsemen saying: "My years are seventy and seven. I have proclaimed to the Empire what are justice and right, and can now die." He and Nakatsuna both fell by their own swords. The Prince was captured on the road by the pursuing troops, and killed. All the heads were sent to the capital.

Kiyomori, hearing that all the Gen were conspiring against him, made the confinement of the cloistered Emperor still stricter. In the sixth month he forced him to remove the capital to Fujiwara. He carried off the Emperor to his own house, and made a room of planks six yards square, in which he imprisoned the cloistered Emperor. Finally he conceived a desire to exterminate all the Gen. Miyoshi Yasumobu sent a letter post hasty to warn Yoritomo, and to make him take precautions at once. Yoritomo had in the first place lived in the house of Itō Sukéchika, but for a certain reason<sup>95</sup> they were on bad terms with each other. Finally Itō conceived a desire to slay Yoritomo. Sukéchika's son Sukékiyo secretly informed Yoritomo of this, and the latter then took refuge with Hōjō Tokimasa. Tokimasa had always appreciated his talents, and married him to his daughter Masago. When the orders of Prince Mochihito arrived, Yoritomo was greatly delighted, and secretly planned with Tokimasa to take up arms. Taira no Kanétaka, a distant relative of the Heishi, was the *Mokudai* of Idzu, and resided at the fort of Yamaki<sup>96</sup>. Yoritomo designed to at-

tack him first, and privily sent Fujiwara no Kunimichi, a Kiōto man, to visit Kanétaka, map out the nature of the ground, and come back again. It happened that Oba Kagéchika came back from the capital, with orders from Kiyomori to plot against the life of Yoritomo, and told this to Sasaki Hidéyoshi. Hidéyoshi secretly sent his son Sadatsuna galloping to inform Yoritomo. Yoritomo had just received Yasunobu's letter and knew that it was time. He therefore desired to be the first to strike, and told Sadatsuna that he was about to attempt a great deed, saying: "I wish in the first place to attack the *Mokudai* in order to have an omen of success or failure. Do you stop here and invite all your younger brothers hither." Sadatsuna asked leave to return home to fetch his armour and weapons, and to come with them. He then left, and did not come back, though a long interval elapsed. Yoritomo suspected that he had changed his mind, and regretted having told him; but shortly afterwards Sadatsuna arrived with his three younger brothers Tsunétaka, Moritsuna, and Takatsuna. Their armour and helmets were worn and shabby, and they had wretched horses with bridles of rope. Yoritomo on seeing them was grieved and shed tears. Hereupon he ordered Tokimasa and other horsemen to the number of eighty to attack Yamaki. He brought out the plan and showed them the points against which they must direct their efforts. He detained Moritsuna and Katō Kagékado as a protection to himself. The time was the 17th day of the 8th month. Tokimasa waited till dusk and then started. Yoritomo called him back and said: "How shall I know whether you are victorious or defeated?" He answered and said: "If we are victorious we will kindle a fire. If we should chance to be defeated, I will send a messenger galloping to announce it. In that case you must look out for yourself." He then went. A formidable general of the enemy's, named Tsudzumi Nobutō, lived separately on the north of the fort, and Yoritomo despatched the Sasaki family to attack him. Tsunétaka entered by the front gate and shot at him. Nobutō knew there was an attack and shot back, after which he issued forth brandishing his sword. At the moment the moon had just risen. Tsunétaka perceived him, and throwing away his bow engaged him with his sword. Sadatsuna and Takatsuna came up immediately afterwards, and they succeeded in cutting off Nobutō's head. They also proceeded towards Yamaki. Yoritomo made a man climb into a tree to look for the fire, but none was to be seen. He ordered Kagékado to go and assist, and gave him a halberd, saying: "Cut off Kanétaka's head for me." Kagékado proceeded to Yamaki with his servant Susaki Saburō, and found the fight going on hotly. The fort was strong and impregnable. Kagékado advanced, and approached the ditch. He fastened several mantlets together, tying them with bow strings, and throwing them across the ditches, crossed by their means. He then jumped over the parapet and got inside. The enemy had a good marksman named Sekiya Hachirō, who shouted from the top of a tower, saying: "I have but one arrow. Who will be a mark for it?" Saburō told a lie and said he was Kagékado, advanced and struck Hachirō dead, and then entered. He killed another man, and got to the bed room. The bed room door opened. There was a light inside. He thereupon took off his helmet, placed it on the end of his sword, and stretched it inside the door, as if some one were peeping in. Kanétaka was close to the door, and thinking that an enemy had entered struck at the helmet. Kanékado brandished his sword and cut Kanétaka down. He made use of the light to set the screens on fire, and then went out. Yoritomo saw the fire rise and was greatly pleased. Shortly afterwards Tokimasa returned in triumph. Kagékado carried Kanétaka's head in his hand, and showing it to Yoritomo, said: "This may be taken as an omen that my lord will give peace to the Emperor." A kinsman of Kanétaka named Tomochika was village mayor of Kabaya, and was detested by the people. Yoritomo gave out that he had received orders to administer the *Kuntō*, and under that pretext dismissed Tomochika, to the great joy of the people.

(To be Continued.)

(95) Most of these names, called *monori*, are written with two Chinese characters, at least all those which consist of four syllables.

(96) A monastery at Uji.

(97) Yoritomo had seduced his daughter, who was delivered of a child.

## Correspondence.

TO THE EDITOR OF THE *Japan Mail*.

SIR,—Seeing in a printed notice sent round to the hongs to-day that the Band of the U. S. *Colorado* will, by courtesy of Captain Baldwin and officers of the ship, play in the Public Gardens to-day (weather permitting), will you kindly inform me whether the same is lent to the public in general or only to the manager of the Public Gardens, as each time that I wish to avail myself of the privilege of hearing it, I am compelled to pay for that pleasure.

I am, Sir, yours truly,

ONE OF THE PUBLIC.

July 6th, 1872.

[This complaint appears to us unreasonable. The Gardens demand the united support of the public, and "One of the Public" should subscribe to them or pay on entrance—Ed. J. W. M.]

## Law Report.

## IN H. B. M.'s SUPREME COURT FOR CHINA AND JAPAN.

Before Mr. Acting-Assistant Judge HANSEN.

Wednesday, the 3rd July, 1872.

FINDLAY, RICHARDSON & Co. *versus* PITMAN & Co.

Judgment.

The petition in the present case alleged in its first paragraph a contract between the plaintiffs and the defendants by which the latter agreed to supply the former with from 1,800 to 2,000 piculs Akita copper, at a certain price and by a certain date; it then alleged a breach of this contract. In the third paragraph of the petition the plaintiffs set forth a second contract alleged to have been made on the 2nd day of January, by which the defendants were to supply the plaintiffs with about 1,500 piculs of copper, by a certain time and under the following conditions:—"It is understood that you do not purchase similar copper in the meantime or make any arrangements for the purchase of this should ours fall through;" and the plaintiffs alleged that in other respects the contract of the 2nd January was similar to that of the 15th December. The petition then alleged performance of all conditions precedent on the part of the plaintiffs, breach on the part of the defendants, and claimed \$1,500, and further relief. The defendants by their answer denied the contract; alleged certain additional terms of the contract set out by the plaintiffs and alleged non-performance of conditions precedent.

Without deciding whether all or any of the oral evidence given before me should be taken into consideration in the present case, I have come to the conclusion from the written evidence alone, together with such oral evidence only as was necessary to bring the case into Court, that some contract was entered into on or about the 15th December; that this contract was put an end to on or about January 2nd; that on the same day an absolute contract was entered into by the defendants to deliver to the plaintiff 1,500 piculs of Akita copper &c., and that the price was to be \$13.50 per picul. That contract was not fulfilled and I think that the plaintiffs have sufficiently shown that the damage they incurred by such breach amounted to \$1500. I have also come to the conclusion that there was no breach of the conditions precedent on the part of the plaintiffs.

The only two questions which appear to me to be of importance from a legal point of view, are these:—

1st. Was there any consideration for the contract of the 2nd January?

2nd. Was there such evidence as to exclude it from the operation of the Statute of Frauds?

Now, as to the first question, I think that, apart from any other consideration, the mere fact of the plaintiffs abstaining from entering the market against the defendants, is sufficient to support the contract. As to the second question, the only difficulty which arises is in regard to the price not being specified upon the face of the contract. It is not necessary that the whole of the terms of the contract should be gathered from a single instrument; it is sufficient if they are to be collected from memoranda in writing. The allegation is that a contract of a particular nature was entered into on the 2nd day of January, and I am of opinion that this allegation has been proved in such a manner as to satisfy the Statute. I think that the price of the copper is to be gathered from the letters of the defendants to the plaintiffs. It is sufficient to instance the letter of January 5th, in which the defendants state that they are willing to

give the plaintiffs the option of taking over the whole or any portion of the copper at the said price of \$13.50 per picul. This fixes the price, and although in the same letter the contract of the 2nd January is called a conditional letter of guarantee, this is merely the assertion of the opinion of the defendants as to the nature of such contract, and, if considered apart from any oral evidence upon the subject, might be reasonably taken to refer to the condition that the said agreement was not to be mentioned, and that the plaintiffs were not to purchase similar copper whilst the defendants were negotiating the purchase of the lot in question.

There is yet further evidence in writing of the full terms of the contract of the 2nd January. It is contained in the letter addressed by the defendants to Mr. Consul Robertson, and dated the 24th day of that month. Attached to that letter is a memorandum of the loss said to be sustained by the defendants through the non-fulfilment of a certain contract between them and one Aburaya Hihi. Therein it is stated that Messrs. Pitman & Co. bought of the said Hihi, 3,000 piculs of copper at \$12 per picul. It then goes on in the following words:—

"Sold to Messrs. Findlay Richardson & Co. from the above  
"1,500 piculs at a net profit of \$1.50 per picul..... \$2,250  
"Penalty incurred to Findlay Richardson & Co. as per  
"guarantee..... \$1,500

This seems to me to be conclusive evidence of the price, and it is signed by Pitman & Co. I think that this, together with the letter of the 2nd January, if they stood alone, would be amply sufficient to remove this case from the operation of the statute. The whole of the communications which contain the memorandum of the contract need not be between the principals, they may be between the person charged with the agreement and third parties, (vide *Roe versus Cunninghame*, 11 Vcs. 550; *Fowler, vs. Freeman*, 9 Vcs. 351). Moreover, if the suggestion that this contract of the 2nd January was merely entered into for the purpose of being used in a claim against the Japanese be true, the statement contained in Messrs. Pitman's & Co.'s letter to Mr. Robertson is false, and the claim put forward is not a *bona fide* one. This I am loth to believe, and as there was not, and could not in my opinion be any evidence properly before me to prove it, I must reject it and hold that the contract as alleged in the third paragraph of the plaintiff's petition, has been made out. There will therefore be a verdict for the plaintiffs for \$1,500 with costs.

Mr. Dickens gave notice of appeal.

William Burt, George Foster, privates R. M., were charged with destroying Japanese property and assaulting Japanese police.

Lieut. Polkinghorne attended from the Camp.

Nobokitchi said that the prisoners were at the Sumitamicho Street last night at about ten o'clock. They caught hold of the tray he was carrying, threw it down, and broke the dials. He called for the police. Did not know if prisoners were drunk.

P. C. Katto went to last witness' assistance. Burt ran away. Witness overtook him, upon which he struck witness with his belt. The other prisoner came up; both fell on him with their belts, and stunned him.

P. C. Manno Masaburo said he pursued the two men, who ran away after going a short distance. Burt fell. He took him into custody. He was tipsy.

P. C. Shiraka Yoichi found Katto on the ground. He followed in the direction towards which the men had run, and arrested Foster between the bridges.

In defence, Burt said Foster pushed the man with his shoulder accidentally, and knocked the tray off. He knew nothing of the assault, or about striking the man with his belt. Foster alleged that the crowd was so great he could not help pushing against the man's tray.

The owner of the broken things assessed their value at \$5.

The Judge ordered prisoners to pay this with costs, and further sentenced both to 3 weeks' imprisonment with hard labour.

## IN THE KANAGAWA KENCHO.

Before the Governor, MUTSU MUNEMITSU KEN NO KAMI.

Thursday, the 4th July, 1872.

SIBER & BRENNWALD *versus* S. S. "SADKIA."

This action is for damages as alleged to have been suffered under a contract of affreightment by Bill of Lading, by reason of delay in the delivery of the merchandize carried.

The Court proceeded to review the evidence, and, disallowing

certain sums demanded by the plaintiffs, read the following judgment:—

It is adjudged and decreed that the plaintiffs have and recover from the ship the *Sadkia*, her master and owners, the sum of \$7,000, their damages suffered, with interest thereon from the 19th day of May, 1872, the day of the ship's arrival in the port of Yokohama, at the rate of one per cent per month. Costs to follow judgment.

#### HUDSON, MALCOLM & Co. versus S. S. "SADKIA."

The finding in this cause, which was of too great a length to admit of its publication in these columns, reviewed the bottomry bonds each in succession, and, after disallowing certain items and severely censuring Captain Spinks for his neglect on several occasions, delivered the following judgment:—

It is adjudged and decreed that the plaintiffs have and recover from the ship the *Sadkia*, her master and owners, the sum of £6,155 19s. 10d., and the further sum of \$3,888.4s. 4d. with interest on said sums from and after the 29th May, 1872, at the rate of 1 per cent. per month. Costs to follow judgment.

On the conclusion of the proceedings the Court asked Captain Spinks if he were prepared to pay the claims. On his replying in the negative the Court intimated that the vessel would be sold.

WE think that the following from the *Athenæum* will amuse some and puzzle all of our readers.

#### MORS IABROCHII.

(JABBERWOCKY.)

Cæper\* erat: tunc lubricile† ultravia circum

Urbant gyros gimbiculosque tophi;

Mæstenui visæ borogovides ire meatu;

Et profugi gemitus exgrabuere rathæ.

O fuge Iabrochium, sanguis meus!† ille recurvis

Unguibus, estque avidis dentibus ille minax.

Ubæ fuge cautus avis vim, gnate! neque unquam

Foodarpax contra te frumiosus eat!

Vorpali gladio juvenis suocingitur: hostis

Manxumus ad medium quaeritur usque diem:

Iamque via fæso, sed plurima mente prementi

Tumtumiæ frondis suaserat umbra moram.

Conilia interdum stetit egna§ mente resolvens:

At gravis in densa fronde susuffrus|| erat,

Spiculaque ¶ ex oculis jacientis flammea, tulscam

Per silvam venit burbur°° Iabrochii!

Vorpali, semel atque iterum collectus in ictum,

Pernacuit gladio pernacuitque puer:

Deinde galumphatus, spernens informe cadaver,

Horrendum monstri rettulit ipse caput.

Victor Iabrochii, spoliis insignis opimia,

Rursus in amplexus, o radiose, meos!

O frabiose dies! CALLO clamatque CALLA!

Vix potuit lætus chorticulari pater.

Cæper erat: tunc lubriciles ultravia circum

Urbant gyros gimbiculosque tophi;

Mæstenui visæ borogovides ire meatu;

Et profugi gemitus exgrabuere rathæ.

A. A. V.

#### Extracts.

#### THE PRESENT ATTITUDE OF THE UNITED STATES.

(Economist.)

"The intelligent foreigner" is sometimes sadly abused in political debate; but that imaginary personage has a use, and, we think, he has a considerable use in relation to the present tone of opinion in England and America with reference to the Treaty of Washington. His use is simply this—to enable any people for a moment to look at themselves from an external point of view, and to gather any argument which may be gatherable from that point of view, and which

\* Cæper: from *cens* and *vesper*.

† *Lubriciles*: from *lubricus* and *graciles*. See the commentary in Humpty Dumpty's square, which will also explain *ultravia*, and—if it requires explanation—*mæstenui*.

‡ *Sanguis meus*: cf. Virg. *Æn.* 6, 836. *Proijce tela manu, sanguis meus!*

§ *Egna*: muffled—*segnis*, therefore *uffish*—*segnis*. This is a conjectural analogy, but I can suggest no better solution.

|| *Susuffrus*: whiffing :: *esurus*: whistling.

¶ *Spicula*: see the picture.

°° *Burbur*: apparently a labial variation of *murmur*, stronger but more dissonant.

is gatherable from no other. Now it is not often that a purely external view of any question is really instructive, for a purely external view means a view which, in nine cases out of ten, is blind to all the vital points on which political principle and expediency turns: But where there is a purely external question like that now at issue between England and America as to the true meaning and popular acceptance of a contract, perhaps there is no other view which is much more important than the "intelligent foreigner's," since though it may exclude some important elements of judgment, it excludes them equally in relation to both nations, and in relation to the points on which it draws a comparison, it draws that comparison fairly. Now no one can, we think, doubt what the intelligent foreigner would say of the popular opinion of England and America in relation to the points in dispute. He would say that in England, from the first moment when the issue was understood, opinion has been unanimous with a sort of unanimity hardly ever seen before in this generation,—that republicans and democrats of the reddest type have concurred with Liberals, with Whigs, with Conservatives, on the point; that no one has ever thought—unless the solitary exception be Professor Leon: Levi, who apparently wishes us to go into the arbitration in any case—of advising our taking the opinion of the Arbitrators on any point on which we are not absolutely determined to abide by it, whatever opinion it be; and that no one has ever thought that we could abide by a decision conceived in the spirit of the American Case on the "Indirect Claims." We are not afraid of saying that unanimity such as has been shown in England on this point has rarely at any time been shown in England on any question of either home or foreign policy before. It has been something unique, and so far from being varied by dissensions as time has gone on, the unanimity of feeling of the early part of the year has gained in the last month a still firmer and calmer expression—has gained the appearance of settled conviction. That is what the intelligent foreigner would say of the English view. He would say it has always been unanimous, and that it has become calmly immovable; that any Government which thwarted it would not endure for a day; but that nevertheless there is no sort of passion about the conviction, nothing but complete confidence in the extreme moderation as well as in the justice of our position. On the other hand, the same "intelligent foreigner" would say of the United States, that opinion, never unanimous, or anything like unanimous, as to the justice of the United States' claims, had become more and more hostile to the demands of the Administration, until at last the Committee of Foreign Affairs of the House of Representatives itself, following in the track of the ablest journals and the best publicists of the United States, has declared its conviction that the demands were untenable, and ought, in some important respects, to be modified, if not absolutely withdrawn. We take it that this is a perfectly sober and accurate account of the movement of public opinion in both countries, nor would the intelligent foreigner be a reasonable being—which the hypothesis of his existence requires him to be—if he were not profoundly impressed by the bare outline of the facts we have alleged, by the marked movement of sober opinion in America in a direction hostile to the acts of its own Administration, and by the earnest fixity, settling into cool unwavering resolve, of British political opinion. The intelligent foreigner could hardly help feeling that by far the most plausible explanation of this double set of facts was to be found in the assumption that England had really intended to exclude, and had believed she had excluded, the indirect claims from the operation of the Treaty; and that America, if she had not been already conscious of the same understanding, had still afforded England very strong superficial reasons for supposing that it was so, and had not guarded or cared to guard her own right to submit those claims,—in spite of their vast importance in the individual case as well as the incalculable importance of their bearing on the international law of neutrality for the future.

But this would not exhaust the instructive reflections which the intelligent foreigner of our hypothesis would draw from his observations. He would also, we think, observe on the very great advantages which a sound and sober popular opinion possesses in England for making itself obeyed by the Government, and on the very inadequate means possessed by a popular opinion of quite as enlightened a class in the United States for reaching the springs of political action and changing the policy of the Administration. He would note that in this, as in other cases, the very bounds set to the aggression of a dangerous popular opinion on the Administration have practically resulted in protecting the dangerous policy of a secure Administration against the sobering and Conservative influence of popular opinion. As far as we have the means of judging of the views of the American public, political wisdom, at least on this subject, has originated outside the Government—has originated outside not

only the Government, but Congress—has been pressed on the direct representatives of the people by their constituents, and has had its first victory within the Legislature in the Lower House, the House of Representatives, which is, of course, at once the most accessible to external opinion, and the least responsible for mistakes which have been made. The Upper House, the Senate, is an important part not only of the Legislature, but of the Executive Government. It was with the advice and consent of the Senate that the Treaty of Washington was made, and the pride of that body, like that of the President and his Secretary of State, is now more or less identified with the course taken, and irritated by the suggestion of any departure from it. It is therefore not at all wonderful that we should find the profound political sagacity of the American people showing itself in a victory over the popular House before any impression can be made on the Senate. But it is a matter, as it appears to us, for very great regret, that when the nation really has made up its mind on a question of first-rate importance like this, it should be deterred by the embarrassing character of its own institutions from dictating to the Executive Government what ought to be done. In England the absolute dependence of the Prime Minister on the confidence of the House of Commons practically secures that the will of the nation, once manifest, shall have its way. But in America the dread of democratic passion has contrived expedients for providing that a body, elected under quite different circumstances and for quite different purposes, shall have the power to foil the nation, even in its clearest and most emphatic expression of a new resolve. The Senate is periodically renewed by the election of one third of its members, but not only is that an incomplete appeal to popular opinion, but there is no means of making that appeal, such as it is, in relation to any particular emergency. Consequently the Senate—which must confirm, and can veto, all the President's appointments—is very liable to grow into a good deal of the same feeling of personal privilege which attaches to the Administration itself, and to be very considerably biased by those not very pure influences which are always put in action in the United States wherever patronage is in question. It is obvious that such a body is by no means as accessible to popular opinion as the House of Representatives, which has little or no patronage, and which is completely renewed when the Senate is only partially renewed; and yet it is on this body, and not on the House of Representatives, that the President leans for advice so far as he leans at all, in relation to such a subject as the mode of understanding this Treaty. In the United States both the sensitiveness and the stability of the political balance have been too often sacrificed in the interests of what was believed to be a theoretical safeguard against popular caprice. Opinion goes before the Administration; and only very slowly, and only on topics where delay is not of the first importance, do the Administration and the Senate halt after it. On matters like this Treaty,—where indefinite delay is impossible,—the highest interests of two great nations are endangered, and even sacrificed, because the Americans have spontaneously conferred on their President and their Senate the power of defying their own strong wishes for months and years together. We have long been of opinion that there is a much truer Conservatism in our own form of Government, which leaves the Minister no power at all to resist a really clear and unanimous public opinion. The expedients devised in the shape of guarantees against the caprices of democracy act too often as guarantees for the caprice of individuals and of interested bodies of men against enlightened opinion. It would be well for America if there were fewer obstacles interposed between the good sense and will of the nation and the action of the Government. We feel no doubt at all that if there were room for another year's delay Mr. Fish would find out, long before the expiration of that time, what the *New York Herald*,—we fear without adequate authority,—has given him credit for having found out already, that the American people want him to light upon a mode of giving up the indirect claims which would be not dishonourable to them; and that he would propose something like what rumour, according to the same paper, says that he has proposed, that if we will concur in laying down as a principle of international law,—so far as we can make international law,—that indirect claims of this kind on neutrals shall never be valid, they will withdraw those indirect claims in this particular instance. This report seems too good to be true. But we do not doubt that if Mr. Fish were as dependent for his action on the House of Representatives at Washington as he is on the Senate, that is what he would have proposed to Lord Granville, and what we should have been heartily willing to accept. The Senate of the United States no doubt contains the most distinguished of its statesmen; but we fear that its high constitutional privileges too often tend to separate it from the people, and to make its action embarrassing and full of elements of peril.

## Shipping Intelligence.

### ARRIVALS.

July 4, *Colorado*, Am. steamer, Warsaw, 3,875 from Hongkong, Mails and General, to P. M. S. S. Co.  
 July 4th, Jap. ship *Awari*, More, 335 tons, from Hongkong  
 June 6th, General,—Walsh, Hall & Co.  
 July 4th, N. G. bark *Hernino*, Pembeck, 275 tons, from Taiwan-foo, Sugar,—Order.  
 July 5, *Iron Duke*, Brit. Ironclad, Arthur, Rear Admiral Shadwell, 3,787. 14 Guns, from Kobe.  
 July 5, *Salamis*, Brit. Despatch boat, Smith, 876, 2 Guns.  
 July 2, *Aden*, Brit. str., Hocking, 812, from Hongkong, Mails and general, to P. & O. Co.  
 July 2, *Oregonian*, Am. str., Dearborn, 1,914, from Nagasaki, to P. M. S. S.  
 July 3, *New York*, Am. steamer, Furber, 2,117, from Kobe, July 1st, General, to P. M. S. S. Co.  
 July 3, *Jenny*, N. G. barque, Hartmann, 237, from Takow, June 13th, Sugar, to Order.

### DEPARTURES.

July 5, *Benicia*, Am. Corvette, Kimberly, 1,120, for San Francisco.  
 June 29, *G. C. Lorenz Meyer*, N. G. barque, Schmidt, 306, for San Francisco, General, despatched by Walsh Hall & Co.  
 July 2 *Ariel*, Am. steamer, Newell, 1,736, for Hakodate, General, despatched by P. M. S. S. Co.  
 July 2, *Golden Age* Am. Str., Coy, 1870, for Shanghai, General, despatched by P. M. S. S. Co.  
 July 3, *Tolya*, Fr. Str. Flambeau, 960, for Hongkong, Mails and General, despatched by Messageries Maritimes.  
 July 3, *Water Lily*, Brit. brig, Doblo, 263, for Hongkong, Rice, despatched by Walsh Hall & Co.

### PASSENGERS.

Per P. M. S. S. *Colorado*, from Hongkong. For Yokohama.—L. J. da Silva, Dr. H. Von Kauffman in the cabin, and 5 Chinese steerage. For San Francisco.—820 Chinese, steerage.  
 Per Str. *Aden* from Hongkong:—Mr. and Mrs. Lowder and son, Miss Brown, Mr. Kempermann, Messrs. Finch, Linden and Dayman.  
 Per P. M. S. S. *Ariel*, for Hakodate.—Messrs. P. Schleater, J. H. Boulet, Mrs. Sidall, B. T. Lathrop (Hawaiian Consul), A. Olorovsky, Mrs. W. G. Howell, two children and servant, and three Japanese in the cabin, and 55 in the steerage.  
 Passengers per P. M. S. S. *New York*, for Yokohama.—Lieut. Comdr. Thos. Nelson, U. S. N., Miss Ada Tyler, John Wilson, A. E. Rosenthal and servant, Rupert Smith, Miss Alice McDonald, F. L. Pollard and servant, W. Macaulay and servant, M. Longfellow and servant, Mr. and Mrs. Chang, M. Blackmore, Mr. Look, H. Thorner, Rev. M. Runvier, E. J. Pereira, A. Singer, E. D. Haygarth, Mrs. Enoya Bunda, L. Haber, eight Japanese in the cabin, and twenty-one foreigners and 257 Japanese in the steerage.  
 For Liverpool.—Messrs. J. Morris, V. Jules, C. H. F. Schutze, Delien Antoine, and G. Albert.

### REPORTS.

The *New York* reports having to anchor in the inland sea on the evening of the 29th on account of thick rainy weather: latter part of the passage from Hiogo to here fine pleasant weather.  
 The *Aden* reports strong head winds all the way up.  
 The *Oregonian* left Yokohama June 18th, arrived at Hiogo on the 20th, and left again on the 21st at 3.48 a.m. On the 22nd, while passing between Yokoshima and the north end of Hirado (the usual track), ran on an unknown reef and remained on it for eight hours, getting off again after throwing overboard 130 tons of cargo. The vessel leaking badly, was compelled to re-ship balance of cargo in another vessel from Nagasaki. Left Nagasaki June 28th, at 12.22 p.m., and proceeded with very light winds and smooth water. Kept company with the *New York* up to Hiogo.

### CARGOES.

Per P. M. S. S. *New York*, from Shanghai.  
 Treasure ..... \$866,122.

## Standing Counsel.

R. W. M. BIRD, Esq., Barrister-at-Law.

Secretary to the Provisional Committee.

JAMES GILFILLAN, Esq.

THE Provisional Committee being now in possession  
of legal opinion on the subject from London, have  
decided to establish the Bank by registration under the  
Companies' Act of 1862. A permanent Board of Direc-  
tion will be formed in London—as required by the Act—  
with a Board of Management in Shanghai.

The Provisional Committee therefore give notice that  
applications for Shares will be received by the under-  
signed not later than the 31st August, 1872.

It is the intention of the Committee that the business  
of the Bank shall, if possible, be commenced simulta-  
neously in China and London on the 1st January, 1873.

By order of the Provisional Committee,

J. GILFILLAN,

Secretary.

Shanghai, 9th April, 1872.

YOKOHAMA.

Yokohama, Dec 10th, 1870,

tfj

Yokohama Chamber of Commerce, and should no amelioration ensue, they will have to bear the consequences of their neglect.

Under existing circumstances, it behoves the Japanese reelers to exert themselves in order to regain the popularity they once enjoyed, and we hope they will not miss so fitting an opportunity as the present. On their part, the foreign buyers should not be slow in urging upon the native merchants the desirability of turning their attention to clean and well-reeled silk, when we hope that their efforts will be rewarded by success, and that the Japan staple will be once more taken into full favour by the European consumers.

Before concluding this review, let us turn back to the remark we made that the crop of 1871 had been at first stated to be a very good one for this country.

It was estimated at one time by credible and intelligent Japanese judges to much exceed, at least in bulk, that of the former year. But the indifferent quality of the seed which had been kept in many districts may probably have been the cause of the yield of the cocoons turning out a good deal less than had been at first expected. It may possibly also be supposed that the native consumption took throughout last year a far larger quantity of silk goods than had been the case for the two or three previous seasons. Whatever the real cause may be, the total export of the season 1871-72, which amounted only to 14,635 bales, may be considered short, inasmuch as the season 1870-71 showed a figure of only 8,467 bales, when it was calculated that a good quantity of silk was left in the country which would have found its way to this market.

We need not add here that a certain quantity of the silk which was reeled in March, April, and May, from cocoons kept over the winter months, and probably also a portion of the last summer's silk, must have been purposely mixed by the native dealers with the new silk of this season. It is a practice very generally adopted by them, and no silk importer of any experience can have failed to observe it.

Hence it would appear that the export of the season 1871-72 might have been larger than it really appears; but as the same thing occurs every year, we hardly think that the above argument would be sufficient to explain the shortness of last year's export. The increased demand on the part of the native consumption is more likely to be the real cause than anything else.

#### THE TEA SEASON 1871-1872.

THE total export of tea for the past season, much to the surprise of many experts engaged in the purchase of it, shows a marked deficit on that of the preceding one.

Arrivals of the new crop came to hand about the middle of May, and the P. M. steamer leaving on the 22nd of that month was enabled to include in her freight list some 400 to 500 half-chests representing it. This was probably the first time in the annals of our tea trade from this port that any shipment of moment went forward at so early a date, and as the teas arrived in New York in the full bloom of freshness and youth, they did not fail to command very satisfactory prices.

From this period our market was fairly opened, and a brisk business inaugurated at prices which must have been satisfactory, at least to the producers. The June mail steamer's cargo contained at least 10,000 half-chests, all of good quality new leaf, and prices became now quotable, fully fine teas ranging from \$52 to \$55, and finest to choice \$56 to \$60 per picul.

The result of the high prices ruling, and the eager competition for good-class parcels, attracted copious supplies, and settlements progressed uninterruptedly during the whole of July, the export since the opening of the season to the end of the month amounting to 760,000 lbs., there being one vessel on the berth recipient of open freight.

With the departure of the July steamer, a slight amount of caution crept upon purchasers, and native dealers found increasing difficulty to palm off open unfinished leaf which had before been accepted as standard quality. The character of the Esai crop, which then began to arrive in sizeable parcels, was also unfavourably commented on, this province's growth lacking the high characteristics it had exhibited in former years. A slight depression was appreciable in the tone of the market, and dealers more willingly listened to offers which they would scornfully have rejected at the opening of the season.

Prices became now more or less regular; good medium commanding \$39 to \$42 per picul, and finest classes \$46 to \$53 per picul. Settlements during the month of August amounted to 13,000 piculs, and supplies poured in briskly. The first vessel for New York direct, the *Inverary*, had despatch on the 19th of the month, and two first-class clippers were loading simultaneously for the same port.

September, which is generally the most important month for tea settlements at this port, now well maintained its character with a full score of 16,000 piculs in spite of which rates showed a downward inclination, which was most marked on medium and lower classes. The ruling rate this month for good medium was \$32 to \$35, and for finest \$42 to \$45. In lower classes much objection was made to the chaffy and mixed appearance of the leaf, but so far it has been entirely futile to attempt to persuade the native dealer that he is jeopardizing the fair fame of this country's produce by persisting in the pernicious practices disclosed by this appearance, and we can only hope that time and circumstances may produce a reformation which persuasion is powerless to effect.

Our export at this period began to assume a somewhat threatening figure for operators interested, as it already exceeded that of the corresponding period in the preceding season by more than 1,000,000 lbs. This last export being considered by our American constituents as likely to prove excessive, buyers became cautious, and holders, to meet the market, had to make considerable concessions. Finest teas alone showed a bold front, all lower classes ruling more or less irregularly. The quality of many parcels showed somewhat of deterioration, and buyers became fastidious.

Advices from New York concerning the probable future of the tea market there still continuing gloomy, prices further receded, and there being a strong belief current that the supply would exceed even the heavy crop of the year preceeding, but little disposition existed even so much as to look at musters, and for the month of October settle-

ments barely reached piculs 5,000, principally in medium and lower classes.

During November business was quiet, and not more than 5,000 piculs changed hands; good medium averaged \$29 to \$32 per picul, and common classes were in full supply. Our export still headed that of the preceding year at a corresponding period, and although stocks unsold were ample, native merchants persisted that the crop would fall short of that of 1870-71, and this prognostication has been fully verified.

Common grades during December received the principal attention, and settlements to the extent of nearly 6,000 piculs, were in common classes at \$16 to \$18 per picul for common, and \$19 to \$22 for good common, clean suitable teas fully up to shipping cargo Japans.

About this time telegraphic information of a proposed reduction or removal of duty on tea to be brought forward at the next meeting of Congress reached one or two firms here, and an improved demand became at once apparent.

Prices did not rally immediately, as only one or two houses entered the market with any spirit, and the likelihood of the reduction of duty, if known, was not believed in. The month of January showed settlements of some 10,000 piculs, and a recovery in prices of \$1 to \$2 per picul in classes on offer; fine and finest teas being almost unrepresented.

This last little revival enabled our Japanese friends to tide over the Japanese settling day at the new year, at which period in former years tea buyers always looked forward to "tremendous sacrifices," but the Japanese merchant of the present day has taken a lesson or two in finance, and is able now to obtain pecuniary accommodation on easy equitable terms; in addition to which the dealers had cleared out fully nine-tenths of their crop for the season and could fairly hold over the balance.

At this date, the 20th February, the bulk of the season's produce had been disposed of, the export to date exceeded ten millions of pounds, and the *John Milton's* cargo, the last sailing ship freight for the season, having been nearly all purchased. Tea operations became very unimportant, and a small dragging business was done up to the close of the season, shipments being principally for San Francisco and the far Western States.

Season 1871-1872 closed with a total shipment from this to all ports of 11,482,173 pounds against 13,449,157 pounds, exhibiting a deficiency of 1,966,984 pounds, in comparison with the preceding year; but the actual deficiency is much greater, as 1871-1872 is credited with nearly 250,000 pounds of the present season's crop which was shipped per 22nd May steamer *Great Republic*, whereas the corresponding steamer of the season before last took merely a nominal quantity.

As to the general quality of the present crop a few words may prove interesting.

If the Japanese guilds could be only made to comprehend how whimsical and uncertain public taste is in tea, especially in the country which we must look on as our only customer, they would perhaps take into consideration whether some good might not be done by an honest official supervision. For this purpose we do not want a staff of ill-paid uninformed individuals whose only care would be to do as little as they could and squeeze as much as possible for so doing, but a regular commercial

board at each leading port who would make the staple more or less a study, and advise both the tea merchant as well as the grower for the general good of the crop.

For one instance, the style of firing in the province of Surunga, if slightly modified, would greatly improve the leaf and make it much more valuable to the foreign merchant. There is now no reason why the old fashioned style of high firing which prevails in that province should be persevered with, as the teas now come to this market in as many weeks as it took months to forward the produce here in former years. Another great point would be to persuade the merchants not to continue mixing their teas. At the first rush no doubt they sometimes gain by it, but if they miss the market and have to sell at an unfavourable time they lose more heavily, nor does such tea suit the foreign trade so well even at the greater reduction.

A strong warning on the point of too much dust should also be given, as, already, complaints, not loud, but deep, are coming from the other side of the Pacific, and the day may come when we shall find ourselves in the position of the Chinese, who six or seven years ago, on account of the annual increase of this evil found their Oolong crop out of favour and their young competitor Japan usurping the place of honour. They, however, like sensible men, turned their close attention to the evil and its consequences, and their teas are returning slowly but surely into favour again. It would be well therefore if fraudulent mixture of dust was found, the offender should be punished by fine or confiscation, without the foreign buyers having to undertake the trouble and expense of a prosecution at the Saibansho.

Some little good has been done by one or two of the native merchants in this place, who have privately endeavoured to improve the manipulation of the leaf by obtaining labour from the provinces of Goshu and Esai, where the leaf is cured in a manner well adapted for the necessary re-firing and packing at this port, and sending these experts into the important provinces of Inshui and Surunga, the latter being the largest tea-producing province in this country. The result of their labours has been the production of several parcels, which, if of no great size, are yet sufficiently large to demonstrate that if the same care and attention was bestowed on the gathering of the entire tea crop of these provinces, their marketable value would be largely increased.

From the remunerative prices obtained by the tea growers in the two last seasons, strenuous exertions are being made to extend the area of the tea-producing country, and small parcels of attractive leaf are often offered from districts hitherto unknown as tea bearing. As it takes about five years to bring a new plantation into full cultivation, these lots have been so far small, but every year will see their augmentation, and we may hope next year to add two or three names of new tea-producing provinces to those already recognised on this market.

The following is an approximation derived from the best native sources of the production season 1871-1872 of the following provinces, the bulk of their tea crop finding its way to this market.

PROVINCE.	TOTAL PRODUCE. Season 1871-72.
Yamashiro, ... ..	Piculs 11,000
Esai, ... ..	" 20,000
Surunga, ... ..	" 21,000
Inshui, ... ..	" 18,000

Goshin,	...	...	...	...	7,000
Kishin,	}	...	...	...	9,000

Tamba,	}	...	...	...	7,000
Menou,		...	...	...	
Simosa,	}	...	...	...	4,000
Kudusa,		...	...	...	
Stachi,		...	...	...	
Idsu,		...	...	...	
Adsojee,	}	...	...	...	2,500
Sagami,		...	...	...	
Small districts unenumerated,	...	...	...	...	4,000
Total	...	...	Piculs	103,500	

of the total about 20 per cent. found its way to Iliogo, consisting principally of Yamashiro and Esai leaf.

Of our new season's produce we may add a few words. Owing to the utilization of steamer transport, we have received full supplies of new leaf fully six weeks in advance of former seasons. Many of the parcels are finest and choice quality, and possess great freshness and fragrance; but we regret there are evident signs in many that their preparation has been unduly hurried to forward them to this market. This fault is not confined to this country alone, but has been experienced in former years in China, especially in Foochow; but it is an evil which will right itself if buyers will reject such parcels, or only accept them at a full reduction. So far, arrivals have been confined to the better classes, and about one and a-half million pounds have been settled. The general average of the crop is considered rather better so far than that of last season, and we have every reason to believe that the total will at all events equal, if it does not exceed, last season's supply. The prices now paid should prove a powerful incentive to the Japanese to use every effort for the improvement and augmentation of their tea crop, which is the second important staple of the country, and we hope at the close of this season to report favourably on the progress made to achieve that end.

#### RELIGIOUS CEREMONIES IN YEDO.

*(The following is the substance of a sermon recently delivered in one of the temples at Yedo, and overheard by a Japanese scholar who has favoured us with the translation.)*

THOU SHALT CLEARLY UNDERSTAND THE PRINCIPLES OF HEAVEN AND THE DUTY OF MAN.

The relations between Heaven and Earth are some of the most important that come under our notice. From Heaven spring the principles which bring about the changes in the seasons, &c., and which regulate the movements of the Earth, while in the latter we have to do with the social relations between mankind. Now between these two there is great similitude. As regards Heaven and Earth, the former controls and guides the latter. At the beginning of the year the skies shine brightly on the face of the fields, and the flowers immediately put forth their varied colours. Again, when the Heavens, in winter time, look dull, and snow pours down, the Earth too loses her brightness, and, in obedience to the dictates of her superior, also presents a mournful aspect. This is a single instance, but many others might be quoted to show how this world of ours always renders dutiful and obedient homage to the will of Heaven.

Just so should it be in the several relations between mankind. Children should show filial piety towards their parents, the vassal should be prompt in obeying the wishes of his lord, and the wife should be submissive to her husband. How would it look for a child, when summoned by his father or mother, to say "I can't come, I'm just sitting off on a pleasure excursion?" What would be the thoughts of bystanders, if a servant refused to do the bidding of his superior? And, again what is the result

of discord between husband and wife? A man goes out in the morning to labour in the fields, while his wife remains at home to cook his midday meal. Something turns up unexpectedly to prevent his return at that hour, and his wife, if she be undutiful, grows tired of waiting. "Why does not my husband return?" says she; "really if he can't come home in time, he can't expect me to keep the food waiting." So she takes her meal alone, then extinguishes the fire, and puts away the dishes. Just at this moment enters the husband. What a scene ensues! He storms with rage at losing his meal, she retorts that he ought to be more careful in keeping to hours. They are certainly not a happy couple. But if the husband enters late and says, "I'm behind time, have you any food ready for me?" and the wife at once bustles about the room, and produces tea and food,—then I say, they both agree together and the harmony of the house is not disturbed. Which of the two conditions is preferable? One should never forget these social relations, based on those of Heaven and Earth, for very sad events may arise from such neglect. Now, to show this, I'll tell you an amusing story.

Once on a time there dwelt in the country a fine young fellow, who was well made, handsome, and clever. He had but one fault, and that was forgetfulness. Well, he lived on pleasantly till he was about seventeen years old, and then his father told him he ought to marry. Accordingly, an eligible maiden was found, and the formalities were arranged; the wedding-day came, and the wedding-feast was spread. In came the young fellow with his bride, accompanied by a number of friends; they sat down, the food and drink were vigorously attacked, and the greatest good humour prevailed. The bridegroom himself set a very good example in that way, and drank cup-full after cup-full of liquor, till he had taken quite as much as was good for him. At this moment the guests departed, and he and his bride remained alone. Now, observe what came of his fault of forgetfulness. Looking round, he perceived the damsel seated in the room, and was struck with astonishment. "Who are you?" said he? "Why, I believe I'm your wife," replied she. "Wife! rejoined he, but I don't remember ever having been married! All I remember is that a number of friends came to see me, and that I gave them a feast, and drank—and drank—oh! a large amount of liquor! Pray can you tell me why I am wearing such fine clothing to-day?" "I really don't know," said the bride, (who was also rather given to forgetfulness), "I too have forgotten the circumstances, but perhaps we had better ask some one." So it was settled they should each ask their parents. The young man went to his father's room, and called "Father! Father!" "Well, what's the matter?" "Why, here's a strange girl in the house, who declares she's my wife! Do you know anything about the affair?" "Not I; I remember nothing of it: (you see, he, too, forgot). So these two remained in a state of great embarrassment. Meantime, the girl had gone out to ask her parents also. But on the way she forgot where they lived, and, calling to a chair-bearer who was passing, said "Pray, sir, be good enough to tell me where I live." "Don't crack your jokes at me," replied the man. "But please tell me, for I've quite forgotten." "Why, if you yourself don't know, how should any one else know?" answered he, and, going away, he left her standing in the middle of the road. Here was a nice position for the young couple to be in, and it all arose, too, from their fault of forgetfulness!

I see you are amused at the tale: well, it certainly is laughable for people to forget their wedding, but observe the moral. In this case no very evil consequences arose, but what, I ask you, is the consequence of forgetting the principles of Heaven and the ways of Earth? Is that also amusing? Not at all, you will say.

Everything in this world goes by contraries. Summer and winter, light and darkness, are all opposed, respectively, the one to the other. There is, in reality, no such thing as spring or autumn, they are made up of a combination of summer and winter, and do not exist by themselves; nor do these two seasons exercise any great influence over the earth as do the other two. Just so is it with the twilight, dawn or evening, which is composed merely of light and darkness. In like manner, there can be no half-dealing with our social relations. One either observes, or does not observe, one's duty. If one observes it, all goes well, if one disregard it, the result is discord.

You all know that last year a privilege hitherto restricted to the military class, has been extended to the lower orders. Until that time the *samurai* alone could mount on horseback, now-a-days the tradesman too can ride, and there are many among you, my friends, who ride remarkably well. Well, in a certain place, some tradesmen were exercising their horses round a riding-school. But, unfortunately, each man strove to get the front place, and what was the consequence? Collisions occurred every moment, and several persons were hurt. Then it was that one of the party, dismounting, went up to a *samurai* who was standing by, and said, "Sir, I know that you must be a good horseman; will you not take my place, and show us all the proper way to sit in a saddle?" "I am much obliged," said the *samurai*, "but I am afraid of getting a blow from someone's stirrup." However, it was arranged that one man only should ride in the course with him, so he mounted, and, drawing in the reins, pulled his horse behind the other. Round and round they went, and whenever the second horse tried to pass the other, his rider pulled him in, and made him keep his proper place. All the people wondered at this, but when they again mounted, and tried the same plan, they found to their surprise that they, too, were just as well able to keep the line as the *samurai* had been, and why? Because man's will is stronger than that of an animal without sense, and therefore if the riders willed that their horses should keep in a certain position, the horses could do nought to the contrary. It was by reason of their not knowing this, that, in the former instance, they fell into confusion: but so soon as the proper relations between rider and horse were established, all went well. This is also the case with regard to the social relations between mankind.

You must not, then, forget that the principles to which I have called your attention are things really worthy of very serious consideration. It rests with you all to choose which course you will pursue,—to observe, or to neglect them,—but I assure you that the only way to lead a happy life is to take example by the relations between Heaven and Earth, and to follow out those principles in your intercourse with your fellow men.

### JAPANESE NOTES.

EXTRACTS FROM THE SHIMBUN ZASSHI.

(Budget of News.)

No. 42.

A certain Matsuda writes from America, where he is studying: As so large a number of Japanese of both sexes come hither to study, I will just give you my ideas as to the things which they should bear in mind.

1.—The cost of a woman's education is twice that of a man's; for example, the women here will not be satisfied with a silver watch; they must all carry gold watches.

2.—The heat and cold are both extreme, and no weak constitutions can stand the climate.

3.—The food is generally coarse. You may count on having nothing better than Japanese 'rice and tea' (*chad-zuké*) and common salt.

4.—Japanese women are particularly ignorant and they must make up their minds to being the subject of ridicule.

5.—Supposing that you know all these things, before carrying out your intention of travelling in foreign countries, you should study foreigners' customs in Japan for several months, learn the rules of eating and drinking and of general deportment; after which you may start. Unless you adopt this plan you will not escape bringing disgrace on your country.

6.—When a student desires to go abroad, he should first inquire of everything from some one who has resided and studied in foreign countries, and is well acquainted with foreign manners and customs. He must be careful to put no trust in Guide-books, or in men who have formed part of an envoy's suite, even though they may have visited foreign countries. For Guide-books are dead things, and the followers of envoys are ignorant of the real state of things because they have not tasted hardship.

7.—Supposing that you understand all these things and manage to get as far as New York, you must still look for aid to some Japanese residing in this country. Many

cases have occurred where students have been contented with getting letters of introduction from foreigners at Yokohama, and have thought it unnecessary to seek the help of students residing here. The consequence has been that they have suffered great hardships, and have, in the end, been obliged to accept the support and assistance of these students. Students who have resided abroad know much more about the subject than foreigners residing in Yokohama.

8.—Persons with weak constitutions ought not to travel abroad. If they insist upon it, they must make up their minds to bury their bones in foreign countries, even though they should be free from disease at starting.

9.—If young people of good constitution wish to go abroad, they should study arithmetic and reading for two or three years in Japan, after which they may step out.

10.—Young people who are ignorant of Japanese matters seldom do any good after returning to Japan, even though they may have learnt a great deal abroad.

11.—A Japanese proverb says: a traveller should not feel ashamed. This is a most objectionable saying. The shame of a man who is abroad is the shame of the government.

12.—Japanese constantly say, 'it'll come all right.' This is a great mistake. It may come all right in Japan, but it certainly is not so abroad. Men who sit at home at ease cannot imagine the hardships of life abroad. Pray do not take counsel of wisecracks who are fond of visionary arguments.

12.—It has lately become a current notion amongst students that students residing abroad spend a great deal of money fruitlessly, and live dissipated lives. Some have therefore received orders from the Government that five or six hundred dollars is sufficient, and though they manage to escape want and misery because there is the *Chargé d'Affaires* to help them, still there are many, who led away by this style of talk, bring very little money with them, hoping to carry out their studies independently of aid; and when they come to this country gasp with amazement, and are plunged into want.

These are the results of my experience, and I give them now in the hope that they may be of some slight use to persons who intend to travel in future. Please communicate them also to any persons who are in want of advice about the proper steps to take.

No. 43.

We have received a letter from a student in America, who tells us a curious story. The subject of it is the Russian Minister at present accredited to Washington. He was formerly attached as secretary to the Russian Minister there, and there was a great scandal about his keeping a French mistress. The Minister advised him to leave, as it was not proper to be so intimate with a woman unless she possessed the title of wife. So the Secretary went off with the woman, and went to another country where he was at first attached to the *Chargé d'Affaires*. He was afterwards promoted to be Minister, and came again to America, with the same woman, who had now become his lawful wife. Some days ago all the Ministers of the various powers were invited to an entertainment at the private residence of the Secretary of State for Foreign Affairs, and the Russian Minister was to have been invited also. The wife of the Secretary of State was of opinion the wives of the Ministers of the various powers ought to be asked, but that the wife of the Russian Minister could not be invited, as she was ashamed to sit down with a man's mistress. (I expect that the spouses of most of the famous gentlemen of our country would also be unable to sit down with the wife of the Minister for Foreign Affairs). So all the other countries were invited, both husband and wife, and the Russian Minister by himself. When the day arrived all the guests assembled at the house of the Minister for Foreign Affairs, and the Russian Minister felt very awkward and ashamed because while all his colleagues were accompanied by their wives, his was not present. However, he bore his vexation that day, but shortly after, in the excess of his annoyance, wrote a letter to a friend abusing Grant, the present President. This letter was picked up in the street by an American, and eventually came into Grant's hands, who was very angry when he knew the facts. He therefore said to the Minister: "I

won't see the face of such a stupid man as you again," and sent to the Emperor of Russia to replace him.

The foreign newspapers state the murderer of the Councillor of State, Hirotsawa, last year was one of his own servants. This report is not yet confirmed, but we will make inquiries and give the result in a future issue.

No. 44.

To Terashima Munénori, Daibemmushe. Being despatched to England, you are entrusted with the charge of diplomatic business and jurisdiction over Japanese residents in that country.

A postal system having been established in the interior, it has now been resolved to extend this to foreign countries. The rates for letters, newspapers and books have been determined, and arrangements made for conveying them at the greatest rate of speed to England, France, America, Russia and all other countries with which we have relations. One cannot but be overjoyed at the advance of civilisation and the great advantages thus secured to all classes of the population. As soon as the table of rates to the various countries is published by the Post Office, we will make them known in full.

### NIHON GUAISHI.

#### ACTUAL HISTORY OF THE MINAMOTO FAMILY.

##### PART I.

(Continued from our last.)

Kanô Shigémitsu, a man of Idzu, Doi Sanéchira a Sagami man and others having gradually joined him, he held a meeting at the village of Doi<sup>100</sup> to discuss business, after which he sent Adachi Morinaga to publish the orders he had received, and to persuade the men of mark in the eight provinces one after the other. Morinaga came first to Oba Kagéchika, who, having always been generously treated by the Heishi, refused his consent. His elder brother Kagéyoshi addressed him, saying: "You act from a feeling of obligations received, but I shall act from love of justice and right," and then came to give in his adherence. Morinaga came next to Sudô Tsunétoshi. Tsunétoshi burst out into laughter at him, and said: "For an exile to plot against the Heishi is like a mouse plotting against a cat." He departed thence and came to Miura Yoshiakira. Yoshiakira, on hearing of the messenger's arrival, bore up against his sickness and came forth. He summoned his sons and grandsons, and addressing them said: "Our family has for ages served the Genji. I have been fortunate enough to see this work, while my remaining breath still lasts. Do ye strive for this object, for if the affair turns out well, you will make the fortune of the family. If not, die for justice and right." He thanked Morinaga and sped him on his way. Then he came to Chiba Tsunétané. Tsunétané at first hesitated, but his son Tanémasa remonstrated with him and he then made up his mind. He followed this up by proposing a plan of action, saying: "Kamakura is in an unassailable and strong position. It is the old seat of the Minamoto family. My lord should first take this as a base of operations, and his servant also will proceed thither." Morinaga at last came to Taira no Hirotsuné. Hirotsuné's affections were divided between both parties, and he gave a dubious answer. Morinaga then returned, but Tsunétané and Yoshiakira had not yet arrived.

On the twenty third day Yoritomo encamped on mount Ishibashi<sup>101</sup> with three hundred horsemen. On the following day Oba Kagéchika came with Sudô Tsunétoshi and other horsemen to the number of three thousand to attack him. It happened that the evening was coming on, and some one proposed that they should wait for the morrow to fight. Kagéchika's meant to fight before the Miura faction could arrive. He advanced to offer battle, and calling out his name, said: "I am the descendant

of Kagémasa of Kamakura. Who is he who proclaims war?" Yoritomo sent a man to reply to him, saying: "My prince is the descendant in the fourth generation of Hachiman Kô. He bears the orders of his prince to destroy the unprincipled. Who of the warriors of the eastern provinces is not the retainer of my prince? Do you alone forget that your ancestor followed Hachiman Kô to Mutsu? You turn your back on justice and right, and your face towards gain, thereby defiling the reputation of your house." Kagéchika's mouth was shut, and he then advanced ahead with his younger brother Kagéhisa. Yoritomo summoned Okazaki Yoshizané, and asked who would encounter this pair of brothers. Yoshizané was the younger brother of Miura Yoshiakira, and dwelt in Idzu, and in reply to Yoritomo he presented his son Yoshitada, who received the order and withdrew. He called his servant Iyéyasu, and said: "I wish to die for Sakô's sake. Do you return home unhurt, and tell my wife and children of this." Iyéyasu would not consent to go back, and replied: "My young prince, you are twenty years of age, and yet you can die for Sakô. Why should your servant, who is sixty years old, not die for his young prince?" He then followed him and advanced towards the enemy. Yoshitada encountered Kagéhisa, knocked him over and held him down. He called his followers, but they did not join him, while Nagao Tamémuné, one of the enemy's men, came to rescue Kagéhisa. It was a pitch dark night and the rain fell in torrents, so that things could not be distinguished a foot distant. Yoshitada said: "The man on the top is Kagéhisa," while Kagéhisa said: "The man on the top is Yoshitada." Tamémuné advanced and felt his armour. Yoshitada lifted up his foot and kicked him, and swiftly tried drew his sword to stab Kagéhisa, but it would not come out of the sheath. Tamémuné's younger brother Sadamuné also came up, and Yoshitada was at last slain. Iyéyasu was also killed in this skirmish. When the day broke our troops finally received a severe beating, and fled into Sugiyama, the enemy's troops pursuing them in a crowd. Yoritomo brought up the rear and shot with his own hand; every time his bowstring twanged an enemy fell. Kagékado held back his horse and persuaded him to cease, and he himself, with Sasaki Takatsuna, Amano Tokagé and others stopped behind to fight. Takatsuna's younger brother Yoshikiyo had married the younger sister of Kagéchika, and was amongst the pursuing cavalry. Takatsuna shouted to him saying: "You rebel against your prince and separate yourself from your relations all for the sake of a woman. What an exceeding insensibility to shame." Having relieved his mind Takatsuna fought vigorously, and several times forced the enemy's troops to retire. Yoritomo thus gained a little time, and alone with Doi Sanéchira escaped by climbing up a precipice. Kanô Shigémitsu being old, found such difficulty in walking that he made his son Chikamitsu abandon him and follow Yoritomo, after which he killed himself. Chikamitsu with Tokimasa, Kagékado, Takatsuna and others, six in all, followed Yoritomo's track together. They saw him standing on a fallen tree, and prayed to be permitted to live or die with him. Sanéchira said: "If we are too numerous we shall be discovered. We had better disperse here." Yoritomo then despatched Tokimasa to Kai to call out all the Gen in that province, and all the rest dispersed, promising to meet again. Yoritomo hid himself with Sanéchira only. Kagéchika made great search in the mountains and vallers. Kajiware Kagétoki, a kinsman of his, knew where Yoritomo was concealed, and purposely led Kagéchika in a different direction. Kagéchika also heard that Yoritomo had killed himself, and sent a messenger post haste to the capital to convey the information. Yoritomo having escaped, came forth from Sugiyama, and hid in the mountains of Hachicô.

Previously to this Miura Yoshiakira had despatched his sons Yoshizumi and Yoshitsura, his illegitimate grandson Yoshimori and others with three hundred horsemen to

(100) The two-volume atlas of Japan, called Koku-zan Zenzu, gives the village of Doi on the sea-shore, just inside Sagami, where it borders on Idzu. In the large map of the thirteen provinces round Fuji, called Fajini Jinsan-shû, it is stated to be the place now called Miya-no-shimo.

(101) In the prov. of Sagami, on the left of the road which leads up the Hakoné pass, just overhanging the village of Yumoto.

(102) Yoritomo was Sahiôei no Suké and Sa is the abbreviation of this title. Kô is the Chinese word 'noble,' which is translated elsewhere by my lord, or his lordship.

(103) On the Yedo side of the Sakawariver, which discharges itself into the sea between Odawara and Oiso.

join Yoritomo at mount Ishibashi. On arriving at Saka-wa<sup>104</sup> they heard that Yoritomo had been defeated and was dead, upon which they returned home. They fought with Hatakeyama Shigetada at Kotsubo,<sup>105</sup> and after beating him, returned and occupied the castle of Kinugasa<sup>106</sup>. Shigetada attacked them with three thousand horsemen. Yoshiakira was eighty nine, but mastered his disease and mounted on horseback, with the intention of fighting in person, but Yoshizumi and the others prevented him. They went out to fight and were not victorious. The castle fell at last. Yoshiakira addressed Yoshizumi and the others, saying: "Sakô is possessed of valour and capacity. He would never die after being beaten only once. Do you carefully search for and follow him. I am old, and cannot walk; I will stop here and die. I am old and worn-out, and death is not worth regretting. I only regret that I cannot behold Sakô's success." Yoshizumi and the rest urgently besought him to let them support his steps, but he would not consent. Whilst they were loitering he was at last caught by the enemy's troops and killed. Yoshizumi and the rest put to sea and fled to Awa in search of Yoritomo. When Yoritomo concealed himself in the mountain of Hakoné, he took shelter in a Buddhist priest's house. The priest's younger brother had once been on friendly terms with Taira no Kanetaka, and desired to avenge him. Yoritomo therefore escaped, and passing along the mountains, fled to Doi. He embarked in a vessel at Cape Manadzuru,<sup>107</sup> and proceeded to Awa.<sup>108</sup> Doi Sanéhira and Okazaki Yoshizane alone followed him. At this time the sea and land were covered with his enemies. The two men exhausted every effort to protect him. After some days they espied a large vessel full of men in armour. The two men hastily concealed Yoritomo in the hold and awaited the approach of the large vessel. It turned out to be filled with the Miura family, who, as soon as they saw Yoshizane, all asked at once where Sakô was. Yoshizane did not answer at once, but said: "I also am searching for my lord." Yoshizumi and the others wept and said: "We have abandoned our father simply in the hope of seeing my lord. If this is the case, we must regret not having died in his company." Yoritomo heard this, and came crawling out. Yoshizumi was astonished and pleased. He did reverence to him, and said: "Is my prince here? Then my dead father's words have after all come true." Yoritomo asked about Yoshiakira's death and was exceedingly grieved. Yoshizane also related to him the circumstances of Yoshitada's death at Ishibashi, and they shed tears in company. Yoshimori advanced and said: "Why do you gentlemen weep vain tears? We have now been fortunate enough to find Sakô; why not consult about more important business? The proverb says, 'He who wishes to eat must first provide himself with the utensils. Some time back Fujiwara no Tadakiyo, by order of the Shôkoku,<sup>109</sup> was fortunate enough to become Bettô of the *Samurai-dokoro* and the *Samurai* of eight provinces assembled in crowds at his gate. I envied him from the bottom of my heart, and I pray that if my prince attains the object of his desires, he will give this office to me." Yoritomo laughed and promised to do so.

Hereupon Yoritomo landed in Awa, and sent proclamations far and wide calling men to come and join him. Those who were separated from him by districts occupied by the enemy were to come by sea. In the ninth month he summoned Oyama Tomomasa and Shimorôbé Yukihira, and thus procured three hundred horsemen, with whom he advanced in the direction of Shimôsa. Chiba Tsunétané took prisoner Chida Chikamasa, the *mokudai* of the province, and with three hundred troops came to meet Yoritomo at Kokubu.<sup>110</sup> He took occasion to propose a plan of action, saying: "You should spread out a quantity of banners and curtains,<sup>111</sup> and so seduce the

"looker-on." Yoritomo followed this advice. He advanced to the River Sumita.<sup>112</sup> Hereupon Taira no Hitotsuné came to join him with ten thousand horsemen, and desired to have an interview with Yoritomo. Yoritomo would not see him, and sent Sanéhira to say to him: "I have taken up the cause of justice and right in obedience to the Imperial orders. Why did you not come at once? You may remain in the rear of the camp and wait till you are summoned." Hitotsuné was frightened, and withdrawing, said to some one: "This Lord will certainly accomplish great things. I was going to the rescue of his solitary weakness with my followers, and I never expected to find him as strong as this." Yoritomo then amalgamated Hitotsuné's troops with his own, and it also chanced that the fugitive soldiers from Ishibashi came and joined him, so that his army was now in great force. Previously to this the report of [the battle at] Ishibashi had reached the capital. Kiyomori was highly delighted, but when he afterwards heard that Yoritomo was not dead and that his might was waxing again, he feared for himself. In the tenth month he sent his grandson Korémori and his younger brother Tadanori with fifty thousand horsemen, to attack Yoritomo. Fujiwara no Tadakiyo was made overseer of the operations, while Saito Sanémori acted as guide. Yoritomo summoned his commanders and said in consultation: "I wish to proclaim Kôdzaké and Shimotsuké first, and then advance. What do you think of this?" Hitotsuné replied: "The best thing to do would be to take Musashi and Sagami before the enemy can cross Ashigara.<sup>113</sup> When we have possession of those two provinces, you will be able to do what you like with the Empire." Yoritomo approved of this, crossed the river and encamped on the other side. Hatakeyama Shigetada and Yedo Shigenaga came and surrendered. Yoritomo reproached Shigetada for having attacked the Miura family. He replied and said: "Your servant's father Shigeyoshi is at the capital, and I merely tried thereby to shut peoples' mouths. It was not your servant's genuine desire." Sanéhira and Tsunétané interceded, and got him pardoned, upon which he was appointed to be in the van of the army, in order to perform services in atonement. Hereupon all the men of mark in Musashi and Sagami told each other, and came to offer their submission, thus bringing up the number of his troops to over a hundred thousand. Yoritomo then entered Kamakura and erected it into a seat of military Government.<sup>114</sup> He organized the officers of all ranks, and finally marched westwards, taking the command himself, to anticipate the attack of the Heishi. The officers of all ranks in the eight provinces crowded after to join him, so that when he crossed mount Ashigara he had more than two hundred thousand horsemen. Hôjô Tokimasa joined him here with the troops of Takéda Nobuyoshi and others. Nobuyoshi was the great-grandson of Yoshimitsu and his family had dwelt in Kai for generations. When these events took place, with his son Nobumitsu and his younger brother Yasuda Yoshisada and others, he raised twenty thousand men in the province, and marched south into Suruga. At the same moment Oba Kagéchika and his younger brother Kagéchisa were fleeing with more than a thousand troops with the object of joining Korémori, but hearing that the Kai troops blocked the road, Kagéchika was greatly embarrassed, and came to offer his submission in company with Sudô Tsunéyoshi Nagao Sadakagé and others. Kagéchisa fell in with Yoshisada at mount Hata, and being defeated in battle, took to flight and joined Korémori. Nobumitsu also attacked and defeated the *Mokudai*<sup>115</sup> of the province, and decapitated Nagata Niudô and his son. Hiraga Yoshinobu and his son Koréyoshi also called out the Shinano troops, with which they came and joined, Yoritomo who then concentrated the various

armies and advanced. He encamped on the bank of the Fujikawa, which thus lay between him and Korémori. Before this Korémori had fallen in with a traveller coming from the east, and asked him the number of Yoritomo's troops. He answered: "All the plants and trees in the eastern provinces bend before the wind. There are no mountains or rivers, but are his troops." Korémori called Saitô Sanémori and inquired of him saying: "You know eastern matters. Calculate how many of Yoritomo's troops can bend the bow like yourself." He replied: "There are not less than twenty men in each division who pull a bow for five, and use arrows fifteen handbreadths long, with which they can pierce seven suits of armour one laid on the other. Each man keeps five or six horses, and they gallop over hill and vale as if on level ground. If in fight they lose a relation, they advance over his dead body. Men like your servant are to be measured by the bushel and are as numerous as dust. It is impossible to count their numbers. As for our troops of the home circuit and the western provinces, they are undersized, decrepit and weak. The least thing makes them desire to leave the army, on the pretence that they have to bury a relation or cure wounds themselves they have received. Their mounts are without exception useless jades. "How can we possibly pit ourselves against these fellows?" It seems that Sanémori could not agree in consultation with Fujiwara no Tadakiyo, and having thus answered Korémori, he finally took leave of him and turned his steps westwards. The whole army feared and trembled. Korémori made Tadakiyo leader of the van, and he advanced as far as the river bank. The river was just then full of water, and the two armies lay over against each other without fighting. Takéda Nobumitsu was the leader of our van, and sent a messenger to the camp of the Hoi-shi in order to arrange with them a date for a battle, but they did not answer. Nobumitsu then took some troops secretly by a bye path in the night, and came out in the rear of the western army. As he passed through a large marsh on his way, the geese and wild duck rose in alarm, and the western army being greatly frightened, scattered and fled. Yoritomo wanted to pursue the fugitives, and then march westwards, but Tsunétaté, Hirotsuné and Yoshizumi all dissuaded him, saying: "The provinces of Hitachi and Mutsu have not yet submitted, and we fear they will try to take us in the rear. First settle the Kwantô, and it will not be too late afterwards to smite the west." Yoritomo followed this advice, and ordered Nobuyoshi to hold Suruga, and Yoshisada to hold Tôtômi, after which he marched back with his troops, passing the night Kiségawa<sup>115</sup>.

It chanced that a certain commander came to him at the head of twenty horsemen, and requested through the medium of Doi Sanéhira to have an interview with Yoritomo. Yoritomo asked what his appearance was like. Sanéhira answered and said: "He is about twenty years of age, and his countenance is distinguished." Yoritomo exclaimed: "This is Kurô of Mutsu. Call him in at once." Sanéhira showed him inside the curtain, and it actually was Yoshitsuné, who said: "I heard that my brother had taken up arms in the cause of duty, and was unable to restrain my joy. I therefore bade farewell to Hidéhira and came." Yoritomo was much pleased, and said: "When his lordship Hachiman smote the east, it fell out that his lordship Shinra<sup>116</sup> came to aid him. He said, 'it is as if I now saw the late Shôgun.' My meeting with you now is the same to me as if I had seen my lord the master of the horse<sup>117</sup>." The two brothers shed tears together.

## Law & Police.

### IN THE KANAGAWA KENCHO AT KANAGAWA, JAPAN.

Before MUTSU MUNEMITSU, Ken no Kami.

SIBER & BRENNWALD, plaintiffs,

versus

Steamship *Sadkia*, her Master and Owners.

This action is for damages alleged to have been suffered under a contract of affreightment by bill of lading, by reason of delay in the delivery of the merchandise cartied. The plaintiffs are the agents of a Japanese principal.

The actual time of the delay alleged—to wit, four months—is not denied in the answer; but several causes are pleaded, which, it is averred, excuse the delay for a portion of that period; the defendants admitting a delay for which the ship is liable of only fourteen days.

The evidence submitted in the case consists of certain papers purporting to be copies of letters and telegraphic despatches bearing on the detention of the ship at Alexandria, a certain bottomry bond shown by defendants' counsel, in which is recited the cause of the delay in the river Clyde, and the verbal testimony of the present master and engineer of the ship.

These alleged copies of despatches and letters are in no manner authenticated, and quite fail to throw any light on the exact nature of the proceedings against the ship which caused the delay at Alexandria; but so far as the Court can discover from these papers and from the statement of the master on this subject, taken together, those proceedings were in the nature of a civil action or proceedings in Admiralty to enforce a claim against the owner, and such a cause in no wise comes within any of the exceptions stipulated on the bill of lading.

The same may be said of the farther detention of three days at Ismalia,—making a total of 63 days' delay for which no excuse is found.

As to the subsequent delays, the case is somewhat different. In the Red Sea a delay of six days occurred by reason of an accident to the machinery, and the loss of speed in consequence. The engineer says that although this accident was unavoidable, the required repairs could have been effected in one day, so that it would seem of that delay five days should be charged to the ship.

Seven days at Point de Galle, and twenty at Singapore, were consumed in effecting repairs required by the engine and boilers, which suffered injury from causes quite beyond control, and which could not have been by ordinary care and foresight provided against. The testimony of the engineer is direct and conclusive to the fact that his department of the ship was well found as to necessary stores, and that these accidents were unavoidable.

As to the delay of ten days in the Clyde, the testimony of the present master is not so decisive. He gives his belief that no blame can attach to any person for the grounding of the ship which there occurred, but he admits that with a lightening of the ship to the extent of 100 tons of her burden, her draft would have been less by 8 inches, and that this would have changed the conditions materially. A survey of the ship was had, and by an entry in the log book it appears that the survey report pronounced the ship to be "overloaded," and that in consequence upwards of 100 tons of cargo were discharged, and not again re-laden on board. From all the evidence on this point, the burden seems to indicate blame on the part of the then master, one S. Stavaly.

Then it appears that of the 120 days' delay complained of, one-fourth is properly excused, leaving a period of about three months for the consequence of which the ship and her owners are liable under the contract with the freighters.

What those consequences really are we have then to consider.

The plaintiffs give a schedule of losses, making up an aggregate of \$3,200 per month.

On the trial it was urged, on behalf of the defendant, by his counsel, that the measure of damages set up by plaintiffs was quite an erroneous and inadmissible one, and that the enquiry should be made of plaintiffs what would have been the profits or gain during the period that has since elapsed, had the merchandise arrived at the proper time. That question was asked by the counsel, and answered that it was impossible to tell.

It was remarked by the counsel on the trial that it was not desired by the defendant to rely upon any rules or precedents in foreign legal jurisprudence, but rather that it should be treated on its merits, and as sound reason and justice should seem to direct.

While the Court would not have been unwilling to weigh and consider such rules and principles as govern foreign Courts in the investigation of questions of similar character, which have of late received much careful attention and undergone extensive discussion; yet as these were not adduced by either party they must not be considered as having governed the Court in arriving at a conclusion in the cause.

On the question of damages the defendants truly remarked that what justice requires is that so far as a mere money compensation can do so, the plaintiffs should be placed in just the same condition as they would have been had the delay not occurred. The obvious and direct way of doing this is to enquire what this delay has cost the plaintiffs,—what disbursements made by them have been necessarily incurred and which would otherwise have been avoided, and to award to them such an amount as is thus determined.

The plaintiffs demand interest at the rate of 15 per cent on what is set up as the whole capital invested, and also cash disbursed, and they have submitted their vouchers and receipts in proof of the several particulars. The Engineer in their service has also testified that the buildings had been wholly completed at the date when the goods should have arrived, and have ever since that time been ready for the erection of the gas fixtures and plant. But in some respects the evidence submitted by the plaintiffs does not so fully support their claim.

A peculiar item of the plaintiffs' demand is that for interest on \$15,000 a sum added to the capital invested as the amount paid out for salaries for one year and up to the present time. How it can be so considered is not clear, for the plaintiffs have elsewhere charged the actual payments made to employees for the full term of four months' delay alleged. The amount so paid out during the *real* period of delay for which defendants are liable should seem a just charge, and the plaintiffs should be reimbursed for such an outlay.

To the argument submitted by the counsel for defendants in the form of a memorandum to the effect that the demand made seems avowed as contemplating a profit of \$50,000 per year on an investment of \$130,000, it may be observed that this does not seem a just way of putting the demand.

The actual return on the investment prayed for is at the rate of 18 per cent. a year and would amount not to \$52,000, but only to about \$23,000 in a year. The only evidence on the rate of interest was that of the defendant who stated the customary rate to be 1 o/o per month, and of Takashimaya who said it was 15 o/o per annum.

#### JUDGMENT.

It is adjudged and decreed that the plaintiffs have and recover from the ship the *Sadkia*, her master, and owners, the sum of \$7,000, their damages suffered, with interest thereon from the 18th day of May, 1872, the day of the ship's arrival in the port of Yokohama, at the rate of one per cent. per month. Costs to follow judgment.

Before MUTSU MUNEMITSU, Ken no-Kami.

HUDSON & MALCOLM

versus

S. S. *Sadkia*, her Captain and Owners.

The Court has been much perplexed in the examination of the evidence submitted on the trial, by the reason of its fragmentary and indecisive character, and has found much difficulty in weighing the burden of proof on many of the points involved.

The case presented is a very peculiar one, owing partly to the frequent changes in the command of the ship, and partly to the absence of the proper papers and the inexcusable confusion in the ship's affairs.

Of the bottomry bonds on which payment is sought to be enforced, those of November 1st and November 11th, 1871, were executed by the then master, S. Stivalay, the one first in date being also signed by M. de Abensis, as owner of the ship.

The bond of 26th January, 1872, is executed by Captain Azzopardi, who succeeded the former master at Malta.

Neither of the former masters was present on the trial, and their testimony could not be had as to the disbursements for which the bonds were executed by them, and on that subject the present master knows nothing.

The remaining bonds were executed by the present master, William Spinks; and each of the bonds, of which there are in all eight, are made in favour of one George Newsome, a co-partner in the firm of Mons. Le Blanch & Co., of Liverpool, who are the charterers of the ship for her present voyage, during which the expenses were incurred.

The plaintiffs, although the representatives of the charterers, failed at the hearing to show clearly how and when payments become due on the charter party, and when they were paid.

The only person answering in the cause is the master, and he being without legal counsel on the trial, the Court, so far as it was able to do so, has directed such enquiries as seemed proper to protect the interests of any absent persons, whose interest may be opposed to that of the bondholder.

No fraud or collusion has been alleged or suggested on the pleadings, and none is imputed or suspected.

While this is so, and while the plaintiffs have not by themselves or by counsel referred to or relied upon any rules of law or procedure of foreign commercial nations, it is believed by the Court that in a case attended by circumstances so peculiar as those above noted, any court would be impelled to a very strict scrutiny of those circumstances, and a close examination of the expenditure incurred; and further, it is conceived that it may be true that obligations like those now sued upon may be good as to some of the expenditures, while held to be bad as to others, and that such charges as seem to be improperly included may be disallowed.

Such rules appear to the Court to be strictly consonant with justice and good reason, and in that spirit and by such principles has this cause been examined.

The expenses of the voyage seem enormous, compared with its extent,—being, indeed, some 200 per cent. in excess of the money under the charter; but it may properly be noted that in a previous action it has been adjudged that the ship and her owners are liable for the consequences of a large fraction of the delay, and that fact can justly be urged by those plaintiffs as a reason for, and occasion of, such large sums being advanced to the ship.

Examining the bonds in the order of their date, we find the first to have been executed at Glasgow on the 1st November, 1871, and to be for the sum of £1,485, including maritime premium.

This bond is executed jointly by the then master, S. Stivalay, and by M. de J. Abensis, as owner of the ship, he being then present and presumably approving all charges.

The succeeding bond, of date 11th November, 1871, was executed by the same master, Stivalay, for a loan of £737 18s. 6d., and for a marine premium of 35 per cent. thereon.

One item in this bond is for insurance on bottomry bond, £40; and the propriety of this charge and of similar ones in succeeding bonds was somewhat discussed on the hearing.

To the Court it appears that good reason would indicate that he for whose benefit an expense is incurred should bear the outlay, and that such an expense as this in question cannot in any manner have accrued to the benefit of the ship or her owner.

The holder of the bond insured for his own personal benefit, and should bear the outlay. £10 for that charge is disallowed.

At Malta, Stivalay was superseded in command of the ship by F. Azzopardi, and the ship, pursuing her voyage, reached Alexandria, Egypt, in December.

At the last named port, the third bond, of date 26th January, 1872, was executed by Azzopardi, as master, for £1,060, and for maritime premium at 35 per cent.

Two of the charges on this bond were somewhat questioned on the trial, the entries on the bond being as follows:—

Advance to Capt. Borg. ... ..	£10
By cash to Capt. Borg. ... ..	£17

No such person as Capt. Borg appears on the papers of the ship answering to shipping articles, and no voucher or receipt was produced by plaintiffs for such an expenditure.

Neither is there, so far as can be found, in any of the ship's accounts or papers any entry or charge of this character, and we should in truth be wholly without information as to who the person referred to as Capt. Borg was, but for an entry discovered by the Court in the log-book of the ship, to the effect that one of that name visited Alexandria while the ship was there, having been sent by the owner from Malta, but who never had any capacity on board the *Sadkia*, or in connection with her voyage.

It was suggested by plaintiffs' counsel that Capt. Borg possibly had an appointment from the owner, and that if such were the fact he would possibly have had a claim against the ship.

No such fact has been made to appear in evidence, and applying to what seems the proper source for such evidence—that is to the shipping articles,—and finding none, and being without any voucher for such a charge, it seems impossible to admit it as one necessarily incurred for the ship's benefit, or to enable her to continue her voyage. Disallowed £37.

The bond next succeeding, dated 5th of February, 1872, was executed by the present master, Spinks, and was also made at Alexandria, he having there superseded Azzopardi in the ship's command.

This bond is alleged to have been given for a balance due for advances not included in the former bond given by Azzopardi, but the

testimony of Capt. Spinks touching these advances is very unsatisfactory and inconclusive as to their correctness or necessity.

His statement is that he does *not know* whether that amount is correct, and that he signed it on hearsay, taking the word of one, an agent of the lender, that such a balance *was* due in excess of the bond given by Azzopardi.

This carelessness on the part of the master is very censurable.

No vouchers for this account have been produced by plaintiffs, and their absence is not clearly accounted for.

Capt. Spinks *has*, however, testified to his knowledge that *some* expense was incurred in excess of the amount secured by the prior bond; and the Court, while feeling compelled thus strongly to reflect on the lack of care exercised by the master in this transaction, does not feel justified in declaring the bond to be invalid.

This point has been one of grave difficulty with the Court. Ample time has since elapsed to enable the plaintiffs to have procured the proper vouchers, and it is thought that they are quite inexcusable.

Under the bond of date March 9th, 1872, executed at Aden, the item of £53 for insurance being rejected for a like reason as before the advances are found to amount to £1,325.

As to the bond of date 28th March, made at Point de Galle, the master testifies that the expenditures were not carefully examined and audited by him previous to its execution, and that certain charges have been twice entered therein, and included in the aggregate.

In fact, he says he signed the bond in blank, leaving it to be afterwards filled up. In the light of this evidence, and deducting the charge for insurance, the amount of advances is found to be £619 18s. 1d.

At Singapore two bonds were executed by the master, for reasons given by him in his testimony, each being of date May 1st, 1872.

On that given for the lesser sum, the original advances, as per schedule attached, and rejecting insurance, \$51.41, are found to be \$2,570.42; and on that for the greater sum, by the same rule, \$5,742.28.

From the amount last named was deducted a sum of £200 due under charter-party, reducing the net advance to \$4,836.62.

This concludes our examination of the various advances and charges included in the several bottomry bonds.

We proceed to the consideration of the question as to fines demanded for the protraction of voyage and of the marine premiums on the monies advanced.

Whether in view of the relation in which the lender stood to the owner, to wit as one of the charterers, and in view of the culpability of the obligee in the manner of securing some of the bonds, and in failing to produce vouchers, etc., the marine premium stipulated in the bonds should be allowed on these loans was a question mooted and debated at length on the trial.

It was there urged by plaintiffs' counsel that it could not be said that when the advances were made the charterers were indebted to the owners, or that aught was due under the charter; as the money provided for in the charter to be paid abroad, was not yet earned.

There is force in that view certainly, and had there been no other objectionable circumstances attending these advances as to the bond first in date the argument would be perhaps a good one. To the bonds of later date this reasoning does not so clearly apply so far as appears to the Court.

It is indeed not clear, when the later payments under the charter party become due and although the enquiry was made at the hearing it was not answered by the plaintiffs.

By the copy of the charter party placed in evidence by the plaintiffs it would appear that the final payment under the charter, should have been made at Singapore, and yet the master in his testimony states that there is still something due and unpaid by the charterers under the charter.

In respect of the charter then, and of the voyage, there would seem to have been a continuous and still unbalanced account between the owner and charterers.

Again it has *not* been shown that the master could not have procured the necessary supplies and advances on the personal credit of the owner and without resorting to an hypothecation of the ship and stipulating for the payment of a marine premium on the loan, or even that any *effort* was made to do so, and thus save the marine premium.

Indeed it appears that at one period of the voyage, the charterers *did* advance funds and make disbursements on the ship's account largely in excess of the amount for which they could have been called upon, on the personal credit of the owner, and without the security of a bond, which so far as it goes, supports a presumption that the owner had such a personal credit.

This presumption in view of all the circumstances which have been narrated, the Court holds it is upon the plaintiffs to overthrow, to strictly entitle them to demand the maritime premium for which judgment is sought on the several bonds; excepting only that one first in date, executed as stated by the owner jointly with the then master.

Besides the duty which is conceived to be upon the master, of endeavouring to raise the necessary funds without resort to bottomry, nothing would seem to be further from fairness, than, that an owner, should pay an excessive marine premium for disbursements made on account of his ship, by the charterer or his agent, when there was an open account between them in respect to the voyage, and the charter money still not fully paid; and the like reasoning holds good also, as to the fine demanded for the protraction of the voyage, under the bond of November 11th signed only by the master Sivralay.

Desiring to properly weigh and protect all interests concerned, the Court will therefore, in view of the foregoing considerations, reduce the rate of marine premium demanded, and will award the like rate, as was adjudged in the prior action of like character, of Mr. V. Comi, to wit 20 per cent. premium on the several advances found to have been made, subsequent to the bond of date 1st November, 1871.

The aggregate of the several amounts thus determined are found to be due on the 29th day of May 1872, that is 10 days after the arrival of the ship in the port of Yokohama.

The accounts are as follows:—

On bond date, November 1st 1871,...	£1,685.
" " " " 11th " ...	£ 837.10.2
" " " " January 26th 1872, ...	£1,203.12.
" " " " February 5th " ...	£ 96.
" " " " March 9th " ...	£1,590.
" " " " 28th " ...	£ 743.17.8
	<hr/>
	£6,155 19.10
" " " " May 1st 1872,...	£3,084 50.
" " " " " " " ...	£5,803.94.
	<hr/>
	\$8,888.45.

#### JUDGMENT.

It is adjudged and decreed that the plaintiffs have and recover from the ship *Sadkia*, her master, and owners the sum of £6,155.19.10 and the further sum of \$8,888.44, with interest on said sums from and after the 29th May, 1872, at the rate of 1 per cent. per month. Costs to follow judgment.

Kanagawa, Japan, July 4th, 1872.

#### IN THE AUSTRO-HUNGARIAN COURT.

Before RUSSELL ROBERTSON, Esq., *Actg. Consul.*  
Monday, 8th July.

A claim for \$181.20.

The defendant was brought up from gaol in which he is incarcerated on a charge of theft, and was therefore asked if he was prepared to go on with the hearing of the case then, or if he laboured under any disadvantage from being unable to procure witnesses.

Defendant acknowledged the debt, and wished the trial to proceed without delay.

His honour said that Schnerr had given over some of his goods to plaintiffs as security for their claim, which they valued at \$240, which was in excess of their claim, but defendant alleged them to be worth \$500. Their value would, however, be determined when the goods came to be sold at auction, but it became an important point now that how the goods came into plaintiffs' possession should be determined—whether, as they alleged, defendant voluntarily handed them over, or whether they took them from him, as he alleged, by force or in any unlawful manner.

Defendant alleged that the goods were taken away without his consent.

Emanuel Schraub deposed that he was a partner in the firm of Bush, Schraub & Co. Schnerr was going away, and they demanded payment of their bill. He refused payment, pleading inability. Witness then demanded some substantial security, which he promised to furnish in half-an-hour's time. Witness conceded this, after which he went in company with Captain Stevens to Schnerr's house for the promised security; Schnerr then said he had arranged with Weintraub to advance him \$100 on goods to be removed, which he would then hand over to plaintiff. Witness inquired of Weintraub if this was true, and found it was. Schnerr then dictated to witness a list of what he possessed, and put himself under

surveillance. Witness was to select articles out of the list of sufficient value to cover payment of his claim. He did so with the help of Captain Stevens, and with the consent of Schnerr, called coolies to remove the goods to witness' godown. He gave Schnerr a list of the goods, and lent Schnerr a few itziboos to pay coolies. Mr. Weintraub was then called in to look at the goods on which his advance of \$100 was to be secured, but having seen them, refused to advance more than \$50. Schnerr then said "this arrangement having fallen through, you had better take the whole of the goods away, place them in your godown, and I will redeem them by the 8th June," failing which, he gave them authority to realise them. He expected cash on delivery for the goods sold to Schnerr.

The defendant stated that the custom was to give him a month's credit, as was shown by two invoices delivered.

Plaintiff said he had intended to give a month's credit. A day or two after the purchase he heard the defendant had sold some carpets at 20 per cent under the price at which he bought them on credit, saying he wanted them to fill an order from Yedo. That made plaintiff suspect that Schnerr was sacrificing the goods to raise money.

The case was adjourned till to-day at 10 A.M.

Tuesday 9th July.

BUSCH, SCHRAUB & Co. v. SCHNERR.

Capt. T. S. Stevens was called and corroborated the evidence given by Mr. Schraub. He accompanied Mr. Schraub to Schnerr's house. Mr. Schnerr gave him full permission to remove the goods into Busch Schraub's godown. Mr. Schnerr only offered Mr. Weintraub's security for payment. Mr. Weintraub refused to lend more than \$50. He only knew of Mr. Weintraub as security.

Mr. Schnerr objected to Capt. Stevens' evidence being taken.

To the Court. The goods were taken on or about the 13th May. A schedule of the goods taken was then handed into Court. Mr. Schraub said Mr. Schnerr valued the goods; his valuation were attached to the schedule.

Schnerr said that the goods he bought—the carpeting—were not to be paid for till June 8th. He had twice previously bought goods from the plaintiffs and the other goods were payable at the end of the month. Why, he asked, did Mr. Schraub come three weeks before the time and demand payment. In order not to lose reputation he offered to pay Mr. Schraub \$100 and the balance of \$81 on June 8th or to obtain security for the whole amount, for the space of two months. If Mr. Schraub was not willing to give a month's credit why did he not demand cash payment.

His Honour remarked that the case turned upon the question whether or not he had given plaintiffs permission to take the goods.

Schnerr said how was it likely he would allow the plaintiffs to take the goods when such of course would leave him destitute? If he (defendant) had no intention of paying for the goods he should not have offered the \$100 or the security. Plaintiffs had no judicial authority to seize the goods. Plaintiffs said he (defendant) might go to the consul and then told Capt. Stevens to get the coolies. The moment the coolies took away the goods he went to the Consul. The Constable was sent round, but on arriving nearly all the goods had been taken away, only a few trifles being left. Mr. Schraub asked the Constable for permission to move the rest. The Constable said he could not give permission, he only came to see if the goods had been removed. Had the goods not been removed he would not have been in his present position. Mr. Schraub said that the goods were valued at \$240. He maintained that they were worth \$500. The valuations put in were not his as stated by Mr. Schraub.

Mr. Schraub declined to cross examine.

J. S. Weintraub was called and examined by the defendant.

Mr. Schraub and Mr. Schnerr came round to his house and they wanted him to stand security for \$100 for two months. Schnerr asked for a loan for two days till he got some money from Yedo.

To Mr. Schraub. The \$100 was to be paid to plaintiffs. He went to look at the security for the \$100 but found the goods were not worth \$50.

To the Court. He was willing to go security for \$181. Nothing came of the arrangement, for there was not enough goods to cover \$50.

Judgment was reserved.

#### IN H. B. M.'s SUPREME COURT FOR CHINA AND JAPAN.

Before Mr. Consul ROBERTSON.

Tuesday 9th July.

James Swan and T. Mackay, of the *Lord of the Isles*, were charged with neglect of duty. The case was proved and prisoners sentenced to three weeks hard labour.

C. Thurley, of the *Pakwan*, was also charged with the same offence, and sent to prison for six weeks.

#### IN THE U. S. CONSULAR COURT.

Before Mr. Vice-Consul MITCHELL.

Tuesday, 9th July.

Wm. J. Carroll, was charged on oath of David Shields with assault and battery.

Prisoner pleaded not guilty.

David Shields, sworn, deposed.—Last Saturday I was at Homoko with Carroll, who was the worse for liquor. I was standing in the street, when Carroll made a rush at me, knocked me down, kicked and struck me; he knocked several teeth out, and has injured my hand, so that I am in as bad a state as when I went to the hospital last January. My hand has been injured by a gun shot wound, and Carroll kicked and struck it, so that it is in this condition (hand showed fearful brutal treatment.) He tore the clothes off my back, and treated me most shamefully. The Japanese came around us, but offered me no assistance; and I got away as best I could, with but little clothes on me. If I had laid there much longer I would have been killed, as Carroll was infuriated.

Wm. J. Carroll's stated.—Shields and myself were together. I had been drinking. I struck him and knocked him down once; don't think I kicked him. I was in a passion.

Prisoner was sentenced by the Court to 6 months' hard labour.

#### THE PEOPLE OF THE UNITED STATES *vs.* J. L. LIEBERMAN *v.* LEWIS COOK.

Mr. Marks appeared for the defendant who was charged with attempted burglary and assault and battery.

Upon the prisoner being called upon to plead Mr. Marks said he must make a preliminary objection. According to the rules of Court some one specific charge must be laid but the indictment mentioned more and was therefore, he maintained, inadmissible.

His Honour ruled that as outside persons could not always draw up their petitions in legal form the Court must make such allowances as may be necessary. The case would have to be adjourned to secure the attendance of certain English witnesses and while he would accept the indictment as it stood he would adjourn the case till Thursday next at 3 P.M.

#### IN H. B. M.'s SUPREME COURT FOR CHINA AND JAPAN.

Before Mr. Acting-Assistant Judge HANNEN.

BUSH & BLASS *v.* R. MALCOLMSON. Claim for \$95.43.

Defendant, having left in the steamship *Aden*, did not appear.

Constable White, sworn, stated that he personally served the summons.

G. Blass said he supplied the goods mentioned in the bill produced. Prices charged were the usual ones. The bill had been presented to defendant several times without success. The total amount was \$95.43.

Judgment in favour of plaintiffs.

George Peters, seaman of the *Charley*, was charged with being drunk and creating a disturbance in the streets.

Pleaded not guilty.

P. C. Kent said that on Tuesday afternoon he went to No. 173, in consequence of certain information received. He saw prisoner there, quite drunk and creating a disturbance. He had a knife on his person, and he arrested him.

Accused denied making the disturbance, but admitted having taken drink during the day.

Fined \$1 and costs.

#### IN THE UNITED STATES CONSULAR COURT.

Before Mr. Vice-Consul MITCHELL.

11th July, 1872.

THE PEOPLE OF THE UNITED STATES *vs.* J. L.

LIEBERMAN *v.* LOUIS COOK.

Louis Cook was charged with assault and battery. Prisoner pleaded not guilty.

J. L. Lieberman said that last Friday evening at 8 p.m., Mr. Morris, Mr. Cook, and Mr. Oldenberg, and others, were outside his gate. They asked for the key of the Synagogue in a very excited manner. He told Mr. Morris and Mr. Cook that he had nothing to do with it, and told them to go to Mr. D. Davis, or, if they were not then satisfied, to apply to the Consul who had the matter in hand. Mr. Cook said he was a Jew, and wanted the keys. Plaintiff answered that he knew he was a Jew, but that he had not paid his subscription, and he therefore wondered at his taking the matter up. He vilely abused him, and, saying he was armed,

# THE Japan Weekly Mail.

A POLITICAL, COMMERCIAL, AND LITERARY JOURNAL.

VOL. III.—No. 29.]

YOKOHAMA, SATURDAY, JULY 20, 1872.

[PRICE \$24 PER ANNUM.]

## DIED.

On the 6th inst., at the Railway Hospital, THOMAS HAMBLEY, a native of Liskeard, Cornwall, aged 29 years.

## Notes of the Week.

THE Mikado has paid a visit to the Mint, and expressed himself extremely gratified with all he saw there. He took up his quarters at the Reception House belonging to the establishment, which he ordered to be styled from that day "Seupukau." His Majesty devoted a long morning to the details of the works, and subsequently gave Major Kinder an audience at which he graciously expressed his approval of all he had seen—an approval earned by the cordial and intelligent co-operation of the native and foreign officials who administer the affairs of the establishment.

AN indecent and shameless squabble between several members of the Jewish community, arising out of some matters connected with their synagogue, was terminated on Wednesday last, by a fine of \$10 imposed on one Cook, for an assault on Liebermann, the complainant.

The case was tried before Mr. Mitchell, U. S. Vice Consul, who said that the evidence showed more wilful and corrupt perjury than any case he had ever read or heard of. There was an apologetic tone, however, in his condemnation of Cook which we are at a loss to understand, and which seemed strange in a case demanding a just severity from the Bench. We can supply him with a judgment formerly given by one who was more than a prophet, and under circumstances somewhat analogous: "It is said my house shall be called a house of prayer; but ye have made it a den of thieves."

The evidence displayed a singular instance of dead formalism. Liebermann, who appears to be the custodian of the Ten Commandments, which he retained apparently without any thought of keeping, deposed that it was against Jewish law to pray for any sick or dying person on the evening of Friday—the commencement of the Sabbath—though any application to him at that time for the roll of the sacred law was deprecated because "he always got tight on Friday evenings." We should have imagined that as it was never disputed even in times of the most pharisaical formalism that it was lawful to pull an ox or an ass out of a pit on the Sabbath day, no injunction would be placed upon an act of devotion in favour of a human being. But in this we presume we are wrong, and that the spiritual level of modern Judaism is below what it was eighteen centuries ago. As a local, social, and religious study, this trial affords some matter for thought—but infinitely more for bitter shame.

Mr. Mitchell, U. S. Vice-Consul for Kanagawa, has displayed much good sense in repressing the energies of the loafers and rowdies who infest the settlement. These have long been a grave source of annoyance to the community, and both foreigners and natives alike, have suffered from their depredations. The sentences which Mr. Mitchell passes upon all such as come under his judicial notice would seem likely to do good. Six weeks hard labour during this hot weather is not the kind of employment which a loafer, accustomed to bully the country shopkeepers into supplying him with liquor gratis and then sleeping it off under the friendly shade of a neighbouring hedge, would instinctively prefer, and as such sentences are

by no means infrequent, we may well look for some improvement. The nuisance arising from drunken sailors should also be on the decrease, as these worthies rarely escape the clutches of the gaol when they enter the U. S. Court, while the brutal assaults which some time ago were so prevalent seem to have somewhat subsided. Mr. Hannen and Mr. Robertson have apparently both determined to take the matter in hand, and a continued series of severe punishments is alone needed to render the settlement a little less liable to the influx of loafers which characterises the approach of winter. Mr. Mitchell, at least, deserves credit for acting with decision in a matter which has long required the application of strong repressive measures.

## COREA AND JAPAN.

The following somewhat extraordinary article appeared in the *Japan Gazette* of July 18th. It may be mentioned that three years since there was considerable agitation in Yedo with respect to an expedition to the Corea, the object being to employ the dissatisfied Tokugawa men. Since then nothing has been heard of the matter, and it seems almost a pity that it has been raked up. However, it is of some interest, and we give it for what it is worth.

"Two letters which have lately appeared in the *Nishin Shinjishi* have excited a great deal of attention both in Yedo and the provinces; and also some degree of excitement in certain quarters. They are upon the subject of the Corea; and it is very evident, from the interest they have evoked, that this is the subject, *par excellence*, that after the pressing affairs of the moment, lies nearest the heart of the Japanese nation. The first writer was short enough in his own remarks, but he gave a copy of the letter sent by the Coreans in reply to one from hence, and this letter will be read everywhere as at once revealing the state of relations between Japan and Corea.

This is the letter of the correspondent of the Yedo paper:—

"As soon as our Government in Japan was established (after the revolution), an embassy was sent to Chosen (Corea), with a demand for the fulfilment of the old treaty (which made Corea tributary to Japan). Instead, however, of complying with the request of our Government, the Coreans returned an insulting letter, so repugnant to our people that we cannot endure it. This was three years ago; and probably it is now too late to speak; but I have felt very indignant with it, and can be no longer silent. Patriots ought to form their judgment upon it."

This is the reply of Chosen to the Government of Japan:—

"We have received your letter and have given it very deep consideration, comparing your despatch with other despatches. It is a long time since there has been any intercourse between our two countries. Your despatch demands payment of tribute. We will shew how this affair stands. Taicō Sama, without provocation or cause of any kind, invaded Corea, and made Corea sign a document agreeing to pay tribute. In those days Corea was unprepared for war, and had not even been informed of the intention of Japan. But it is very different now. The invasion by Taicō, was a crime committed against Corea by Japan, which is not yet punished. Your demand is so unreasonable, that instead of Corea paying you tribute, it is for you to return the money paid by Corea. In your despatch you have made many insinuations of your having adopted foreign customs; we can assure you that Japan is Japan, Corea is Corea—but Corea has its own customs. Some years back we had a difference with a coun-

try called France, which is, among barbarians, considered to be very powerful and very large, whilst Corea is very small—but we defeated that great country. We assembled all our warriors, every one of whom was ready to die. According to our old treaty of friendship, whenever either is attacked by barbarians, the other is to help. To shew our honesty, when the barbarians went to your country, we immediately wrote to you that we had made every preparation to help you. During the French attack on Corea, we day and night expected that you would come with your forces to our aid; but not having received your assistance, we wrote and informed you of our distress, informing you of our position, and asking for immediate help. You have neither sent us aid, nor any answer to our despatch. From that day our treaty of friendship was at an end. We no longer consider each other friends, but enemies. The tone of your despatch is so friendly that we look upon it as treachery; and after having been so friendly with Japan and being repaid by treachery, we never can be friendly again. Not only have you broken the treaty as we have above described, but you have also broken another very chief point of treaty in adopting the manners and customs of the western barbarians. Our information is, that you have adopted French drill; and whenever you want money, you go to England; and if you wish to tax your own people or impose duties you take advice from Americans. But you have never consulted us, as agreed in our old treaty. You think the western barbarians are great people. We, Coreans, are a very small country, but yet, we have the courage to put in writing to you, that western barbarians are beasts. The above we intend as a direct insult to you and your allies—the barbarians. We desire that you should join them and bring your great ships and your army here. Fusankai is the nearest part of Corea to Japan. To make your attack as inexpensive as possible to you and your friends, we will send and clear Fusankai for a battle-field, and will appoint the battle. It is useless to go into any correspondence, because the wrong you have done to us is so great, that your apologies will not avail. The only alternative is a bloody war.—A war that will cost Japan all its warriors;—and then we will bring you to terms.

This is our intention. You must not attempt to write us again; and the above is a notice to you to make all preparation, for either Japan must invade Corea, or Corea will invade Japan."

(Signed) KAKURIN.

Circumstances that took place on the publication of this letter, have proved to us conclusively that it is genuine; and we are not surprised at the emotion it has caused."

THE members of the Y. A. D. C. have decided to place on the boards for their next entertainment the burlesque of "The Field of the Cloth of Gold." As a burlesque, this is perhaps one of the best of the modern stage. It is witty, overflowing with puns, plenty of songs, and has comparatively so little of the "leg" element, that it can well be played by men without losing any good features. The cast, as at present announced, runs much as follows: Mr. V. de Browne, *King Francis*; Mr. Frederick (we believe that is his name), *Henry VIII.*; Mr. Oddson, *First Brigand*; Mr. Newcombe, *Tête de Veau*; Mrs. Trotter, *Queen Katherine*; Miss Godfrey, *Anne Boleyn*; Miss Mathews, *Constance*; Miss Brani, *Suffolk*; and an American gentleman, whose *nom de théâtre* we do not know, plays *Sir Guy*. The cast is good, and with the addition of the excellent music afforded by the kind assistance of the Amateur Orchestra, we do not doubt that it will take exceedingly well.

ON July 17th Vice-Admiral Shadwell inspected the battalion of marines at the camp. The usual manoeuvres were not gone through, but the troops were exercised in the platoon and other drill. The Admiral expressed himself as much pleased with the creditable manner in which the troops went through their exercises, and their orderly appearance.

WE understand that the *Iron Duke* according to present arrangements, is to leave shortly after the arrival of the mail of July 31st, and the *Salamis* will follow her with a fortnight's

later mails. Mr. Watson will take this opportunity of visiting the northern ports of Hakodate and Niigata, to which latter Mr. Lowder proceeds as British Consul by the same opportunity.

DURING the past day or two a report has been circulated to the effect that the *Thracian*, which left London on Dec. 20th, has been lost. On enquiry, the rumour, although discredited by some, receives very general confirmation.

It will be remembered that the English mail, per P. & O. Str. *Araca*, arrived only three days after the French mail. The mail by the *Araca* is the quickest on record, the whole passage only occupying forty-two days six hours.

Messrs. Haygarth and Singer's third and farewell entertainment took place at the Gaiety Theatre last evening. The house was not full but the performance was appreciated, the novelty of the evening being the introduction of a Japanese juggler. It may be mentioned that the Grand Piano was not given away, Mr. Haygarth explaining his case to the audience during the interval.

#### OUR RIGHT OF APPEAL.

A JUDGMENT delivered on Monday last by the Acting Assistant Judge, to the effect that English subjects are practically without the power of appeal from the decisions of the "Supreme Court" in this country, has produced among them a sense of unpleasant surprise such as few announcements could have excited. The idea that, by some means or another and by no fault of our own, we have forfeited one of the most cherished privileges of our birthright, is far from agreeable. We have not even potage to show for our loss. It is bad enough to live in this Inferno with all our rights about us—to be banished from the world's brain to its heel—to mark one's intellectual and moral subsidence year by year in spite of protest and strenuous resistance. But to think that we are legally hanging here, self-poised, self-contained, unconnected with, indeed, cut off from, our legal genealogical tree, is a far more serious matter. We are disinherited without reason. There is no bar sinister on our escutcheon, and yet we do not come into possession. An inalienable right has been alienated from us. We have been thrown into a pit and sold into bondage. We are lesser Englishmen than our brethren over the whole world; shorter by a whole right; weaker by a whole invaluable privilege. Our fortunes and characters might be at stake at any moment, and the cast might go wrongfully against us. No *de profundis clamavi* will avail us then. The earth is as iron under us, and the heavens are as brass above us. It is impossible that we can have been intentionally left so deserted. But it is equally certain that we shall get no help unless we bestir ourselves, and show that we appreciate the forlorn condition to which we are reduced.

The argument of Mr. DICKINS in favour of an appeal from this Court to Shanghai seems to be based on the plea that the Court is only a Provincial Court, presided over, indeed, by an officer of the Supreme Court, to whom some of the powers inherent in that tribunal are delegated, yet remaining, in spite of this, only a Provincial Court existing under special and exceptional conditions. He argued that the Order in Council of March, 1865, must be regarded as the embodiment of our statutory rights, and interpreted in accordance with the presumed intention of the Legislature in framing it, which intention

can never have involved the desire to exclude us from the possibility of appealing against decisions pronounced here. Taking Section XIV of the order, he relied on its provisions to prove that any case brought before the Assistant Judge could be subsequently referred to the Chief Judge, though, if we understand him rightly, rather for a re-hearing than an appeal. But we cannot persuade ourselves that the wording of Section XIV provides for this, at least, as far as Yokohama is concerned. It runs as follows:—

14. The Assistant Judge shall hear and determine such matters and questions arising in suits and proceedings of a civil nature, originally instituted in the Supreme Court, as are from time to time especially referred to him by the Judge; but in every such case any party to the suit or proceeding shall be entitled as of course, to a re-hearing before the Judge.

What matters and questions does this provide for? For matters and questions "*arising in suits and proceedings of a civil nature.....as are from time to time specially referred to him by the Judge.*" This, obviously, does not mean suits, but points arising in suits, and would alone be enough to show that under this Section, at all events, we have no such protection as we desire. And if further proof were necessary, it would only be sufficient to adduce the words which conclude the sentence quoted, which cannot apply to such cases as arise here.

And Mr. HANNEN apparently took this view. He said:—"If you have anything under Section XIV, I have nothing to do with it." The meaning of which, if we apprehend him rightly, is, in his own words repeated elsewhere, that "if you are entitled to a re-hearing you have no business to apply to me at all. You should go straight to Shanghai," say "give me a re-hearing," and then go to that Court to decide what kind of a re-hearing it is to be."

But as the argument proceeded, a larger question even still was opened up, though it was not discussed; nothing less, indeed, than the legal constitution of the Court here, and therefore the binding force of its decisions. Its occasional existence is, indeed, provided for, but not its permanent and continuous existence, as the Judge himself allowed, and if the former is not a sufficient legal foundation for it, its decisions have not the binding force of an eyelash. It seems to us a mere fiction to say that it is the Supreme Court on circuit. It is to all intents and purposes a permanent Court. The whole question is, what is its jurisdiction? Is it a Supreme Court or a Provincial Court?

To constitute it the former, it must, we apprehend, have supreme jurisdiction, not only over the Provincial Courts, but in all civil cases. But it has neither the one nor the other. It is not the Court of appeal against the decisions of the Consular Courts at the out-ports, nor has it jurisdiction in lunacy, matrimonial, or some other varieties of cases. If its authority rests upon Section 38 of the Order in Council, as Mr. HANNEN said that it might (not did), that Section empowers the Chief Judge to appoint "*the Assistant Judge or the Law Secretary to visit.....any Provincial Court*" to hear and determine civil or criminal cases arising within the jurisdiction of that court. But this might put us into the hands of the Law Secretary, a very subordinate officer, and, if he remained here, as Mr. HANNEN does, we should be without the right of appeal from his decisions, absolutely, for sums under \$2,500, and

only to the Privy Council in more serious cases; than which nothing more monstrous can be imagined.

If it were a Supreme Court, too, would not the Order in Council somewhere provide for the abolition of the Provincial Court whose place it takes? The Provincial Court is not abolished, and the foundation of the Supreme Court is not laid. On what does the tortoise rest?

Again; the Supreme Court is one and indivisible. Its *locus standi* is at Shanghai. How can it be here too? If you confound the persons, you divide the substance—we mean no irreverence—and you cannot conjure with law as theologians conjure with creeds. If the Chief Judge were to come over here on circuit, he would bring the Supreme Court with him, and no appeal except to the Privy Council need lie from his decisions. It would be ridiculous to appeal from Caesar to Caesar. But if we look on our Court as a Provincial Court, presided over by one of the officers of the Supreme Court who holds some of the powers vested in that Court, we have an intelligible position, though we cannot find that any clear provision is made for that position. Supreme Court to *all* intents and purposes it obviously is not, and we very much doubt whether any one can accurately say what it is.

The fact would seem to be, that when the Order in Council was drawn up, no such Court was contemplated. We cried for a Judge, and it is incontestable that we wanted one. The Chief Judge did what he could for us, and made the arrangement, but the Order in Council did not provide for it, and, as it seems to us, its whole basis is unsound. That we should be practically without the right or power of appeal from its decisions is absurd, and perhaps no better means could be devised for bringing this absurdity fully to light than the statement from the Bench that we have no such power. The unsatisfactory position of the whole affair was exposed in the judgment, which seems to us sound, specially in this, that it refuses to twist any section of the Order in Council to the support of the Court, but frankly confesses that the whole evil must be boldly faced, so that the Legislature may deal with, and make ample provision to meet it.

We are aware that in treating this matter we have done so very superficially. It is a case for lawyers, and laymen know little of the use of their weapons. But in giving publicity to the judgment, and drawing attention to it, we have done what lies in our power to subserve the interests of the British part of this community.

#### THE EXPORT OF RICE.

WE have already drawn attention on several occasions to what appears to us the mistaken policy of the Government in respect of the export of rice. We have shown the economical fallacy of its undertaking such business on its own account, and while we have admitted that it has the right to choose its own agents through whom that business is transacted, we are still decidedly of opinion that its entire course of action in this matter is wholly unworthy of its advanced professions, besides being inimical to its interests. Without, perhaps, granting exclusive privileges to members of any special nationality as such, its action upon this very important question savours of a back-stairs influence (we do not use the word in an invidious sense), which is not to the credit

of the Government, and cannot be for its real welfare. Nothing is easier than to persuade men ignorant of economical science that some specious plan, wholly opposed to the principles of that science, is sound, provided only it offers the attractive advantage of immediate pecuniary relief. But in dealing with national affairs, advice which is naturally and even legitimately interested should be subjected to a rigid analysis, and rejected in cases where the adoption of it is not manifestly for the public good. Amongst other good reasons which seem to us to demand renewed attention to this subject, there are two or three which have arisen since our last articles on it were published, and while we think that those reasons on which we previously grounded our protests against the action of the Government are as irrefutable as ever, we are glad to think that time has placed additional arguments in our hands which lend fresh support to our old position.

The first of these is the prospect of a splendid crop this autumn, which, if realized, will place the country in a very secure position as regards its food prospects for at least two, it may be, three, years. Now, in order that all the advantages derivable from this crop may be realized, it is important to prevent the price of rice falling below such a rate as will tend to discourage its production, and this can only be done by a large measure of permission to export it. But no mere export of it by the Government through its own agents can effect this. A nation must throw itself upon broad, sound, general principles, and allow these to work out their legitimate results; not attempt to nurse and coddle trade, and thus repress those very instincts upon the free play of which the development of that trade depends. All this hole-and-corner tendency which characterizes Japanese legislation on these matters is utterly unsound, utterly inimical to the prosperity of the country, and repressive of that commercial spirit so necessary to the growth of its future wealth and welfare. It is more than probable that we have entered upon a cycle of favourable seasons. It is quite certain that we have passed through a cycle of bad seasons. Last year the crop was superb; this year it promises to be equally good; and the occurrence and recurrence of such cycles are well known to physicists. Under these circumstances, the Government has an admirable opportunity for effecting an organic change in its policy in respect to the exportation of grain, and the great object of this change should be to make this country a granary for China and the Pacific coast of America. We do not argue for an entire repeal of the laws prohibiting the export of rice. The country is not ripe for this either materially or mentally. Its means of internal communication are far too undeveloped, and the prejudices of the people are yet far too strong, to permit of an unrestricted grain export. Yet, after making due calculation in regard to the requirements of the country, the Government might institute periodical sales, granting to buyers the permission to export their purchases. It could hold in its own hand the friction lever to prevent grain running away too fast. Its command of the estimates of production and consumption would be quite sufficient to guide it in the use of this lever, while the money which would pour into the country in return for its grain would tend to the rapid growth of its wealth. Why should not the Government issue throughout the Empire a clear,

short, but well argued edict on this subject, setting forth the advantages which would accrue from the proposed policy, and the disadvantages which experience proves to wait upon such laws as those which now regulate this trade? Such an edict would appeal powerfully to the agricultural class, which must be a very large one, and which would see its own prospective gains in the proposed policy. Violent fluctuations of price in the first necessary of life are infinitely to be deprecated, and nothing could tend so surely to prevent these as liberal regulations in regard to the grain trade.

The second ground on which we would press this question is one casually hinted at above, viz; the supplying of the San Francisco market from this side. California is a large importer of rice, and will continue to be even more and more so on account of her increasing Chinese population.

The quantity entered during 1871 was as follows:—

China ...	27,480,000 lbs.
Siam ...	2,496,000 „
Manila ...	195,300 „
Hawaii ...	709,000 „
Mexico ...	3,000 „
Carolina...	320,000 „

31,203,300 lbs. or nearly 14,000 Tons.

Nothing but a bad law now stands in the way of our supplying this large consumption, and sharing with the Japanese the large profits which would accrue from the trade. The best Japan rice is preferred to that from Carolina, and if shipped more cheaply than China rice would gradually win over the Chinese to itself. It is, indeed, necessary to have it cleaned on arrival, but this is done on a very large scale by machinery in the local mills at an expense of five-eighths of a cent per pound, and the margin shewn on the whole transaction is very large.

But in order that the country should reap the full benefit of any such measure as we propose, it would be necessary to give increased facilities, under proper restrictions, to foreign shipping to visit the ports on the coast not now accessible to foreign flags. This might possibly be done under what is known as a general bond in England, in which the charterer or owner binds himself in heavy penalties to proceed only on the specific voyage, and with the specific purpose, declared in the bond, and to obey such regulations as may be imposed on the ship, officers and crew, during her stay at her destined port. Rice can be obtained in the province of Sendai at about a *ryo* per picul, it could be transported here for 20 cents, and it is worth in its cleaned state in San Francisco 9 or 10 cents per pound. This is only one branch of the new trade which would spring up on a relaxation of the law at present in operation, but it is an excellent branch, and would yield good fruit to this country. We would again especially request the attention of the Foreign Ministers to this question. The moment is opportune; all the conditions are favourable; last year's harvest has well stocked the country; the present crop promises superbly; the time for the revision of the treaties is at hand; and on no other subject would greater disappointment be felt by the mercantile community of Japan than on this, if negotiations should fail to produce the end for which we have now and have long since been arguing.

# THE CONVERSION OF H. M. THE MIKADO BY MR. GOBLE.

NO one can accuse us of having been lukewarm on the one side, or fanatical on the other, in respect of the Christian question in this country. It is a cause we have much at heart; which we have always treated with earnestness and the deep respect imposed by the subject; and which, as long as we think that any good can be done by discussing it, we shall discuss freely. It is only very recently that we referred to the possible advent of a number of ignorant men into the country as teachers of Christianity, but believing that they would at least be honest, although ignorant men, we had no misgivings on the subject, because we felt sure that many good, wise and able teachers would be brought here by the same current of events, and that whether united or working separately, their efforts would conduce to the well-being of this country and people. The profession of the Missionary has always seemed to us one of the noblest which can engage the life and labours of any man, and all the more noble, perhaps, because the world rates it far otherwise, knows little of its toil or self-sacrifice, secretly disdains it, and has no measure by which to estimate the value of the rewards which are promised to it. But there are two main causes which militate against any high rating of it as a profession, and these the world estimates quite rightly. The first is that it enlists some of the most stupid and ignorant men in the world in its ranks; and the second, that it has been discredited by the dishonesty of many of its members. This dishonesty usually takes the form of exaggerated statements of the success of missions, and the public, accepting these statements as true, are deluded into giving money very freely for missionary purposes. This amounts to nothing less than obtaining money under false pretences, and is a criminal offence punishable by imprisonment; and, as it is our wish, by any means in our power, to free the religion we profess and the civilization we attempt to represent from a taint of this kind, we consider it our duty to expose misrepresentations on this subject made by dishonest or ignorant men for the purpose of obtaining money. With this end in view we publish *in extenso* the following report taken from the New York Tribune, a paper of great weight and respectability.

## THE AMERICAN BAPTIST MISSIONARY UNION. FIFTY-EIGHTH ANNUAL MEETING—THE JAPANESE MISSION.

The 58th anniversary meeting of the American Baptist Missionary Union opened at the Calvary Baptist Church in Twenty-third-st. at 10 a. m. yesterday, the Rev. M. B. Anderson, LL. D., of Rochester being chosen chairman. After an address by Dr. Anderson, the annual report of the Executive Committee was read. It expressed gratitude for the harmony that has prevailed in their councils, and for the success they have enjoyed both at home and abroad; stated that the interest of the churches in the cause of missions to the heathen has not diminished; gave detailed accounts of the condition of the various foreign missions, chronicling an increase in their number and greater stability, strictness, and order, and said that the object of the committee in the home field has been to cultivate a missionary spirit, promote healthy missionary zeal, and help the preachers in training their flocks for this work. The report was very long, and the reading of it occupied most of the morning session. The following is the Treasurer's report:

The society has received for the year ending April 1, 1872, donations, \$151,611 45; legacies, \$17,651 71; donations for the Bangook Karen College, \$8,477 64; donation for the Chapel in Paris, \$8,957 30; Women's Baptist Mission East, \$5,137 04; Women's Baptist Mission West, \$2,625 44; American Bible Society, \$2,000; American Tract Society, \$200; other sources, \$12,538 51, making a total of \$212,199 10. The expenditures during the same period were \$230,952 17, which leaves an indebtedness of \$18,753 07.

The afternoon session was opened with prayer by the Rev. J. D. Fulton of Boston, after which the following resolution was unanimously adopted:

*Resolved*, That though we miss the face of the Rev. Jonah G. Warren D.D., from among us, we are conscious of the help received from the prayers of this man of God, and would express the hope and confident

expectation that we shall soon see him at his post, working for God and for the spread of His Gospel throughout the world.

The Rev. M. B. Anderson, the Rev. Mr. Murdoch and Dr. Sheldon delivered addresses, eulogizing the character of Dr. Warren, and declaring that he had been of more use to the cause of Foreign Missions than almost any other living man. The Rev. Wm. Ward of the Assam Mission was then introduced, and said that as a missionary of long connection with the Society he considered that he belonged to his brethren, and was subject to their call. He thought that not enough interest was taken in the cause of evangelization, and if the Christians in America could only see how anxious the Hindoos and Assamese were to know Christ they would contribute more liberally to the Foreign Mission fund.

Dr. Bright of New-York said he hoped that no more difficulty would exist between the Free Mission Society and the Missionary Union, and that they should be merged into one Society, as they were both working for one common interest. The Rev. Dr. Goble was now the representative missionary in Japan, and he thought that as Dr. Goble had been there so long, and was so thoroughly acquainted with the Japanese vernacular, he should be allowed to remain there. But as Japan was so large a field, and required such earnest efforts for its evangelization, he thought Dr. Goble should have some one to assist him, and he knew of no one who was better able to do so than the Rev. Nathan Brown, the poet, divine, and Christian. The Rev. Nathan Brown was then called for, and said:

I trust this movement that is being made to unite our missionary interests will meet with success. Bro. Goble will receive our thanks for the noble way in which he has vindicated the cause of Christ in Japan. He has succeeded in establishing a flourishing Christian Mission in that country, and among others whom he has converted is the Mikado himself. A few years ago this monarch thought he was a descendant of God Almighty, and had written on the pillars of his temple an edict prohibiting Christians from sojourning within his kingdom, and he even went so far as to have all who refused to acknowledge him as the Supreme power put to death.

Dr. Goble—It was my privilege to travel across the Pacific with the Japanese Embassy a short time ago. I had just finished translating the Gospel of St. Matthew into the Japanese language, and wished to present the chief ambassador with a copy. Before I could get a chance to do so, he had asked the American Minister for an introduction to me; and after we became acquainted, the first thing he asked me about was the progress of Christianity in Japan. He was very much pleased with the translation of St. Matthew, and expressed a desire to have the whole of Japan evangelized.

At the evening session addresses were delivered by the Rev. Dr. Goble of Japan, the Rev. Wm. Ward of Assam, and several others.

We would have our readers first remark the large sums of money collected by this society, which amounted for the year 1871-1872 to \$212,199.10, the expenditure exceeding this income—of course—by \$18,753.07. Of the various speakers, with one exception, we know nothing, though we infer something from the unmanly dribble of their utterances, the cant of their phraseology, and the gross delusions under which one of them at least labours—we put this charitable construction upon his words—in respect of the Hindoos and Assamese, of which we do not believe one word. It is the Christian who ardently wishes to teach the pagan; this we will allow. It is not the pagan who ardently wishes to be taught by the Christian, for all experience is against anything of the sort. But be this as it may, the speaker we happen to know is Mr. GOBLE (above called the Revd. Dr. GOBLE) who has been for many years a self-supporting missionary in this country, and who, by turning his knowledge of Japanese to good account, has become possessed of houses and lands here, has attracted to himself at least one considerable legacy on the strength of his success as a preacher of the Gospel, and has found in his profession the equally comfortable promise of the life which now is and that which is to come. We should be the last to reproach him for having made the humble trade at which he formerly laboured the means of his support. The greatest of all missionaries, and the first gentlemen of his age, was a tent-maker; Bunyan was a tinker; and if Mr. GOBLE was a cobbler, he translated one of the Gospels into Japanese while he repaired soles and heels for this community—and all praise to him for it. But he not long since appeared here as a litigant in an unseemly squabble with a brother missionary about a few dollars, and whether right or wrong in this, he has brought grave scandal on his profession and on his faith by his violence and unruly temper. We may be certain that much of his time must have been

taken up in looking after his temporal interests, and, if we are rightly informed, his tenants have never found that the severe discipline which he learned as a marine in the U. S. service was at all relaxed in his relations with them. Dr. BRIGHT of New York spoke of Dr. GOBLE "as the representative Missionary of Japan," and the Revd. NATHAN BROWN, who followed Dr. BRIGHT and was introduced as the "poet, divine, and Christian," made the astounding statements presented in the body of his speech upon the subject of the conversion of the Mikado. We will absolve Dr. NATHAN BROWN from all complicity with this gross misstatement. We will presume he believed what he said, though the value of his words may be inferred from the fact that he could not have verified his statements in this case, and, therefore, in all probability, is not in the habit of doing so. Mr. GOBLE's sin is far deeper. He allowed this statement, as far as we can judge from the Report before us,—a statement utterly false, and made in his actual presence,—to remain uncontradicted, and therefore what was merely a foolish misstatement by one man, became, by implication, a wicked falsehood in the other, and with this, be the consequences what they may, we deliberately charge Mr. GOBLE. He knows that the Mikado, whom, in all probability, he has never seen, has not been converted to Christianity. He knows that the insulting edicts against Christianity have never been withdrawn by the Government, and he is Japanese scholar enough to have recognized and read them on the edict boards of the native portion of this settlement, under the very noses of the foreign community. Comment on these facts is superfluous. We shall send a copy of this number of our journal to the New York *Tribune*, and to the American Baptist Missionary Union, and we now call upon the latter to make a full investigation into all the facts connected with the grave case. The mission Board can only clear itself of complicity with this falsehood by at once disclaiming all participation in it, and by the expulsion from its body of their representative Missionary in this country, by a special published resolution to that effect. Nothing less will free it from the taint of being a party to one of the most scandalous pieces of humbug by which the religious world was ever deluded and defrauded.

#### NIHON GUAISHI.

#### ACTUAL HISTORY OF THE MINAMOTO FAMILY.

#### PART I.

(Continued from our last.)

Yoritomo returned to Kamakura where he inflicted penalties and bestowed rewards on a large scale. He pilloried the heads of Nagata Niudô and his son, and decapitated Oba Kagechika. He then summoned Sudô Tsunétoshi and addressing him, said: "How about the mouse plotting against the cat," and was about to cut his head off. Tsunétoshi's mother had formerly been Yoritomo's foster-mother, and consequently interceded for clemency. He was pardoned. Yoritomo gave Nagao Sadachika to Okazaki Yoshizane, saying: "He is your enemy." Yoshizane also interceded for his life, and obtained it. Itô Sukéchika wished to put to sea and flee to the west, but was captured by Amano Tô'agé, and placed in the custody of the Miura family. Yoritomo sent for Sukékiyo, desiring to requite his services. Sukékiyo absolutely refused, and begged leave to go and join the Heishi, having formerly been a recipient of their generous bounty. Yoritomo granted him leave in view of the loyalty of the sentiment. Sasaki Yoshikiyo surrendered, and was also pardoned on account of his father and elder brother.

In the eleventh month Yoritomo took command of some troops and attacked Satake Yoshimasa in Hitachi, and because Hirotsuné was related to him by marriage made the latter persuade him to surrender, but after having thus lured him on, he put him to death. Yoshimasa's nephew Hidéyoshi occupied the castle of Kanasuna.<sup>118</sup> Hirotsuné also allured Hidéyoshi's uncle Yoshihiro by an appeal to his greed, and made him act the traitor from within. He secretly entered the castle with his troops, and, attacking Hidéyoshi, put him to flight, after which he partitioned his lands amongst his officers.

In the twelfth month, Yoritomo's new residence being completed, he removed to it and dwelt there. He allotted houses to more than three hundred officers. He also established the *Samurai-dokoro*, and appointed Wada Yoshimori its *betto*, in fulfilment of his previous promise. He selected eleven sturdy warriors, who were on duty in his bedchamber every night, and thus provided for his own safety.

At this time the number of the men of mark in all parts of the country who took up arms and supported Yoritomo was very large. The Kôno family rose in the Nankaidô, the Kikuchi and Ogata families rose in Kishû, the Yamaki and Kashiwagi families arose in Omi, whilst Kiso Yoshinaka was a young orphan. Hatakéyama Shigéyoshi intended to put him to death, by orders from Yoshihira, but had not the heart to do so. He placed him in the charge of Saitô Sanémori, who, again, transferred him to the charge of Nakahara Kanétô in Kiso, whence he took the surname of Kiso. Yoshinaka was always indignant at the cruel destruction of the head branch of his family, and secretly planned how to take revenge. In playing with the other children, he constantly imitated the action of a mounted archer. As he grew older he became extraordinarily sturdy; he possessed great bodily strength and was a skilful archer. He secretly visited the capital, and several times watched for a chance against the Heishi. When the orders of Prince Mochihito arrived, he rejoiced and collected troops, obtaining more than a thousand men on the spot. The Heishi, on hearing of this, summoned Kanétô and reproached him. Kanétô acquainted Yoshinaka, who left him, and took refuge with Nenoi Yukichika. He invited all the Gen of Kai and Shimotsuké to join him. On hearing that matters had come to a head at Ishibashi, he wanted to march there to render aid, but was prevented by Kasawara Yorinawo, a man of the same province, who came to attack him on behalf of the Heishi. Yoshinaka attacked him, and having put him to flight, took up a position among the mountains of Kiso.<sup>119</sup>

In the spring of the first year of Yô-wa (1181) Kiyomori died, and was succeeded by Munémori. In accordance with Kiyomori's will, he sent his younger brothers in command of troops down to the East. Yoritomo, on hearing of this, despatched Wada no Yoshimori to aid Yasuda Yoshisada in holding Tôtômi.

Yoritomo's uncle Yoshihiro was in Hitachi, and desiring to surprise and take Kamakura, assembled thirty thousand men, with whom he entered Shimotsuké, and endeavoured to seduce Ashikaga Tadatsuna, and Oyama Tomomasa. Tadatsuna responded to the call, and Tomomasa feigning to do so, made an ambuscade, attacked, and defeated him. Yoshihiro fled, and joined Yoshinaka.

Yoritomo's youngest uncle Yukiiyé, who was in Mino, fought with the Heishi, was defeated, and retreated. Yoritomo despatched his younger brother Giyen in command of some troops to his rescue. In the third month Yukiiyé and Giyen encamped with two thousand men on one side of the river at Sunomata,<sup>120</sup> while Taira no Shigéhira was on the other with seven thousand horsemen. During the night Giyen adventured forth by himself and crossed the river. He was caught by the patrols of the Heishi and died fighting. Yukiiyé advanced close after him, but was worsted, and after fighting fled to hold the Yahagi<sup>121</sup> river, whence he sent a man

(118) About the centre of Kishi dept. in the province of Hitachi.

(119) Kiso is the general name for the South-western portion of the province of Shinano or Shûshû. It is drained by the Kiso-gawa which falls into the Bay of Owari.

(120) This river rises in the north of the province of Mino, which it cuts in half, falling into the Kiso River no great distance above its mouth.

(121) This river rises in the dept., of Shidara, flows through Kamo and Awami depts. in the province of Mikawa, and empties itself into an arm of the Bay of Owari.

westward in the guise of a coolie. The man met with the western troops, who asked whether succours had arrived from Kamakura or not. He answered and said: "The van is at Kikugawa,<sup>(122)</sup> the rear at Mitsuké."<sup>(123)</sup> Shigéhira was greatly alarmed and retreated. Yukiye sent a man galloping to proclaim Mino and Owari, saying: "The Heishi flee. He who does not shoot them is 'my enemy.'" The people of the two provinces rose with speed and lay in wait to attack them. The western army lost its presence of mind and went its way. Yukiye wished them to enter the capital and beg assistance from the priests of Iliyeizan, but the priests refusing to take his side, he fled and joined Yoritomo.

Previously to this Taira no Munémori had ordered the Fujiwara family in Mutsu to attack Yoritomo, but they refused. He also ordered the Jō family of Echigo to attack Yoshinaka, and they consented. In the sixth month Jō Sukénaga called out more than ten thousand troops and entered Shinano. Yoshinaka formed three ambuscades, attacked him, and killed nine thousand men. In the ninth month Taira no Michimori and others also came to attack him, but he anticipated their attack in Echizen, and inflicted a severe defeat on them. In the first year of Jinyei (1182) Jō Nagamochi came to attack him with thirty thousand horsemen. Yoshinaka had three thousand effective troops, which he divided into seven bands, in accordance with a plan suggested by Minamoto no Mitsumoto. He hoisted a red banner and went to meet them so that the enemy thought it was some of the Heishi party. As he gradually approached nearer, he lowered the red banner and raised a white one, and attacked them rapidly. The enemy's army was astounded and scattered. Nagamochi received a wound and fled. All the men of mark in Mutsu joined Yoshinaka.

Takéda Nobumitsu wished to marry his daughter to Yoshinaka's son Yoshitaka, but the latter replied: "I will receive her as his concubine only." Nobumitsu was wroth, and tried to alienate Yoritomo from Yoshinaka by saying: "Yoshinaka has several times been 'victorious, and extends his power in the northern provinces. Taira no Munénori once adopted his elder 'brother's' daughter, whom he wishes to marry to Yoshinaka, and entering into an alliance with him, to 'march eastwards together.' Yoritomo was very wroth. It happened that Yukiye came to Kamakura and prayed to be granted a fief. Yoritomo replied: 'I have taken 'ten provinces and Yoshinaka has taken five. Why does 'my Lord not take some for himself?' Yukiye was enraged, departed with more than a thousand horsemen, and gave in his allegiance to Yoshinaka. Yoritomo waxed more wroth than ever. In the third month of the second year (1182) he took the command of a hundred thousand horsemen and entered Shinano. Yoshinaka assembled his officers. Higuchi Kanémitsu and Imai Kanéhira wanted to throw up earthworks at Tomibé<sup>(124)</sup> to resist the attack, but Yoshinaka said: "The world says universal-ly that the Genji devour each other. How about people's laughter if we now after all leave our detested foes 'the Heishi alone and measure weapons with our own 'race?' He then led his troops into Echigo so as to avoid an encounter. Yoritomo also led his troops home again. He sent a messenger to speak to Yoshinaka saying: "The measure of the crimes of the Heishi is full, 'and the Imperial court has commanded our race to 'punish them. Night and day ought we to hasten to 'carry out this command. But Jiurō<sup>(125)</sup> has taken up 'arms on his own account to execute his designs against 'me, and you have given him shelter. Why do you 'leave the west alone and turn eastwards? If you have 'no disloyal intentions, I pray you to expel Jiurō at once, 'and if you will not, then I will adopt<sup>(126)</sup> your son as my 'own. If you will accept neither proposition, I will have

"an interview with you at the head of the troops of the 'eight provinces." Komuro Tadaakané, one of Yoshinaka's commanders, advised him to grant the request. Kanéhira said: "Has my prince heard of Okura?<sup>(127)</sup> How can<sup>(128)</sup> 'Sa-kō ever feel amicably towards my prince? You had 'better break with him at once," but Yoshinaka followed Tadaakané's advice and sent Yoshitaka to become a hostage.

In the 4th month the Heishi sent an expedition consisting of more than a hundred thousand horsemen against the East. They first attacked Yoshinaka. Yoshinaka sent Nishina Yukihiro and others of his commanders, to defend the castle of Hiuchi<sup>(129)</sup> against them. They diverted the river Hino, and made a wet-ditch, so that the western troops could not cross. A certain Nariakira, a commander who had lately joined the side of the Genji, was in communication with the Heishi, and, letting out the water, guided the troops. The castle then fell. The western troops, profiting by their victory, took one castle after another. In the 5th month Taira no Moritoshi, a western general, advanced to Hania-no.<sup>(130)</sup> Yoshinaka was at the capital of Echigo, and sent Imai Kanéhira galloping to seize the pass of Kambara before Moritoshi could come up. Kanéhira attacked and defeated Moritoshi, and the western army retreating, encamped on Mount Shiwo and Tonami. On the south of Mount Tonami was the ravine of Kurikara, several thousand feet deep. Yoshinaka started from the capital, and, collecting troops as he marched along, obtained fifty thousand horsemen. Having held an inspection of his troops at the [temple called] Rokudōji, he advanced in person against Mount Tonami, and, addressing Higuchi Kanémitsu and the rest, said: "They are many and we 'are few. For them to descend the mountain into the 'plain, in order to fight, would not be to our advantage. 'We will first encamp at its eastern foot, upon which the 'enemy will be sure to descend it and encamp. The 'whole of our army shall then make a circuit, come out 'on the west side of the mountain, and drive the enemy 'into the ravine, thus exterminating them at one blow." The commanders all replied: "That will be well." He then detached ten thousand men under Kanémitsu and others, and taking command of thirty thousand himself, advanced to the eastern foot, where, having increased the number of his flags and banners, he encamped under the cover of a wood. The Heishi observed him, descended from the summit as he had expected, and encamped on the side of the mountain. The two armies kept up a fight with arrows all day, but Kanémitsu and the others were already in the enemy's rear. When night fell, the ten thousand men advanced, beating their drums, and made a sudden onset. Yoshinaka marshalled his troops, and marched up the mountain, thus getting the western army between two fires. The western army was panic-struck, and fled in all directions. Nearly twenty thousand men were killed by falling into the ravine, which was completely filled with their corpses. The generals of the Heishi barely escaped with their lives, and, collecting their scattered troops, occupied Mount Sara.<sup>(131)</sup> Previously to this, Yoshinaka had sent Yukiye in command of a separate division of ten thousand men against Shiwoyama: he fought and was worsted. Yoshinaka went to his aid, and the western army then fled without striking a blow. In the sixth month he pursued the fugitives, and encamped in the forest of Odaté.<sup>(132)</sup> The two armies occupied positions in face of each other without fighting. The western troops caught a forager of ours and inquired of him, saying, "What are the plans of the 'northern army?" He replied: "They are planning a 'night attack." The western troops feared and fled, each man striving to cross the ferry at Ataka<sup>(133)</sup> before the other, and more than a thousand sank in the waters. When they had crossed, they cut through the bridge and encamped. Yoshinaka arrived at the ferry station

(122) Kikugawa is a village at the foot of the pass called Kanaya-zaka, between Kanaya and Nissaka in Tōtōmi, on the Kōto side of the pass.

(123) Mitsuké is a posttown on the Tōkaidō, half-way through the province of Tōtōmi. If the van of Yoritomo's army was at the former place and the rear at Mitsuké, it must have been retreating, in which case Shigéhira need not have retreated. Rai has evidently copied the original mistake from the Gemppei Seisuiiki.

(135) In the dept. of Ishikawa, province of Kaga.

(136) Dept. of Nomi, prov. of Kaga.

and found the water muddy and very high. He sent in ten horses to try, and the water came up to their bellies. The whole army followed the horses, and finally inflicted a severe defeat on the enemy. Profiting by their victory, they pursued the fugitives, and advanced as far as Echizen, capturing Nariakira, Saito Sanémori, and others. The Heishi having been repeatedly defeated by Yoshinaka, fled back to the capital. Yoshinaka advanced into Omi, and sent his secretary Kakumei with a letter to the priests of Hiyeizan, inviting them to join him. In the seventh month he crossed the lake and encamped on Hiyeizan. Taira no Munémori was much frightened, and the whole of his family fled westwards, carrying off the Emperor and his suite. Yorimori's mother had once rendered a great service<sup>(127)</sup> to Yoritomo, who secretly communicated with him by letter, inviting him to come over and expressing his desire to reward the vassal Munékiyo. For this reason Yorimori did not accompany his party in their flight. The cloistered Emperor evaded the Heishi, and went to Hiyeizan. Yoshinaka and Yukiyé, in command of sixty thousand northern troops, entered the capital by different roads. The inhabitants of the capital said to each other: "We should never have expected to see the white banners again as we do to-day."

## VOL. III.

This month the cloistered Emperor assembled all the High Officers of State and apportioned rewards to those who had been engaged in putting down the Heishi. Yoritomo was first, Yoshinaka second. Yoshinaka was raised to the rank of *jiu-shi-i-no-gé*, created Sama no kami, and appointed *kami* of Echigo. Yukiyé was appointed *kami* of Bingo. Neither was pleased, so Yoshinaka was appointed *kami* of Iyo and Yukiyé *kami* of Bizen instead, and the right of audience was granted to both. Of five hundred and more villages belonging to the Heishi which were confiscated, one hundred and forty were granted to Yoshinaka, who was kept at the capital for its protection. He was commonly called the Asahi Shōgun.<sup>(128)</sup> Yoshinaka was born and bred in the country and his manners were coarse and vulgar. He could not endure his cap and dress of ceremony, and was a subject for the ridicule of the people of the capital.

The son of Prince Mochihito, aged seventeen, had some time before become a monk<sup>(129)</sup> and had fled into Echigo, whence he was known by the title of the Hokuroku no Miya (Prince of the Northern Provinces). Yoshinaka now brought him to the capital. In the eighth month the Cloistered Emperor proposed to set up a "Son of Heaven," seeing that the Emperor and his train had fled to the west, leaving the capital without a master. There were two sons of the Emperor Takakura, of whom the elder was aged five and the younger four years. The Cloistered Emperor wished to select one and place him on the throne, and consequently gave orders to inquire of Yoshinaka. Yoshinaka's sympathies were in favour of the Prince of the Northern Provinces, and reported, saying: "To set up a prince is a weighty matter, in which it is not for a low fellow like me to interfere. But since I have received this gracious inquiry, I feel it my duty to express my sentiments. The late Sanjō no Miya, Prince Mochihito indignant at the audacious usurpations of the Heishi, desired to draw your Majesty from confinement. But the pre-ordained moment had not yet arrived, and he lost his life by the spear-point and arrow-head. The Empire bewails this event. The services which your servant has lately been able to render were also the fulfilment of his dying commands. If you now propose to set up [a sovereign], and do not take one of his seed, what will be the feeling of the people?" The Cloistered Emperor would not consent, seeing that the prince had once been a monk. He made use of divination to determine which of the two children it should be, and the elder was the lucky one. The Cloistered Emperor, however, prompted by his

favourite mistress, desired to set up the younger, and having repeated the divination, set him on the throne. This was the Emperor Toba the Second.

(To be Continued.)

## Correspondence.

## TO THE EDITOR OF THE Japan Mail.

SIR,—The report of the proceedings in the case of Findlay Richardson & Co. v. Pitman & Co., contained in your impression of this morning, is erroneous in an important particular, which I am anxious to correct. I am represented as saying that a British subject carries about with him the common and statutory law wherever he goes. This of course is an obvious absurdity. What I did say—and what I maintain to be the law—was that British subjects (why cannot we use the word "citizen," as most other nations do, instead of "subject," an inharmonious word not by any means expressing the true legal condition or status of an Englishman) in a ceded or conquered country, not having laws of its own, cannot be deprived of the benefit and protection of the common and statutory law of England, so far as possibly applicable to the existing circumstances, by any mere Order in Council, except so far as such order is founded upon, and is in pursuance of, an Act of Parliament. There are numberless cases that might be quoted in proof of my statement, but I will only cite two. In the old case of *Blankard v. Galdy* (Salkeld 411), it was held that an uninhabited country, newly discovered, and inhabited by the English, is to be governed by the laws of England. In the recent case of the Advocate-General of Bengal v. Rance Surnomoye Dossee, it was decided by the Privy Council that where Englishmen establish themselves in an uninhabited or barbarous country, they carry with them the laws and sovereignty of their own State.

New laws, of course, can be imposed upon a ceded or conquered country, but only by, or in accordance with, some Act of Parliament. Cases of absolute necessity are obviously on a different footing; but ordinances arbitrarily made to meet them must be approved or excused by Parliament in order to become permanent laws.

The diminution in the number of jurymen referred to by the plaintiff's counsel as a conclusive proof, that the Queen in Council can make what laws she likes for us Britishers in exile and deprive us of the rights that eight centuries of bitter struggling have won for us—an argument refuted by its very enunciation—would be defended, if defended at all upon the grounds of necessity expediency and public interest, and perhaps also upon the ground that all powers not expressed in a statute and yet necessary efficiently to carry out the objects of such statute are impliedly, annexed, or incident to it. It is perhaps hardly necessary to remind you that the Order in Council establishing the Supreme and other Courts of Justice in China and Japan, is by its preamble only valid so far as in accordance with the Act known as the Foreign Jurisdiction Act, which grants to the Queen, such legislative power as Her Majesty would possess in ceded or conquered countries. Hence the importance of defining as I attempted to do yesterday what power the Crown does possess in ceded or conquered countries not having laws of their own or—what comes to the same thing—prevented by treaty from applying any laws they may possess to foreign residents.

I should not have troubled you with this long and I am afraid somewhat tedious letter, but that I am desirous that my argument upon a point of an importance hardly capable of being over-estimated to the British portion of the community, if set forth at all should be set forth correctly.

I am, &c.,

THE COUNSEL FOR THE DEFENDANT.

(127) This service consisted in saving Yoritomo's life, when he was taken prisoner in 1159.

(128) Or, "morning-sun General" because of the sudden manner in which he had risen.

(129) Echigo being one of the provinces of the Hokurokudō.

## Law &amp; Police.

## IN THE UNITED STATES CONSULAR COURT.

Before Mr. Vice-Consul MITCHELL.

THE PEOPLE OF THE UNITED STATES *vs.* J. L.  
LIEBERMANN *v.* LOUIS COOK.

Wednesday, July 17th.

Mr. F. W. Marks did not appear on this occasion for the prisoner.

Jacob Morris, sworn, stated that on the 5th instant, he went with prisoner to the Synagogue, to perform the rites prescribed by the Hebrew faith for the dying, and found the place did not contain the Tables of the Law. He went to Liebermann's and asking him for them; Liebermann said, if he had come like a Jew and not like a Greek, he would talk to him like a gentleman. He then recapitulated the conversation which passed, much as the previous witnesses had given it. Liebermann, in the course of the row, heaved a chair out of the window, and an ice pitcher. Witness had a little whip, and struck Liebermann with it; saying that "he was a very nice polite gentleman, and he (witness) felt very much obliged to him for his kindness." Liebermann then came out of the door with a spittoon in his hand. Mrs. Liebermann came and pulled him back, saying to witness "you know very well he is tight on Friday evenings. If you come to-morrow, you shall have the Ten Commandments." Witness left the house saying he didn't want any more prayer; he had been insulted too much.

To the Court.—He walked up to the house with Cook and Goldenberg, and other parties after him. When the chair was thrown out of window, it did not strike him. The ice-pitcher struck Cook, and the water in it partly wetted witness. Complainant leaned out of the window from the sofa, as he threw it. He did not strike Cook with the pitcher in his hand. Cook was about half way across the yard. The chair fell between him and Cook. The pitcher struck Cook on the hand. (On indicating the place, witness pointed to his shoulder.) Cook didn't swear. Liebermann snatched up a spittoon; but did not throw it, and abused all of them. He jumped up on the window-sill when he had the chair raised ready to throw—took no notice if he stood on one or two feet. Witness only struck him once, and neither saw Cook throw or pick up stones, nor strike or attempt to strike complainant. He would swear solemnly Liebermann had the chair in his hand when he jumped on the window-sill. He did not tell witness to go to Mr. Davis for the keys, nor say the latter had had no conversation with Cook about this matter. The latter had been to see him during his time of mourning. He did not see Wilkins take away the chair or spittoon or ice-pitcher from Liebermann. Witness had never been arrested and convicted of any crime, or been sent to prison. He had been twelve years in China and Japan.

Goldenberg recalled:—There was no conversation whatever about the key. It was simply about Ten Commandments. He heard nothing of a threat of licking Liebermann. He said the chair, though he did not mention it in his evidence the other day. The question was not put to him, and he might have forgotten it. Liebermann jumped on the window-sill when he threw the chair. The pitcher was thrown about 3 feet. He did not remember saying it was thrown about 20 feet. He said it was about 15 to 20 feet from the window to the gate. He did not remember saying the pitcher was thrown as far as the post office door was from the witness box.

L. Cook recalled, did not remember seeing the chair. He knew that Liebermann did not throw the chair out of the window. He did not fall between him and Morris. He knew that Liebermann tried to pick something up to throw out. Mr. Morris stood close by the window nearly all the time, witness was 4 or 5 feet from him. If a chair had come out of the window he would probably have seen it, but he was excited. He thought the chair must have come after the ice pitcher.

Complainant handed in the following statement:—

I am but imperfectly acquainted with the English language and therefore liable to be misunderstood, will your Honor allow me the privilege of submitting to the Court in writing, the following points in connection with the above case?

1st.—That I could have called further evidence to prove the assault on me by Mr. Cook, had I thought it necessary.

2nd.—That the evidence of the man Goldenberg ought to be received with caution, he being one of the parties who came with Cook to premises, with the intention of assaulting me, he, witness also states, I jumped upon a window sill to throw a pitcher at Cook, but it is impossible for any man to do so, for the window sill is 3 feet from the floor and only 3 feet high; it would therefore be im-

possible for any one over 3 feet in height to stand upon the window sill.

3rd.—The witness Morris also came with Cook to my premises and also assaulted me, his evidence ought therefore also to be received with caution.

4th.—The witness Rappeport admits that he knows but little or nothing, except what he has heard, of the circumstances of the case.

5th.—That it is palpable from the evidence that the three persons Cook, Morris and Goldenberg came to my place with the settled determination of assaulting me, for how else came the riding whip in the hands of the man Morris. It is not usual for a Jew to go to a Synagogue to pray, armed with a riding whip.

6th.—That it is against the Hebrew law for any Jew, under any circumstances, to pray for a sick person on Friday (the day of the assault). The statement of all the witnesses in this respect must be untrue.

His Honour in delivering judgment said.—I don't know what to think of this case, there are so many complications in it, and the wilful and corrupt perjury that must have been committed in the case is about the worst that I have ever known or read of. In this matter, with regard to the chair, Cook's evidence that day does not say anything about it, and Goldenberg did not think it of sufficient importance to mention it. Morris states that the chair was picked up by Liebermann, who jumped on to the window sill, and threw it out: then jumped down, picked up the pitcher, threw it out at Cook and struck him on the arm. Goldenberg corroborates that though his testimony lacks a few feet of what he said the other day. Cook denies the chair having been thrown at all, and the testimony of Mr. Wilkins states that he held the chair with his foot. From consideration of all the evidence before me, Mr. Cook, I am compelled to find you guilty, and I am exceedingly sorry to find such unseemly squabbles as this occurring between two members of a church. The sentence of the Court is that you pay a fine of \$10 or in default thereof go to gaol for twenty days.

IN H. B. M.'s SUPREME COURT FOR CHINA  
AND JAPAN.

Before Mr. Acting-Assistant Judge HANNEN.

Monday, July 15th.

*In re* FINDLAY, RICHARDSON & Co. *v.* PITMAN & Co.

This was a motion on the part of defendants for leave to appeal questions in this suit to the jurisdiction of the Supreme Court of Shanghai.

Mr. Davidson for the plaintiffs.

Mr. F. V. Dickens appeared for the defendants.

Mr. Dickens, for the defendants, said the question was raised to determine whether an appeal lay from this court to the Supreme Court in Shanghai. The importance of the question lay in this—that if there was no such appeal, then there existed no appeal of any kind, and the Court became one of final decision. The existence of the right of appeal was based either on statutory or on the common-law rights of the subject. The Order in Council must be regarded as statutory, and if it had not provided for appeal in the case now existent, be examined to see if it was its intention to permit of one. Referring to Section XIV. of the Order in Council, he held the Court sitting at Yokohama was simply a travelling member of the Supreme Court of China and Japan sitting at Shanghai; but its decisions were not those of the Supreme Court. The word re-hearing in that section would apply to the re-hearing of disputed points on parts of a case, and did not necessarily imply the hearing over again of the whole mass of evidence; although, if wished by one of the parties, he might insist on the case being re-heard in full.

This Court, he held, was a kind of promoted Provincial Court, with the duties and powers incident to the latter, and where no express provision was made by the Order concerning it, must be guided by the rules laid down for the guidance of the Provincial Court. The Queen in Council had no power to enact laws—except under direct prerogative—unless in pursuance of an Act of Parliament; and therefore the Order must be read as taking its binding authority from the Foreign Jurisdiction Act, and exercising it here as it would be exercised in places obtained by conquest or cession. As the British subject carried the common law with him wherever he went, and one of his rights at common law was the right of appeal, it followed there must be an appeal here. It might be looked upon as an extra territorial right; for, an Englishman not being subject to none whatever unless he were to the common law of England.

His Honour corrected Mr. Dickens, saying that a man coming here from England didn't bring the common law with him, on the contrary the whole of the existing law was derived from the Order in Council.

Mr. Dickens continued: this order of the Queen's could not abrogate any right at common or criminal law, except as regarded piracy or infractions of treaty; and where no special direction was laid down in it on a question arising like the present, the general law must be followed. Now the right of appeal from a single Judge to the Judges sitting *in Banco* was not derived from any act of Parliament; but from Common law, which he contended a British subject brought here with him. To make new laws, Her Majesty must either have an Act passed to enable this, as had been done in India, or abide by existing laws; and though in numberless instances Common law rights had been abrogated, it had only been done by consent of Parliament.

The Judge observed that the native law of a conquered place existed till altered by the Queen; who, it was laid down by Blackstone, is allowed to alter those laws without the interference of Parliament. As to the other point, this very Order in Council took away the common-law right of trial by twelve jurors. That question had been argued, and it was decided that it was competent for the Queen to rule this, without special authority by Act of Parliament.

Mr. Dickens urged that this was only a case of necessity, which over-rode the law. The point on which he was arguing was, however, a mere matter of procedure, involving a common-law right, which could not be infringed.

The Judge considered himself bound by the decision of the Supreme Court on that point, and felt it would be very dangerous to leave Mr. Dickens a precedent from which to argue that the Queen had no such power.

Mr. Dickens contended that a British subject landing in Patagonia where there was no law, would carry there the statute law with him, the privileges of which could not be abrogated by any Order in Council.

His Honour replied that Mr. Dickens's theory was wrong. If there were no laws in a place, there were no laws. A British subject did carry about the laws with him when he settled in a country and colonized it; law could not exist in such a place, as Mr. Dickens spoke of till either actually made by the Queen in Council, or the place had been colonized. With regard to India, the common law there existing was the common law of India and not the common law of England, and the later Judges had attempted to conform to the former.

Mr. Dickens then argued that if under Section 131 there was no appeal hence to Shanghai, there was none at all in cases involving amounts under \$2,500, except the special reasons of involved construction, important principles, similar interests, indirect interests or the rights of the Crown appeared to justify the appeal. It was thus a very serious question for suitors.

His Honour said that in point of principle they were no worse off than in Shanghai.

Mr. Dickens said that a similar position for a suitor in Shanghai could only occur when the Assistant Judge was sitting as Chief Judge. In this Court the Judge did not sit as Chief Judge. Besides, the case was then heard before a gentleman from whose long experience it might naturally be supposed, his judgments would give more satisfaction to all parties than those of the Judge of an inferior Court. He also quoted *Forryth's Constitutional Law*, p. 375, to shew that in all cases where an appeal from an inferior to a superior Court was not directly provided for, there must be one by implication.

In reply, Mr. Davidson contended that the case as to the number of jurymen was conclusive, as to the authority of the Queen in Council to make reservations, as to the jurisdiction of her court here. That decision was an assertion of the principle that her Majesty had power to alter the rights of her subjects in England when they came to Japan and China. It was by no means necessary to have a special act passed to enable the authorities to decide the question of appeal, as was shown by the very case referred to by Mr. Dickens. The construction of the Order in Council must be like that of an Act of Parliament, strict; for it must be presumed to be, of itself sufficient for interpretation. In a very important conveyancing statute, drawn up by the present Lord Justice General of Scotland, the word "not" was omitted, and a special act had to be passed to supply it. The point now in dispute was not a question of rehearing, but one of appeal. The Section 119 clearly applied to the decisions of a Provincial Court to the Supreme Court; but this was a Supreme Court, from which no appeal could lie at Shanghai. Mr. Dickens argued that, as far as appeals were concerned, this was a Provincial Court. But this it would be for him to make out. Her Majesty's Consul dealt with cases as a Provincial Judge, but this was most assumedly a

Supreme Court, its jurisdiction being of the fullest kind excepting in only one or two special matters. With regard to Section 38, his Lordship held office under it, and it was the only one under which he could have been appointed. If the counsel for defendant took advantage of Section 14, he must assume that all cases were tried by his Honour sitting in Supreme Court, and it could not be construed to apply to a judge specially such from one country to another, and specially told to take cognizance of everything which took place in his court. The cases were not referred to him; but his Lordship was referred to them. As to clause 38 of the order, it was the foundation of His Lordship's appointment as assistant judge to visit any Provincial Court. He came, therefore, in the magisterial or judicial capacity with power to give certain decisions, as a substitute for the Chief Judge. As there was no appeal from the Chief Judge's decision given by him on circuit at Yokohama to the Chief Judge sitting at Shanghai, his Lordship's decisions were equally binding and without appeal. The question to be decided was not what should be, but what is: as the legislature had not thought proper to extend the power of the order in Council therefore we must be bound by it.

Mr. Dickens replied that this was not the Supreme Court to all intents and purposes; but only possessed delegated powers to be strictly construed. There was no delegated power to this Court to hear an appeal from any Provincial Court in Japan, and there were other points in which it was not a Supreme Court. If the Order in Council were construed very strictly the Court would be undermined altogether as the Order only gave power for the Assistant Judge or the Law Secretary to be appointed Deputy Judge—and only in the absence or illness of the Chief Judge.

The Judge—or, on an emergency. You see two of the circumstances would hit the case.

Mr. Dickens said that it might be made a preliminary objection at every trial brought before the Court.

The Judge.—There wouldn't be the slightest foundation for it.

Mr. Dickens.—The Chief Judge has however no right to say "your case shall be heard before a Court having part of the powers of the Supreme Court, and you shall not have the right to appeal to the Supreme Court."

His Lordship said he considered he was here acting under Section 38, and was "visiting" this Provincial Court.

Mr. Dickens continued to argue that if the Chief-Judge came here he brought the whole Court with him, and it would be perfectly unnecessary to argue for any appeal.

His Lordship thought that a Barrister might well wish to argue a point before a Judge without a Jury, or to obtain at Shanghai further legal assistance.

Mr. Dickens contended that there must be an appeal from this Court somewhere. The only difficulty was as to the mode of appeal. The order must be construed as an Act of Parliament would be interpreted, and trusting to the common law rights of British subjects he contended that the Court here should be guided by those Sections of the Orders which applied to Provincial Courts, under the particular circumstances in which litigants here were placed. If His Lordship would not grant the appeal, the question would then arise as to the course to be pursued to obtain a re-hearing of points in the suit before the Chief-Judge at Shanghai.

#### JUDGMENT.

The Judge said he had considered this matter for some months; and it would be but waste of time for him to delay or reconsider the matter, in order to write down upon paper what now he might equally well express verbally. As this was an application for an appeal from this Court to the Court at Shanghai, he must look to the Order in Council to see what grounds there were to go upon. If it was based upon section XIV, it could not be for an appeal; but was for a rehearing; and under that section all steps must be taken before the Supreme Court in Shanghai. It would then be time enough to argue what a "rehearing" was, and the Judge would then determine in what sense that word "rehearing" was to be taken. He hoped that the Chief Judge would take such a view as would enable the rehearing to be, in reality, an appeal from his (the speaker's) decision—a view which would manifestly be for everybody's benefit, and also a personal relief to himself. At present it was a great inconvenience to suitors, to the bar, and to the Bench, to know that a decision given here was practically without appeal. He fully appreciated the absurdity of his decisions being only appealable by reference to the Privy Council at vast expense; but this Court was in an anomalous condition, and must sooner or later be placed upon a proper footing. He did not think it was necessary to patch up the jurisdiction of this Court by such means as had been suggested—

twisting the words of the order in Council to present circumstances—but considered it was better to go boldly at the work—to make the wording of the Order apply in the strictest sense, and he had then no doubt the Legislature, when it saw the evils which would flow from a strict and proper construction of the wording of the Order in Council, would amend it. If reference were made to the Section XIV of the Order in Council, he must rule that he had nothing to do with any application for a re-hearing—under that section all steps must be taken before the Judge in Shanghai. The rule governing the appeals from the Supreme Court laid down in H. M.'s Order in Council might possibly apply; but then again, he had under present circumstances nothing to do with that, inasmuch as the present application was not for leave to appeal to H. M. in Council, but to the Supreme Court at Shanghai; for this there was no provision in the Order in Council. He could see no possible section under which he could grant an appeal from his decision to the Supreme Court of Shanghai; and the only course which appeared proper was for the defendant's counsel to apply for leave to appeal to H. M.'s Privy Council, or to go straight to the Court at Shanghai, apply for a re-hearing, and then argue before that Court what the meaning of "rehearing" was. He must therefore dismiss the motion for appeal, and costs would go with it. With regard to the question of what ought to be done, he was quite prepared to consider as embodied in this motion an alternative motion for stay of execution till the application to Shanghai should have been made, on the understanding that this arrangement met with the consent of both parties.

This was agreed to, and fourteen days more allowed for the defendant to fill the notice, and give the securities which would be required, supposing the rehearing to have been an appeal from a decision of the Provincial Court.

#### IN THE AUSTRO-HUNGARIAN COURT.

Before *Mr. Acting Consul* ROBERTSON.

Thursday, July 18th, 1872.

Jacob Morris was charged by J. L. Liebermann with an assault.

The particulars of the case were much mixed with those recently heard in the U. S. Court; but after hearing evidence on both sides His Honour dismissed the charge.

#### MIGHTON & WATSON v. STILLFRIED & Co.

This was a claim for \$33.50 for work performed.

The defendant, while admitting a small portion of the claim, made the following statement. He said he engaged a man from the plaintiffs to do certain carpenter's work of a very particular nature, and on account of that he was willing to pay 75 cents a day for wages. When the work was nearly completed this carpenter went away and sent a man who styled himself a friend of the first carpenter. The work in hand was finished, and a contract made for fresh work, which was also completed. The men went away, and, as they never came for payment, he had not paid them.

The Plaintiffs—represented by Mr. Mighton—said that the man with whom defendant alleged he made the contract was in his employ. He had paid the wages himself.

Safé, a Japanese witness, confirmed the evidence, and

His Honour gave a verdict for plaintiffs with costs, remarking that as the defendant had not paid Mr. Mighton's men and plaintiff had done so, he, plaintiff, ought to be reimbursed.

### Extracts.

THE intimate association existing between the history of our early relations with this country and the subject of the following biographical sketch, justifies us in reproducing it *in extenso* from the columns of the *Times*. It portrays a character which Englishmen love to think is especially, perhaps exclusively, English, and, in the words of a distinguished modern writer, exhibits "that devotion to the sense of duty, that power of pursuing a course which they believe to be right, independently of all considerations of sympathy or favour, of enthusiasm or success," which Englishmen regard as the basis of the national character in its highest form;—"men," continues this eloquent writer, "careless indeed of glory, but very careful of honour; who made the supreme majesty of moral rectitude the guiding principle of their lives, who

proved in the most trying circumstances that no allurements of ambition, and no storms of passion, could cause them to deviate one hair's breadth from the course they believed to be their duty."

#### LORD ELGIN.\*

James, eighth Earl of Elgin, was born in London on the 20th of May, 1811. From his father, so well known in connexion with the "Elgin Marbles," he inherited the genial and playful spirit which made his society so charming in after life, and from his mother, Miss Oswald, he derived that deep-seated piety and that grasp of intellect which so distinguished him throughout his career. Educated at Eton, and afterwards at Christ Church, Oxford, he found himself among a group of young men destined to distinction in politics—Lord Canning, Lord Dalhousie, the Duke of Newcastle, Sidney Herbert, and Mr. Gladstone. Of these he confessedly stood in the first rank. "In his speeches at the Union," writes his brother Frederick, "he far outshone his competitors," a judgment supported by the most distinguished of them all, Mr. Gladstone, "who well remembered," as he wrote after his death, "placing him, as to the natural gift of eloquence, at the head of all those I knew either at Eton or at the University." "Like all men of original mind," says his brother, "he lived a life apart from his fellows, was always reserved about his own feelings and aspirations, and with him life from a very early date was 'sicklied o'er with the pale cast of thought.' Its practical aspect to him was one of anxiety and difficulty." Such a mind if left to itself might have become at a later period morose and morbid had it not found a fitting occupation in a life of excitement and action; but while at Oxford Mr. Bruce, for at that period he had an elder brother, threw himself heartily into the studies of the place, and his exertions were rewarded, first by a studentship in Christchurch and later on by a First in Classics and a Fellowship at Merton. After he had taken his degree his time was chiefly spent at Broomhall, the family seat in Fifeshire, where in his father's absence he took his place in county affairs, commanding a troop of Yeomanry, presiding at a farmers' dinner, and even writing a song for it, speaking at Dr. Chalmers' request at a public meeting on church extension, taking long and solitary rides, throwing his melancholy thoughts into the shape of sonnets or poems to his eldest sister, and keeping up a regular correspondence on abstruse questions of philosophy with his brother Frederick, who was still at Oxford. By such pursuits, and the still more harassing occupation of disentangling the family property from its embarrassments, "he was preparing himself," as Mr. Walrond well says "for future usefulness by the exercise of the same industry and prudence, and the same grasp, both of details and general purpose, which he showed in his political career." "Whatever his hand found to do he did it with all his might, as well as with a judgment and discretion beyond his years, and a tact akin to genius."

In politics he was a Tory, and as early as 1834, when he had barely completed his 23rd year, he published a letter to the electors of Great Britain, with the view of vindicating the policy of the party, and protesting at the same time against the assumption that the Whigs had a monopoly of Liberal sentiments, and that to be a Tory was necessarily to be a narrow bigot. On the same principle he stood for Fifeshire in 1837, but, coming forward "at a moment's warning, he was defeated by a large majority." What he might have become in politics had he remained at home and been swept away into the whirlpools of party, it is difficult to say, but the choice of a career which, while it took him away from England, at the same time bound him by the ties of loyalty to the Ministry of the day, whatever its politics might be, enabled him to maintain his private convictions unfettered by the extreme principles of either party, and to mould his mind in that impartial form which enabled him on such occasions as Lord Ellenborough's attack on the Government after the outbreak of the Crimean War to afford a support to the Ministry all the more valuable because it was based on reason and common sense rather than dictated by the impulses of political feeling.

In the year 1849 Mr. Bruce became heir to the earldom by the death of his brother Lord Bruce. On the 2d of April, 1849, he married his first wife, a daughter of Mr. Cumming Bruce. In July of the same year he was returned as what has been since called "a Liberal Conservative" at the head of the poll for Southampton. In the next Parliament he seconded the amendment to the Address in a speech of great promise, in the course of which he professed himself a friend to Free Trade on the principles of Mr. Huskisson; but the most characteristic part of his speech was that in which he commented on the "harsh, severe, and unjust" terms in which it had been the fashion to designate those who had dared to differ from Her Majesty's Government. "In days," he

\* *Letters and Journals of James, eighth Earl of Elgin.* Edited by Theodore Walrond, C. B., with a preface by the Dean of Westminster. London. John Murray.

said, "when all monopolies are denounced, I must be permitted to say that to my mind, the monopoly which is the most intolerable and odious is the pretension to the monopoly of public virtue." As is well known, the amendment on the Address was carried by a large majority, Lord Melbourne resigned, and Sir Robert Peel became Prime Minister. Just about the same time the seventh Lord Elgin died, and the new member for Southampton succeeded him in the Scottish peerage. It may have seemed that this event had removed him from the House of Commons just as the fair promise of eloquence and statesmanship were about to be fulfilled. But Lord Elgin had work to do on a new path, "leading," as Mr. Walrond, says, "to a new field of action, distant, indeed, and often thankless, but giving scope for the exercise of gifts both of mind and character which can rarely be exhibited in a Parliamentary career." In March, 1840, at the early age of 30, he was selected by Lord Stanley, who was then Secretary for the Colonies, for the important post of Governor of Jamaica.

It was in the middle of April, 1842, that the new Governor sailed for his post. The Governorship of Jamaica was no longer the great prize which rewarded discontented politicians at home, and sent them to the Tropics to recline for a season on a bed of roses. In 1842 that bed was not luxurious, and it was most assuredly thorny. The emancipation of the slaves, though philanthropic in theory, had been ruinous in practice to all classes of the community. It had crushed the proprietors and reduced the incomes of agents, managers, and middlemen; in many cases it forced merchants and mortgagees most unwillingly to foreclose and become proprietors, only to be ruined in their turn. As for the emancipated slaves it had conerted in too many instances a class of well-fed and well-cared-for labourers into poverty-stricken, ignorant, and idle squatters. It had created, in fact, a nation of black Irishmen in the West Indian Islands, and of its effects on this very Jamaica it will be sufficient to say that it has taken just 40 years of political education in the bitterest adversity to restore the island even to the semblance of prosperity under the able government of Sir J. P. Grant. Such was the island for which Lord Elgin sailed in April, 1842. It cannot be said that his advent was propitious. The West Indian steamer in which he had embarked ran on a coral reef off Turk's Island, and became a total wreck. No lives were lost on that night, but the shock was ultimately fatal to Lady Elgin, who died in the summer of the following year, leaving an only daughter. If anything could add to the difficulties of Lord Elgin as Governor, it may be found in the fact that the island possessed representative institutions. What a mockery these must have been will be seen at once, when it is stated that the local Legislature was a Democratic oligarchy, composed chiefly of overseers, who had no permanent stake in the country. Another difficulty he had in the fact that he succeeded Sir Charles Metcalfe, one of the most conciliatory and popular of Governors. In the face of the universal despondency and gloomy forebodings which he found on his arrival, Lord Elgin resolved that the principle of his government should be to restore hope in all classes of the community. It was soon found that he was as anxious to conciliate the good will and promote the interests of all ranks as his predecessor had been, and he firmly set his face against the discussion of vexed Constitutional questions, and directed his efforts towards promoting the moral well-being of the population and the restoration of the economical prosperity of Jamaica. As a step towards the latter object, and to reform, if possible, the shattered finances of the island, he passed a new Tariff Bill, which when sent home was found so contrary to the economical principles of the new Government, that instead of praise it only provoked an angry despatch from Downing-street, amounting to a reprimand, and insisting on his vetoing any such measures for the future. To this Lord Elgin replied temperately that it was but natural that traces of a policy so long sanctioned by the Mother Country should linger in colonial legislation; and that the duties in question were not such as to check trade, while they were unfortunately demanded by financial reasons. We are happy to add that the Home Government felt the weight of these considerations, and the correspondence closed with the revocation of the peremptory command above mentioned. Besides providing ways and means for the colony, Lord Elgin did his utmost to improve the moral and social condition of the negroes, and to fit them by education "for the freedom which had been thrust upon them;" but, with characteristic tact, he preferred to compass this end through the agency of the planters themselves. This he did by encouraging the application of machinery to sugar cultivation, and thus seeking to create a class of skilled labour which would oblige the negroes to acquire the necessary education. At the same time he lost no opportunity of impressing on the land-owning class that, if they wished to secure a constant supply of labour, they could not do so better than by creating in the labouring class the wants which belong to educated beings.

In these exertions, and in working out the problem how to maintain a State Church and at the same time not to disgust any of the various sects of Dissenters or the members of the

Anglican Communion, in which last, if he failed, he only failed, as so many have done at home and abroad, before and after him. Lord Elgin spent more than the allotted period of a Governor of Jamaica. He found in these labours a solace for that domestic sorrow which made his abode in that lovely island so melancholy. He lived chiefly in retirement in the Blue Mountains with his sister, afterwards Lady Charlotte Locker, herself gathered to the dead since this book appeared, and his brother Robert, who was his most able and efficient secretary, seeing little society there, but never intermitting official intercourse and receptions at Spanish Town. But the isolation and monotony of such an existence could not fail to tell on his active spirit. In 1845 we find him reminding Lord Stanley that he had already exceeded the usual period of such Governorships, and alluding gently to those private circumstances which made a prolonged residence in the island so repugnant. Yet he remained a year longer, finally quitting Jamaica in the spring of 1846 on leave of absence, with the understanding that he should not be required to return to Jamaica. On his return to England, Lord Elgin found a new Secretary for the Colonies in the person of Lord Grey, to whom he was unknown except by reputation; but, in spite of their political differences, that reputation was enough to induce Lord Grey, first, to endeavour to persuade him to return to Jamaica, and afterwards to offer him the Governor-Generalship of British North America. "I could not hope to find any one whom I could recommend to Her Majesty for that office with so much confidence as yourself" were the words with which Lord Grey ended the letter in which he offered him the appointment. Lord Elgin accepted the splendid offer, not in the spirit of mere selfish ambition, but with a deep sense of the responsibilities attached to it. It was settled that he should go to Canada at the end of the year, and in the interval he became engaged to a daughter of the first Earl of Durham, to whom he was married on the 7th of November, 1846.

In passing from Jamaica to Canada, Lord Elgin not only carried with him Lord Durham's daughter as his bride, but also the principles laid down by his father-in-law in his celebrated Report, drawn up when he went out as Lord High Commissioner in 1838. It may safely be said that in that Report, so stigmatized by his political opponents, were contained all the seeds of the beneficial changes which followed. And it only shows how very little party there need be in party itself that in 1847 the very measures and principles laid down in 1838 by that dangerous Radical and French sympathiser, Lord Durham, were carried out by his Liberal-Conservative son-in-law and successor with such firmness and impartiality as have rendered Canada loyal and contented ever since. The difficulties of the new Governor-General's position in Jamaica were all intensified in Canada. There were the same colonial hatreds and the same "Responsible Government," complicated by the feuds of the British party and their Family Compact, the French Habitants, the recent rebels and their Rebellion Losses Bill, and, though last not least, that great Irish flood of misery and famine which the emigrants of 1847 brought with them from that unhappy island. After Lord Durham's mission the Canadians had been successfully governed by Mr. Poulett Thompson, afterwards Lord Sydenham, who took the first step by the resolution of Lord John Russell towards the introduction of Responsible Government. This principle was further extended by Sir Charles Bagot, who, though an old Tory, did not scruple to admit to his counsels persons who had been active in opposing the Crown during the recent rebellion, acting on the broad principle "that the Constitutional majority had the right to rule under the Constitution." To Sir Charles Bagot succeeded Lord Metcalfe, a man of singularly popular manners and conciliatory disposition, but too old and too feeble from disease to deal with the novel questions presented by Canada at this crisis. Instead of preserving his responsibility, he sided with the Conservative or old British party, a sort of Canadian Orangemen, quarrelled with his Ministry on a question of patronage, became hopelessly entangled, and at last resigned. This was in November, 1845, and as there was some apprehension of a quarrel with America, arising out of the Oregon question, Mr. Gladstone, who was then Secretary for the Colonies, appointed Lord Cathcart, the Commander of the Forces in Canada, to be Governor-General.

When Lord Grey came into office the Oregon difficulty had been settled, and it was no longer necessary that Canada should be governed by a soldier. "What was wanted," as Lord Grey has said in his *Colonial Policy*, "was a person possessing an intimate knowledge of the principles and practice of the Constitution of England, some experience of popular assemblies; and considerable familiarity with the political questions of the day." After much consideration, as we have seen, it was decided to offer the post to Lord Elgin, though personally unknown at the time both to the Premier and to the Secretary for the Colonies. The principles on which Lord Elgin undertook to govern Canada were that he should identify himself with no party, but act as a moderator and mediator between influential men of all parties; that he should have no

Ministers who did not enjoy the confidence of the Assembly, or, in the last resort, of the people; and that he should not refuse his consent to any measure proposed by his Ministry unless it were of an extreme party character, and such as the Assembly or the people would be sure to disapprove. "Happily," as Mr. Walrond points out, "these principles were not in Lord Elgin's case of yesterday's growth. He had acted upon them even in Jamaica; and in their soundness as applied to a colony like Canada he had that firm faith, grounded on original conviction, which alone could have enabled him to maintain them, as he afterwards did, single-handed in the face of the most violent opposition, and in circumstances by which they were most severely tested."

The first days of Lord Elgin's rule in Canada were very harmonious, in spite of the sensation produced on the party in power by the declaration of the new Governor-General, on the occasion of his being sworn in, that he had "adopted frankly and unequivocally Lord Durham's view of Government." The old Tories of the British party and Family Compact were in good humour at being in power, to which they claimed a prescriptive right; while the Liberals, or the French party, were full of hope that Lord Metcalfe's system had come to an end. Then, too, the new Governor-General was young and vigorous; he could work days and days together; was able and willing to face Canadian snow-storms, and to make long journeys through the province; always ready to receive an address and make an *impromptu* reply. The papers were full of "the geniality and affability of his demeanour." He was "a man of the people." Then it was discovered that "our new Governor is the most effective speaker in the Province," and he could speak, too, not in English alone to French Canadians, but in far purer French than their own; added to all which the mere fact that he had married a daughter of Lord Durham was "a passport to the hearts of many in Canada who looked back to the late Lord Durham as the apostle of their liberties, if not as a martyr in their cause."

But, alas! these were but the halcyon days, which last in every colony, great or small, while the new Governor is, as it were, incubating over his policy. All is fair and sunny till the brood of new measures is hatched and sees the light of day. Then comes a storm and hurricane of abuse. In a little while the Tory Ministry of the old British party tottered to its fall; while its agony was prolonged a flood of Irish emigrants, some of them, unfortunately, from Lord Palmerston's estates, brought fever and famine into the Province. This cause of discontent was hardly allayed by the cessation of the immigration when on the dissolution of the Canadian Parliament, at the end of 1857, the British party, with its Family Compact, found itself in a decided minority, and for the first time in the Constitutional history of Canada the French or Rebel party came into power as the Ministers of the Crown. This event was almost identical in time with the outbreak of the French Revolution of 1848, and Lord Elgin considered it fortunate that the transfer of political power from the British to the French party in Canada had occurred before the Republicans in France had found sympathizers with the enemies of English dominion on that side of the Atlantic, whether in the Provinces or the United States. But though the French "rebels" and the restless Irish emigrants, more rebellious than any rebels, might cause temporary alarm, the great foe of Lord Elgin and his Administration was that old British party who looked on political power as their vested right, and could never forgive him for having broken down the barriers which separated them from the alien French. Round this party, now in opposition, rallied all forms of Canadian discontent, and especially of that chronic form of it in Canada which looked on Free Trade and the Repeal of the Navigation Laws with equal hatred, and which attributed the commercial depression, then common both to England and all her colonies, to a mistaken system of Imperial legislation.

In this gloomy aspect of things the winter of 1848 passed away, but the wrath of the old British party, which was excited by seeing their adversaries in power, rose to fever pitch when the Governor-General, taking advantage of the repeal of the law restricting the use of the French language, delivered his speech when Parliament met both in French and English. Nor was their indignation lessened when the new Ministry brought in a Bill to provide for the indemnification of parties in Lower Canada whose property was destroyed during the rebellion of 1837 and 1838. "A questionable measure," to use Lord Elgin's words in first mentioning it, "but one which the preceding Administration had rendered almost inevitable by certain proceedings adopted by them in Lord Metcalfe's time." This was the measure which soon became notorious in Canada as the "Rebellion Losses Bill." The Tories petitioned, and spoke, and agitated against it, and complained that loyalty was going to the dogs when rebels were to be compensated for losses sustained in the struggle which they had provoked. In spite of the outcry raised at home against the "suicidal folly of rewarding rebels for rebellion," Lord Elgin was firm to his principle of governing Canada constitutionally. He refused to dissolve the

Parliament, and ultimately the Bill was passed and received the Royal Assent. Then ensued those disgraceful Montreal riots of April 25th, 1849, which were as disgraceful to the old Canadian Tory party as the result was honourable to Lord Elgin and his policy. He was hooted and pelted on leaving the Parliament House, and, by a sudden impulse, after holding an open-air public meeting, the infuriated mob, led on by persons of a better class, rushed to the House of Parliament, set it on fire, and burnt it to the ground. Much valuable property perished by this outrage. But this was not enough; a few days afterwards, the fury of the mob again broke out, and when, on the 30th of April, Lord Elgin drove into Montreal to receive an address voted to him by the Assembly, he was received in the streets of Montreal by showers of stones, and narrowly escaped personal injury. For some weeks after he did not enter the city of Montreal, remaining all the time perfectly calm and cool, but declining to enter the capital with any military force lest he should afford the infuriated rioters the opportunity they desired for causing bloodshed. At the same time he was equally firm in his resolution to yield nothing to force, and wrote home strongly to insist that dictation of this sort must not be listened to unless all government of the province by constitutional means were abandoned. At the same time he suggested that his removal might possibly be beneficial to Her Majesty's service. The reply of Lord Grey was worthy of the occasion. He assured Lord Elgin of the complete confidence of the Crown, and expressed the Queen's anxious wish that, relying upon his devotion to Canada, he would retain the high office with which she had intrusted him. And so gradually the obnoxious Bill was carried into effect, and the only lasting result of the rebellious conduct of Montreal was the removal of the seat of Government from the rebellious city.

It is not our intention to follow Lord Elgin at any greater length in his government of Canada. As he began, so he ended, firm and impartial to the end. He displayed the same tact in managing parties when the dangerous doctrine of annexation was started as he did on the Navigation Laws, or on the Reciprocity Treaty with the United States, which that Government has since denounced so much to their own loss. Nor was he wanting, either to himself or to Canada, on that vexed question of the Clergy Reserves, which caused so much ill-blood both in the Provinces and at home. On all occasions which affected Canada and her interests, he was neutral and impartial, and resolved to let the expressed and deliberate will of the people govern. But with one class of statesmen he had no sympathy; he refused to believe in that school of philosophic statesmen, strong in the support of the utilitarian school of Radical reformers, who desired to see the day when every colony enjoying constitutional government should be emancipated entirely from allegiance to the mother country, and form an independent Republic. He was a Constitutional Colonial Governor, but he was also a servant of the Crown, sent out to maintain the Imperial authority on all occasions when it should be paramount, and above all things believing firmly in the vitality of monarchical institutions and abhorring the doctrine that a Constitutional Kingdom must as necessarily be turned into a Republic as a chrysalis into a butterfly. So he remained Governor-General of Canada for several Administrations, and under different Secretaries of State. During his term of office, his services were recognized by his promotion to the peerage of Great Britain, and, finally, in 1854, having outlived almost every enmity except that of the old British party, he saw the principles of colonial policy propounded by Lord Durham, and for which Lord Grey and he had worked so consistently for so many years, finally triumphant. That triumph was attended by some gloomy forebodings on the part of Lord Derby and his adherents, but they have not been realised, and even the measure to which Lord Derby took such exception, the introduction of the elective principle into the Upper House in Canada, has been reversed by the latest colonial legislation, and the Dominion of Canada has returned, so far as the Legislative Council is concerned, to the Conservative principle of nomination by the Crown. It was in December, 1854, that Lord Elgin, amidst very friendly demonstrations, handed over the reins of Government to his old friend, Sir Edmund Head. For the two next years he enjoyed complete rest from the cares of office in his native land.

In the spring of 1855, when Lord Aberdeen's Ministry broke up, Lord Elgin was offered by Lord Palmerston the Chancellorship of the Duchy of Lancaster, with a seat in the Cabinet, an office which he declined, from a desire to remain for a time independent. During the next two years his time was chiefly spent in repose and retirement at Broomhall. In his place in the House of Lords he spoke twice,—once when he thought the interests of Canada imperilled by the alleged intention of the Government to send to the Province several regiments recently from the Crimea, and again at an earlier period, in May, 1855, in support of the Government against Lord Ellenborough's attack upon the conduct of the war. He had before spoken in Glasgow to the same effect. He said:—

"My opinion on the question of the war I can easily state, and I have no hesitation in avowing it. I say that now we are in the war we must fight it out like men. I don't say throw

away the scabbard; in the first place because I dislike all violent metaphors; and in the second place, because the scabbard is a very useful instrument, and the sooner we can use it the better. But I do say, having drawn the sword, don't sheathe it until the purpose for which it was drawn is accomplished."

In the same spirit but with far greater eloquence he addressed the House of Lords, and from the tone of his speech it will be seen that he had not at that time joined either party in the State, but was feeling his way in home politics, from which, as he said with regret, "those ancient landmarks of party had been removed which, if not a wholly sufficient guide, are yet some direction to wanderers in the political wilderness." But, as Mr. Walrond says, "while he was thus engaged, events were happening at the other end of the earth which were destined to direct into quite another channel the current of his life."

Though political memories are proverbially short, still we suppose that no one forgets the *lorcha Arrow*, and her seizure by the Chinese authorities at Canton. That act, though insignificant in itself, was the last grain that broke the back of British endurance under the faithlessness of the Chinese authorities. There can now be no question, after the experience of two Chinese wars, that hostilities between the two nations were inevitable, whether the *Arrow* had been seized or not. But it was not so in 1857, when Mr. Cobden and his supporters would persist in looking on the case of the *Arrow* by itself, and in condemning the Government for "the violent measures resorted to at Canton." Those were the words inserted in Mr. Cobden's famous motion, which, supported by Mr. Gladstone in one of his splendid bursts of rhetoric, placed the Government of Lord Palmerston in a minority of 16 on the 26th of February. It cannot be said that the veteran statesman was unequal to the occasion. He appealed from the House to the people, and candidly told his opponents that, pending that appeal, "there would be no change and could be no change in the policy of the Government with respect to events in China." At the same time he intimated that a Special Envoy would be sent out to supersede the local authorities, armed with full powers to settle the relations between England and China on a broad and solid basis. It is matter of history that the new House of Commons approved the policy of Lord Palmerston, and that the Special Envoy was found in Lord Elgin, who set sail for China in the face of an adverse vote of the Lower House. There can be little doubt the Chinese difficulty would have found a speedy, though, perhaps, only temporary, solution in his practised hands; but while he was on his way, accompanied by such a body of troops as would have dictated submission to the Chinese authorities, a worse enemy met him in the shape of the great Indian Mutiny. With characteristic generosity and with rare forethought, Lord Elgin at once recognized the magnitude of the impending evil. Let India be saved, China could well wait. Responding to Lord Canning's appeal, he sent first his troops and then his ships, and especially the *Shannon*, under the command of Sir William Peel, to the aid of the Indian Government. This was in May, 1857, and it was not till quite the end of the year that the combined French and British naval forces were in a position to take Canton by storm, and to capture the crafty and stubborn *Yeh*, who, as the Emperor's Viceroy, had been the great foe to British interests in Southern China. All through those hostilities Lord Elgin was deeply impressed with pity for the unfortunate Chinese, who were forced to resist by the stupidity and obstinacy of their rulers. He most reluctantly consented to the bombardment of Canton. "I feel sad," he said to Admiral Elliot, as they lay before the doomed city, in which were 1,000,000 souls, "because when I look at that town I feel that I am earning for myself a place in the Litany, immediately after plague, pestilence and famine." After the bombardment he was overjoyed to find that the loss of life and property had been small, and that there was a probability of no more bloodshed. When Canton was taken, having completely succeeded in gaining a diplomatic superiority over his French colleague Baron Gros, he proceeded northwards, recognizing the truth of the policy which declared that at Peking, the heart of the Empire, a lasting peace must be extorted from the fears of the reigning dynasty. We have no time to dwell on the most interesting private letters of which this part of Mr. Walrond's book is full,—how Lord Elgin saw Foochow and Chusan, and was amazed at their picturesque beauty; how he conversed with the missionaries, and saw Shanghai; and how it was at last settled that he and Baron Gros should meet in the Gulf of Pecheli, at the mouth of the Peiho, backed by their fleets, and insist on laying down the principle of direct communication with the Imperial Government at the capital. On the 21st of May, 1858, the forts at the mouth of the Peiho were stormed and taken, and on the 30th we find Lord Elgin at Tien-tsin negotiating with the Chinese Plenipotentiaries. It is now, perhaps, clear that these negotiations at Tien-tsin and the stopping short of the capital were a mistake, and that a more vigorous policy might have saved Lord Elgin a second visit to China. But it must be remembered that the Allies had little or no force with which to march on Peking, that the chief articles of the Treaty secured

enormous advantages, not to England alone, but to foreign nations, and that everyone conceived the Chinese had received a sufficient lesson. On the 5th of July Lord Elgin was at sea on his return to the south. The Treaty had been accepted by the Emperor as he wished it, the troops and ships coming up to the north had been stopped, and, in a word, the Chinese war was at an end.

With characteristic energy, while waiting in China to see the Treaty ratified at home and set in action, Lord Elgin, while his hand was in, made an expedition to Japan and signed the treaty which was the beginning of that intercourse which increases every year between that hitherto secluded Empire and the outer world. He was nobly acting up to his principle of doing with all his heart whatever his hand found to do. The rest of his first mission to China may be despatched in a few words. There were the usual delays and subterfuges on the part of the Chinese, relieved by expeditions up the unknown waters of the Yangtze-Kiang as far as the great emporium of Hankow. But, at last, all obstacles seemed to have been overcome by tact and firmness, and Lord Elgin returned to Hongkong in February, 1856. Nothing now remained to keep him in the East. On the 19th of May he reported to the Foreign Office his arrival in London.

On his return, the successful negotiator, whose labours and ability in America and Canada had been sparingly recognized, was received with every honour for the sake of his brilliant diplomatic triumph in the East. Lord Derby and Lord Grey contended for the credit of having first introduced him into public life, and Lord Palmerston made him Postmaster-General. The students of Glasgow elected him Lord Rector, and the merchants of London gave him the freedom of the City and an enthusiastic reception at the Mansion-house. Such honours and tokens of public appreciation were doubly grateful to one whose sympathies were always ready and warm; but he was not destined long to fancy that his work in the East was over. The lesson only partly taught to the Chinese had been thrown away. As soon as Lord Elgin's back was turned and the Gulf of Pecheli freed from the Allied Fleets, the Imperial policy returned to its old groove. When Mr. Bruce, who was designated to be the first British Minister at the capital, was proceeding to Peking to exchange the ratifications of the Treaty he found the forts at the mouth of the Peiho armed and manned, and when the men-of-war which accompanied him tried to remove the barriers they were fired at. As no hostilities were expected, Mr. Bruce returned to Shanghai, and reported to the home Government the failure of the Treaty. It is well known that Lord Russell, then Prime Minister, resolved that the Chinese should be coerced by a large allied force both of ships and troops. There could be no doubt to whom this expedition should be confided, and on the 16th of April, 1860, the Prime Minister wrote to Lord Elgin that Her Majesty had determined again "to call on him for his valuable services as Ambassador-Extraordinary." His instructions were necessarily vague. He was to act with his old colleague, Baron Gros, and to demand—1st, an apology for the attack on the fleet off the Peiho; 2nd, the ratification and execution of the Treaty; and 3rd, the payment of an indemnity to the Allies for the expenses of the war. It was hard to have his work to do over again; but on the 29th of April he was "off Sardinia," on his way to the East, this time to accomplish his mission more completely. On the 21st of June he was back at Hongkong, after a delay of a fortnight at Galle, having been again shipwrecked in the Malabar, Peninsular and Oriental steamer, escaping, as at Turk's Island, with the loss of all his effects. At Hongkong he received letters from Mr. Frederick Bruce, the Plenipotentiary to the Emperor, affording a hope of a diplomatic solution of the difficulty, and in this hope he pressed on to Shanghai, only to find the Chinese as faithless and obstinate as ever. On the 9th of July Lord Elgin reached the Bay of Talien-Wan, the rendezvous of the British force. His first mission to China had cost scarcely any English blood, been almost bloodless, but this was less happy. On the 1st of August the allied land forces landed without opposition near the little town of Peytang, and on the 21st the formidable Peiho Forts, which in the interval between the two expeditions had beaten off a British squadron with heavy loss, were taken with little bloodshed, owing to the judicious arrangements of Sir Robert Napier. Then ensued some land fighting, in which the Allies were uniformly successful, and on Sunday, the 26th Aug., Lord Elgin again reached Tien-tsin, where his Treaty had been negotiated less than two years before. Here there was some show of negotiations up to the 2d of September; but it was ascertained that the object of the Chinese was only to gain time, and Lord Elgin informed the Chinese Plenipotentiaries that the Allies would at once proceed to Tung-chow, in the immediate neighbourhood of the capital. On the 8th of September he writes, "I am at war again. My idiotical Chinaman have taken to playing tricks which give me an excellent excuse for conveying the army on to Peking." By this time Sir Hope Grant had got all his little army up, and it was agreed with the Plenipotentiaries that it should advance within six miles of Tung-chow, and there remain, while the Ambassador proceeded with 1,000 men to Peking. But it appeared afterwards

that though the Chinese Peace Party, led by Prince Kung, were sincere in their intentions, they were at the last moment overborne by the notorious San-ko-lin-ain, the Commander-in-Chief. In consequence of his machinations, the allied forces were attacked, Mr. Parkes and Mr. Loch were captured and hurried off to Peking, and at the same time Captain Brabazon, and Mr. Bowlby, then the correspondent of this journal in China, with other officers and some Sikh troopers, were seized and dragged away about the country. Over the unhappy fate of these sufferers we willingly draw a veil. It is well known how Mr. Parkes and Mr. Loch were rescued from the jaws of death; how the Summer Palace, with all its wondrous treasures, was sacked and burned by the Allies as an act of solemn retribution; and how, the Emperor having fled to Tartary, the execution and ratification of the Treaty of Tien-tsin were extorted from the Imperial authorities within the walls of the capital. It may be inferred that the lesson thus taught to the Chinese has been effectual, as the Treaty of Tien-tsin has remained inviolate from that day to this. On the 26th of November Lord Elgin, having seen his brother installed as British Minister at Peking, found himself again afloat in the Gulf of Pecheli. After some further delay in China, he returned to England, having visited Manila and Java; and on the 11th of April, within a few days of the anniversary of his departure, he stood once more on his native soil. It may well be imagined that after he had finished his work so well, he met with even a warmer reception at home than had been his lot two years before, and he took occasion at a great banquet given in his honour at the Mansion-house to impress upon the merchants of London that the work England had to do in China was only begun by the Treaty, and that its fulfilment was in the hands of British commerce, which alone could make China an active and useful member of the great community of nations.

We are now entering on the last chapter of Lord Elgin's life. Compared with those that had gone before it, Mr. Walrond says "there is something in it of the repose of declining day, after the heat and dust of a brilliant noon; something even, young as he was in years, of the gloom of approaching night. It seems almost as if a shadow cast by the coming end rested on his path." He had not been more than a month in England when Lord Palmerston offered him the Viceroyalty of India, about to be vacated by Lord Canning. He accepted it, but not without something of a vague presentiment that he should not return from it. As he grew older, too, he felt it harder to tear himself from the children, now requiring his care, added to which he felt as if, after the labours of Lord Dalhousie and Lord Canning, his old school and University fellows, there were few laurels left to reap in India. "I succeed," he used to say, "to a great man and a great war, with a humble task, humbly to be discharged." But it was his duty to go, and he went on the 28th of January, 1862, after a few pleasant months spent in London and Scotland. On the 12th of March he reached Calcutta. Six days afterwards Lord Canning took his departure, and Lord Elgin entered on his new duties. It so happened that the death of Mr. Ritchie, a most esteemed member of his Legislative Council, and the removal of others, left Sir R. Napier alone remaining of all that body whom Lord Elgin had found in office. This necessarily threw much work on his hands, which he felt equal to in the cold months, but which in the hot season he found most trying. And now blow succeeded blow. First he heard of the death of Lord Canning, which affected him much; but when it was followed by the unexpected death of his brother Robert, Governor of the Prince of Wales, who died in London of the effects of a fever caught in the East, he found it difficult to bear up at all against the depressing influence of these shocks, coupled with the ailments caused by an unusually sickly season.

On his brother's death, in writing to his second boy, he said,—

"You have lost a kind and good uncle and a kind and good godfather, and you are now the only Robert Bruce in the family. It is a good name, and you must try and bear it nobly and bravely as those who have borne it before you have done. If you look at their lives you will see that they always considered in the first place what they ought to do, and only in the second what it might be most pleasant and agreeable to do. This is the way to steer a straight course through life, and to meet the close of it, as your dear uncle did, with a smile on his lips."

He was right in his judgment that his two predecessors had left him little scope for action. "India," to use his own words, "was at peace in a sense more emphatic and comprehensive than it had ever been before." Lord Dalhousie had extinguished external foes, and Lord Canning had taught the same lesson to internal sedition and rebellion. There was, therefore, no call for great military operations, and yet questions of great difficulty and perplexity remained to settle. There was the army to be adjusted and established on a new footing; and those jealousies of race which, as he well said, "are the sources of almost all our difficulties in India," had to be assuaged. To both those points Lord Elgin applied himself with his accustomed ability, and his communications to Sir Charles Wood, then Secretary of State for India, show "the

keenness as well as the sagacity" with which he approached Indian questions. At an early period of his stay he adopted the opinion impressed upon him by Lord Canning that a Governor General should see as much as possible with his own eyes, and on the 5th of February, 1863, he left Calcutta for a long tour of inspection. We may remark, in passing, that Lord Mayo acted very much on the same principle. Lord Elgin resolved to travel to Simla, and, after spending the hot season in the Hills, to proceed in the next winter to the Punjab, inspecting it thoroughly, and returning during the summer heat either to Calcutta or Simla. The first portion of this programme was fulfilled; the last was never destined to completion. After a progress in which he visited every place of importance on his route, Lord Elgin arrived at Simla on the 4th of April. There he remained, always attending to public business, to the end of September, when he left that "Paradise of Anglo-Indians" for Sealkote, where he was to rejoin his camp and proceed to Peshawur. On his way to traverse the upper valleys of the Beas, the Ravee, and the Chenab, and make his way across the mountain chains which divide them. On the 18th of October he wrote to Sir Charles Wood in tolerable health, but before the next mail he had received the stroke which was to lay him in the grave. Symptoms of serious heart disease appeared, probably long lurking in his system and now brought out into fatal activity by fatigue and the keen mountain air. On the 4th of November he reached Dhurmsala, in the Kangra Valley, whence he wrote to the Secretary of State in an altered tone, but still hopeful and cheerful. "It had been already remarked," says the Dean of Westminster, writing in the *North British Review*, "that two years in India had made him look many years older in 1863 than when he left England. But it was not till he entered the Hills that any symptom manifested itself of his fatal malady." On the 4th of November, Dr. Macrae, his medical attendant at Calcutta, joined him, and on the 6th he came to the conclusion that the Viceroy's illness was mortal. When Lord Elgin was satisfied that Dr. Macrae's opinion was right he showed the utmost resignation, and though he felt it hard to believe that his life was ending he steadfastly set his face heavenward. The next fortnight was spent in painful alternations of severe suffering and rare intervals of rest. But those sufferings were cheered by the devotion of all around him, by his firm faith and piety, and by the reflection that he was dying as he had lived, in harness. On the 19th he sent a message to Sir Charles Wood expressing his love and devotion to the Queen, and his determination to do his work to the last possible moment. This was his last public act. A few words and looks of intense affection for his wife and child were all that escaped him afterwards. He died on the 20th of November, and on the 21st he was privately buried in the cemetery at Dhurmsala, in a grave which had been selected by Lady Elgin with his approbation.

Thus ended the life of a man who most emphatically had done good service to the State. Cut off, as those who knew him best felt most keenly, just at the moment when his best qualities were about to show themselves, such a man at the age of 52 might have been expected to rise to higher duties than even the Viceroyalty of India. That varied ability, that steady conscientious industry, that genial temper, and that combination of fertility of resource with simplicity of aim, and of cautious sagacity with prompt resolution, might well have filled the highest position that a subject can fill in the State. His death, so untimely and so unexpected, added another to the long list of statesmen, his contemporaries, who have been cut off in like manner in middle age and in the very prime of official life. Canning, Dalhousie, Newcastle, Sydney Herbert, Elgin, and Frederick Bruce, what are they now? Mere names and recollections in the history of the country the destinies of which they might, in all human probability, have been expected still to direct. Verily, they have rest from their labours, and of many of them it may be said that "their works do follow them."

It only remains to discharge a pleasant duty and our work is done. We refer to the excellent manner in which Mr. Walrond has executed the task confided to him of publishing these letters and remains. No description can do justice to the masterly way in which these very interesting private letters are arranged and connected by a running narrative, with which the only fault we can find is that it is too short. At the same time, we feel that no review can do justice either to the correspondence or to the book. They must be read for and by themselves. It was a labour of love which Mr. Walrond undertook, and he has worthily executed his work in the spirit in which it was conceived.

## Shipping Intelligence.

### ARRIVALS.

- July 18, *Wanja*, Brit. Brig, Withers, 295, from Hongkong, General, to Pitman & Co.
- July 13, *Albuera*, Brit. Barq., Thomas, 774, from London, General, to Gilman & Co.
- July 13, *Oceana*, Brit. Barq., Carr, 499, from Liverpool, General, to Sitwell, Schoyer & Co.

July 13, *Ariel*, Am. Str., Newell, 1,736, from Hakodate, General, to P. M. S. S. Co.  
 July 16, *Cosmo*, French corvette, Lefevre, 1,800, from Hakodate.  
 July 16, *White Adder*, Brit. ship, Harris, 915, from London, March 22nd, General, to Strachan and Thomas.  
 July 16, *Teaser*, H. M. gunboat, Blomfield, 464, 4 guns, from Kobe.  
 July 17, *Isanhoe*, Brit. ship, Phillips, 998, from Cardiff, January 10th, Coal, to P. & O. Co.  
 July 19, *Japan*, Am. Str., Freeman, 4,352, from Hongkong, General, to P. M. S. S. Co.  
 July 20th, Am. Str. *Costa Rica*, Williams, 1,917 tons, from Shanghai July 12th, General,—P. M. S. S. Co.

## DEPARTURES.

July 12, *Colorado*, U. S. frigate, Baldwin, 3,100, for Kobe.  
 July 13, *Charley*, Brit. barque, Silano, 359, for San Francisco, General, despatched by Walsh Hall & Co.  
 July 17, *Godavéry*, French str., Vailhen, 960, for Hongkong, Mails and General, despatched by M. M. Company.  
 July 17, *Jenny*, N. G. barque, Hartmann, 236, for Hongkong, Rice, despatched by Walsh Hall & Co.  
 July 17, *Lord of the Isles*, Brit. 3 masted schooner, Petrie, 317, for Hongkong, Rice, despatched by Walsh Hall & Co.  
 July 18, *Oregonian*, Am. steamer, Dearborn, 1,914, for Shanghai and Ports, General, despatched by P. M. S. S. Company.  
 July 18, *Ocari*, Japanese ship, More, 327, for Shinagawa, Ballast despatched by Walsh Hall & Company.  
 July 20, *Penrith*, Brit. Barq., Danzon, 520, for Kobe, part original cargo, despatched by Walsh Hall & Co.

## PASSENGERS.

Per P. & O. steamer *Alaska*, for Hongkong.—Messrs. Ichida, Awaya, and Noguchi.  
 Per P. M. S. S. *New York*, for Kobe.—Mr. McGregor, D. Gebser, Col. Shepard, U. S. Chargé d'Affaires, and 1 Japanese in the cabin, 115 in the steerage. For Nagasaki.—1 Japanese in the cabin, and 60 in the steerage. For Shanghai.—Miss Ida Tyler, Miss A. McDonald, Col. Cook in the cabin, and 5 Chinese in the steerage.  
 Per *Ariel* from Hakodate. Messrs. G. Bewick, A. E. Olarovsky, Mr. and Mrs. Trachtenberg and 2 children, Mr. Kahie and 30 in the steerage.  
 Per Str. *Avoca* from Hongkong.—Messrs. B. M. Grey, J. T. Hardy, and C. Civetta.  
 Per M. M. *Godavéry*, for Hongkong.—M. Renovic and Ah-Keen. For Saigon.—M. de Paupelone, M. Essay, 38 Quarter Masters and seamen.  
 Per P. M. S. S. *Japan*, from Hongkong :  
 For Yokohama.—Captain Maies and two Chinese.  
 For San Francisco.—W. Lund and wife, Capt. J. J. Humphreys, wife, daughter, and two sons, H. M. Mansbrook and 582 Chinese in the steerage.  
 For New York.—F. G. Weron.  
 For Liverpool.—Jose Minos and two nephews, J. Ross.  
 Per P. M. S. S. *Costa Rica*, from Shanghai, &c.—Dr. and Mrs. Hepburn, Mrs. J. H. Bell, Messrs. C. O. Shepherd, U. S. Chargé d'Affaires, J. M. Smith, J. Nesmyth, W. G. Read, J. U. Malcomb, K. Maorae, H. M. Blanchard, L. V. Helmes, M. Little, Dr. Coles, U. S. N., A. Gerard, J. Cooper, F. O. Ryley, U. Halsen, J. Hunt, For America.—Mrs. F. Jenkins, Messrs. C. Woodward, J. A. Crawford, C. Gherie, H. Muller, J. M. Corveter, Captain Percival, G. N. Robertson, A. Owens. For Europe.—Rev. C. H. Judd and Mrs. Judd, Miss Bayer, Rev. J. Haney.  
 Per P. M. S. S. *Oregonian*.—Messrs. L'Abbe Marechal, F. P. Bijoux, H. Legrand, M. Ullman, E. De Bavier, Junior, and 8 Japanese in the Cabin, 100 in the steerage. For Nagasaki.—1 Japanese in the Cabin, 60 in the steerage. For Shanghai.—1 Japanese in the Cabin, and 9 Chinamen in the steerage.

## CARGOES.

Per M. M. steamer, *Godavéry*, for Hongkong.  
 Raw Silk... .. 369 Bales.

## REPORTS.

The *Avoca* reports moderate S. W. winds from Hongkong to Van Dieman's straits; squally weather with thunder and lightning off Chichakoff, thence light S. W. winds and fine weather. Noon of the 12th passed P. M. S. S. Co.'s steamer *New York*, steering to the southward, and at 7 p.m., same day the U. S. frigate *Colorado* passed. 2.45 a.m. of the 13th anchored in Yokohama bay in a thick fog.

The *Ariel* reports thick foggy weather throughout the passage. The British barq. *Albura* reports leaving the East India Docks on February 7th, reached the Downs on the 9th, had strong Westerly and South Westerly gales down Channel; and after clearing the land till reaching Latitude 36° N. 16° 30' West, had two or three days steady weather in the variables. 23 days to Madeira, which was passed March 5th; fine winds from the N. W. West and N. N. E. to the Cape Verde which they passed, March 11th; light winds from N. N. E. to N. N. W. to the Equator, which was crossed on the 20th. Exchanged signals same day with the Barque *C. B. Patton*, London to East London; 72 days out. Were off the Cape, May 5th, winds from N. W. to S. W. light. Passed St. Pauls May 23rd, strong winds and squalls with cross seas at times while running the Longitude down, strong winds off the N. W. end of Australia. Sighted Java Head June 6th, rounded first point on the 8th, anchored at Anjer on the 10th, passing through Maclesfield on the 15th, spoke *Eastern Chief* same day. Came up through China Sea and Formosa Channel,

passing through Linschoten on the 8th instant. Sighted Fusiya on 11th, took on board a Pilot on the 12th near Rock Island, 151 days from the Downs.

The British barque *Oceana*, after leaving Liverpool on the 15th December, having met with very heavy weather in St. George's Channel, during which a man was lost overboard and several sails were split, put into Lamlash for shelter on the 17th, and lay there till January 9th, when they proceeded on the voyage, passing into the Atlantic through the North Channel; encountered a series of S. W. gales, and on the 18th a circular storm passed over the vessel, in Lat 46° 28' N., Long. 14° 4' W. While it continued lost the lower topsails and bulwarks; had the long-boat washed out of the chocks, and all the spars washed away from their lashings, besides having five of the crew disabled by a sea that broke on board. On the 5th of February put into Madeira to land a boy who had his leg broke; left Madeira again on the 8th, and crossed the equator March 4th. Were in the meridian of the Cape April 16th, thence had pleasant weather to Anjer, which was passed on the 8th June; were in company with the *Woodhall*, from Liverpool to Yokohama, in Gaspar Straits. Coming up the China Sea had squally weather, with heavy rain; from Formosa into port the weather was generally fine and winds rather light.

The *Teaser* reports light southwest winds coming along the coast. The British ship *White Adder*, Captain Harris, left the London Docks on the 22nd of March, and was towed to the Nore, where she lay at the anchor one night; weighed next day and proceeded, clearing the Channel on the fourth day out, after which experienced a succession of South-westerly gales that lasted for eight days, doing a considerable amount of damage. Were in the Parallel of Cape Finisterre on the fourteenth day out, thence till reaching the N. E. trades in 25 deg. N. had very light weather; the trades were found very light and carried the vessel to 3 deg. North; variable winds thence across the equator and as far as 2 deg. South. The S. E. trades were very good, and the ship carried favourable winds to the Cape which was passed on the 58th day from London. Between the Cape and St. Pauls met with very severe gales and a heavy sea, and were compelled to heave to at one time for eight hours. Reached Anjer on the 27th day from the Cape and 58 days from Port. From Anjer to Pulo Sapata the winds were light and variable, above that had a light S. W. Monsoon for a few days, calms and light easterly winds prevailing in the Northern part of the China Sea for a week; the winds light all the way up, with few exceptions. On the South Coast of Japan had a severe thunder storm with much lightning and rain. Entered the Gulf of Yedo on the 15th and anchored here yesterday morning, 115 days from London.

The British ship *Iranhoe*, left Cardiff January 10th, had a continuation of strong gales from the S. S. W. till the 26th, afterwards moderate wind and weather till February 12th. Passed the Capede Verde islands February 23rd, winds light and fine weather; crossed the Equator March 4th, and were on the Meridian of the Cape April 10th; thence till the 29th met with light Easterly winds, but on the 30th had a severe gale from the W. N. W. during which the decks were swept, bulwarks washed away and several stanchions and the sails carried away. Passed St. Paul's May 5th, Java head, June 5th, and arrived at Anjer June 7th, left again on the 8th. From Anjer up to Formosa had light variable winds, and the same nearly all the way up to Rock Island. Took a Pilot on board on the 15th instant, and anchored here the following day.

# THE Japan Weekly Mail.

A POLITICAL, COMMERCIAL, AND LITERARY JOURNAL.

VOL. III.—No. 30.]

YOKOHAMA, SATURDAY, JULY 27, 1872.

[PRICE \$24 PER ANNUM.]

## Notes of the Week.

ON Monday evening, at the Bluff Gardens, the pyrotechnic display, which had been postponed from Saturday, took place with every success. The Gardens were fairly attended, and soon after the appointed time the display commenced—serpents, rockets, and a thousand other fireworks, whose names are unknown, being let off, and apparently giving very general satisfaction. Mr. Smith does well by giving us evening entertainments during the hot weather, but we would recommend some music on the next occasion.

WE are authorized by the Agent of the M. M. Company, to state that the steamer *Donnai* with the outward mails from Europe, due at this port on the 7th of August, having been detained in the Canal, left Suez on the 9th of July, instead of the 30th of June; consequently the connecting steamer cannot be expected here before the 16th of August next. The corresponding date of departure from Yokohama will be published hereafter.

WE have received from Dr. Geerts of Nagasaki, with a request for its insertion, a long and interesting letter upon the subject of the Christian question in its relation to this country. While thanking him for his communication and the courteous note which accompanied it, we feel that the whole ground he travels over has already been entirely surveyed by the writers who have recently treated the question here, and that no good purpose would be subserved by re-opening it. With much that he says we entirely agree. The Church has often taken most erroneous views on subjects upon which it felt called on to pronounce decisions. It persecuted learning and learned men, and has filled history with records of violence and intolerance. But not the less do we believe that the benignant and civilising influence of Christianity would work upon this Empire the effects it has wrought elsewhere. Not the less do we think that the pure theism its contains would, by giving men loftier views of the nature of God and of our relations to him, elevate and purify the mind of this nation, and bring it into more perfect harmony with the principles of our own progressive civilization. We wish no new faith imposed on this people, no creeds insisted upon for their acceptance, no fetters of religious intolerance rivetted on their minds. All we ask for is the bare toleration of our faith, the withdrawal of insulting edicts against it, and the restraint of the persecuting spirit which has made martyrs of so many of its converts. Let it do the rest for itself. If it be a mere device of man's, it must come to naught, and if Dr. Geerts will do us the favour to look over our last number, he may be convinced that no efforts of ours will be wanting to purge from charlatany and dishonesty the cause we advocate.

IN commenting last week upon the alleged conversion of the Mikado by Mr. Goble, we expressly refrained from alluding to the conversation which he alleges passed between himself and Iwakura, the head of the Japanese mission, in which the latter is reported to have expressed his anxiety to see the whole of Japan evangelized. We took this course because it was obviously impossible to contradict the statement. We had one definite fact to deal with and that was enough. But we have not yet done with this matter, and will make a short attempt to deal with this special allegation on its own merits.

Iwakura is a man of the old school, too intelligent not to see that times have changed and that the policy of the Empire must also be changed, but conservative in the general character of his views. He is a sagacious and practised statesman; can estimate, and would naturally be inclined to overrate, the danger attending the introduction of Christianity into the empire; would also in all probability be very reticent about it; and would certainly, under any circumstances, express himself most cautiously on the subject. What then is the probability that he would say to Mr. Goble what he is alleged to have said? Is it likely that Iwakura should wish it: is it likely that he should have expressed that wish? To both questions we answer, and we think every one will answer; assuredly not.

But on what evidence have we this assertion made? On that of a man who—if the report in the *Tribune* be correct, and there is not the slightest reason to doubt this—heard it stated in his presence that he personally had converted the Mikado, an assertion which he knew to be false, and who allowed this statement to remain uncontradicted, because it redounded to his personal credit. What, then, is the value of his whole statement? Not the thousandth part of a farthing.

How well men argue upon mistaken facts may be gathered from the following extract from the *Alta California* :—

On the first of last April, Okubo, Chief Minister of Finance of the Empire of Japan, and Ito, Minister of Public Works, Vice Ambassadors of his Majesty, the Tenno of Japan, with another Japanese gentleman from Europe, their secretaries and servants, left this port for Japan on the steamship *Great Republic*. The object of their return was not made public, but it was generally reported that they were to report progress in their mission to their sovereign, and probably to consult him relative to the terms of some prospective treaty between the United States and Japan. Their intention was then to soon return and join Iwakura, Prime Minister at Washington. At any rate, none was here so silly as to suppose that the cause of a return home was a recall by the Emperor because they had indiscreetly used their powers and were seriously embarrassing the foreign policies of the Empire.

This absurd, ridiculous, and even malicious story, was circulated and perhaps fabricated by the Yokohama *Mail* journal, on the arrival of the Ambassadors in Japan, in the following words :—

"Three members of the Japanese Embassy, in fact, three not the least important under the Chief Ambassador, Iwakura, returned from America by the 'Great Republic' this morning. They were telegraphically recalled, and may perhaps lose their positions under the Government, it being whispered they have exceeded their powers, because too pro-foreign in their views before the American public, promised too much, and made the Japanese Government responsible for views which, they maintain, will not or cannot be carried out for some time to come. Every action and move of the Embassy has been so criticised and telegraphed to every newspaper in America that the existence of the Embassy itself is embarrassing. Either the Ambassadors have had too great powers delegated them from the Mikado, or they are thought to have exceeded them."

Now if we say that every assertion in the above extract is but a glaring falsehood, we only tell the truth. That voracious journal had no positive knowledge of the Ambassadors having exceeded their powers when it made those assertions, for it said "it is being whispered," which shows that it was only a rumour, and yet upon that rumour it proceeded to make charges which reflected severely not only upon the two Ambassadors that had returned, but the whole Embassy, including the Prime Minister, Iwakura; and if all were guilty of the same offence, why two or three only should be punished?

But that they did not exceed their instructions, is evident from the fact that they have confined themselves strictly to the object of their mission. What was their mission? Prince Iwakura declared

it in plain language in his response to the address of welcome by the Citizen's Committee in this city on the 16th of January, as follows :

The true spirit of our mission is to establish peaceful relations more firmly and to see how greater privileges may be granted in the true interests of a righteous government and a free people.

Our mission being one of investigation, we shall inspect with pleasure your manufactures and machinery, your colleges and schools and your system of justice, and as these are to become the guide of our nation in the future, this study will be one tending to promote our national welfare, and, as commerce is reciprocal, may be of future direct interest to your city."

Aside from these general and conditional promises, the Japanese Embassy made no positive assurance of future grants to us in their public speeches, and therefore they placed no responsibility on their Government. Their public address, as well as their desire of learning our civilization, did not elicit any unfavourable criticism from the American press. On the contrary, they earned by them our esteem and applause. The unfavourable criticism all comes from journals of the *Yokohama Mail* class, which are very much chagrined because the honour of the first visit paid by the Embassy to our nation and of the appointing by the Japanese Government of American officers over certain interests of the Empire. This is a great slight of other nationalities, in the opinion of the *Yokohama Mail*. And that's what's the matter.

We entirely agree with the *Alta* in every word it says, but would observe that the paragraph in question appeared in the *Japan Herald*, and was only reprinted in the *Mail* to expose its folly and untruthfulness. Before a paper like the *Alta California* begins to argue, it should verify its facts, and we call on it at once to retract and apologise for the expressions it has used in respect of this Journal—a Journal which has never yet fallen into an error in regard to fact which it has not at once corrected when the truth has been pointed out to it.

THE case of Smith v. Escombe reported elsewhere is one of some little interest for this community, since the question involved in it has for some time past been under general discussion. It must not be supposed that Mr. Escombe, in refusing to pay the \$12, was actuated by any desire to avoid a just due; his intention was to bring a test case before the Court with a view of obtaining a decision on the question. He was ordered to pay the \$12, but at the same time Mr. Smith was told that, according to the present reading of the tickets or the rules regulating the Bluff Gardens, he could not exclude ticket holders from the Bluff Gardens free of payment at any such times as they may be open to the public. The ruling was decisive and it remains to be seen what Mr. Smith will do. There is no fear of any one summoning him for the few dollars illegally paid; but no evening entertainment can be made to pay if the ticket holders are admitted free. A meeting of shareholders and ticket holders might possibly solve what seems a difficulty which is likely to deprive us altogether of evening entertainments at the Bluff Gardens.

Now we begin to see the fruit. It is hardly a month since we spoke in very plain terms of the infamous character of the correspondence admitted into the *Hiogo News* under the heading YOKOHAMA. The scoundrel who writes these letters—and whom, if we can track him, we will assuredly gibbet, name, nationality, profession and all—has at last brought about precisely the kind of trouble his letters were calculated to produce. Exasperated by the insults levelled unmistakably at himself, Dr. Tryon, an officer of the U. S. Navy, a gentleman well and most favourably known to the residents of this port, went in company with Flag Lieutenant Emory of the *Colorado* to the office of the *Hiogo News* and demanded an apology for the insults put upon him. A form of apology was agreed upon by the respective parties, and the two officers left. But instead of this apology being published, an explanation was made in the paper which was deemed insufficient—as it was. The two gentlemen again went to the office of the *Hiogo News*, high words arose, and Dr. Tryon struck the representative of the paper—whoever he may have been. The inevitable consequences ensued; the matter comes before the American Consul, and, of course, eventually before the American Admiral.

We are not in the least surprised at the affair, however great may be the regrets it causes us. The letters of the anony-

mous Yokohama correspondent of the *Hiogo News* ought never to have been published by any paper whatsoever; they were scandalous and disgraceful, and reflected the gravest discredit upon those who permitted their publication, as we pointed out a month ago. We trust the Admiral or the authorities at Washington will take a common-sense view of the matter, reprimand the officers, and reinstate them. As to the cowardly ruffian from whom the correspondence emanates, the sooner sufficient tangible evidence of his identity comes out, the sooner his punishment will come. It is high time a stop was put to these things, which disgrace every foreign resident in this country.

WE have said a few words elsewhere upon the proposed formation of a Society having for its object the furtherance of such investigation as has been given prominence to the Asiatic Society of London. A meeting to this end, at which H. M. *Chargé d'Affaires* has courteously promised to preside, will be held on Monday next at 3 p.m., at the rooms of the Chamber of Commerce (by the kind permission of the Chairman), and we hope that residents and visitors to the port who are friendly to such a purpose will attend the meeting and show their readiness to co-operate in the undertaking.

As the Report of the Hospital Commission has found its way into print, although it was in reality only privately laid before the Residents—the Commission considering that they were debarred from publishing it until it had been laid before a General Meeting—we present it in its original form in our issue of this week, reserving all comments upon it until after the General Meeting has been held.

WE understand that Mr. Davis has obtained promises of sufficient subscriptions to warrant him in undertaking the watering of the streets. He has applied to the Government for permission to erect four pumping-places, two on the Bund and two on the Creek. These will be fitted with Norton's tube wells, and will have a reservoir of water kept ready for use as may be required. Another pumping-place in the back part of the settlement will also be obtained, and as soon as the carts are ready—and they are now nearly completed—Mr. Davis will commence operations. There are yet a few houses which have not subscribed, but this is no doubt an oversight. The Saiban-sho authorities, too, should contribute their share, and then our settlement would be well watered in every street; with only partial subscriptions, the watering can only be partial as well.

DR. HEPBURN has returned from Shanghai, where he has been for some months superintending the publication of a new and much-enlarged edition of his Anglo-Japanese Dictionary.

THE steamship *Osaka*, which went ashore at Bentsen during the typhoon of last August, got under weigh on Thursday for the first time, making a short trial trip down the bay. She carried the P. M. S. S. house-flag.

THE buildings in connection with the new Custom-house are progressing satisfactorily. It is as yet impossible to tell what the buildings will be like when completed, but it is to be hoped that the Government will not spoil the work for the sake of a little ill-judged economy.

Mutzu Munemitsu, late Governor of Kanagawa, has been promoted to the Board of Finance, and Ucho-no-omi has been appointed in his stead. Nakayama, late Superintendent of Customs at this port, has been appointed to a similar post at Kobe, for which port he left lately.

SCHNER, who has recently been before the Austro-Hungarian Court, on a charge of robbery, is to be removed to Shanghai for trial.

By the Shanghai mail just in port Sir Edmund and Lady Hornby have arrived.

Mr. De Long was to have sailed per the *Great Republic*, but was detained in San Francisco by the illness of one of his children.

The following is the list of tea and silk shipments per the P. M. S. S. Japan:—

#### AN ASIATIC SOCIETY.

THE change which has taken place in Japan, and especially in this place, during the past three years, has been very remarkable, though it may not have been marked by many. Prior to this time, the foreign community consisted principally of men engaged in commerce. The diplomatic and consular officers, and the professional men resident here, could almost have been told upon the fingers of two hands, and society presented a homogeneity of material which it is now rapidly losing. Our social constitution has since been reinforced by professional men of many different classes. Engineers, geologists, chemists, barristers, electricians, all men who have moved and worked in totally different spheres of life to that mainly represented here, are now to be found either resident among us or intermittently stationed here. The dead level which invariably characterizes a society composed only of one class, be it what it may, has given, or is rapidly giving, way, to an intellectual variety which presents something of the charm of undulating scenery, and the advantage we have gained from this is unquestionable. Our horizon of thought, conversation, and discussion has been extended. Things small in themselves, but appearing great in the absence of any true and recognized standard of comparison, have ceased to be estimated at an unreal value; while greater things, which, from a similar cause, had lost their due proportion in men's minds, are gradually growing into more accurate definition and asserting their claims to recognition and analysis. All kinds of new germs are springing into life around us, activity in many varieties of form surprise us on every side, and the well-wisher to this country need not despair of seeing the foreign element it contains more and more moulded into European forms, and the native element modified and developed by contact with the higher types which it is now ambitiously attempting to rival.

Yet the changes and modifications which we see taking place around us ought surely not to be regarded in their material bearing alone. One of the most prominent features of the modern European mind is an unbounded curiosity in respect of all knowledge, whether of antiquity, of organic and inorganic nature, of physics or metaphysics. Thousands of men in all parts of the world—so rich has it grown—spend their lives in investigating or applying the secrets of nature, in collecting materials for elucidating the history of the past, in instructing the present, and

in forecasting or attempting to give direction to the future. The old Greek form of thought, with its lofty disdain of the practical and its introspective tendency, its love for sailing in an upper air high above the poor mean contentions or wants of average humanity, its contempt for vulgar realism, and habitual dalliance with purely speculative problems, has gone for ever. The world has taken to fact-hunting. It has become insatiable in regard to hard concrete truths; and, as it amasses these, it forms, first, its tentative hypotheses; next, gets its glimpse of new laws; and lastly, lays down the true theory under which each subsequently discovered fact assumes its place and accepts its true position.

Is it not time that this modern spirit of enquiry should animate us here? It is no ordinary state of transition which Japan is now undergoing. History presents no similar instance of an Asiatic nation throwing off its characteristic immobility, and struggling to get abreast of a world to which it has only just been introduced, but which it aspires at once to rival. It is this spirit which, unabashed by inevitable blunders, and undaunted by serious failures, keeping always a good heart and an ever accelerating speed, has moved the admiration and evoked the sympathy of the world. Three years ago the name of the Empire was rarely seen in print in Europe or America. Now, it is hardly possible to open a newspaper without finding a reference to all this progress, and a kindly word in favour of those who are pursuing it. These references are often absurd, they often give grossly distorted reflections of facts, and even sometimes are destitute of the slightest foundation. Yet sooner or later the cloud of error passes away, the truth comes out, and meanwhile attention has been drawn to the spirited little Empire of the rising sun, which is sending its ambassadors abroad, appointing ministers to foreign courts, and sprinkling every university in Christendom with its eager scholars. Is it quite right that we should remain here within a few miles of the capital and united to it by a railway which is the most marked material feature of this recent progress, and yet do nothing towards acquiring more knowledge than we now possess of this old and interesting country? Of its history, antiquities, geography, geology, its manners and customs, its art and its literature, we know little or nothing, and unless some definite effort is made to dispel this ignorance, we, or those who come here ten years after us, will know but little more. Some laborious student here or there may amass in a life-time of study a treasury of knowledge in regard to these things, travellers may visit us and throw out for the world's amusement some entertaining sketches of their wanderings or adventures. But it is given to few students to work in a dozen different directions at the same time. The historian may throw his light upon the tangled skein of the Japanese chronicles and help us to unravel them; the geologist may explore the country and give us his sketch of its anatomy; and specialists may, each in his own sphere, make his contribution towards the general stock of the world's knowledge in reference to Japan. But how is all this information to be combined? By what means can it be thrown into a focus, or how is it to be made accessible and available for the instruction of this community or the information of Europe?

Some such ideas as these have moved a few gentlemen

in this community to attempt the formation of a local Society, the object of which may be inferred from the foregoing remarks. They propose that it shall do for this country what the various branches of the Asiatic Society have done for India and China. The project has little of ambition in it. It extends no hopes that it will issue a quarterly journal overflowing with brilliant papers, and dazzling the world with profound speculations in regard to this country. The movers in it know that any beginnings it makes must be modest, and may be dull, and that anything like activity and vigour can only come with more mature age and a wider extension of promises of support than they have even yet received. But all such efforts have had similar humble beginnings, and those who are making them feel that the amount and diversity of intelligence among the foreign communities in Japan warrant the foundation of such an institution and are a guarantee for its support. In this conviction we heartily join, and while we cannot prophesy more than a modest inauguration of the Society and halting steps during its early life, we see no reason to doubt that each succeeding year may see it advance in vigour, prosperity, and public favour.

#### WHAT THE CHAIRMAN SHOULD HAVE SAID.

**I**F we used some harsh and contemptuous words last week in referring to the manner in which the speakers at the American Baptist meeting delivered themselves of their views and feelings on the subject of missionary enterprise, we did so with a set and a good purpose. Why cannot these well-meaning people talk like sensible men of this world when discussing their proceedings? We shall not deny that as science, art, law, and morals, have their own phraseology and terminology, the religious world has a right to a similar privilege. But when this degenerates into a cant, we feel bound to protest against it, as well in the interests of society as of the institutions whose spokesmen lend themselves to the use of this cant, the prominent vices of which seem to us its unmanliness, its exclusivism, its apparent claim to look upon those who use it as better than their neighbours, and its pharisaical thankfulness that those who adopt it are not as other men are. Why do these good folks alienate—or go far to alienate—the sympathies of others well disposed to their cause, and who know quite as much as themselves of hard, honest, progress-producing labour as themselves? Why do they almost force men who wish well to their efforts, and who would gladly see the blessings of Christianity diffused among the Asiatic nations, to write harsh and bitter words about their proceedings? Are they Hebrews? So are we. We do not know what they have done to advance the cause of Christianity in this country, unless it be to give currency to the intolerable falsehood of the conversion of the MIKADO by the Revd. “Dr.” GOBLE. We know what we have done, and defy them to show as much labour as we have bestowed on this cause, little as we had wished to speak of it.

But as we have impugned the manner in which they discuss their proceedings, we may be asked how we should do it, had we similar matters to discuss. Our answer would be ready. We should deliver ourselves somewhat as follows:—

“Gentlemen: You have heard the Report of our year's proceedings which has just been read by the Secretary, and I would first invite your attention to the fact that our expenditure has exceeded our income by the large sum of \$18,753.07, a fact which calls for my unqualified reprobation, and which is calculated to bring down on us alike the reproaches of those who wish well and who do not wish well to our cause. A merchant or tradesman who showed a similar balance-sheet would incur the grave censure of his creditors or the judge before whom he was arraigned, and I do not know on what grounds we are exempted from obedience to the command of the Apostle Paul to “owe no man anything.” Let us set to work to make up this deficiency without delay, so that we may present ourselves next year before the world with an honest balance at our banker's, however small that balance may be.

I shall presume that we are all animated by an earnest desire to diffuse the blessings of Christianity among the Asiatic nations. Now, gentlemen, this is an extremely difficult matter, and it is well that we should look it boldly and manfully in the face. These nations are possessed of high and well-defined civilizations and forms of religion, which cannot be too carefully studied by us before we attempt to displace them with higher forms. In some Asiatic countries, in Japan for instance, the form of government is, in some sense, a theocracy, and we must be careful how we deal with men so governed. We rely, indeed, on the promises extended to us and on the commands given for our guidance, but the history of the world affords many proofs that men, however well intentioned, may do a vast deal of harm in unwisely attempting to do good. You must expect when brought into contact with educated Asiatics to be questioned with great subtilty in respect of the grounds of our faith, and it is not sufficient that these should be to you grounds of subjective certainty. You must be prepared to argue and prove them. Vague generalities will not avail you here, and unless you can maintain the high ground you take, you will bring contempt on yourselves, your profession, and your faith. It is wrongfully imagined that a mere desire to preach to the heathen, and a strong inward conviction of the truths of religion, are sufficient to qualify a man for the high office of a missionary. But this is an erroneous idea, and still more erroneous is it to suppose that men whose absence of vigour and poor mental attainments would disqualify them for the successful pursuit of any trade or profession are therefore fit to hold the proud position of soldiers of Christ. The great missionary to the Gentiles, whom it would be well for us all to study and attempt to imitate more than we do, was, from a mere secular point of view, preeminently a scholar and a gentleman. The fastidious critics of Athens forgot to sneer when he addressed them in language as polished as that of their own orators, and enforced his arguments with such logic and rhetoric as impressed even those who were familiar with the masterpieces of Demosthenes and Æschines. Christianity should give of its best and highest to this great missionary work; not of its poorest and weakest. And, indeed, I thank God that in many instances it has done so. The roll of our soldiers in the East comprises names which are never mentioned without honour, whose patient, self-sacrificing, and laborious efforts have been devoted to this cause throughout their honoured life-time. No thought of worldly advantage, of money-greed, or of earthly possessions ever alloyed their noble zeal. They put their hands to the plough, but never looked back. No danger ever deterred, no toil ever wearied them. Their translations of the Holy Scriptures, their dictionaries, their ministrations among the poor, the sick, and the diseased, their pure and simple lives, the recollections of their kindly and genial neighbourship, their wide and active sympathies, are the living tokens of the spirit with which they were animated, and the proofs of its beneficent action. It is to the lives and labours of such men that I would point for your example and encouragement. They are few, indeed, but they constitute the very salt of the earth, and on the direction of our labours depends the increase of their number.

Hopeful prospects are extended to us in the Empire of Japan, and we have just heard with equal pleasure and surprise that the ruler of that distant country has been

converted to Christianity by one of our brethren. But unlikely as this important event would appear, judging from antecedent probabilities and from what I know of the religious condition of that Empire, I trust that the Revd. Nathan Brown has verified the statement which he made to that effect, for I can imagine nothing more discreditable or injurious to this religious body than that it should give currency to such a report, if it be not true. The impression it will make throughout the Christian world must needs be profound, and I will not do the reverend speaker the injustice to suppose that he made the assertion without sufficient authority. From the silence of Mr. Goble on this subject, I infer that the fact is as stated; for he is present, and is said to have been the happy instrument of this momentous change. But I tell you this, gentlemen, that if we make assertions of this nature and they subsequently prove to be untrue, we shall be justly branded as a set of base impostors, who are careless of the first principles of that truth we profess to preach, and who delude credulous people into giving us money under pretences which have not the shadow of a foundation.

And this brings me to the question of our Reports. I fear that there must be more truth than many of us are willing to admit in the very common strictures made upon them in the books of lay travellers. It is said by these writers that our successes are grossly exaggerated, and that we accept as tokens of conversion and regeneration of heart behaviour which is interestedly good, but which reverts to its old unconverted type as soon as our eye is taken off the convert, or he derives no material advantages from his connection with us. I am willing to believe that though there is much ground for these accusations, the Reports are the results of illusions springing from your hopes, and not from any wilful desire to pervert facts. But, gentlemen, we are the trustees of public money, given for a specific purpose and attracted by specific allegations. An extreme scrupulosity, therefore, should characterize every word of these Reports, and whenever you are not certain of a conversion, you may safely give the benefit of the doubt against the fact, for in any given individual case of an adult heathen it is a thousand to one against your success.

In concluding this brief address, gentlemen, which has not been couched exactly in conventional terms, but which is animated by the sincerest desire to benefit the cause of this and all other Christian missions, I commend this great object to your earnest, and, above all, to your honest efforts, and I hope that when we meet again next year, we may have a modest balance to our credit, and look back upon the intervening time as characterized by solid success and big with hopeful promises for the future."

This is what we should say, if we had to address the Society whose proceedings suggested our comments, and though we are quite certain its income would meet with an immediate reduction from those who now provide it, we are equally certain that supplies would come from more intelligent sources, and that no reflections such as those we have made could possibly be cast upon it in 1873.

#### THE LATE RISING AT NIIGATA.

In addition to the particulars recently published by us concerning the riots at Niigata the following information has reached us.

It appears that when the peasants under Watnabé advanced upon Niigata, they marched under a white banner bearing the following inscription: "Tenshoko Saijin; Tokugawa Kwaifuku; Kandsosku Seibatsu." The meaning of this may be taken as a reference to an ancestor of the Mikado, the re-instatement of the Tycoonate and the punishment of the wicked. Besides this, the prominent leaders of the riot wore similar flags on their coats, having also brass helmets bound round with a white cloth bearing the Tokugawa crest.

It will be remembered that six peasants were held at the Kashiwadsaki Kencho to await an answer from Tokei to the petition they sent. Five of these hostages have been

released, but the remaining man, one Kawadsaki Kuroji, having avowed his connection with the petition has been detained in prison.

#### THE TAXES IN NIIGATA.

A short time since, when narrating the varying circumstances connected with the outbreak at Niigata, we alluded to the taxation which the authorities have levied on the province of Echigo. It was then pointed out that the taxes were very high and caused much dissatisfaction. Since then enquiries have been instituted which have resulted in the gathering of the following information.

Saki breweries, in the time of the Tokugawa dynasty, were licensed, though the license cost nothing but a small gratuity on application; forty years since some seven of these licences were granted to saki breweries in the Niigata ken, the holders of these licenses having power to transfer them on the payment of a registration fee of 20 to 25 lbs of rice, according to the size of the brewery. Some four years ago, however, a fee of twenty rios per 100 kokus—about 250 piculs—was charged on the granting of a license, and at the commencement of the present year this fee was raised to one hundred rios. Two months later an entirely new system of taxation was adopted, the license fees before charged being abolished, and a tax of ten rios per brewery and five rios each for registration was substituted. In addition to this tax, which was levied from all—alike from those who had paid the previous taxes and from those who had not—a duty of five per cent upon the average prices of the preceding four months was levied. The Niiguri saki being inferior, the fees, &c. are lower, being three rios and two and a half per cent duty. The same facts also apply to the manufacture of soy.

Notwithstanding that seed oil pressing machinery has heretofore been subject to a license in various portions of the country, still Niigata has hitherto been exempt. Now, however, a license is charged; a machine capable of producing one *to* (8½ lbs.) of oil being charged one rio per annum, with a license fee of half a rio. The fees increase in proportion to the capacity of the machine in the ratio already stated. These licences it would appear are transferable without charge, but if the machine is not worked for three years the license is withdrawn.

Steamers and sailing vessels are charged respectively 15 and 10 rios per 100 tons, and native junks and boats one rio per 100 kokus or about 6½ tons. Should any craft so registered carry more than the tonnage upon which duty has been paid, a fine of three times the duty is levied upon the owner.

The taxes are payable at certain periods between the first and eighth Japanese month of each year, and, in order to make an equitable arrangement with the shipowners, no duties are levied on ships which become useless from accident or age within the first four months, and no new ship is liable to be taxed if finished after the first four months. It may be mentioned that these taxes are all levied under the direction of the Treasury Department. Besides these taxes the Government levies a duty of one per cent. on all goods leaving Niigata. This is doubtless most injurious to the trade of Niigata, though it might be partially removed by allowing goods sent to Niigata for sale, but which are left unsold, to be returned free of duty.

We now come to the import and export duties. As long as 260 years since, *Funayaku*—that is, import and export duties—were levied at Furu (old Niigata), the present port being established some twenty years after. Subsequent to this, when the province of Echigo was given to Mori Lambano kami as a reward for his bravery, these duties were abolished, but were subsequently re-established, a duty of one per cent on all imports being levied, and four persons being appointed to collect it. Taxes of 150 cash per koku of salt, and 120 cash per koku of rice, were also levied, the tax-gatherers paying themselves by deducting one-third of a bu for every rio of duty. On the opening of the port, the import duties were again abolished.

At present the principal sources of local revenue are the houses of public prostitution, and the *geisha*, or singing girls. A tax has, for the last fourteen years, been levied upon the former at the rate of 1,200 cash per annum, the *geisha* paying the same amount, and the

public prostitutes one-half that sum, the total yearly revenue obtained by the Government being about 2,300 rios. Such are the taxes which were levied in times past, and the alterations which have been made under the present Government.

REPORT OF THE COMMISSION APPOINTED TO INVESTIGATE  
THE MANAGEMENT OF THE YOKOHAMA GENERAL  
HOSPITAL DURING THE YEAR 1871.

(Printed for the convenience of the Members of the  
Committee.)

IN pursuance of the object for which the Commission was appointed, we have examined into the accounts, management, and condition of the Yokohama General Hospital during the year 1871. These, as the subscribers must be aware, were, at the time of the appointment of the Commission, not in so satisfactory a state as to give entire confidence to the public in the management, and therefore in the permanent efficiency of the institution. A large debt had accumulated, heavy and apparently unavoidable expenses were still being incurred, while, owing to the diminished amount of sickness in the community, the resources of the Hospital were seriously impaired. Under these circumstances we felt that nothing less than very decided measures would enable the Hospital to maintain its old position, and after a narrow examination of the accounts, we have considered that certain modifications should be made in the economy and management of the Institution, and these we now proceed to lay before the General Meeting.

A careful examination of the various books and papers of the Hospital shows, that during the last year there were 235 patients treated, instead of 240 as stated in the report submitted by the Committee to the General Meeting held on the 2nd of April last.

Of this number 41 were in the Hospital on the 1st of January, remaining over from the previous year, giving 194 as the actual number of new admissions.

The total number of days of service rendered to patients was 6,991, or an average of 29.32 days to each patient.

The Committee's Report to the Meeting of the 2nd of April gave 16.78 days as the average to each patient, but this error was subsequently corrected by the Chairman of the Committee at the adjourned Meeting of the 9th April. The table submitted to the meeting marked A., and called "Service Statement, &c.," gives the figures from which the foregoing result is obtained.

This table further shows the number of 1st, 2nd, 3rd, 4th class and charity patients treated, the number of days of service rendered to each, the amounts due by each for such service, and the amounts due for sundries, coffins, spoilt bedding, &c., &c.

The following is a synopsis of this table—

1st Class Patients...	240 Days service, Amount due...	\$ 960.00
2nd " " "	800 " " " "	2,400.00
3rd " " "	2,764 " " " "	4,199.50
4th " " "	359 " " " "	359.00
Charity " " "	2,828 " " " "	—
Total.....	6,991 Days.	\$7,858.50
For Sundries—the Total amount due was.....		\$ 353.40
Grand Total.....		\$8,211.90

The books of the Hospital show that out of this amount only \$7,112 was collected, leaving a deficit of \$1,099.90.

Of this deficit the sum of \$829.35 is explained by the Accountant for the Hospital in the table submitted marked B.

Of the balance—\$270.55 no explanation is given, and the Commission has been unable to trace it. Mr. Talbot, the accountant, thinks it may be explained by "the differences between the lists rendered by the Steward and the amounts paid in to the Treasurer" which, he says, are very numerous.

Some part of the explained amount of \$829.35 can doubtless be collected, and the Commission thinks, that the present Hospital Committee should make efforts to this end.

The special attention of the meeting, and of the Com-

mittee for this year, is called to the fact that several of the delinquent debtors were treated as 1st and 2nd class patients. If proper guarantees had been required before admission into these classes, such delinquencies could hardly have occurred. Patients who are unable to pay can have no claim on the community other than can be satisfied in the charity wards of the hospital.

Many small errors have been discovered in the Steward's tables of admission, discharges, amounts due, &c. which could have been rectified without trouble if these tables had been properly examined at the end of each month. Now, rectification seems impossible, and the Commission has been obliged to content itself with making a statement of them which will be found in the paper submitted marked C.

The Commission has carefully examined the vouchers for the expenditure of the Hospital during the year ending December 31st, 1871. The Table herewith submitted marked D will show the result of this investigation.

The report of the Hospital Committee to the General Meeting held April 2nd shows a total expenditure of \$15,243.28 (the amount of the credit side of the Revenue Account, less the amount of the deficit of 1870 and an error in a Consular account).

No detailed analysis of this expenditure having been given by the Committee, the Commission was obliged to go through the vouchers and make one. The result shows a total expenditure of \$15,175.62 or \$67.66 less than the amount given by the Committee. Whether this difference is a discrepancy between the books and the vouchers, or an error made by the Commission in dividing the expenses into different classes, it is impossible to say. If in the books and vouchers, it has been probably paid out and is not recoverable, or is in the unpaid accounts and is recoverable. If an error of the Commission, it is so small as not to affect the general value of the Table.

An examination of the Table herewith submitted shows; that of the amount \$15,175.62, \$7,815.92 comes under the head of Variable Expenses and \$7,359.70 under the head of Establishment Expenses. Of the Variable Expenses \$1,948.33 were for meat, poultry, game, &c, \$587.38 for Bread, \$1,108.23 for Milk, \$626.27 for Fish and Eggs, \$443.16 for Vegetables and Fruit, \$1,111.25 for Wines and Liquors, \$1,272.20 for Sugar, Syrups, Tea, Coffee and Stores, \$617.10 for Medicines and Soda Water, and \$102 for Coffins.

Of the Establishment Expenses \$1,088 were for fuel and lights, \$4,456.13 for wages, \$1,213.04 for insurance, ground rent, and repairs, \$337.48 for furniture, and \$265.05 for washing and sundries.

The Establishment Expenses being distributed over the entire year the average is found to be \$1.05 per diem for each patient.

A division of the Variable Expenses by the average number of patients treated in each month of the year shows a disbursement per head of 90 cents per diem for the month of January, 98 for February, 94 for March, \$1.23 for April, \$1.43 for May, \$1.03 for June, \$1.09 for July, \$1.37 for August, \$1.23 for September, \$1.25 for October, \$1.54, for November, \$1.34 for Dec.; giving an average for the year of \$1.12. Adding the \$1.05 Establishment Expenses, we have, January \$1.95, February \$2.02, March \$1.99, April \$2.28, May \$2.48, June \$2.09, July \$2.14, August \$2.42, September \$2.28, October \$2.30, November \$2.60, December \$2.39. The average daily cost for each patient throughout the year being \$2.17.

It will thus be seen that while the expenses for food, wines, medicines, &c., furnished by contract at the same prices, were in January 90 cents per diem, the same expenses in November were increased to the sum of \$1.54. The Commission believing that the cost of the daily regular diet and the articles of extra diet, wines, and medicines ordered by the Medical Officer would explain this large difference, obtained from the Hospital a copy of the regular and other diets in use there, a copy of which is herewith submitted marked E, and a number of the diet sheets upon which all the extra orders are supposed to be entered by the Medical Officer, a few specimens of which are also submitted marked F.

Comparing the Diet Table E. with the contractor's prices for the articles there mentioned, the Commission finds the market value of the full diet ration for one day to be

about 32 cents. Examining the diet sheets, the Commission finds that where special orders were entered by the Medical Officer, the quantity is frequently not specified, and occasionally the word "various" only is used. The object of these diet sheets as a check upon expenditure is thus defeated, leaving the Steward free to dispense extras at his discretion, or according to such verbal instructions as he may have received, and rendering impossible any estimate of the cost of these articles. But even if these diet sheets had enabled the Commission to ascertain the quantity of wines, liquors and other extras used, this would not account for the expenditure in November being \$1.54 while in January it was only 90 cents, the Establishment or Invariable Expenses being the same in each case. The Medical Officer in charge of the Hospital states in his report to the Committee, dated January 2nd, 1872, that the Small Pox epidemic ended in April, and that the year generally was the healthiest ever experienced by foreigners in Japan. The Return of patients during the year shows an average daily number of 49 in January, and only 10 in November. The cause of the difference of 64 cents between the two months cannot therefore be attributed to a greater necessity for extras in November than in January.

On the contrary, the Commission finds that owing to the greater proportion of first and second class patients in the month of January, amounting to a daily average of four first, and seven second, class patients, against but one second class patient in November, the expenses in November should have been less per head than those in January.

The Commission has therefore been unable to discover any reason for the very large difference referred to, which still remains unexplained.

The Establishment Expenses appear to be excessive, the item of fuel and lights alone amounting to \$1,088. and the contractors accounts showing that 17 tons of coals were furnished in January, or about 1,200 lbs. a day, in addition to a large quantity of firewood and charcoal. It is difficult to believe that this quantity could have been fairly used.

Examination of the contractors accounts reveals the fact that all articles furnished were charged for at full retail prices, and many articles which may be styled luxuries, such as turkey, geese, ducks, game, sausages, ham, shell-fish, etc., none of them belonging to the diet table of the Hospital, and none ordered by the Medical Officer, if the diet sheets are to be taken as evidence, were supplied in large quantity.

It is with regret that we feel it to be our duty to report unfavourably on the management of the Hospital during last year. There was apparently almost an entire absence of method, and no check upon the daily consumption and expenditure. The diet sheets should have been inspected at short intervals, and a constant record kept of the issue of extras and their cost, and the accounts made up at least monthly. Had this been done, considering the amount received from patients and the liberal subscription by the community, the Commission is of opinion that the Hospital, instead of having a large deficit of \$1,678.08 for the year, would have been able to pay off at least a part of the deficit of the previous year. Taking the expenditure of the month of January as a criterion of economical administration, (of which there may be great doubt,) the expense for the year would have been \$13,701.56, against receipts \$13,566.30, leaving a deficit of only \$135.26 which may be easily more than covered by bills due, and not yet collected.

In regard to the accounts of the Hospital, we find that there has been no efficient system for keeping a constant check on the various departments of the Institution, and we recommend therefore that the following system of accounts be strictly adhered to in future, viz.:—

1.—A Register. *Form No. 1.*

The Register should be a printed and ruled form bound in a book of about 300 pages. On the entrance of a patient, the particulars for the first five columns should be immediately filled in, and the order for admission filed as a voucher. On the discharge of the patient, (the date being certified by the initials of the Surgeon) the remaining columns should be filled up and the bill made out at the same time. At the close of each month the Register

should be examined by the Accountant or Secretary, and any unusual feature, such as the extended stay of a patient in Hospital, possibility of bad debts, or any circumstance requiring explanation, should be brought to the notice of the Committee.

2.—A Monthly Report prepared for the information of the Committee, showing the number of patients and days, the receipts and expenditure, &c. *Form No. 2.*

Careful attention to the Register and a regular preparation of the Report, would prevent, as far as book-keeping can do, much loss by bad or doubtful debts or by peculation or neglect, while the Monthly Report will serve to keep the financial position of the Hospital before the Committee.

3.—A Daily Consumption Book, *Form No. 3.*

4.—Yearly and Daily Cost Book, *Form No. 4.*

5.—Inventory Book, *Form No. 5.*

The Inventory Book should be compared with the stock of property in the Hospital not less than once a quarter. Any deficiencies discovered on making the comparison should be referred to the next monthly meeting of the Committee.

6.—Cash Book.

7.—Petty Cash Book. (This should register all cash passing through the hands of the Steward, the amount of which should be more limited than heretofore.)

8.—Journal.

9.—Ledger.

10.—Minute Book as hitherto.

11.—Extra-order Book.

12.—Wine expenditure Book.

We recommend that all admissions of whatever class be accompanied by a guarantee for the payment of the hospital expenses, except in cases of emergency, when the guarantee must be given within twenty-four hours.

We recommend that a form such as the following should be forwarded once a month to the local journals, for the purpose of keeping the public informed of the state of the Hospital and maintaining their interest in it.

REPORT OF THE YOKOHAMA GENERAL HOSPITAL

FOR THE MONTH ENDING.....1872.

Number of Patients remaining from last Month.....	10
Admitted since.....	10
Total.....	20
Discharged .....	5
Died.....	0
Present Number { Paying...10 } .....	15
{ Charity... 5 } .....	

.....MEDICAL OFFICER.

We recommend that the Head Steward's pay, now \$75 per month, be reduced to \$50, and that he should not board from the Hospital stores, but have an allowance in money, which we think should be fixed at \$30 a month.

We recommend that one of the Under-Stewards should be dismissed, the average number of patients in Hospital not seeming to demand the services of two. The staff of native servants should vary with the number of patients in Hospital.

That new tenders be called for by advertisement, in which the articles required for the Hospital should be divided into classes, as follows, and tendered for either together or separately.

*Class 1.*—Beef, fowls, mutton, fish, veal, vegetables, eggs, soup beef.

*Class 2.*—Bread, flour.

*Class 3.*—Firewood, charcoal.

*Class 4.*—Coals.

*Class 5.*—Oil, kerosine.

*Class 6.*—Coffee, pearl barley, tea, vinegar, sugar, arrowroot, table salt, tapioca, preserved milk, jams, white sugar.

*Class 7.*—Lager-beer.

*Class 8.*—Beer, claret, sherry, port, brandy, gin.

*Class 9.*—Milk. [We recommend the adoption of preserved milk as far as possible.]

We recommend the establishment of a fixed and uniform diet for all patients irrespective of class. This diet to be full or low. The following Tables of Full and Low Diet are transcribed with but little alteration from the form already in use, and we recommend that they should be adhered to except in the case of 4th class or native patients, for whom a different diet may be necessary.

## FULL DIET.

## REGULAR DIET FOR YOKOHAMA GENERAL HOSPITAL.

*Breakfast.*

Bread.....	6 oz.
Eggs.....	2
Tea.....	1 pint.
Preserved Milk, sufficient quantity.	
Sugar.....	$\frac{3}{4}$ oz.

*Supper.*

Bread.....	6 oz.
Eggs.....	2
Tea.....	1 pint.
Preserved Milk	
Sugar.....	$\frac{3}{4}$ oz.

*Dinner.*

## Sunday, Tuesday, Thursday.

Soup.....	$1\frac{1}{2}$ pints.
Roast Beef.....	10 oz.
Potatoes.....	8 oz.
Rice.....	2 oz.
Bread.....	6 oz.

## Monday, Wednesday, Saturday.

Soup.....	$1\frac{1}{2}$ pints.
Beef.....	10 oz. } stew-
Potatoes.....	6 oz. } ed.
Beets.....	4 oz.
Vinegar.....	$\frac{1}{2}$ oz.
Bread.....	6 oz.
Rice.....	2 oz.

## Friday.

Soup.....	$1\frac{1}{2}$ pints.
Fish.....	8 oz.
Beefsteak.....	5 oz.
Cabbage.....	4 oz.
Bread.....	6 oz.
Rice.....	2 oz.

## LOW DIET.

Bread.....	14 oz.
Potatoes.....	8 oz.
Tea.....	$\frac{1}{4}$ oz.
Sugar.....	$1\frac{1}{2}$ oz.
Milk (prepared).....	6 oz.
Soup.....	1 pint.

With regard to the modifications or changes in the above diet, to suit the demands of special cases, they should be made in writing by the Medical Officer in an extra order book, specifying the articles, quantity, and the individual for whom intended, and signed daily, and without this signature no extra article should be issued.

In like manner all orders for wines, liquors, &c., should be made in a separate wine expenditure book, specifying the kind and quantity prescribed and for whom intended, the requisition being signed by the Medical Officer.

We recommend that such articles of diet as ham, shell-fish, and game, on which a large sum was expended last year, should not be given without special orders signed by the Medical Officer.

That it shall be optional with patients to order special articles of food and drink, if licensed by the Medical Officer, on payment to the Steward. That a tariff over cost of such articles be settled by the Committee, and that the Steward be responsible for the payment, keeping a separate account of these extras.

That, in view of the sum collected last year by the Committee, and the dependence of the Hospital to a great extent upon the voluntary contributions of the community, the Committee should make it a special duty and object to secure a continuation of these contributions.

Should these suggestions be adopted by the Committee, the Commission would recommend the acceptance of Mr. Talbot's offer to carry out this system of book-keeping, to furnish the Committee with statistics, collect accounts, and prepare the yearly or half-yearly balance-sheet, for the sum of \$600 *per annum*. The Treasurer's duty will then be limited or reduced to the receipt and payment of cash and keeping a cash-book, and the entire proceedings will be so clear that the auditors will be able to examine and check without difficulty.

In conclusion, the Commission would urge that it is only by means of the strict and constant supervision of the Committee and the Medical Officer that an efficient and economical administration of the Hospital can be secured. The new regulations suggested are but mechanical appliances contrived to facilitate the working of the Institution, and to remove all obstacles in the way of an easy yet rigid weekly scrutiny into its accounts and condition. But even these will avail little towards a better administration of its affairs than has hitherto characterized them, unless supplemented by the unceasing vigilance of the Committee, the assiduous discharge of more than mere perfunctory duties by the Medical Officer, and the critical yet sympathetic interest of the public.

J. G. WALSH.  
W. G. HOWELL.  
BAYLY DONE, M.D.  
W. T. BUCKLE, M.B.

Yokohama 6th July 1872.

Before submitting the above Report to the public, the Commission thought it advisable to refer it to the General Committee for their examination.

The Committee think that the cost of the Stewards' messing should have been included in "Establishment Expenses" instead of in the "Variable Expenses," and they show that had this been done the average cost per patient for the month of January would have been 84 $\frac{1}{2}$  cents per day instead of 90, and for November \$1.18 $\frac{1}{2}$  instead of \$1.54, reducing the difference against November to 35 $\frac{1}{2}$  cents instead of 64 cents.

Undoubtedly provision should have been definitely made for the messing of the principal Steward, either by a sum of money or the equivalent of it in a definite amount of provisions. The Commission has not been able to find any rule or regulation governing this matter. The Steward apparently exercised his own discretion in the matter of his messing, and levied without check upon the Hospital stores both for himself and the under-stewards, and therefore this expense had to be classed as "variable." With regard to the two under-stewards, they were both long inmates of the Hospital as charity patients, and were both incapacitated from earning their subsistence elsewhere. Under these circumstances they were paid \$15 and \$10 respectively to assist the Steward, but we think that there was no reason to change their diet from the full diet of Charity patients, which, as we have seen before, ought to cost 32 cents.

The Committee made some suggestions in addition to the above, but none of these appear to us to necessitate any modification of the foregoing Report.

## NIHON GUAISHI.

## ACTUAL HISTORY OF THE MINAMOTO FAMILY.

## VOL. III.

(Continued from our last.)

The Cloistered Emperor had a considerable dislike to Yoshinaka, and wished to summon Yoritomo to the capital. Yoshinaka vigorously opposed this idea, but not being listened to, became violently indignant. The Northern troops wanted supplies, and issued forth in all directions to plunder to the great annoyance of the Cloistered Emperor. At this time the Heishi were in the Nankaidō, and as they constantly made incursions into the Sanyōdō, Yukiiyē besought leave to go and punish them. A decree was issued, granting this. Yoshinaka said: "Although Yukiiyē is valiant, he is unlucky. He ought not to be put in command." Thereupon fresh orders were given to Yoshinaka in his stead. Yoshinaka started from the capital and made Ashikaga Yoshikiyo and some others leaders of the van. In the intercalary month Yoshikiyo fought with the Heishi at Midzushima, was defeated and killed. Yoshinaka de-

sired to advance and attack the Nankaidô, but hearing on the way that Yoritomo had despatched troops which were on the point of entering the capital, he led his army back again. A decree was issued ordering him to desist, but he took no heed of it. The Cloistered Emperor had previously sent a messenger to Kamakura. Yoritomo summoned him into his presence, and addressing him, said: "The Heishi having abandoned the capital and fled of their own accord, Yoshinaka and Yukiie took advantage of their having evacuated it to enter therein. They then presumed on their services to demand rewards, and dared to choose the provinces to which they would be appointed. What do they mean by this? Your servant ought to go and smite them at once; but Fujiwara no Hidéhira and others lie in wait to strike him in the back at any moment, so that your servant has been unable hitherto to obey the decree. Besides, if he were to enter the Imperial capital at the head of a large force, that would cause tumult and confusion." The messenger returned and reported. All the high officers of State admired the attitude assumed by Yoritomo, and eagerly inquired what his personal appearance was like. The messenger said: "Yoritomo is dwarfish in person, and has a large face, but his manners are distinguished. His languages plain and clear. He is not of Yoshinaka's sort." Yoritomo also sent a messenger to say to the Emperor: "All the vices which the Heishi have seized ought to be restored to their original owners, for your servant will not profit by them. Those of the Heishi who surrender, ought to be pardoned, for your servant was once pardoned, and the events of to-day are the result of that act. That the Gen and Hei take equal positions and both guard the Imperial family, is the old system, and a good one. Why should the Imperial Court look on either with partiality?" The Cloistered Emperor's inclination for Yoritomo increased, and he sent frequent messengers to summon him. Hereupon Yoritomo made his younger brothers Noriyori and Yoshitsuné take charge of the payment of tribute in the Kuantô,<sup>(140)</sup> and go up west, in order to spy upon Yoshinaka. Yoshinaka wished to hinder Yoritomo's plans, and plotted with Yukiie to carry off the Cloistered Emperor to the army, but Yukiie, who had always been a favourite of the Cloistered Emperor, secretly informed him of this. The Cloistered Emperor then sent the priest Jôken to reproach Yoshinaka. Yoshinaka replied, saying: "Who invented this tale? Your servant only regretted that the Government wished to betray him to Yoritomo, and therefore desired to try which is the stronger of the two. He beseeches that orders may be given to him to chastise Yoritomo." He then proceeded to the Cloistered Emperor's palace and presented to him a written oath, and asked leave to prevent the slanders from having any result. The Emperor replied in such a way as to appease him. In the eleventh month frequent decrees were issued, urging Yoshinaka to undertake a western expedition. Some one said to him: "Your not marching westward shows that you desire to plot some thing wicked." Yoshinaka replied that he was taking precautions against the eastern troops. Still the practice of plunder increased. The Cloistered Emperor despatched a favourite retainer named Taira no Tomoyasu to reproach him. Tomoyasu was skilful in beating the drum, and went by the name of Tsudzumi<sup>(141)</sup> Hangan. Yoshinaka said: "Does the Tsudzumi Hangan desire some one to beat him?" Tomoyasu was wrath, and returned to report, saying: "Yoshinaka is evidently a traitor; I beseech that he may be punished." The Cloistered Emperor gave his consent, and suddenly called out the priest troops of Yenjôji on Hieiizan, appointing Tomoyasu to be their commander. Yoshinaka assembled his officers, and, addressing them, said: "I have performed services and have committed no crimes. Why should matters come suddenly to this pass? I stop here with fifty thousand warriors and horses to protect the capital, and the authorities give me nothing. If I do not slay the rich townspeople, how can I live? Still I have never yet plundered

"the Emperor's people. This Drum's slanders are the cause of all this. I will strike and smash him." Higuchi Kanémitsu and Imai Kanéhira earnestly remonstrated with him, and advised him to go to the Palace and give in his submission. Yoshinaka grew angry and said: "Since I took up arms I have fought several tens of battles, and have never known what it is to surrender. If I surrender, I shall simply be beaten and killed by the Drum instead of beating him." He then gave orders to his officers, saying: "I have made up my mind to die to-day. Do you do your best, so as not to be laughed at by Yoritomo." He then divided his army into seven bodies, and surrounded Hôjinji.<sup>(142)</sup> Tomoyasu ascended the wall and dancing about abused Yoshinaka. Yoshinaka yelled angrily and advanced towards him, on which Tomoyasu fled and concealed himself. The northern troops set everything on fire to look for him but without success. Yoshinaka succeeded in carrying off the Cloistered Emperor to the Palace of the Regent (*sesshô*) and the Emperor to Kannin. He deprived all the high officers of State down to Tomoyasu of their offices and honours, and made himself master of the horse<sup>(143)</sup> to the ex-Emperor. Yoshinaka had previously married the daughter of Fujiwara no Motofusa. Hereupon Motofusa gently expostulated with him, and he then removed the Cloistered Emperor to the Nishi no Tôin,<sup>(144)</sup> resigning also his own office and rank. In the first month of the first year of Genriaku (1184) Yoshinaka was raised to the rank of *Jiu-shi-i-no-gé* and appointed Sei-i-tai-shôgun. Yukiie had some time previously fought with the Heishi at Muroyama, and had been defeated. He then took up a position in Kawachi and revolted against Yoshinaka. Yoshinaka despatched Higuchi Kanémitsu in command of troops to attack him. Noriyori and Yoshitsuné had, however, already arrived in Isé. A certain Tachibana no Kintomo went and told them of the events which had occurred, and then proceeded to Kamakura. Yoritomo admitted him to his presence, and said: "Yoshinaka is guilty. Let the Emperor order his servant to destroy him. Who is Tomoyasu that he should be able to withstand Yoshinaka?" He then sent out proclamations to the officers of the eight provinces, and was marching west to chastise Yoshinaka, when Tomoyasu came to Kamakura, desiring to give explanations. Yoritomo gave warning to his people not to admit him. Tomoyasu arrived, but no one took the slightest notice of him.

Shortly afterwards the troops who had been called out assembled to the number of sixty thousand. Yoritomo confided everything to the charge of Noriyori and Yoshitsuné, and also commanded them, saying: "If Kiso resist the passage of our troops it will certainly be at the Uji river. All of you must provide yourselves with good horses so that you may ride across." Yoritomo had two good horses called Ikédzuki and Surusumi. Kajiwara Kagétoki was a great favourite with him, and his son Kagésuyé, though young was keen and valiant. When these orders were given he asked that he might have Ikédzuki in order to be the first in the attack. Yoritomo replied: "Many have begged for this, and I have not given it. It strikes me that if Noriyori and the rest are not victorious in the fight, I shall march myself in which case this will be my mount." He then gave him Surusumi. The officers all started. On the following day Sasaki Takatsuna came from Omi to see Yoritomo, who inquired of him, saying: "I heard you were in Omi. Why did you not follow the army directly to the capital?" Takatsuna answered and said: "Your servant felt that he could not be sure of surviving the campaign, and he wished to see his prince once in order to take leave and receive his directions. After having galloped three days he has arrived. Your servant has but one horse, which is tired and of no use. That is why he is here behind time." Yoritomo was so pleased that he said to him: "Will you be able to be my first in the attack at Uji? He replied: "I can. Your servant lives on the river and knows its depths and shallows." Hereupon Yoritomo after all brought out Ikédzuki and bestowed the horse on him. Takatsuna was

(140) The Kuantô or 'east of the barrier,' includes all the eastern part of Japan as far as Ozaka in Omi, close to Kiôto.

(141) Tsudzumi is the small drum used by Japanese in concerted music.

(142) The palace of the Cloistered Emperor.

(143) In no M'maya Bettô.

(144) Tô-in is a palace inhabited by a retired sovereign.

grateful and happy, and thanking him, said: "If my prince hears that Takatsuna has died without fighting, it will show that he did not succeed in being first in the attack. If you hear that he has fought and not died then you will know that the first in the attack was Takatsuna." He paid his respects and departed dancing for joy. Yoritomo called him back, and warned him, saying: "Kagésuyé and others begged this animal of me, but I did not give it. Remember this." He answered and said: "Yes." At this moment the great army was encamped on Uki-jima ga hara.<sup>(145)</sup> Kagésuyé looked at the crowd of horses, and found none which surpassed Suritsumi. He led his horse up on to a high mound, and showed it proudly to the multitude. Shortly afterwards there was a great sound of neighing. Hatakéyama Shigétada said: "That is Ikédzuki's voice. How can it have come here?" In a short time Takatsuna's servant came leading Ikédzuki past the bottom of the mound. Kagésuyé asked him: "Whose mount is it?" The servant replied: "It is Mr. Sasaki's mound." Kagésuyé was very angry, and said: "I did not expect my Lord would have treated him as my superior. I will rather die with him, and make my lord lose two good men." He clapped his hand on his sword, and lay in wait in the road. Takatsuna observed him, and addressing his horsemen, said: "Is not that Kajiwaru? What my lord told me to remember was just on his account." As he gradually approached, Kagésuyé called out saying: "Shirô!<sup>(146)</sup> It is a long time since we met. Is that mount a present from my Lord?" Takatsuna smiled and replied: "No. I was grieved at not having a good horse, and wished to go to my Lord's stable and borrow one. I heard that he had bestowed Nurusumi on you, and that you could not get leave to have Ikédzuki. If such was the case where you were concerned, how much more so for Takatsuna. But the prince's business was pressing, there was no time to consider, so I persuaded the stable keeper to let me steal this. Should I hereafter be accused of it, I shall esteem myself fortunate if you will help me out of the difficulty." Kagésuyé countenance cleared up and he laughingly replied: "I am sorry I did not steal it myself." They then marched west in company. Noriyori advanced against Séta and Yoshitsuné against Uji. Yoshinaka on hearing of this took counsel whether he should fight on the defensive. As he had but a thousand effective horsemen he despatched Imai Kanéhira and Yamaki Yoshihiro to defend Séta, and Nénou Yukichika and Taté no Chikatada to defend Uji. They took such measures of defence as stripping the planks off the bridges, constructing stockades, and stretching ropes under water. On the twentieth Yoshitsuné arrived on the eastern bank with twenty-five thousand horsemen, and warned the inhabitants to keep out of the way of the army, but he burnt their cottages and pitched his camp on the site thus obtained. He erected a tower which he ascended and provided himself with a pencil and inkstone to write down the exploits of his officers, saying: "I intend to send a report to Kamakura." The officers were all enthusiastically desirous of fighting. Yoshitsuné issued another order, but the army was so noisy that it could not be heard. He then took the drum of Biódô-in and beat it under the tower, so that the whole army lent ear. Yoshitsuné then pronounced his orders, "that amongst twenty thousand men there must be some good swimmers. Advance at once and make the trial. Our brave warriors will pass along the framework of the bridge and keep off the enemy, so that they may not shoot our swimmers." The swimmers eagerly unfastened their armour and plunged in, and cut the ropes with their swords. Hirayama Shigéshigé, Shibuya Shigésuké, Kumagao Nawozané, and others, got on to the beams and shot. This archery fight endured a good while. There were two horsemen who whipped up their horses and advanced to ford the stream. The first was Kagésuyé, the last Takatsuna. Takatsuna from behind lied to Kagésuyé, saying: "Your horse's girth is loose." Kagésuyé stopped his horse and tightened the girth, upon which Takatsuna rode up and passed him. He landed on the bank and called out his own name. Kagésuyé landed

at his heels. When Yoshitsuné sent in the list of those who had distinguished themselves, Takatsuna was first in the assault and Kagésuyé the second. Hatakéyama Shigétada crossed immediately afterwards with his own band. Yukichika shot at him and hit his horse, but Shigétada swam to the bank, and advanced brandishing his sword. The northern troops shrank back. Yoshitsuné then crossed with the whole army, and, attacking the foe, inflicted a severe defeat on them. Yukichika fought with his empty hands and retired. Yoshinaka sent a messenger galloping to pray the Cloistered Emperor to remove to the monastery of Daigoji,<sup>(147)</sup> but he refused. Yoshinaka then hastened to the palace with some troops, drew his sword, and stood at the bottom of the steps with glaring eyes. He had the Cloistered Emperor's palanquin got ready, and insisted on a move being made. The inmates of the Palace trembled. It happened that some one came and told that the eastern army had already reached Kobata.<sup>(148)</sup> Yoshinaka galloped forth, and called at the Palace at Gojô to take leave of his wife the lady Fujiwara. A long time elapsed without his appearing. Two of his Samurai remonstrated with him, and then committed suicide before the curtain. Yoshinaka then came forth. He met Yukichika and Chikatada, and effected a junction with them. Their force amounted to barely three hundred horsemen. He looked at the eastern army, whose banners filled the skies, and said: "I will die." He advised his officers to disperse and leave him, but all begged to be allowed to share his fate. Yoshinaka then advanced and fell upon the eastern forces. Shigétada and Kagétoki advanced one after the other, and were all scattered. Yoshinaka ran forward and fell in with Yoshitsuné. Yoshitsuné charged with several hundred horsemen ranged in a line, and then shot wildly at him. Yoshinaka was severely defeated, and, having received a wound, fled westwards with his remaining troops. Yoshitsuné sent his troops in pursuit, and went with Shigétada and a few more to the Palace of the Cloistered Emperor. Oyé no Naritada ascended on to the Palace wall, and observing them, said: "Yoshinaka has come back again." The whole Palace feared and trembled. Naritada again reported, saying: "The crests on the flags are not the same. Probably the eastern troops." Yoshitsuné alighted from his horse on arriving at the gate, and shouted in a loud voice, saying: "Your servant is Yoshitsuné, the messenger of Yoritomo, who has arrived after defeating the rebels. I pray you tell his Majesty for me." Noritada was astonished for joy, and, dancing down, scampered in to report this. The Cloistered Emperor was greatly delighted, and summoning the six<sup>(149)</sup> men, ranged them in line outside the inner gate, where he saw them. He made a man ask each one his name. He who wore a red brocade mantle was called Minamoto no Yoshitsuné. He who was clad in scarlet armour and carried a great sword at his girdle was called Hatakéyama Shigétada. Next to Shigétada were two men named Shibuya Shigésuké and Kawagoyé Shigéyori. He in the black armour was Kajiwaru Kagésuyé; he in the yellow armour was Sasaki Takatsuna. The Cloistered Emperor said: "All lusty warriors." He then commanded them to guard the Palace. Yoshinaka having been defeated, desired to carry off the Cloistered Emperor, and fly to the west. He came back to the Palace for this purpose, but Yoshitsuné and the rest attacked and repulsed him. Yoshinaka fled to the bare bed of the river at Sanjô, where the eastern troops were eagerly lying in wait to attack him. Yoshinaka fought as he retreated and retreated as he fought, till only thirteen horsemen remained to him. Shigétada again pursued him. There was a mistress of Yoshinaka's called Tomoyé, the younger sister of Kanéhira, who possessing great personal strength constantly followed the army to battle. On this occasion she stopped alone on horseback and fought. Shigétada wished to take her alive, and fixing his eyes on her approached. He seized the sleeve of her armour, but Tomoyé whipped up her horse, which bounded away, and the sleeve parted. Shigétada left her alone

(147) Dept. of Uji, about four miles east of Kiôto.

(148) On the road from Uji to Kiôto.

(149) The author ought to have given the number of Yoshitsuné's companions above, instead of saying a few more. Such instances of carelessness are common enough in his text.

(145) Province of Suruga.

(146) Shirô was the ordinary name of Takatsuna.

and went back. Yoshinaka fled with seven horsemen. It happened that Noriyori, having broken through Seta was coming in. Uchida Iyeyoshi, a Tôtômi man, was in the van. Tomoyé fought with him and cut off his head, which she showed to Yoshinaka. Yoshinaka sighed and said: "Iyeyoshi was handsome and brave, but still he lost his head at a woman's hand. We cannot tell by whose hand I shall eventually die." He then exhorted Tomoyé to fly, saying: "What will people say of me if I take my mistress with me when I am going to die," but Tomoyé besought leave to die with him. Yoshinaka insisted. Tomoyé then shed tears, took leave and departed. Yoshinaka fled to Awazu,<sup>150</sup> where he met Kanéhiro. Kanéhiro said: "Yoshihiro has fallen in battle. I have escaped and come back simply because I did not know clearly how my Lord and Master had fared." Yoshinaka replied: "I ought to have died in the capital, but I wished to see you once more. That is why I have borne up as far as this. I am wounded and my strength is spent, wherefore I may as well perform suicide." Kanéhiro said: "Let my Lord and master strive still. The Heishi are in the west, Sakô in the east. Why should my Lord and master not fly and occupy the northern provinces, thus taking a third share? Your servant begs that he may stop and keep off the enemy so that his Lord and master may escape." He then set up his flag to rally the scattered troops, who gradually began to assemble, so that he obtained a force of several hundred horsemen. Having advanced and attacked the enemy's lines, he pierced them and passed through three times, till there were a few more than twenty horsemen left. Noriyori surrounded them with several thousand horsemen. Yoshinaka fought with great spirit, and lost all his horsemen, Kanéhiro alone remaining. Kanéhiro then pointed to a tree on a hill, and addressing Yoshinaka said: "Let my prince go thither and calmly take care of himself. Your servant begs leave to offer resistance here." Yoshinaka crossed the paddy-fields and went towards the hill. His horse fell into a quagmire and as he turned round to look at Kanéhiro, an arrow hit him in the forehead and killed him. He was thirty one years old. Kanéhiro was fighting vigorously, and had only eight arrows remaining in his quiver, with which he shot down eight horsemen. Hearing a cry amongst the enemy that his lordship of Kiso was dead, he said: "My business is done," and putting his sword in his mouth, fell from his horse, in such a manner that he pierced himself through and died. The eastern army was returning home after its victory, while Kanémitsu after defeating Yukiye was pursuing him into Kii. On hearing of the misfortune which had occurred he returned towards the capital; but his troops deserted on the road in such numbers that when he reached Toba he had only thirty horsemen. The eastern troops were marching to attack him, when the Kodama clan, which was connected with him by marriage, persuaded him to surrender and carried him back. They interceded for his life, but the Court Council would not grant it. Yoshitane sent the heads of Yoshinaka and the others to the capital, and tied a piece of silk to the queue of the former, on which was written "the rebel Yoshinaka." He bound Kanémitsu and made him follow in his rear; and in the end cut off his head. Yoshinaka's uncle Yoshihiro had in the first place defended Imoarai<sup>151</sup>, and his troops being defeated, fled to Isé. He was afterwards attacked and slain by Yoritomo. Yoshinaka's son Yoshitaka had previously been sent as a hostage to Kamakura. Yoritomo gave him his daughter in marriage, and afterwards wanted to kill him. Yoshitaka discovered this and escaped, but was pursued, captured and decapitated. His wife bewailed him and refused to eat. Yoritomo laid the blame on the pursuers and decapitated them. He wished to marry his daughter again to Fujiwara no Takayasu, but she refused and killed herself. Yoshinaka's mistress Tomoyé, having separated from him, took off her armour and travelled back to Shinano by private paths. She met the relations and comrades of Yoshinaka to whom she related the whole circumstances, and wept with them. At this time she was twenty eight.

(150) In Shiga dept. in Omi, close to the town of Zetzé on the Tôkaidô.

(151) In the prov. of Yamashiro.

She shaved off her hair and became a nun. She is said to have dwelt at Tomomatsu in Echigo, praying for Yoshinaka's happiness in the next world, until her own death.

(To be continued.)

## Law & Police.

### IN THE MUNICIPAL COURT.

Monday 22nd July.

Before E. S. BENSON, Esq., Director.

Ah Chan, a Chinese, was brought up on a charge of assault. It seems that on the 13th some Japanese policemen saw the prisoner and a Manila-man fighting opposite No. 72. The latter got the best of it, on which the Chinaman went into his house, got a Japanese sword, and cut him. The policemen then arrested both. They were each drunk.

The Manila-man has been dealt with by the Spanish Consul. The Chinaman was again remanded.

On Monday in the Saibansho Native Court, the second mate of the *Zadkia* was fined twenty-five boos for assaulting a Yokohama revenue officer on board that steamer.

### IN HER BRITANNIC MAJESTY'S CONSULAR COURT.

Before Mr. Consul ROBERTSON.

Tuesday, the 23rd July, 1872.

James Williamson and J. Wallace of the *Eastern Chief* were charged with drunkenness, abusive language, and refusal of duty.

Wallace pleaded guilty to refusal of duty, not guilty to other charges. Williamson pleaded not guilty to all charges.

C. W. Carr narrated the circumstances of Williamson using abusive language on various occasions. He also refused duty. Wallace was drunk on Sunday, and on Monday he refused to do duty.

To Williamson.—He was drunk on Sunday.

Prisoner Williamson made a long statement, throwing the blame on the captain, denying his being drunk or refusing duty. Wallace denied the charges brought against him.

Captain Carr gave both the prisoners a good character, and said he did not wish to punish them.

His Honour dismissed the case, each to pay his own costs.

Captain G. S. Carr, of the *Oceana*, was charged by the crew with neglecting to issue a proper amount of limejuice, or vinegar, according to the Act, on the voyage between Liverpool and Yokohama.

The Captain pleaded not guilty.

James Davis, A. B., said: The captain did not supply the proper amount of lime juice and vinegar. They left on December 14th, and none was issued till 6th February. Witness handed in a bottle containing, as he said, limejuice, sugar, and water, which he said was given them daily. They got no vinegar for nearly two months, and then it was a quart bottle for seven men for ten days. They ought to have had half-a-pint a-week each.

Charles Vincent, A. B., said the limejuice was served out about ten days after leaving port, when they were on salt provisions. It was afterwards very irregularly served out. For about a month they had a wineglass full of limejuice, water, and sugar per diem; afterwards the allowance got better again. On one occasion they were refused any water or sugar, and were told that the captain said if they found their own sugar he would find the limejuice. As to the vinegar, that was not duly allowed. The captain told him that they did not sign for it, and could not have it. The Captain was then shown the agreement, and he said he would abide by the penalty of the law.

Samuel Mathews A. B. also corroborated the charges made by the previous witnesses. He also corroborated the statement made by Vincent as to the Captain refusing to serve out more vinegar.

Capt. Carr said that he was prepared to prove that from the 28th December the limejuice was served out first by the steward and then by the second mate. There had been no symptoms of scurvy among the crew though they had been 203 days at sea. Fifty per cent more of limejuice had been used than was required. As to the vinegar the scale allowance had not been issued but the men were told that if they wanted more they could have it. As to his refusal to supply sugar he did so one day because fourteen days allowance had been used in half that time. There had been ten dozen of limejuice consumed. One quart of limejuice was allowed every four days for ten

men. Every fourteen days 9 lbs. 12 oz. of sugar was issued to the men.

William Watts, chief mate, said the limejuice was issued on the 25th and 26th December. There were two occasions on which complaints were made as to the limejuice, one that there was not enough water, and one that there was no sugar. He did not hear the Captain say that they could have more vinegar if they wanted it. He always had plenty of limejuice.

The Court then adjourned till 1.30 P.M. when a further adjournment till 10 A.M. next-day was ordered the Captain being sick.

Friday, July 26th.

This was in continuation of the charge against Captain Carr, of the *Oceana*, of issuing short allowance of limejuice and vinegar to the men.

John Preston, second mate, said he had served out the limejuice, but was not prepared to say whether or not he had always served out the due allowance.

To the Plaintiffs.—The occupants of the cabin used to take part of the limejuice out of the same bottle as given to the men.

To the Court.—He served out one quart of limejuice every four days to the ship's company, 15 in all. He had orders from the captain to give out that allowance; but the men never asked for more, though he believed they went to the captain once or twice to complain of its being insufficient. He mixed the limejuice with water, at the rate of fifteen half-pints to one-fourth of the quart bottle. He served out an ounce of sugar per diem to each man, for use with the limejuice alone.

Christmas Williams, formerly steward of the ship, said he issued the limejuice according to the instructions of the captain.

To the Plaintiffs.—He gave the men half-a-pint of limejuice, sugar, and water per diem. Then there were no complaints. There were complaints afterwards, when only a wineglass full of the mixture was served out to each man daily. For one month before reaching port, a half-pint tumbler full was given. The wineglass full was served out to the men for over a month; they were three months on short allowance of water, owing to the salt water getting into the tanks.

Captain Carr said that during the time the crew were on the short allowance of water for limejuice, they were on short allowance of water. This was just after rounding the Cape of Good Hope, and the crew desired to put back. He told them he would consult with his officers and let them know his decision. During the night 200 gallons of water were saved, and he then determined to go on, and if the water ran short, to put into Mauritius. This he did not have to do. Handed in the logbook as corroborative evidence of this statement. The crew were on short allowance of water to Anjer—a distance of 36 to 40 days. To his knowledge there had been no symptoms of scurvy. They were 203 days from Liverpool.

Judgment was reserved.

#### IN H. B. M.'s SUPREME COURT FOR CHINA AND JAPAN.

Before Mr. Acting-Assistant Judge HANNEN.

Wednesday, 24th July, 1872.

SMITH v. ESCOMBE.

This was a summons for \$12 being the value of a family ticket to the Bluff Gardens.

W. H. Smith stated that at the end of April he issued a family ticket to the Bluff gardens to Mr. Escombe for one year, amounting to \$12. After using the ticket for two months he returned it declining to pay. He now claimed the amount.

To Mr. Escombe.—The reason for returning the ticket was because it did not admit in the evening. When he granted the ticket he did not make any restrictions, but Mr. Escombe being a shareholder he knew the hours when the gardens were open. He always advertised the conditions as to the entry into the gardens.

To His Honour.—The tickets were issued by the directors. Mr. Escombe was a shareholder and was furnished with a copy of the rules. (The rules and tickets were handed into Court.)

His Honour said that on the face of the ticket and on the face of the rules there was no restriction as to the right of entry by family tickets.

Mr. Escombe said that the charge was only disputed in order to try the question whether or not Mr. Smith had a right to charge extra admission to the holders of tickets. It has caused a great deal of interest in the community.

His Honour said that was no defence to the summons. The \$12 must be paid and Mr. Escombe must summon Mr. Smith. There would a verdict for \$12 but without costs. Mr. Escombe would

now go to the gardens and if refused entry on his ticket pay for his entrance and then summon Mr. Smith.

Mr. Escombe said he had already paid for entrance during the evening.

His Honour said that Mr. Escombe was then entitled to a summons unless Mr. Smith would allow him to make a set off.

Mr. Smith urged that rule 2 admitted ticket holders only during the day, but

His Honour ruled that the ticket admitted the holder at any time when the public were admitted, evening or not.

It was then agreed between the parties that the extra admission should be deducted from the \$12.

#### IN THE AUSTRO-HUNGARIAN COURT.

Before Mr. Consul ROBERTSON.

Wednesday, July 24th.

BUSCH SCHAUB & Co. v. SCHNERR.

Judgment was rendered in this case as follows:—The verdict would be for the plaintiff, the goods being sold by auction and the proceeds being taken to satisfy the plaintiff's claim. The balance, if any, to be handed over to the defendant.

#### Extracts.

##### UMBRELLAS.

(Saturday Review.)

The greatest revolution of the eighteenth century took place on the day when Jonas Hanway walked down Fleet Street with an umbrella. The dress, the social tone, the very architecture of the West were modified in a moment. There was no longer any necessity for the heavy porticos which sheltered a visitor from the rain. Men flung off the cumbersome coats and watchmen's capes which had been their only protection against a shower. Even the shaggy beaver gradually disappeared, and the hat weathered storms which at an earlier age in the world's history would have reduced it to a shapeless wreck in twenty minutes. The mere sense that rain was at last beaten, that it was no longer necessary to watch the clouds and tap the barometer before starting for a walk across the fields, gave a new sense of freedom and exhilaration to mankind. Child as it is of the East, the umbrella only found its true realization when it ventured in Jonas Hanway's flat into Fleet Street. The "Lord of a Hundred Umbrellas" is really only the master of as many parasols. The umbrella of the Assyrian King or of the Byzantine Cæsar was a mere appendage of royal pomp. The Papal umbrella of the present day is a last relic of a time when State had absorbed what was meant for mankind. So long, in fact, as the umbrella lived only in lands of the sun, it missed its vocation; and even now, when the peasant of the Riviera appears with an umbrella, it is with something utterly undeserving of the name. Rain is a phenomenon, and he constructs a phenomenon to shelter him against it, red, vast, and formless. It is hard to believe that the gigantic erection has any kindred with the exquisite little implement which dangles from every lounge's finger in Pall Mall. In the civilized umbrella, however, the practical plays only a subordinate part. It is far more than a mere protection against a passing shower; it is the symbol of a life, the companion of leisure hours, the index to character. It is impossible to dissociate her umbrella from Mrs. Camp. There is something in the very bulginess of its vast circuit which marks the monthly nurse. A recent Archbishop of Canterbury used to be famous for walking across Westminster Bridge to the opening of Parliament with a cotton umbrella, and we at once recognise the temper and theology of the man. It is from a sense of this that an ingenious tradesman has just patented a "Clerical Umbrella," whose stout ebony handle and serviceable alpaca marks at a glance the decorous, hard-working parson. But a mere glance at an umbrella stand is enough to show the wonderful diversities of character which can be expressed in this way. We see the dapper little darling with its curious monogram on the top, and know we shall hear all the scandal in town as soon as we enter the drawing-room. The rough horn of another tells us that our solicitor is fussing for us in the study. Its neighbour, unkempt but lovely in its negligence, is the sign of an artist friend whose pictures find no favour with the Academy. The square, short umbrella leaning against the wall means "a little bill." When Mr. Sampson Brass is recalling the memories of the departed Quilp, he does not miss the one great symbol of his character—"His wit and humour, his pathos, and his umbrella, all come before me like visions of my youth." But if it is this to the world without, it is more than this to its owner. There are few things so companionable as an umbrella. A stick is

a shade too light. A dog is a shade too troublesome. A friend walks either too fast or too slow. But an umbrella is just heavy enough to give one the feeling of having something with one, it never bothers, and it always goes one's own pace. It is a prop in the moment of languor when one is forced to make talk in front of Lady Dawdle's garden-chair. It is a toy with which one plays as one flirts with her daughter. It has its peculiarities, its history, its stories of flights and returns, its memories of pleasant little *tête-à-têtes* with charming beings who found a shelter in it from showers. There is something human about it which endears it to us. We talk of it to our friends, we discuss its stick and its colour, we make a grievance of it, and write to the *Times* about the harpies who rob us of it at the Academy. There are few hours of loneliness and desertion when a man cannot console himself with his umbrella.

It is owing perhaps to their late introduction into Europe that men have as yet hardly recognized any distinct or separate property in umbrellas. Like game, they belong to the class of *fera natura*. A faint trace of Communism lingers over the stand in the hall. Nobody feels very guilty at taking a "stray" umbrella if it happens to be raining as he leaves his club, or at finding himself walking home with a new umbrella when he was conscious of having left it with an old one. It is amusing to notice the unconcerned curiosity with which the new owner, as he puts his spoil by with his hat and coat, guesses who on earth such a pretty little thing could have belonged to. There is not the least sense of guilt in the question. In common thought the umbrella is gifted with a certain vague personality which is supposed to explain its constant tendency to get astray. A kind of gipsy-like and vagrant nature is assumed to belong to it. It is credited with a volition of its own, and supposed to be in some way itself responsible for its presence in any man's hand but the man who bought it. Its own will brought it to us, and if it happens to be a new one, we generally leave it to its own will to take it back again. There are, we believe, persons eccentric enough to return umbrellas. Dr. Buckland, for instance, after the loss of a good many, boldly carved on the handle of a new one, "Stolen from Dr. Buckland," and found that his friends were only too eager to return it to him whenever it took its walks abroad. But the common sense of mankind has always frowned down invidious attempts of this kind to contradict a large and almost universal human instinct. If we recognise our watch in a friend's watch-pocket, it needs a very warm friendship indeed to reclaim it without a serious explanation. But if we fix an eye of welcome recognition on a long-lost umbrella, which happens to be dangling between a friend's thumb and forefinger, neither party feels the least embarrassment. The owner cries, with a start of pleasant surprise, "By Jove! isn't that my umbrella?" and the fellow surrenders it with a discreet "Is it really?" but without an attempt to cover or explain his felony. Our feeling on the subject reflects itself indeed in common language. An umbrella is never supposed to have been "stolen," but always to have been lost, and to lose an umbrella is simply to be a man. The accurate person who "never lost anything in his life" is careful to except his umbrella. There are limits to the credulity of even the most credulous, and he knows that if he had omitted the saving clause nobody would have believed him. But it is just this vagrant tendency that renders it so dear to us. We feel as the mother feels towards the darling who is sure to go wrong. It is so seldom that we can count on a month's uninterrupted converse with our own umbrella that we cherish the intercourse of every day. Life, too, is never weary of providing pitfalls for our umbrellas. They are constantly being reft from us at doors and corridors. There is a general theory among official people that we use them to demolish vases and to poke out the eyes of pretty pictures. Innocent and playful as the umbrella appears to us, it is to the official person a "dangerous weapon," which has to be seized and ticketed and detained in queer pigeon-holes. We sigh and part to meet no more. We leave the Gallery by a different door. We are chatting with an absorbing coquette as we hurry by the prison-house. It is sunny weather, and we simply forget it, or we remember the wanderer but have lost the ticket. Or, worst of all, we find ourselves amongst a mob of howling maniacs dancing before the fatal desk and shouting "Umbrella!" in ruin. Let us do justice to Mr. Cole as he has done justice to umbrellas. We have had our little tiffs with South Kensington, but South Kensington has freed itself from the superstition that it is necessary to consign the harmless partner of our joys and sorrows to an official blackhole. "Many men," mourns a helpless artist in the *Times* of last week, "who have an hour to spare, and would gladly look into the Academy late in the afternoon, are prevented doing so by the trouble and annoyance of surrendering and reclaiming the umbrella, the use of which our genial climate renders im-

perative." It is at any rate a consolation to these blighted beings that they can reconcile their love of art and their love of umbrella in the galleries of the International Exhibition. If ever we are tempted by gratitude to place the bust of Cole, C. B. in our hall, its place shall be exactly over the umbrella-stand. A more terrible pitfall lies in the tendency of mankind to regard umbrellas as a sort of circulating medium. It is odd that, while it requires at least a year's acquaintance to borrow half-a-crown, a casual chat of five minutes is supposed to warrant one in borrowing an umbrella. The most terrible result of this is that there are a race of people who never have umbrellas, and steadily borrow their way through every shower. There is something agonizing in the sight of one of these predatory persons watching calmly the pattering of the rain out of one's window, while one is conscious that that little gem in the hall is destined to be carried off in a few minutes. But there is no redress. An adroit use of "Christmas bill," or the plea of an already over-drawn account, may evade the demand for a pecuniary loan; but there is no conceivable pretext on which one can escape the loan of an umbrella.

But these communistic aspects are not the only social aspects of umbrellas. It is curious to note the part they play in acquaintanceship or in love. It is very difficult to remain an absolute stranger to the man who has walked a few miles with one under the same umbrella; a confidential relation seems to spring up with singular rapidity under the kindly circle of its roof. A good many very pleasant friendships have been born in this way out of a kindly shower. But prettier things have sprung out of showers than pleasant friendships. In the earlier stages of affection the umbrella is simply a vent for feelings which it is difficult to express in any other way. On the eve of a declaration, for instance, it is an immense relief to be able to fix one's eyes steadily on the ground, and to poke viciously at the gravel with one's umbrella. The awkwardness, the hesitation, the want of the right word is exquisitely annoying, and it is comforting to vent one's annoyance in a good poke, while the fair expectant is drawing curious and elaborately mathematical diagrams with the point of her parasol. But it is in hours of hesitation that the umbrella finds its noblest sphere of employment. Sunshine is by no means the best atmosphere for making lovers happy. The two companions loiter and dawdle; the gentleman hovers lightly over the new tenor at the opera, the lady picks a flower or two, and murmurs monosyllables in reply. The subject they are both longing to touch seems to recede into a further distance as the end of their stroll draws near. After all, Strephon thinks, with a little thrill of vexation, there will be other strolls and other sunny afternoons. But the whole difficulty vanishes with a drop of rain. Strephon opens his umbrella, and Belinda is soon hanging to his arm, and pressing closely to his side. It is easier to utter the "three little words" when they can be whispered under an umbrella than when they have to be shouted across a gravel path. The Educational umbrella carries us into a widely different region of emotion and thought. The ingenious contriver of this new invention has evidently been struck with the enormous field which a walk in the rain offers to self-improvement. In one of his umbrellas he offers us an opportunity of studying astronomy. The concave of silk is turned into the concave of the sky, where a host of planets and constellations gleam down upon us from between the bars of whalebone. In another we are wooed to the study of geography, and our eyes may wander through Baffin's Straits to where the umbrella stick represents the Pole. The idea is ingenious enough, and in the case of poets or persons addicted to walking with their eyes directed heavenwards, might no doubt be turned to very pretty purpose. Imagine the consolation to Mr. Tupper of walking beneath an expanded copy of the *Proverbial Philosophy*, and of being able at any moment to turn to one of its golden sentences on the roof above him. In the present dearth of polite conversation, we can fancy very adroit use being made of models of talk, such as Swift drew up for the fine people of his time, and which could in this way be hung peacefully overhead. Each rib of the umbrella might contain a dialogue adapted to different people, and a dexterous twist, as Lord Heavyside left us, would provide us with a sprightly and vivacious repartee for Lady Flighty. The uses of the umbrella, in fact, can hardly be said to have been as yet explored. But, after all, its great charm will always lie in its utility. To the Emperor Nicholas war was a nuisance, because it spoilt his admirable soldiers; and rain is, for the same reason, a nuisance to the amateur of umbrellas. A rose "just washed in a shower," as Cowper says of it, a pretty thing in its way, but the lightness and grace of an umbrella vanish with a wetting. It never folds again. Its slim proportions gather a shade of portliness. Inside lights we see in it something of a trace of Mrs. Gamp. It is in

vain that we watch its decadence with a curious regret, and veil the sadness of its last moment by a shilling cover from Redmayne's. Its has come, but there is a romance even in its last moments. It simply vanishes. Old sticks linger about the house, but an old umbrella is as a dead donkey. Jew voices rise from the area in the early dawn, and suggest to us, as we turn dreamily on our pillow, theories about its end. But we know nothing. The umbrella vanishes into the Infinite, and we made no impius attempt to lift the curtain of the dark.

## AN IMPERIAL APOLOGY.

(Times.)

We direct attention to this publication less on account of its intrinsic merits than because its author is known to be the chief sufferer in the late mighty strife which has changed the balance of power in Europe. Although the events are quite recent, the causes of the collapse of France in the memorable war of 1870 are well understood and fully appreciated, and nothing probably will alter the verdict of general opinion upon the subject. The French army was not wanting in the national qualities which have made it famous; but within a few days after hostilities were begun, it was hopelessly outnumbered by the gigantic hosts which united Germany poured into the field, and, being inferior to its foe as a military instrument, and having been sacrificed by fatal strategy, it was overwhelmed by the most crushing disasters of which history has left a record. In these circumstances, dignified silence, it might have been supposed, would have been the lot of the ill-fated sovereign who, owing to the conditions of the tenure of power, must be held primarily accountable for the catastrophe. The Emperor Napoleon, however, has thought otherwise; and in this pamphlet, which, though bearing a borrowed name on the title-page, is well known to be from his pen, he endeavours to apologise for the fatal step of having taken the field against Germany with forces proved to be wholly inadequate, and to justify his first military operations, if not to excuse the curious generalship which literally seemed to have courted destruction. In much that he says we fully concur, though we do not think it constitutes a defence. There can be no doubt that during many years before the ruin of 1870, the military organization of France was, in many respects, extremely imperfect; that Napoleon III. and one or two of his counsellors were far more alive to this defect than even the most enlightened Frenchmen; that crude and partial as the reforms were which the Emperor rather designed than accomplished, they increased the strength of France for war, and would have made it in the highest degree formidable had time been allowed for their full development. Nor can it be questioned that the jealousy of the Chambers in the later years of the Empire interfered seriously with the plan of Marshal Niel for the re-organization of the national forces, and was, therefore, in part the cause of the disasters. All this, however, does not excuse the Emperor for the calamitous error of having thrown down the gauntlet to Germany, and advanced hastily to the Rhenish frontier, with an army unequal to its task; and the arguments he urges on this vital point—the only one of capital importance in the present condition of French opinion—cannot stand the test of impartial criticism. Had the French army been numerically as strong as Napoleon III. was led to believe, we still think he has failed to show that it would have been anything like a match for the forces of Northern Germany alone, not to speak of her Southern allies. That, as seems certain, he was wholly deceived as to the capabilities of that army, and to its power of rapid concentration, is surely hardly a justification. As for a plea he puts forward that his advance to the Rhine was not more perilous than the celebrated swoop of his uncle in 1815 on Belgium, we cannot see that it avails him much, not to dwell on the essential difference of the facts. Indeed, we should have thought it unwise to provoke attention to such marked contrasts, as regards the military power of France and the abilities of those who swayed it, as the campaign of Waterloo and that of Sedan. We should add that the present publication seems to differ widely in some respects to the celebrated "Note" of Napoleon III., written when a prisoner at Willichshöhe; and it is at variance also with another publication, on the causes of the disasters of 1870, attributed, untruly perhaps, to him.

The Emperor begins with a brief account of the condition and strength of the French army from 1852 to 1870 which appears to us on the whole impartial. When Napoleon III. ascended the Throne, that army, like those of other Powers, had felt the influence of the long peace, or of the easy triumphs over barbarians, and it had little

in common with the formidable legions which had borne the Tricolour from Cadiz to Moscow. How far this was owing to the effect of the known law of 1832, which abolished general military service by allowing substitutes on a large scale, diminished the number of trained soldiers, and made the reserve a mere mass of conscripts, or how far it was due to an increasing want of those special and scientific arms essential to a good military system, it is unnecessary for us to inquire here. In any case, France was not prepared, in 1852, for a great war, even as great wars were conceived at that period. This was clearly seen during the campaigns of the Crimea, when the Emperor found it extremely difficult to keep up his forces at an effective strength of 20,000 men for 12 months, and was only able to attain these numbers by an extraordinary demand upon the Conscription, and by crowding the ranks with raw levies. It appeared again in 1859, when, notwithstanding the greatest exertions, and the enthusiasm caused by brilliant victories, and even the threats of Germany, France could never place on foot an army more than 250,000 strong, and had not 150,000 men ready to confront an enemy on the Rhine. This state of things, we may well believe, could not satisfy the heir of Napoleon I.; and the Emperor is, doubtless, correct in saying that, after the experience of 1860, he addressed himself with diligence to increase the efficiency and power of the national forces, though there is no proof that, except in idea, he ever contemplated imposing on France the Prussian system of universal service and of local and territorial military organization. Napoleon III. during this period—between Solferino and Sadowa—wished that France should possess three good armies, independent of each other, with sufficient reserves, and each from 120,000 to 200,000 strong; and indisputably his views on the subject were not only wiser than those of his usual counsellors, but do not seem to have aimed at extending the military power of France beyond measure, considering the existing relations of Europe. The indolence or prejudices, however, of the Imperial Marshals, blind to the shortcomings of a faulty system, and the incredulity of a Legislative Assembly, tenacious of old traditions of renown, resisted these salutary attempts at reform; and, notwithstanding the seeming power of the sovereign, the forces of France remained ill-organized, and markedly deficient in the requirements of mobility and rapid and easy concentration, of vital importance in modern warfare. Two circumstances, besides, on which the Emperor not unnaturally dwells as little as possible, being himself chiefly responsible for them—the Mexican war and the vicious practice of allowing money to supply the place of men as substitutes for the Conscription—augmented this weakness in no slight degree; and we can readily understand that, in 1865, the French army, deficient even in numbers and with bad reserves, and a feeble Administration, was wholly unequal to the proud mission assigned to it by national vanity. After Sadowa the truth seems in some degree to have made its way into the public mind; and the unwilling acceptance of the celebrated project of Marshal Niel was a tacit acknowledgement of the comparative inferiority of the army, as well as a pointed challenge to Prussia. Marshal Niel's scheme, in its main outlines, may be ascribed to the Emperor himself; and though it was in part marred by the jealousy of the Chambers, growing impatient of the declining Empire, it made some addition to the military power and resources of France from the first moment, and ultimately would have made them extremely great, for, not to speak of the Garde Mobile, it would have raised the standing army and its reserves to the strength of 800,000 men, and would have thoroughly improved its general organization. But nine years were required to bring out the effects of the change in full completeness; and, except in their armament, the forces of France were not in a much more efficient state in the month of July, 1870, than they had been four or five years previously.

These considerations show that the French army was, at no time, under the Second Empire, equal to the pretensions claimed for it; that the Emperor was more alive to its defects than the chief soldiers and statesmen of France; and that, had his power been as great as his will, he would probably have made it a better instrument than it proved in the hour of trial and danger. In this matter, as in many others, Napoleon III. was more sagacious and well-informed than his foremost subjects; and though personal government must be held responsible for the disasters of the State, those who now rail at their disrowned Sovereign as a worthless and incapable fool ought to remember how, only a few years ago, they resisted his well-designed efforts to improve and strengthen the national forces. We fail, however, to perceive how the circumstance that the ill-fated Emperor was less blinded than most Frenchmen by illusions as to his military strength can in any way excuse his declaring war against a Power of the force of Germany, and his undertaking a campaign on the Rhine with an army utterly inadequate to the task. The arguments he

\* *Les Forces Militaires de La France en 1870.* Par Le Comte de La Chapelle. Paris, 1872.

employs here appear to us to have no weight, and we must add that he merely hints at what history, we believe, will say was his only apology for the fatal step—that he was compelled to follow where he seemed to lead, and that he could not withstand the passionate excitement which took possession of the great towns and the capital. The general position of the Emperor is that the French Army was not so unequal to the German in numbers as is supposed, but that, contrary to what he had a right to expect, its organization was so inferior that it was not given time to develop its power, and that this was the real cause of its overthrow. The standing army of France, he says, was not less than 400,000 strong, whereas that of Germany, even if united, was hardly superior in nominal strength, and would almost certainly be weaker on the Rhine, if a French fleet threatened the German seaboard. But though Marshal Niel and Marshal Leboeuf had more than once given a solemn assurance that this mass of 400,000 Frenchmen could be marshalled for service in about "a fortnight," more than twice that time was required for the purpose, the faulty administration of the French service, and the bad arrangements about the reserves, completely frustrating all previous calculations. The German army, on the other hand, arrayed and organized on a local system, was ready for the field in a few days, though scarcely numerically superior to its foe; and being thus collected in its full strength before the French were even half united, it was easily able to overwhelm its more cumbersome and slowly-moved antagonist. It was not, therefore, the want of military power, but the want of sound military institutions, which led to the calamities of France; and as the Emperor could not suppose that the difference between the belligerent nations would in this respect be as great as it proved, or that his best generals would be wholly mistaken, he is hardly to blame for what happened, and certainly does not deserve the charge of having rushed into war with inadequate forces. All this, we are constrained to say, is either in a great degree unfounded in fact, or, as an apology, is of little value. In the first place, if we are to credit the confidential reports of Baron Stoffel, and even the "Note" written at Wilhelmshöhe, the standing army of France did not reach 400,000 men in 1870; and there are grounds to believe that it was much less numerous by reason of scandalous neglect and corruption. In the second place, whatever the strength of that army may have really been, it was, according to every authority, including the "Note" we have just referred to, inferior to that of an united Germany, not to speak of its marked inferiority in many respects as a military instrument. And, in the third place, even if the disproportion of the standing armies of France and Germany was not so great as has been supposed, what reserves had the Emperor to oppose to the immense reserves of his prepared adversary, and how, therefore, is it possible to assert that the hostile forces were even nearly equal? It is clear, accordingly, that France was not a match for Germany when hostilities began; and as to the plea based on the fact that the French army was much slower in being concentrated than its foe, we cannot see how it avails the Emperor. He had been warned over and over again—he must have been well aware himself—of the superiority of the German principle of "mobilization," and, especially after the events of 1866, he ought to have remembered that his opponents would be in full force on the Rhenish frontier, at least as soon as his own legions. That his Marshals deceived him, and deceived themselves, is doubtless, true, and, in fact, palliates conduct otherwise not to be even explained; but, for a Prince exercising personal sovereignty, the excuse cannot in any way be accepted as a real vindication.

The Emperor, therefore, has failed to show that he had reasonable grounds to hope for success when he ventured upon attacking Germany; and though France is probably much more to blame, we cannot wonder that, in her present mood, she held him accountable for all that followed. In July, 1870, the French Army—never more than 220,000 strong, instead of the expected 600,000—was marched hurriedly to the frontier, and, distributed along an immense arc from Thionville by Strasburg to Belfort, it lay dangerously exposed to its gigantic enemy, who was being rapidly concentrated in overwhelming force. It was, we may well believe, with "bitter pain" that the Emperor discovered that days after "the fortnight" of his Marshals had passed, his army was little more than half the force which he had hoped to collect; and we can understand how this "terrible disappointment" must have baffled the Imperial design of assuming a bold and sudden offensive, and separating Northern from Southern Germany. But we have yet to learn why, when the chief of the Army of the Rhine had become aware that it was so much weaker than he had been led to suppose, and that a formidable enemy was at hand, he left it in its perilous position, liable to

be cut through, defeated in detail, and literally crushed by its gigantic adversary. Two operations, and two only remained to Napoleon III. at this juncture consistently with the rules of strategy—either at any cost to risk the initiative, and to march into the Palatinate at once, in the hope of gaining early success and perhaps of dividing the German masses before they had been fully combined, or else, what would have been more prudent, to have drawn the Army of the Rhine together and, passing steadily to the defensive, to have fallen behind the Vosges and Metz, and made a stand only on the plains of Chalons. Instead, however, of taking either course, the Emperor during the first days of August seemed as if he could not form a resolution, and kept his forces in their state of dispersion; and the result appeared in Woerth and Forbach, to be followed by the ruin of Buzaine and the unexampled catastrophe of Sedan. The Emperor's apology for this fatal inaction, not easily explicable on military grounds, and made intelligible, we believe, only by the circumstances of his political situation, is really, we must say, unworthy of him and cannot bear examination for an instant. True it is, he argues, the army of the Rhine was widely scattered in 1870, but so was that of Napoleon I. when he began the campaign of 1815; and as military critics of all nations have joined in admiring the first operation, the second, he submits, is not to be necessarily condemned, although it proved in the event unfortunate. It is surely needless to remind our readers that the two cases have nothing in common, and do not present the faintest analogy. The dissemination of 1815 was an incident in a strategic project, planned and executed with consummate skill, and, in fact, was one of the means employed by a great commander to make his attack; the dissemination of 1870 was obviously the result of vacillation, and led to nothing but false movements almost without parallel in war; and accordingly it is merely trifling to compare the two campaigns to each other, or to insinuate that each was a signal example of genius baffled through calculations for the errors of which it is not accountable. This defence, we repeat, is worse than useless; and, as we have said, it would have been wiser not to have drawn attention to the striking contrast in all that constitutes military ability which the chief and the warriors of 1815 present, even in defeat and ruin, to those of Snarbruck, of Metz, and of Sedan. This publication contains truths which Frenchmen will do well to recollect; but as an Imperial apology for the war of 1870 it is, we think, a decided failure, and before he had written on that catastrophe, Napoleon III., we venture to say, would have done well had he borne in mind the homely but true English adage, "the least said is the soonest mended."

## Shipping Intelligence.

### ARRIVALS.

July 20, *Decapolis*, Brit. barque, Almond, 631, from Newcastle N. S. W., June 13th, Coal, to P. M. S. S. Co.  
 July 23, *Thabor*, Japanese str., Brown, from Southern Coast, to Japanese Lighthouse Department.  
 July 24, *Great Republic*, Am. Str., Howard, 4,454, from San Francisco, Mails and General, to P. M. S. S. Co.  
 July 25, *Volga*, Fr. Str., Flambeau, 960, from Hongkong, Mails and General, to Messageries Maritimes Cie.  
 July 27, *Ashuelot*, Am. Gun-boat, Wallace, 950, from Kobe.  
 July 27, *Golden Age*, Am. Str., Coy, 1,870, from Shanghai, General, to P. M. S. S. Co.

### DEPARTURES.

July 20, *Hermine*, N. G. barque, Plembeck, 275, for Hongkong, Rice, despatched by Walsh Hall & Co.  
 July 21, *Eastward Ho*, Brit. barque, Charlesworth, 378, for Nagasaki, Ballast, despatched by Pitman & Co.  
 July 22, Am. str. *Japan*, Freeman, 4,352, for San Francisco, Mails and General, despatched by P. M. S. S. Co.  
 July 20th, Am. barq. *Clara Bell*, Pearce, 200 tons, for San Francisco, Tea,—despatched by Walsh, Hall & Co.  
 July 24th, Brit. Str. *Arco*, Andrews, 1,485 tons, for Hongkong, Mails and General,—despatched by P. & O. Co.  
 July 26, *Polly Lewis*, Am. barque, Johnson, 566, for New York, Tea, despatched by Smith Baker & Co.  
 July 26, *Wanja*, Brit. brig, Withers, 295, for Nagasaki, Ballast despatched by Pitman & Co.  
 July 26, *Great Republic*, Am. steamer, Howard, 4,454, for Hongkong, Mails and General, despatched by P. M. S. S. Co.  
 July 26, *Costa Rica*, Am. steamer, Williams, 1,917, for Shanghai and Ports, Mails and General, despatched by P. M. S. S. Co.

### PASSENGERS.

Per P. M. S. S. *Japan*, for San Francisco.—Mrs. L. Wheat, Mrs. D. B. Bationi, L. Brahe, and J. Kaderly in the cabin, and six in the steerage. For New York.—Messrs. Rupert Smith and Wm. Lane.  
 Per P. M. S. S. *Great Republic* from San Francisco: For Yokohama.—Mrs. Dr. Simmons, Dr. E. Caldwell, Jos. Jopaz, A. Schaffer,

W. A. Malcolm, wife and sister, A. Falco, T. Yamashioya, M. N. Wrekof, M. Tshikani, L. Laufenberg, H. H. Madeson, William Cannon. For Shanghai.—Messrs. B. Dawson, Jno. Dillon, Jr., J. B. Dillon, Capt. B. Hobart, Ewd. Queenell, William Barclay, C. V. Smith, Mrs. R. M. Johnson and inf., Revd. C. Goodrich and wife, Revd. A. H. Smith and wife, Revd. H. D. Porter. For Hongkong.—Messrs. J. J. Shawcross, J. H. Bancroft, J. O. M. Heeran and wife, Mrs. McE. Bailey, and 137 Chinese.

Per M. M. *Volga* from Marseilles: Messrs. Lisco, Meloncelle, Dusina, Gindetti, Pelu, Madames Holz, Dinger, Knipping and Bergan. From Hongkong.—Messrs. N. A. Caragiorg and Kiriakidi. From Saigon.—Captain L. Bretonde Rauzéat, Lieuts. Godin, Loizillon and Le Guenno.

Per P. & O. Steamer *Arcoa* for Hongkong: Messrs. A. F. Gain, R.N., and Macauley, 1st class; 2nd class, Messrs. H. George, A. Rogers, W. Woodley, W. Bazelle, E. Frazer, T. French, J. Barnes, and 3 Chinese.

Per Str. *Golden Age* from Shanghai—Sir Edmund and Lady Hornby, Mrs. Bourne, and servt., Messrs. Grimani, R. H. Boyce, A. H. Prince and servt., T. Holmes, E. George and servt., M. Gebsei, D. Ritchie, H. Le Grand and 104 in the steerage. For United States—E. Fraser, wife and son, Messrs. E. J. Roberts, T. S. Smith, S. Trail, R. Low, and one Japanese for Hakodate.

## MISCELLANEOUS.

## SANITARY CLOTHING.

IN the greater part of the British Colonies it is not unusual to have many rapid changes of temperature or climate in the course of one day. Medical men have therefore for some time past thought clothing a matter not unworthy of their serious consideration. The result of their consideration of this subject may be found epitomised in an article published in the *Lancet* in July, 1868:—"We learnt from Franklin a century ago that the solar heat is absorbed with greater or less facility according to the colour of the object exposed to its rays. Everyone remembers how he put pieces of cloth, similar in texture and size, but different in colour, upon fresh-fallen snow in the sunlight, and he found the snow melted under the pieces of cloth quickest when the cloth was black, less quickly under the blue, green, purple, red, yellow, in the order enumerated, and very slowly indeed under the white. Each day's experience shows us that we do not need to be made of snow in order to melt rapidly under a black coat in summer. What we then require for comfort is a nearly white material, in order that the heat rays may be reflected as much and absorbed as little as possible. The material should be porous, should imprison large quantities of air in its texture, and serve, therefore, as a very bad conductor of heat, while at the same time facilitating evaporation of the moisture from the surface of the body."

These qualities are possessed in the highest degree by a material manufactured by D. NICOLL & Co., of Fell Street, London, who, feeling satisfied that the information thus imparted came with the weight of great authority, have, from the date of the above publication, studied to give the best and most agreeable effect so such important advice; and a cloth every way answering the intended purpose is now offered for sale.

It may be described as a neutral tint, sufficiently toned down in colour from white as to give it an elegant specialty for a summer costume; and particularly for the sea-side or foreign tour, and, above all, Anglo-Indian purposes. As suggested by Franklin's discovery, the same material, made heavier and dark, will serve for winter use in northern climates; but the material for summer and autumn use is a natural colour-blend of wool, upon which the eyes rest with ease and comfort on account of the absence of all glare, which a higher colour would undoubtedly produce.

Under these circumstances, the manufacturers have concluded arrangements for the immediate supply to the public, through their representatives, of various garments in the new material. Specimens of the cloth are also obtainable on application through the nearest firm authorised to sell Messrs. D. NICOLL & Co.'s manufactures. The appearance of the new material may be easily understood by the following description:—"Many Foreign Wools do not require dyeing to produce those gray and brown mixtures mentioned above as a natural colour-blend. These bleedings of the above manufacture can alone be obtained of

D. NICOLL &amp; CO.,

Merchant Clothiers and Rug Paletot Patentees  
of 6 Fell Street, London,

and, as previous mentioned, through members of the trade only, as the business of the above firm is now exclusively wholesale; but it may be well to add, that at the end of each piece of cloth the words "NICOLL'S SANITARY CLOTH" are stamped, woven, or printed, so as to form a trade mark and facilitate any desire which may exist to obtain the useful manufacture above referred to.

f

dtf.

**CHOLERA AND DIARRHŒA.**—No Europeans should be without a supply of Jeremie's celebrated "Sedative and Anti-Spasmotic," which has never been known to fail in the most desperate cases of Cholera and Diarrhœa. The manufacturers, Savory & Moore, of New Bond Street, supply it in bottles, with full directions, and it is sold by all Chemists and Storekeepers. The public should see the well-known names of "Savory & Moore" on the bottles.

Yokohama, March 27, 1871.

## MARAVILLA COCOA.

For Breakfast.

THE GLOBE SAYS—

"Various importers and manufacturers have attempted to attain a reputation for their prepared Cocoas, but we doubt whether a thorough success had been achieved until Messrs. Taylor Brothers discovered the extraordinary qualities of 'Maravilla' Cocoa. Adapting their perfect system of preparation to this finest of all species of the Theobroma, they have produced an article which supercedes every other Cocoa in the market. Entire solubility, a delicate aroma, and a rare concentration of the purest elements of nutrition, distinguish the Maravilla Cocoa above all others. For homeopaths and invalids we could not recommend a more agreeable or valuable beverage." Sold in packets only by all Grocers of whom also may be had Taylor Brothers' Original Homeopathic Cocoa and Soluble Chocolate. Steam Mills—Brick Lane, London.

## MISCELLANEOUS.

**Dysentery, Cholera, Fever, Ague,  
Coughs, Colds, &c.**

**DR. J. COLLIS BROWNE'S**

(Ex Army Med. Staff.)

**CHLORODYNE**

IS THE ORIGINAL & ONLY GENUINE.

**CAUTION.**—Vice-Chancellor Sir W. P. Wood stated that Dr. COLLIS BROWNE was undoubtedly the Inventor of CHLORODYNE: that the story of the Defendant, Freeman, being the Inventor was deliberately untrue, which he regretted had been sworn to. Eminent Hospital Physicians of London stated that Dr. J. Collis Browne was the discoverer of Chlorodyne; that they prescribe it largely, and mean no other than Dr. Browne's—See *Times*, July 12, 1864.

The public, therefore, are cautioned against using any other than.

**DR. J. COLLIS BROWNE'S CHLORODYNE.**  
REMEDIAL USES AND ACTION.

THIS INVALUABLE REMEDY produces quiet, refreshing sleep, relieves pain, calms the system, restores the deranged functions, and stimulates healthy action of the secretions of the body, without creating any of those unpleasant results attending the use of opium. Old and young may take it at all hours and times when requisite. Thousands of persons testify to its marvellous good effects and wonderful cures, while Medical men extol its virtues most extensively, using it in great quantities in the following diseases:—

Diseases which in it is found, eminently useful—Cholera, Dysentery, Diarrhoea, Colic, Coughs, Asthma, Rheumatism, Neuralgia, Coughs, Cramp, Hysteria, &c.

EXTRACTS FROM MEDICAL OPINIONS.

The Right Hon. Earl Russell communicated to the College of Physicians and J. T. Davenport that he had received information to the effect that the only remedy of any service in Cholera was Chlorodyne—See *Lancet*, December, 31st, 1864.

From A. Montgomery, Esq., late Inspector of Hospitals Bombay—"Chlorodyne is a most valuable remedy in Neuralgia, Asthma and Dysentery. To it I fairly owe my restoration to health, after 18 months' severe suffering, and when other remedies had failed."

Dr. Lowe, Medical Missionary in India, reports (Dec. 1865) that in nearly every case of Cholera in which Dr. J. Collis Browne's Chlorodyne was administered, the patient recovered.

Beware of spurious and dangerous compounds sold as CHLORODYNE, from which frequent fatal results have followed.

See leading article, *Pharmaceutical Journal*, Aug. 1, 1869, which states that Dr. J. Collis Browne was the Inventor of Chlorodyne; that it is always right to use his preparation when Chlorodyne is ordered.

**CAUTION.**—None genuine without the words "Dr. J. Collis Browne" on the Government stamp. Overwhelming medical testimony accompanies each bottle.

Sole Manufacturer, J. T. DAVENPORT,  
33, GREAT RUSSELL STREET, BLOOMSBURY,  
LONDON.

Sold in bottles at 1s. 1½d., 2s. 9d., 4s. 6d., and 11s. f. dtf.

**RUPTURES.—By Royal Letters Patent.**

**WHITE'S MOC-MAIN LEVER TRUSS** is allowed by upwards of 500 Medical Gentlemen to be the most effective invention in the curative treatment of HERNIA. The use of a steel spring, so often hurtful in its effects, is here avoided; a soft bandage being worn round the body, while the requisite resisting power is supplied by the MOC-MAIN PAD and PATENT LEVER, fitting with so much ease and closeness that it cannot be detected, and may be worn during sleep. A descriptive circular may be had, and the Truss (which cannot fail to fit) forwarded by post on the circumference of the body two inches below the hips being sent to the

Manufacturer, Mr. WHITE, 228 Piccadilly, London.

Price of a Single Truss, 16s., 21s., 26s. 6d.; Postage 1s.  
" of a Double Truss, 31s. 6d., 42s., and 52s. 6d.; Postage 1s. 8d.  
" Unbilled Truss, 42s., and 52s. 6d.; Postage, 1s. 10d.  
Post Office Orders to be made payable to JOHN WHITE, Post Office, Piccadilly.

NEW PATENT

**ELASTIC STOCKINGS, KNEE-CAPS, &c.**

The Material of which these are made is recommended by the faculty as being peculiarly ELASTIC and COMPRESSIBLE, and the best invention for giving efficient and permanent support in all cases of WEAKNESS, VARICOSE VEINS, &c. Prices, 4s. 6d., 7s. 6d., 10s., and 16s. each; Postage, 6d. each.

## MISCELLANEOUS.

**Health for a Shilling,**

BY THE USE OF

**HOLLOWAY'S PILLS!**

If your Liver be sluggish take Holloway's Pills. Should your Stomach be deranged, these Pills, if taken, will act like a charm. Is your Blood impure? here again is your remedy.

In the hand-to-hand struggle for existence, in the present day, good health is every thing; when it is lacking, all enjoyment is excluded, and competency is too often reduced to poverty. Holloway's purifying, digestive, and laxative Pills are admirably adapted for restoring soundness to invalids, whose functions are so feebly or irregularly performed that life itself seems most precarious. The Stomach has its many maladies removed by a judicious use of these Pills,—the torpid Liver roused by them to active secretion,—the Kidneys are kindly encouraged to greater activity,—the Bowels are gently stimulated, and every other organ subserving digestion is placed at its natural standard and better fitted for its duties.

The old, the young, the rich, the poor, whether soldier or civilian, who may suffer from the consequences arising from over indulgence at the table or otherwise, will find that, if health can possibly be restored, these patent Pills (taken according to the printed direction) will prove their infallibility.

**The Friend to all,**

**HOLLOWAY'S OINTMENT.**

Has there ever been a malignant sore, an old ulcer, or a wound of any kind to which this unrivalled "Heal-all" has been applied in vain?—"Certainly not," answer grateful thousands.

Even those ulcerous sores, which sap the very existence of the young and strongest, and which a course of Mercury can never cure, always yield to the influence of this renowned Ointment, when perseveringly used in conjunction with the Pills.

For aches or pains, contracted and stiff joints, for coughs and colds (which latter often settle upon the chest, producing fatal consequences) let the afflicted parts be effectually rubbed with the Ointment, as salt is into meat, and a certain cure will only be a question of time and patience.

Yokohama, April 11, 1872.

Fire Cocks, Hose Reels, Hydrants, Firemen's  
Equipments,**

And every article connected with the Extinction of Fire.

SHAND, MASON & Co.'s Steam Fire Engines have been awarded all the Chief First Prizes, have been in use by the Metropolitan (London) Fire Brigade for sixteen years, and are found to be the most durable Engines yet constructed, also the most readily managed by inexperienced persons. The generative powers of the boiler are such that at the Preston Trials steam of 100-lb. was raised in six minutes and forty-five seconds.

At the great Competitive Trial of Steam Fire Engines, held at Preston, England, May, 1871, the judges, after a searching investigation, decided unanimously in favour of Shand, Mason & Co.'s engine, which was accordingly purchased by the Authorities.

YOKOHAMA, SATURDAY, AUGUST 17, 1872.

[PRICE \$24 PER ANNUM.]

## Notes of the Week.

WHEN we announced on Thursday morning that the fleet which escorted H. M. the Mikado on his trip to the South was on its way to Yedo, we stated that which was then perfectly true. By the time the paper was in the hands of our subscribers it was not so, for His Majesty, with that capriciousness claimed by sovereigns, changed his mind; he determined to see something more of the chief settlement of Japan, and gave orders to make for Yokohama instead of Yedo. The change was one in no way contemplated by the captains of the various vessels, and was made, it is supposed, on account of some message conveyed by a steamer from Yedo which met the fleet outside and which induced the Mikado to order a change of route.

On coming to anchor, three boats put off from the *Joshin Maru* and made for the English Hatoba, where the unwonted spectacle of the Japanese fleet had already attracted a large number of officials. First arrived a white boat with three naval officers: these landed, and, messages being sent to the Saibansho, preparations were made for the reception of His Majesty, although from the short notice it was impossible for anything out of the ordinary course to be done. The police formed line outside the Custom-house, and the Governor, Oye Tak, advanced to the landing steps to meet the Mikado, whose boat at this moment came into the Hatoba. As the boat pulled alongside the steps there was ample opportunity to observe his features and costume. The Mikado appears to be a comparatively young man, of medium height, and, though a little corpulent, his carriage is erect and bearing dignified. His uniform was of dark blue cloth, cut after the fashion of a naval dress uniform. The high collar was covered with flowers worked in gold, while a collet of gold embroidery was worn round the neck, somewhat like a broad ribbon decoration. He wore a cocked hat of beaver with gold tassels at the front and back, and the Imperial bird on each side, the hat being secured by an elastic band under the chin.

As he sat in the barge, manned by ten Japanese sailors, he occupied a wide seat fashioned rather like a sofa and covered with a silk cloth in coloured checkers, each square bearing some device embroidered in gold, the most common being the Imperial crest. In front of him, with their backs to him, were the Chief Chamberlain, Tokudai Jeikunaiku, the Vice Chamberlain, Yoshu Kurai-shoyu, and an officer, said to answer to our Lord High Admiral, named Kama-mura-shoyu. These gentlemen wore blue naval uniforms with an abundance of gold lace, and black velvets cocked hats, and had dress swords. Behind the Mikado were two gentlemen, apparently equerries, dressed in ordinary evening dress, with cavalry swords. In the bow of the boat was a man holding the Imperial banner of a dark coppery red silk with an amber shot silk ball in the centre.

The boat was rapidly pulled up to the steps, when the officials uncovered to receive His Majesty, and at once conducted him into the Custom House, the barge making way for a third boat bearing a box covered with green chintz, embroidered with the Imperial crest, the box apparently containing His Majesty's luggage. Officers also were in this boat, and as soon as they landed the procession—if so it could be called—started on its way to the Saibansho. First came Oye Tak in attendance on His Majesty; then a man bearing the flag already described, then several officers, and lastly the box covered with chintz, borne by two servants.

This small party walked past the English Consulate—

a crowd of Japanese who lined the way on both sides bowing to the ground as His Majesty passed—and, turning first to the right and then to the left, entered the Saibansho by the back entrance, a suite of rooms in the rear of the building being appropriated for the use of the Mikado. A second glimpse of the Mikado showed him seated in an easy chair and conversing freely with those about him, Oye Tak the Governor being among the number. Subsequently His Majesty partook of some ice creams and light refreshments, and it being then about noon orders were given for a departure at one o'clock, a carriage being prepared to convey the Mikado to the railway station. On the way to the station, the only evidence of anything astir was a crowd opposite the back entrance of the Saibansho, another at the Shosha, a general curiosity on the part of the Curio street dealers and policemen stationed at intervals along the line. It having been notified at the station that His Majesty was travelling entirely *incognito*, no attempt at display was made, the only alteration being the addition of a few chairs in the waiting room, and a path being swept from the yard gates to the station doors. It was also announced that only those officials connected with the railway would be allowed inside the enclosure.

After waiting with some considerable patience till nearly two, a number of Japanese officers arrived and it appeared that the Mikado was actually coming at last; but the hope was nipped in the bud by the departure of these officers in the two o'clock train. A return to the Saibansho revealed the fact that the Mikado was not to leave till 6 p.m., he, during the afternoon, having held a long consultation with the Governor. Business was, notwithstanding that the Saibansho was not closed, quite out of the question, the officials evidently being more anxious to catch a glimpse of their Sovereign than to do any work. We should also mention that the arrival of the Mikado being so entirely unexpected, none of the officials wore Court dress, an event which is, we should say, almost without precedent in this country.

In the afternoon, the Mikado, attended by a company of infantry, went to the station, large crowds of both foreigners and natives lining the whole length of Curio Street. At the station he was duly received, and almost immediately entering his state carriage, which was decorated with flags and crests, the train was started for Shinagawa. Passing the return train at Kawasaki the terminus was soon reached. Here His Majesty alighted, and without any ceremony proceeded to his carriage and drove to the Castle. A troop of lancers was in attendance, while his immediate retainers occupied four other carriages. With this His Majesty's visit to Yokohama was brought to a termination. What his reflections were upon the novel scenes which must have everywhere met his eye, none can say; but he must undoubtedly have been fully impressed with the value of those changes which foreigners have wrought in his dominions.

In conclusion, we should say that our statement to the effect that the Mikado was still at Atami was on presumably good authority, and was the more credited since it was recently semi-officially announced that he was at Miyanoshta.

At a Committee meeting of the Chamber of Commerce held on Wednesday last it was resolved to print and circulate on Sunday any telegrams which might arrive for the Chamber on that day.

We shall ask no pardon for expressing ourselves as freely on this decision as it is our custom to do on all matters pertaining to the welfare, the advancement, and reputation of this com-

munity, but it involves a question of such high importance, that we should be ashamed if we either remained silent, or commented upon it in any uncertain manner. And if we know anything of the world, of the character of Englishmen who form the majority of the Committee, or of the gentlemen of other nationalities who compose the minority, the freedom we shall use will not be misinterpreted, but rather, perhaps, constitute a claim to the more earnest consideration of the few words we have to say, words addressed to free and reasonable men.

Now, we shall not urge our views from a purely theological standpoint, and will frankly confess at once that considerable study of this subject has convinced us that the obligations connected with the observance of the first day of the week are founded, not on any directly given divine command, but on the practice of the Christian Church. Any student of this question cannot do better than read the Bampton lectures of 1862—we forget the exact year, and have neither the work itself nor any review of it at hand—delivered before the University of Oxford by Dr. Hessey, late Head Master of Merchant Taylors' School, and a divine of great learning and authority in the Church of England. The obligations in respect of Sunday seem to us to have their foundation in the practice and discipline of the early Church, that Church which has moulded the religious mind of Europe into its present form. But they are not the less binding upon us as Christians on that account, and have in themselves the nature of a divine force, inasmuch as we acknowledge the divine origin of our religion. And the legislation of all Christian countries has, to a greater or less degree, recognised these obligations. Wise and good men of all ages have agreed upon the wisdom of this legislation, and while there is a great and growing tendency to relax the undue severity in respect of Sunday observance created by law, or imposed by custom or by social pressure, in certain countries of Europe—a relaxation we think most wise and salutary—there is not the less a conviction existing in the most mature and thoughtful minds of Christendom that the general tendency and effect of that legislation is sound and wholesome. All our traditions, habits, and feelings bear its impress to a greater or less degree, and either voluntarily or involuntarily, tacitly or by acknowledged consent, each of us gives to it his personal confirmation. It is consonant with our habits of mind, with our religious convictions, and with the general practice of the countries in which we have lived. We shall admit that this is more the case with Englishmen and Americans than with Germans and Frenchmen, although we appeal without fear to the thoughtful representatives of the two latter nationalities to bear us out in regard to the main facts on which our appeal to the Chamber is based.

But we should do wrongly were we to ignore the opinion of many men, oftentimes worthy members of society, who, starting from a different point, or even starting with us, arrive at wholly different conclusions from ourselves on this subject. They recognise no obligations in respect of Sunday. Those of them who entertain strong religious convictions esteem one day as another, and so spend each day that they require to make no special religious reservation in favour of a seventh. Not stopping to inquire whether it would not be better to set apart a seventh day for special observance, without lowering the average level of the other six, we may generally remark that minds so well constituted and balanced are very rare, and need hardly be taken into account. It might also be observed that those who thus regulate the six days, do, as a rule, specially consecrate the seventh to peculiar sanctity. Others fail to see these obligations because they look upon human life from a side which is purely secular, and from which the divine and supernatural element in man cannot be recognised. Either they fail to find it in spite of arduous and conscientious search, or the film which covers their eyes—more voluntarily than they may imagine or would plead—hides it from them. To the first class, as we have said, we shall make no appeal, and to the second we can only appeal on purely secular grounds.

We have, therefore, many different classes of minds to deal with.

Now, with regard to those who, taking the old theo-

gical grounds, acknowledge the obligations of Sunday observance to proceed from a divine command, and to be actually a transference of the obligations of the Fourth Commandment from the seventh to the first day of the week, the position is perfectly clear. It is impossible to plead that the printing and publishing of the telegrams on Sunday is necessary. It is not done in London, the commercial centre of the world, nor, as far as we know, is it done in any city in Europe or America.\* It is not necessary in the sense that work while at sea on Sunday is necessary on board a steamer, the economy of which makes that work obligatory. It is not necessary in the sense that the transfer of mails from steamer to steamer on Sunday on long voyages is necessary. The demands of modern life exact this, and Christianity does not enjoin a rigid iron formalism which would militate against proper and natural provision being made for these demands. But Christianity does undoubtedly embody in its spirit, if not in its actual letter, the sanctification of a special day in the week; the Christian Church enjoins and practices this; and the legislation of Christian countries reflects these injunctions of the Church. Believers in Christianity, therefore, who cannot plead the actual necessity of this work, have not a leg to stand upon, and must submit to have their relative estimates of the value of their souls and their pockets inferred from their vote on this question.

The next class consists of those who cannot see their way to acknowledge these obligations as of divine origin, except, perhaps, inferentially, in as far as they believe that the Christian Church itself has such an origin, and that that Church has enjoined the practice of Sunday observance. It seems to us, that this class is bound by the general example and injunctions of its religious creed, wherever these can be proved to exercise a salutary influence over society, and in this manner cannot conscientiously give its adhesion to the decision of the Chamber. It is, with the first class, equally unable to urge the plea of necessity, and though not so distinctly violating a command believed to be divine, is still disobedient to the dictates of an admitted superior, and inaugurates a line of conduct subversive of his discipline and fatal to his rule. Does the class to which we now appeal think this right, or wise, or salutary? Let them put the telegrams into one balance, and the civilizing influence of the Christian Church into the other and answer us—which weighs most? The Church? Why not then abide by its rules? The telegram? Will it weigh less on Monday?

The third, and only remaining class to which we appeal, is that class which, from whatever cause, fails to recognise the divine element in man. Some of them appreciate, indeed, his sublime hopes and splendid potentialities, for they have cherished the one and give evidence of the possession of the other. But they are forced—often in cruel despair—to confess that the hopes are only hopes, beliefs of the heart and the imagination, and that these potentialities, instead of being seeds destined to blossom in immortality, must perish with the life of the body, and revert into other forms of force without retaining their consciousness of individuality. Such minds want not in attraction for us, nor, indeed, in sympathy. For iron law at most seems too often to rule the universe; the agony of a parent to count no more than the hum of an insect; and the world to be resolved into a laboratory where human hearts are the objects of heartless experiment. But this class will hardly deny that it is well for man to have stated periods of rest;—times when he can resolve to pitch this only life high, for the very reason that it is our only life; times when something may be done to redeem it from its daily meanness, its sordid cares, its poor occupations, its unworthy strifes and bitternesses. And if it concedes this much, why demand some new division of days and moons? Will not a day consecrated by near two thousand years of reverential observation answer the purpose? What objections are there to it? Do they weigh much as against the arguments on the other side?

To others of this class we must appeal on grounds of simple economy, good feeling or good sense. Admitting for a moment—

\* We are informed as we go to press that telegrams are published in New York, in the Sunday papers.

though we cannot, even for a moment—that this is our only life, and that it should be consumed in money-making and nothing else, is it wise for oneself, or humane towards others, so to strain the faculties by incessant wear and tear that they lose their elasticity, their readiness and willingness to act? Admitting for a moment—though we cannot even for a moment—that man's life consisteth in the abundance of things he possesses; still, variety is an element of pleasure, and we can hardly suppose, save in very exceptional instances, that money is sought for its own sake and not for the pleasures it enables its possessor to command. Would not the very variation of the daily routine of life, by twenty-four hours of rest or otherwise directed activity, be an additional pleasure in life? Indeed, we think so.

We have thus, shortly, though we think sufficiently, and we are certain, temperately, argued the various grounds on which the decision of the Chamber seems to be unsound. The printing and circulating of these small slips of paper may seem a small thing, but there is really a great question of principle involved in it. The question is: is it necessary; is it desirable; is it salutary; is it right? The Chamber of Commerce is the only corporate body in Yokohama, and to all intents and purposes we are a Christian community. Should our only corporate body give its sanction to, indeed, should it directly command, the violation of one of the most sacred injunctions of our religion, and one of the most cherished observances of our native lands? In London and Manchester, in Liverpool and elsewhere, the busy men who influencing the world's destinies, and many of whom have much to do with ruling its commerce, do without their telegrams. They may be statesmen, or officials, or bankers, or merchants. But they are in some sense our parents, and their example should be worth something. What plea have we that they have not? How many more pleas have they than we? Yet they abstain, and why should not we? The reduction of a better day to the average level of other days is bad. It degrades the general average. It is a step in the wrong direction, apparently a small step, but a well-defined and recognizable one. The feverish high-pressure of modern life requires a corrective, and the rest of Sunday affords this to a great extent. Exciting telegrams—as they sometimes will be—will set the whole business machinery of the settlement in motion on Sunday. Is this desirable? If we were called upon to give our votes as legislators on this question, knowing that good and evil would result to mankind according to the direction of those votes, how should we give them?

For ourselves, apart from all theologies, and in spite of all materialisms, we believe that man has a soul, of which religion is the natural and necessary food. We have no severe Sabbatarian views, and the attitude of "the publican" is that which alone befits us. But we could not leave this question untouched without seeming to fly from our responsibilities, and it is in this mind that we appeal to the Chamber to reconsider—peradventure, to reverse—its decision.

THE arguments against the detention of the *Maria Luz* have been fairly put before the public, and, we presume, before the Japanese Government, nor can their weight be denied. But we shall not retract one word we have said on the subject of the case itself or the nature of the trade out of which it has arisen. The Captain has threatened us with legal proceedings, and we most devoutly hope he will take them. Whatever may be their consequences to us, they shall bear fruits in regard to this trade that China, at least, shall bless. Very many of the residents have been off to the ship, and are surprised to find her passengers so comfortable. To what do they attribute this? And they lose sight of the fact that eight men died between Macao and Yokohama. To what do they attribute *this*? Can people be so simple as to think that the sweeping and garnishing of to-day, which has gone on since attention was drawn to the whole subject, is any thing more than the preparation for the seven extra devils of to-morrow? The coolies are called passengers by the Captain. By what right does he cut his passengers' tails off if they go or get ashore? Either conduct of this kind is legal or it is not. If it is, let all the world know that it escapes with impunity. If not, let it be

punished. There is no moral doubt about the nature of this trade as carried on from Macao. Old China residents are not to be deceived about this. It is characterised by a wholesale system of kidnapping, and half the contracts signed by the coolies are extorted from them by intimidation, in spite of such care as the Portuguese Government may bestow on the subject, in the thoroughness and efficiency of which, however, we are not large believers. Macao in these cases listens to Peru, and Peru is constantly remonstrating against the difficulties thrown in her way by the regulations at Macao. Then the Peruvian Government charters its own ships, which officers of the Peruvian navy are apparently not ashamed to command, and the results are those we have before us. It is conceivable that the captain might not, as a stranger, know all the devices resorted to to procure coolies and detain them when procured. But if a naval officer permits himself to be detached on such errands as these, he must accept the unpleasant consequences of being identified with practices which the civilized world has agreed to condemn as infamous. He may be the most humane man that ever cut a Chinaman's tail off for taking a passenger's liberty of going ashore when and how it pleased him. But if he does these things, and eight other Chinamen are found on board in a similar condition, who, he says, cut off their own tails—a thing which a Chinaman would rather die than do—ugly suspicions are raised which justify some strong language, and this we have used, because no other language would be applicable. Before law, when clearly ascertained, we bow. But when only difficulties are suggested, we are apt to put the telescope up to our blind eye. Meanwhile we are satisfied that much good will come of this agitation, which will touch the reputation and possibly the conscience of Portugal. The world is so vast and complex that its advance in any given direction can only be made by steps which are individually imperceptible, but each effort made in the right direction is something to the good.

For some time past complaints against the Custom-house officers have been both loud and frequent, and we cannot but acknowledge that there is good reason for at least some of them. The charge of assault against Mr. Badoock, of the *Ariel* will well illustrate the conduct of the Custom-house officers which gives rise to these troubles. In this instance some sheep were being trans-shipped from the *Oregonian* to the *Ariel*, and being intended for the provision of the ship, were neither liable to entry nor duty. But the Customs' officer on board was of a different opinion, and refused to allow them to be shipped. This was told to Mr. Badoock, who at once ordered the sailors to go down to the boat and pass up the sheep, he himself going down also. The evidence goes to prove that the officer seized Mr. Badoock as he was going down the ladder, and attempted to pull him back, the result being that Mr. Badoock turned and struck the officer. On Friday the charge of assault was heard, and Mr. Shepard being of opinion that the balance of evidence went to show that Mr. Badoock was first assaulted before he retaliated, dismissed the charge. The remarks he made on the case, which we publish elsewhere, are worthy of note. Mr. Shepard pointed out that the Custom-house officers are too ready to assume an authority they do not possess, and while he could not from his position say that it served the officer right, yet he could not feel any sympathy for him.

The Custom-house authorities should be more careful to employ men of some little judgment. Their position is one which eminently requires it, and if from the indiscriminate employment of men without a thorough knowledge of their duties, and with but imperfect idea of the treaties under which they exercise their authority, troubles arise, they have only themselves to thank for it.

The new Superintendent of Customs has, we understand, issued an order that on all such invoices as are evidently fair, and not drawn up to deceive, the duties shall not be indiscriminately "raised," as the custom has been hitherto. This is a good change; but it would be well to take measures to ensure the employment of more competent subordinates, or at least to issue such orders as will prevent future difficulties.

THE Japanese Government have appointed Mr. Boyle, a gentleman known in connection with the construction of railways and other engineering works in India, and whose services there gained him the distinction of the decoration of the Star of India, to be Engineer-in-Chief of Japanese Railways. Mr. Boyle is now on his way to Japan.

WE learn with regret that Mr. Searle was drowned on Friday at Kanasawa. It appears that he, with several others, were bathing, and while in the water Mr. Searle was missed. On search being made, he was discovered with his feet fast in the mud and his head just under water. As the deceased had suffered a slight paralytic stroke the day before, it is supposed that on finding his feet fast in the mud, his exertions to free himself brought on a nervous fit, and he was drowned. When the body was recovered, every effort was made to restore him by Japanese doctors, but life was extinct.

It was recently stated that Mr. J. O. P. Stearns was to receive a sum between \$6,000 and \$10,000 for the services rendered by the *Aroostook* at the time of the loss of the *Oneida*, and it has been reported that Mr. De Long was to bring the money with him. This last is incorrect; though it is true that a bill has been sent home for the services rendered, and there is little doubt that it will be paid. No answer can be received, however, for two months from the present time.

WE are informed that by request of the Chamber of Commerce the noon gun hitherto fired on Saturday from the *Tiptree* will henceforth be fired on Wednesday. We shall thus have a time gun on both Wednesday and Saturday.

Pillar posts are being placed about the settlement by order of the Government and promise to be great conveniences now that the postal system is being so much extended.

The batteries for the Telegraph line between this and Kobe have arrived in the *Thracian*, and we may now hope that telegraphic communication will shortly be established.

The *Godavery* is reported to have made one of the fastest passages from Hongkong on record. The trip occupied exactly 5 days 11½ hours.

H. M.'s storeship *Manila* was sold on Wednesday for \$1,000 to Mr. Cook. She will probably be broken up.

The *Emma Augusta*, from Nagasaki, with coal, was reported to have got on the Saratoga Spit on Monday, and the *Ashuelot* was sent down to render assistance. She was eventually got off.

#### OUR RIGHT OF APPEAL.

EVERY one must know the welcome sensation of waking from a dreadful dream and finding all its terrors dispelled. You were to be shot or hanged, given to lions, or put in "the boot," instead of which your executioners disappear, the lions melt away, or you only remember having read a chapter of Macaulay over night in which James appeared gloating over his favourite mode of torture. We were recently thrown into much the same state by a decision from the Bench that the establishment of the Supreme Court here, from which we have derived many various and undeniable advantages, had practically deprived us of the right of appeal against its decisions. This was no imaginary grievance, and if we dilated upon it with some amplification, it was because we were brought suddenly face to face with the conviction that a common law right had been taken away from us unawares.

He that is robb'd, not wanting what is stolen,

Let him not know it, and he's not robbed at all.

But if and when he discovers his loss, and especially when the discovery is coincident with the want of the

missing object, it is not unnatural that he should sing the same tune with many variations, and that none of these should be in a major key. Nor are we concerned to know, or consoled by knowing, that there are others in the same plight. All the tailless foxes in creation would never reconcile us to a similar condition. We have an indestructible prejudice in favour of our born rights, and sooner than steal about this world with an ever present consciousness that we had lost them, we would run the risk of the worst that might befall us in any other. No one can really feel himself wholly an Englishman who has to register himself yearly, and pay the odious five dollars for the transcription into the Consulate books of records hitherto confined to his family Bible. If no human power can add a cubit to our stature, an Order in Council can apparently deprive us of a good inch of it. This is bad enough in all conscience. But to take away our right of appeal! We might as well be on board the *Maria Luz* at once. These things are well enough for men who are accustomed to the domiciliary visits of creatures in cocked hats and side arms. But, thanks to sturdy wills, a free press, and the Straits of Dover, we know nothing of such matters—at least, not in that blessed land of fogs and freedom.

But we have not retrieved our temporarily lost right without such a convulsion as has brought down the Supreme Court altogether, and this is quite enough to show how grave the case was. As long as the Court was looked upon as a Supreme Court, we undoubtedly were without the right and power to appeal, except to the Privy Council, and this for all practical purposes was an useless privilege. Could any such knot be tied here as would justify the interference of such a deity? Hardly, we should imagine. We may honour such gods, as Confucius commands, but we are compelled also to follow his recommendation and keep them at a distance.

The able argument of Mr. DICKINS on the whole subject, which will be found elsewhere, well deserves analysis, and as many of our readers, especially our more distant ones, may be repelled by its technical nature from mastering it for themselves, we think we may do some service by recapitulating its main features in a condensed form.

The learned Counsel, then, first argues that the Chief Judge, in appointing Mr. HANNEN, could never have had the intention, if, indeed, he had the power, of depriving us of a cheap and speedy method of obtaining the opinion of the Chief Judge himself to revise any supposed wrong done us by a first judgement here; and further shows that however much we might have gained, as we confessedly have gained, by Mr. HANNEN's appointment, we should have lost as much on one side as we gained on the other if it involved this privation. He then proceeds to show that in view of the restricted jurisdiction of the Court, and especially of the absence of all appellate jurisdiction, it cannot be called a Supreme Court at all. The utmost that could be claimed for it is that it might hold the relation of a *nisi prius* Court to a superior Court at common law, or to the Judges of the common law Courts sitting *in banco*; for if more were claimed, the Chief Judge would have the power of placing an Acting Law Secretary in the position of exercising what is tantamount to a final jurisdiction.

Mr. DICKINS then proceeds to the great constitutional point in his argument, and urges that the right of appeal is a common law right of which no Order in Council can deprive the subject without a special enabling Act of Parliament. He contends that the Foreign Jurisdiction Act, which is the sanction of the Order in Council, gives the Queen no power to abrogate the Common and Statute law rights which the subject possesses while resident in non-Christian states and under the jurisdiction of British authority, and goes so far as to argue that every British subject carries with him those rights into countries unprovided with legal systems, to the extent, at all events, of their applicability. And he urges that as these Common Law rights must, if abolished, be abolished expressly or by certain implication, and as they have not been so abolished, they must remain with us.

He goes on to contend that from the very terms of sec. 131 of the Order in Council, the appeal to the Privy Council is only from a decree or final Order of the Supreme Court. But could the visit here of the Assistant-Judge, whether more or less protracted, convert a Court which does not possess an appellate jurisdiction, and which is not a Court of *dernier ressort*, into the Supreme Court? Some of the powers of the Supreme Court might be held to be delegated to the Court under such circumstances, but certainly not to the extent of converting it into a Supreme Court.

Having shewn, therefore, what it is not and cannot be, the learned Counsel proceeds to urge that it must be one of two things; either:

1st.; a *Nisi prius* or circuit portion of the Supreme Court, from the decisions of which there is a right of appeal to the Chief-Judge or the Supreme Court *in banco*:—

Or 2nd.; a Provincial Court with or without certain increased jurisdiction, in which case the right to appeal is clear.

He shows that the jurisdiction of the Court, being only co-extensive with that of the Provincial Court, is an argument that it is no more than a Provincial Court, and contends that there is no authority in the Order in Council for the permanent establishment here of any circuit branch of the Supreme Court. It therefore cannot be the first, and thus, by an exhaustive process, is shewn to be the second, viz., a Provincial Court, presided over, indeed, by the Assistant-Judge, and about to be furnished with Admiralty jurisdiction, but still a Provincial Court, from the decisions of which the right to appeal is not only a common law right, but one expressly provided for by the Order in Council.

We must congratulate Mr. DICKINS on his argument and on its success. Nothing could have been more unsatisfactory than the former condition of affairs, which was oppressive to the Judge, bad for the bar, and worse for the snitor. Upon the delivery of the judgment which opened this question, the anomalies it exposed were so grave that we drew immediate attention to them, and at that time expressed a decided opinion that they could only be resolved by regarding this Court as a Provincial Court, for which alone provision appeared to have been made in the Order in Council. The matter is now placed beyond the reach of a doubt.

We think it right also to say that the doubts which in

the same article we threw upon the binding force of the decisions of the Court—doubts for which we had ample grounds at the time—have since been dispelled, and we should regret if any misgivings on so important a subject still remained in the minds of any of our readers.

#### SHIMADZU SABURO.

SHIMADZU SABURO is certainly an outspoken man. Last year when the Mikado sent down Iwakura Dainagon on a mission the object of which was to conciliate him and draw him out of his retirement, he stated in reply to the gracious letter of his Sovereign his opinion that the reforms so grandiloquently announced by the Government were nothing but an empty name, and now we have another specimen of the same style. He seems to have taken advantage of the Mikado's visit to Kagoshima to enlarge upon the shortcomings of the present Government in the document which we print to-day, under the accustomed heading of "Japanese Notes," and certainly some of his suggestions are very pertinent. 'The banishment of greed, the prizing of virtue, the rejection of deceitful arts and the reverencing of truthfulness' are matters to which the present leaders of the country might well give their attention. We do not mean to apply this remark to the leaders themselves, but it is a notorious fact that bribery, corruption and speculation go on amongst the lower ranks of the official class to an extent unprecedented, except in Russia. The last two items, the lightening of taxation and the careful calculation of income and expenditure, are also pieces of excellent advice. To the heavy burdens laid on the peasantry must be entirely attributed the squalor of their general appearance, the raggedness of their clothing, and the ruined state of the mud cottages which they inhabit, things which cannot fail to have struck the eye of every traveller in the interior. So long, however, as the object of the Government is to gather in as much revenue as possible, in order to squander the same again in magnificent schemes of material improvement, imposing burdens on the country which it is not yet in a condition to bear, so long will the peasant have to groan.

Many of the items of advice bear evidence of a strongly-marked Chinese form of thought, which expends all its energy in high-sounding general phrases, and the old dislike to foreigners, which is what really keeps Shimadzu Saburô at Kagoshima, manifests itself strongly. But the Government scarcely needs any spurring in this direction. Under its apparent desire to cultivate friendly relations with foreigners, and to profit thereby to civilize its subjects, lurks the old feeling of superiority to the rest of the world, which one day, when Japan thinks it has mastered the use of barbarian appliances, will burst forth with violence, but which at present manifests itself chiefly in the extra allowance of lace worn by their admirals.

#### THE MARIA LUZ.

(From the Japan Mail Daily Advertiser of the 12th.)

We do not ignore or attempt to make light of the difficulties connected with the stopping of the *Maria Luz*. They are patent enough. The question is whether they are insuperable. The captain of the vessel has brought himself within range of the Japanese law for illegal acts

committed in their waters. The evidence elicited during his examination and facts which have transpired since the vessel arrived here, prove conclusively that measures of the worst kind were resorted to in order to entrap the coolies on board, and punishments of great severity have been inflicted upon those of them who attempted their escape. Is there no possibility of getting so much and such evidence from numbers more of these men as to bring the action of the captain within the broad general definition of piracy? There cannot be the shadow of a doubt left in the mind of any one that to all intents and purposes this vessel is a slaver, and the evidence already elicited is sufficient, we should imagine, to constitute legal proof of this. Cannot Japan call that piracy which other nations have agreed to call so? She has entered the comity of nations, recognizes the obligations of international law, claims its privileges, and abides by its provisions. Why cannot she act upon its dictates?

Her Majesty's Chargé d'Affaires is away and we cannot appeal to him to assist the Japanese with his counsel in this matter. In his absence, therefore, we would ask the offices of the American Minister. We have had our differences with Mr. De Long, and have perhaps urged our side of them with some asperity. But we will not do him the injustice to suppose that the recollection of these would weigh with him for one moment in an appeal where the great doctrines or dictates of humanity are concerned. He represents here a people whose greatest and most admirable characteristic—we have said so a hundred times—is an impulsive, warm-hearted and sympathetic generosity, nor have we ever heard that he was personally deficient in this admirable trait. He is a lawyer, and knows what can and may be done; and he cannot be an American and be deficient in enterprise. We wish to make no meretricious appeal to him, or invoke his action on grounds personal to himself. It is to the spirit and love of freedom of the American people that we appeal—that spirit which has grappled with slavery and overthrown it, and which prizes freedom as the greatest of earthly blessings. And if by some means or another—we have small technical lore to guide us—the mercies inherent in this spirit can be showered on these poor wretched slaves, we hope that no mere difficulties will be allowed to interpose between them and their liberation. The chances of giving a vital wound to this iniquitous traffic are rare. Now we have one; and to men of action the best definition of opportunity is now.

### JAPANESE NOTES.

#### THE AUGUST STUDIES OF THE MOST ILLUSTRIOUS.

The establishment of national principles of action and the execution of the laws. The adoption of a system of dress and strict regulation of the outward man.

The reform of learning.

The careful selection of human talent.

The careful conduct of foreign relations and the establishment of a clear distinction between the rights of Japanese and foreigners.

The cultivation of a military spirit and the reform of the army laws.

The establishment of a clear distinction between the rights of noble and mean.

The banishment of greed, the prizing of virtue, the rejection of deceitful arts and the reverencing of truthfulness.

The strict prohibition of debauchery and the establishment of a strongly marked line between the sexes.

The right of all to address the Sovereign.

The careful judgment of disputes and rightful apportioning of reward and punishment.

The lightening of taxes and the abatement of burdens.

The careful calculation of income and expenditure.

The above paper contains a summary of the opinions held by your Majesty's servant during many years, and he entertained them at the time of his short visit to the capital four years ago (1869), but finding no convenient opportunity for expressing them, and not being favoured either with your Majesty's gracious interrogation, he was obliged to be silent. But now he has, in your Majesty's tour, been fortunate enough to worship the heavenly countenance, and he can no longer refrain from giving vent to his humble sentiments. In this critical moment he can no longer sit by and look on with indifference at passing events; and though he is convinced that your Majesty cannot adopt his retrograde and unlightened views, still he feels that a convenient occasion will perhaps never offer itself again, and he ventures to make this abrupt representation. He most humbly apologizes for his audacity, but the fact is that by your Majesty's present system of government the fortunes of this country are daily declining; the Imperial line which should last for ever and ever is in danger of falling into the vice called republicanism, and he can see as clearly as in a mirror that Japan will eventually become a dependency of the western barbarians. He can only sigh and weep.

Your servant Hisamitsu awaits any punishment for his audacity and want of reverence in speaking thus freely.

Respectfully represented with real fear, and real awe and prostrations.

JUSAMMI HISAMITSU.

[August, 1872.]

### NIHON GUAISHI.

ACTUAL HISTORY OF THE MINAMOTO FAMILY.

VOL. III.

(Continued from our Last.)

When first Yoritomo wanted to select a commander-in-chief for his western expedition, he desired to try the capabilities of his younger brothers, and secretly heated a metal water jug red hot, with which he made each of his brothers serve him in turn. As soon as they took hold of it, they let it go in a fright. Yoshitsuné alone held it until he had finished washing, his heart and colour remaining unchanged. Yoritomo knew by this means that he was fit for the business, but in his heart he secretly stood in awe of him. Kajiwara Kagétoki, who was a favourite of Yoritomo's, acted as inspector with Yoshitsuné's army, but the latter never asked his advice, and Kagétoki becoming angry, joined Noriyori. Hatakéyama Shigétada had at first served Noriyori, but hated Kagétoki because he presumed on the favour he enjoyed with Yoshitsuné. Kagétoki became more angry than before, and gradually prejudiced Yoritomo against Yoshitsuné. Yoritomo was of a suspicious and malignant nature. Taira no Hirotsuné and Minamoto no Tadayori were both put to death by him on the pretext that they had behaved with haughty insolence, and having heard that Yoshitsuné, presuming on his services, was giving himself airs, little by little he began to hate him. Kagétoki, who had disputed the proposal about the reversing towers, also harboured constantly increasing resentment against him. At the battle of Dannoura he had prayed to be made leader of the van, but Yoshitsuné refused him and went first himself, for which Kagétoki abused and slandered him without ceasing. Yoshitsuné grew angry and wished to put him to death, but Kagétoki stroked his sword, saying: "I only recognize the existence of my lord of 'Kamakura.'" The commanders acted as mediators and the affair was quietly settled. Kagétoki returned to Kamakura and slandered Yoshitsuné in every possible way. Taira no Tokitada was a distant relation of the Heishi, and when he followed them in their flight to the west, he had secretly assisted them in their plans. When he was taken prisoner, he had in his possession a box full of books and documents, which was seized by Yoshitsuné. Tokitada conspired with his son to get this back, and so eliminate what would be a source of calamity. He therefore married his daughter to Yoshitsuné, who thereupon returned the box. Yoritomo heard of this and hated him. Yoritomo had just had a male child born to him, and placed great confidence in his father-in-law Hōjō Tokimasa, while all his own flesh and blood became objects of suspic-

ion to him. Yoshitsuné went east to present the prisoners at Kamakura, and when he got to the post town of Koshigoyé,<sup>(182)</sup> Yoritomo refused to admit him, but sent out Tokimasa to receive them. Yoshitsuné then sent a letter to Oyé no Hiromoto, complaining in these terms: "I, Yoshitsuné, undertook the labour of punishing the rebels in Yoritomo's stead. On the one hand I reduced those who were traitors to their Sovereign and on the other purged away the family shame. In my heart I secretly expected praise and reward, but have contrary to my expectation suddenly become the victim of slander. I am wasting my time here and have no chance of clearing myself, but simply shed ineffectual tears. I am about to miss the beneficent countenance [of my brother] for a long time, and the affection between flesh and bone is about to be severed, for unless my father come to life again, who will explain matters for me? When I was a young orphan I followed my mother and fled to a place of concealment. I changed my residence from province to province, and servants became my masters, I so that never had a single day of rest. Suddenly, however, I met with good fortune, and was graciously promoted to an important place of trust. I have whipped my horse down steep hills,<sup>(183)</sup> have dared the dangers of the wind on the ocean, without ever giving a thought to my own personal safety, desiring thereby to give satisfaction to the unjustly accused spirit,<sup>(184)</sup> and gratify my own long felt indignation. How could I have any other designs? I have had the office of *jō*<sup>(185)</sup> and the fifth rank (*go-i*) conferred on me. What glory for me; and now suddenly I encounter this distress. My sorrow is profound and my grief unlimited. I have ventured to offer an oath in writing, and have called the hundred gods to witness, and yet wrath does not clear off. I am compelled to look to your Lordship for aid and protection. Prostrate I pray you to take advantage of an opportunity to represent these facts [to Yoritomo], and I beseech you to make my fidelity clear. If then I receive a bounteous pardon I shall be able to end my days in peace." No answer being given, Yoshitsuné became indignant and went back to Kiôto. Yoritomo heard that he resented this treatment and in his anger confiscated Yoshitsuné's fief. At this time Yukiiyé was concealed in the capital, and Yoshitsuné had intercourse with him secretly. Yoritomo sent Kajiwaru Kagesuyé to order Yoshitsuné to punish Yukiiyé with death, and to spy out the proceedings of Yoshitsuné himself. Yoshitsuné declared himself indisposed, and after the next day but one saw Kagesuyé. Kagesuyé returned and reported how weak he looked after his illness. Kagétoki said: "He left off sleeping and eating for a couple of days and so managed to make himself look ill." Yoritomo thereupon summoned the commanders, and addressing them, said: "Who will attack Kurô for me? Kurô does not act contrary to what I knew him to be. But he has had audience of the Emperor before me. He has become a *jō* of the fifth rank without informing me. His carriage<sup>(186)</sup> and dress are handsome and extravagant, and he swaggers about the palace of the retired Emperor. Even allowing that he enjoys the favour of his sovereign, why does he not behave with modesty. At the battle of Dannoura he was in the same ship with the Empress Dowager, and moreover has married the daughter of a Taira prisoner. Such are his audacity and presumption. He must be hoed up without mercy. Who will attack Kurô for me?" No one dared to answer. Yoritomo was displeased, and then ordered Kagétoki to do it. Kagétoki declined, saying: "The Hauguan has always hated your servant. If I go, he will take his precautions. You cannot do better than to send some one who would not attract his notice, to take him by surprise." Yoritomo then appointed Shôjiun. Shôjiun was a priest of Nara, who, being in Kamakura on business, was admitted near to

Yoritomo's person on account of his courage and fierceness. Hereupon the scheme was imparted to him and he was sent westward. On arriving at the capital he took a lodging four *chô* distant from Yoshitsuné's palace. Yoshitsuné complained of his not coming to present himself at once, and summoning him administered a rebuke. He replied saying: "The object of your servant's journey was to visit the Seven Great Monasteries<sup>(187)</sup>, and he wished to finish that business before presenting himself." Yoshitsuné laughed, and said: "Not so! Not so! It is impossible but that you are plotting against me by instructions from the Nii<sup>(188)</sup>. I have a great desire to put you in prison, but on reflection I am afraid people would think me a coward. Besides you are my elder brother's messenger. I will not be the first to proceed to action." Shôjiun presented to him an oath in writing, and returned to his lodging. Yoshitsuné's favourite hand-maiden, who was called Shidzuka, spied upon Shôjiun, and addressing Yoshitsuné, said: "When that fellow was leaving he looked all round the palace, and fixed his eyes upon the stable. I fear he means treachery." Yoshitsuné did not trouble himself. When dusk came she told him again, saying: "Dust rises on the high road. Men are marching with hurried step. You must absolutely take precautions." Yoshitsuné sent two youths to go and spy out the state of things at Shôjiun's lodging, but a long time elapsing without their returning, he again sent a waiting-maid. The waiting-maid hurried back, and said: "The two youths are lying dead with their heads together at the gate. Inside the gate were about fifty horses ready saddled. The *Samurai* were putting on their corselets preparatory to mounting on horseback." In the third watch a loud noise was heard outside the palace, where only seven men were on guard. Shidzuka hastily took a corselet and put it on Yoshitsuné. Yoshitsuné ordered the door to be opened, and charged out on horseback, shouting: "Who dares to-day to plot against Yoshitsuné?" Shôjiun and more than sixty horsemen of the Kodama band scattered, and shot wildly. Yoshitsuné's followers hearing of the attack, arrived from every side, and Yukiiyé also came to the rescue. Shôjiun at last was defeated and put to flight. Yoshitsuné went straight to the palace of the Cloistered Emperor. The arrows on his helmet were like the quills on a porcupine, and he had only three left in his quiver. He reported the attack and returned home. Shôjiun fled to Kurumayama,<sup>(189)</sup> but the priests, who were old friends of Yoshitsuné, having sought out and captured him, delivered him up. Yoshitsuné reproached him for having acted contrary to his oath. He answered and said: "It was Shôjiun who took the oath, but the Nii<sup>(190)</sup> who attacked you." Yoshitsuné was wrath, and slapped his face. Shôjiun said: "My face is the face of the Nii. If you slap my face, it is really slapping his." Yoshitsuné admired his courage, and wished to send him back alive, but he begged to be put to death at once, upon which his head was cut off. Yoshitsuné and Yoriyé then demanded a commission from the Emperor to chastise Yoritomo. The high officers of State (*Kugió*) fearing the former, wished to give permission for the moment, but Fujiwara no Kan'zané alone refused to agree, saying: "Yoritomo has not yet committed crimes worthy of chastisement. Besides, what a strange proceeding to order the younger brother to chastise the elder." The Cloistered Emperor at last gave his permission. Yoshitsuné's servant Adachi Kiyotsuné was a constant spy on his master in the interest of Yoritomo, and when this happened he departed in haste with the information to Kamakura. Yoritomo was just celebrating the completion of Chô-shô-jiu In, and on receiving the report he merely said: "It is well." When the ceremonies were over, he returned home and said: "This fellow wished to kill my messenger. I will chastise him for it." He then warned his officers to make their preparations, saying: "We will start at break of day." Oyama Tomomasa and more than fifty others having asked leave to

(182) Province of Sagami, a little on the Kamakura side of Katsû.  
(183) This refers to his riding down the Hyôtorigoyé before the battle of Ichino tani, and to his crossing from Watanabe to attack the Heishi in Awa, as narrated above.

(184) Of his father Yoshitomo.

(185) Of the Sayémon guards.

(186) The *rensha* or carriage ordinarily used seems to have been a palanquin mounted on wheels, propelled by men in front and behind. There is a drawing of one in the 1st vol. of the *Giokuseki Zasshi*.

(187) Yamato no Shichi-daiji, seven monasteries, namely Tôdaiji at Nara, Kôfukuji in Yamato, Saidaiji in Yamato, Guankôji at Nara, Dai-anji, Yakushiji and Kôrinji, all in Yamato.

(188) Yoritomo.

(189) On the north of Kiôto near the source of the Kamogawa. This was the monastery where Yoshitsuné had passed his boyhood.

(190) Yoritomo.

start the same night, he constituted them his advanced guard, and commanded them, saying: "Destroy these two villains before I arrive." He started himself from Kamakura five days later, sending summonses to all the circuits to join his army on the road. Yoshitsuné, on hearing of this, went to the Cloistered Emperor, and besought him to order the troops of the Kuansei to assist him. The Cloistered Emperor consented, and appointed Yoshitsuné *jito* of Kiushiu and Yukiiyé *jito* of Shikoku. On the third day of the eleventh month Yoshitsuné, Yukiiyé, and Minamoto no Arisuna, son-in-law of the latter, fled together for concealment in the Saikaidô, and no man knew whither they had gone. Isé Yoshimori took leave of Yoshitsuné, and, returning to Isé, attempted to surprise the *Shingo* Sūdô Tsunétoshi, but was defeated, and concealed himself in the Suzuka hills, where Tsunétoshi attacked and killed him.

When Yoritomo arrived at Kiségawa he heard that Yoshitsuné had already fled, upon which he returned to Kamakura. He ceased not to complain of the Imperial Court for having given orders for his chastisement, in spite of his innocence, in consequence of which the Cloistered Emperor sent orders in haste to all the provinces to make search for Yoshitsuné, but he could not be found. The remnants of the Heishi party were also lying concealed in various places, and the tranquillity of the Empire was disturbed. Yoritomo grieved at this. Oyé no Hiromoto proposed a plan of action, saying: "The universal commotion has now been put down, and the Kuantô reposes tranquilly under the administration of its military chief. But wicked ruffians lie concealed in every circuit, who rise as often as they are put down. The labour and expense of calling out the eastern forces is incalculable, and the people groan under the burdens laid upon them. The best plan possible at the present moment would be to place *Shingo*<sup>191</sup> with the *Kokushi* and *jito* in the *Shô-yen*.<sup>192</sup> Then the Empire will be kept quiet without your having to move." Yoritomo was much pleased, and despatching Hojô Tokimasa to command the garrison at the capital, took advantage of the occasion to lay this matter before the Emperor, and he also asked leave to levy a tax of 5 *shô* per *tan* throughout the home provinces and the four Western and Southern circuits,<sup>193</sup> to provide food for the troops. The Court discussed and adopted these propositions. Yoritomo also proposed that those of his own relations who had performed meritorious services should be appointed *Shiun* and *Jitô* in different parts, and that he should himself have them under his orders. He was therefore commonly styled the *Sô-tsui-ho-shi* (supreme pursuing and capturing-messenger) of the sixty-six Provinces.

Yoritomo had always heard of the great virtues of Kanézané, and was thankful to him for his having opposed the Imperial order.<sup>194</sup> He wrote a letter to him saying: "When the Taira rebels were most flourishing Yoritomo took up the cause of justice and right with his solitary person, and was enabled to report the performance of that service. However, he did not venture to assume arbitrary power. Disturbers of the public peace then possessed themselves of a decree, and relying on the power it gave them, plotted that which their position did not warrant. The requests which he lately preferred were prompted by the fear that disturbance and calamity might again arise from the same cause; he was not laying the foundation of his own

private advantage. He has only put down disturbance in the interests of the Empire itself." He also preferred a request that ten *Giô*<sup>195</sup> (Imperial Councillors) might be created, and high officers of State appointed to this office, to judge and punish those other high officers of State and others who had been concerned in the issue of the mandate ordering the chastisement of the East. In the spring of the second year (1186) Kanézané finally became Sesshō. In the fourth month Yoritomo sent a letter to the *Giô*, saying: "Your servant was born in the military class and grew up in an uncultivated and provincial region, so that he is ignorant of the Court rules. If he should at any time make representations, he prays your lordships to discriminate, to adopt just and impartial measures only, so as to give peace to the Empire. As for the Imperial mandates, should any of them not accord with the interests of the people, I shall be obliged to express my opinion fully. Eye-service is not loyalty." At this time Hojô Tokisada, who protected the capital in Tokimasa's stead, captured Yukiiyé in Idzumi, and Arisuna in Yamato, both of whom he decapitated. In the twelfth month Amano Tokagé was made governor (*bujiô*) of Tsukushi<sup>196</sup>, and hearing that partisans of Yukiiyé and Yoshitsuné were concealed in Kikai-ga-shima he attacked and conquered them.

Yoritomo had previously made representations that the people not having been able to cultivate the ground, owing to the constant war-contributions which had been required of late years, he intended to remit the arrears of tribute in the nine provinces<sup>197</sup> under his jurisdiction; next to diminish the usual tax, and to have the same practice followed in the remaining provinces. This year he also opened his stores and relieved the poor of Sagami.

In the spring of the third year (1187) he despatched Nakahara Chikayoshi, Oyé no Hiromoto and others to repair the Kamin Palace. At this period there were a large number of powerful robbers in the capital, and he despatched Chiba Tsunétané and Shimokobé Yukihira to search them out. He also sent a letter to Fujiwara no Tsunefusa declaring that no one could repress turbulent rebels like these two men. When they arrived at the capital the brigands were entirely put down.

In the sixth month of the fourth year (1188) the Palace of Rokujô was built.

In the first month of the fifth (1189) year, Yoritomo was raised to the rank of *Jô-ni-i*. In the third month the Imperial Palace was repaired.

## Correspondence.

TO THE EDITOR OF THE *Japan Weekly Mail*.

YEDO, August 14th, 1872.

SIR.—In a foot-note to the first column of the second page of your issue of the 10th instant I find the word *Nipon* used in such a manner as to justify the inference that it is the name of the main island in the Japan Archipelago, since you would have employed the word *Japan* had you meant the whole and not the part. It is an old error industriously propagated by every geographer and map-maker from the earliest days of European intercourse, to suppose that the island in question is called *Nipon* or *Niphon*. It is *no* name at all. The word *Nihon* or *Nippon* (the former is more elegant) is applied by the natives to the whole of the dominions of the Mikado, and is simply the Japanese pronunciation of the Chinese word which we have altered into *Japan*.

I am, Sir,

Your obedient Servant,

AN ATTENTIVE READER.

[We thank our correspondent much for his letter. The word *Nipon* in the note referred to was used in the sense he supposes, and the wide-spread nature of the error he corrects may be inferred from the fact that the note was sent us by one who is far from a contemptible Japanese scholar. The old school geographies have to a book fallen into the error. —ED. J. W. M.]

(191) Under the Tokugawa *Shôguns* the number of *Giô* was reduced to five.

(196) Ancient name of the two provinces of Chikuzen and Chikugo.

(197) Sagami, Musashi, Idzu, Suruga, Katsura, Shinôsa, Suânano, Echigo and Bungo.

(191) *Shingo* means literally 'Protector.' One of these officers was appointed to each province, and received one-fifth of the assessed yearly rental of all the lands as his salary. He resided at the provincial capital and had joint authority with the *Kokushi* in all matters of administration; the latter being a civilian and the former a fighting man. The *Shingo* gradually usurped the whole authority and expelled the civilian, and the *Kokushi daimitô* of the Tokugawa period, who ruled over whole provinces in a semi-independent manner, are their modern representatives.

(192) *Shôgen*, literally 'villages and gardens,' were departments or smaller districts in a province exempt from the jurisdiction of the civilian provincial governments (*Kokushi*), like the fiefs of more modern times. A *jito* or 'head of the land' was appointed to each of these, and each *tan* (about a quarter of an acre) was bound to supply a certain quantity of rice for the maintenance of the troops under his command.

(193) Yoritomo had actual possession of the Kuantô, which in those days meant the whole country east of the Barrier near Zôze in Omi, and the districts here meant, namely the Gokinai, Nankaidô, Sôkaidô, Sanindô and Sanyôdô, make up the Kuansei or West of the Barrier.

(194) The order to destroy Yoritomo, extorted by Yoshitsuné and Yukiiyé from the Cloistered Emperor Go-shirakawa.

## OUR RIGHT OF APPEAL.

SIR EDMUND HORNBY's decision in the case of Findlay Richardson & Co. *versus* Pitman & Co. was read on Tuesday from the Bench by Mr. Acting-Assistant-Judge HANNEN, and will be found below, together with the able argument of Mr. DICKINS, to which it is virtually a reply, and to the force of which it yields.

The effect of the decision is of high importance to British subjects in Yokohama, inasmuch as it affirms that the Court here is not a Supreme, but a provincial, Court, under the jurisdiction of Her Majesty's Assistant Judge, and entirely confirms the views we expressed in our Weekly issue of the 20th July. After arguing that it could not be considered a Supreme Court, we said:—"But if we look" "on our Court as a Provincial Court, presided over by" "one of the officers of the Supreme Court, who holds" "some of the powers vested in that Court, we have an" "intelligible position, though we cannot find that any" "provision is made for that position."

The Court will revert, therefore, until or unless the Order in Council is amended, into a Provincial Court, although the Chief Judge promises that he will take measures to enable the Assistant Judge to exercise an admiralty jurisdiction. Until such amendment of the Order in Council, the Court will be hereafter styled Her Majesty's Provincial Court for Kanagawa.

Mr. DICKINS' argument is as follows:—

1st.—Before Mr. Hannen came over to Yokohama, the suitor had, in every case over \$250 in value, the advantage of a cheap and speedy mode of obtaining the opinion of the Chief Justice at Shanghai, by way of appeal. This he possessed under the Order in Council and the Rules attached thereto, and the Chief Judge, in appointing Mr. Hannen, could not have had the intention, even if the Chief Judge possessed the power, of taking away the right, and leaving the suitor here to act under the 14th Section only of the Order in Council, which section is clearly insufficient, as it provides only for a "re-hearing" of points arising in a case originally brought before the Supreme Court, presumed before the Chief Judge, after a reference of such points to the Assistant Judge, by the order of the Chief Judge.

2nd.—If the ruling of Mr. Hannen be correct, then in appointing Mr. Hannen to his present post what was given with one hand was taken away with the other, to say the least, and the community of Yokohama, while great gainers by the substitution of a trained judge for an untrained Consul, are great losers in that they are deprived of all recourse to the opinion of the Chief-Judge by the convenient and cheap mode of appeal they formerly possessed, while, as already shown, they cannot obtain any re-hearing under Section 14, and thus are, in effect, deprived of any mode of appeal or re-hearing whatever, except in cases of \$2,500 in value. In such latter cases, even, they can only appeal directly to the Privy Council, a proceeding practically out of the question, except in very rare instances.

3rd.—This, however, it is contended was not intended by, and has not resulted from, the appointment of Mr. Hannen. The Court here, it is submitted, is not the Supreme Court to all intents and purposes. It is not, indeed, properly speaking, the Supreme Court at all. For its jurisdiction, besides being entirely confined to the Yokohama Consular district, is much less extensive than that of the Supreme Court, and the special and distinguishing function of a Supreme Court, namely, an appellate jurisdiction from inferior Courts, is, in the case of the Court at Yokohama, wholly wanting. The Court may possibly hold the relation to the Supreme Court that a *Nisi Prius* Court at home holds to one of the Superior Courts at common law. In such case the Provincial Court is not

abolished by it, but suspended by and incorporated with it, in such manner that while the Acting Assistant Judge has jurisdiction over and above that possessed by the Provincial Court, he ought yet, where no express provision to the contrary has been made, to follow as closely as circumstances will permit the rules of procedure relating to a Provincial Court, and to consider himself bound by the Sections of the Order in Council applicable to Provincial Courts in circumstances to which those Sections are applicable. A common law Judge may in certain cases sit in the High Court of Admiralty, but he does not, by doing so, in any way alter the procedure of that Court.

4th.—It is clear that under Section 14 decisions in suits here cannot be re-heard, and if the right of appeal from the Court here as a branch or circuit Court of the Supreme Court to the Supreme Court or Court *in banco* at Shanghai does not exist, then it would seem that the Chief-Judge has the power of depriving any suitor in any Provincial district of his right to seek the opinion of the Chief Judge, either by way of re-hearing or by way of appeal, by simply appointing the Assistant Judge or Law Secretary, or Acting Law Secretary, under Section 38, to visit "in a magisterial or judicial capacity" any Provincial Court. It can hardly be the intention of the Order to confer this power, and even in the event of its having been conferred, it can hardly be the intention of the Chief Judge to exercise it in the appointment of Mr. Hannen.

5th.—No harm, it is obvious, is done to the suitor when the Chief Judge himself visits a Provincial Court, the intention of the Order in Council being simply that in cases under \$2,500 and over \$250, the parties shall have the faculty of resorting to the Chief Judge, and in cases over that amount shall resort to the Chief Judge ere appealing to the Privy Council. The Chief Judge brings the Supreme Court with him.

6th.—If Mr. Hannen's ruling be right, in cases under \$2,500 his decisions are absolutely final, and in cases over \$2,500 no appeal lies except direct to the Privy Council, practically a useless privilege, and thus, in the event of Mr. Hannen's opinion being correct, there is in fact no appeal from his judgments, except upon such grounds as are mentioned in the class of cases of which the case of *Ko Khiue v. Snadden*, L.R. 2 P.C. 50, is a type.

It is contended that there is a common law right of appeal from a *Nisi Prius* Judge to the Full Court, or from any inferior branch of a Court to the Court itself, and that an Order in Council cannot abrogate the common law rights of the subject in non-Christian states neither conquered nor ceded, except by the aid of an enabling Act of Parliament. Now, the Foreign Jurisdiction Act, the sanction, so to speak, of the Order in Council, gives the Queen the same powers over British subjects in China and Japan that Her Majesty possesses over British subjects in conquered or ceded countries, and no other power, except, perhaps, incidentally, the power to create certain offences, such as those which result from infraction of treaties by British subjects. It is submitted that every British subject carries with him into ceded countries not retaining their own laws, or unprovided with legal systems, the Common and Statute law of England, to the extent of its applicability, save so far as his rights may be controlled by Acts of Parliament and Orders made in pursuance thereof, and in accordance therewith. It is not, therefore, probable that the Queen could, by a mere Order in Council, take away even the common law right of appeal from any inferior Court established by the said Order. Blackstone, it is true, says that "any colony acquired by conquest or cession is subject to such laws as the Sovereign in Council may impose," but he only quotes two cases in support of the assertion, Calvin's case, in which the main point decided by the Judges was quite other, and the case of *Campbell vs. Hall*, Cowper, which gave the Crown legislative power over conquered countries. But it is quite certain that at the present day this prerogative (always over-rulable by Parliament) could not be legally extended beyond the demands of necessity and the public weal, and such demands, in these days of quick communication, are much less imperative and much less common than in former times. This particular question, however, need not be discussed, for until such prerogative is exercised

and laws imposed thereby, a British subject may still refer to the common law of England, and British subjects in any conquered or ceded country can always refer to the law of England, so far as not abrogated by such exercise as aforesaid of the Crown's prerogative and applicable to his circumstances (*Lautour v. Teesdale* cited below.) His common law rights, in a word, if abolished at all, must be so expressly or by certain implication. That has not taken place with respect to the common law right of appeal inherent in British subjects within the jurisdiction of the Order. Indeed, sections 4, 5 and 6 specially reserve his rights both as to law and procedure civil and criminal. By section 38 the visiting of a Provincial Court by an Assistant Judge is contemplated. It is not said that the Provincial Court is abolished by such visiting, nor is it anywhere said that there shall be *no* appeal from an inferior Court presided over for a time by the Assistant Judge, or even changed into an intermediate Court between a Provincial Court and the Supreme Court, or even made thereby for a time a subordinate part of the Supreme Court, to the Supreme Court of the whole area coming under the operation of the Order in Council. It was probably not thought necessary to say any thing about it, since in all probability it was deemed that any Judge so superseding the Provincial Judge would be naturally bound in states of circumstances where applicable and necessary, by the rules governing Provincial Courts. If that were not so, the good effects of such an interference would be exceedingly problematical. A pending suit, for instance, begun by the suitor under the expectation of being able to have recourse if necessary to the opinion of the Chief Judge, might have to be finally determined by the Assistant Judge or Law Secretary or even by an Acting Law Secretary, or if appealed from to the Privy Council only—a luxury in which few suitors here can indulge. In other words so far as appeals to the Privy Council are concerned, a Court presided over by an Acting Law Secretary would be on the same level as the High court of Judicature in India, or the Supreme Courts of the Australian colonies, the appealable amounts in which are about the same as the amount mentioned in the Order in Council, namely £500. (2,500 Dollars.)

8th.—The learned Assistant Judge is of opinion that since an appeal of some sort must lie from his decisions, such appeal must be direct to the Privy Council. If my contention is correct, this cannot be the case, since the Court here is not one of *dernier ressort*. And if it can be shown that under the Order there is no appeal from the decision of the Assistant Judge direct home, this is a strong argument. Let sec. 131 then be examined. The appeal to the Privy Council is only from a final decree or order of the Supreme Court. Does an Assistant Judge, visiting a Provincial Court, not as Deputy Chief Judge, but “in a magisterial or judicial capacity” under sec. 38, convert that Court into a Supreme Court? Confessedly not, to all intents and purposes, at least. Why then into a Court of *dernier ressort*, the only Court from which an appeal to the Privy Council can lie? Some of the powers of the Supreme Court may be delegated to the Court here under such circumstances, but not, it is submitted that of being a Court of final resort. Were a Deputy Chief Judge or the Chief Judge himself to visit the Provincial Court the case is obviously different, and does not need any argument. Is the visit by the Assistant Judge or Law Secretary to have the same effect as the visit by the Chief Judge? If so, with what object can the Chief Judge visit a Court presided over by an Assistant Judge?

9th.—The Chief Judge may no doubt in proper cases appoint a Deputy, but it is submitted that he cannot in any case clothe the Assistant Judge or Law Secretary as such with all the power of the Supreme Court. It is open to doubt whether they can be so clothed with any of the attributes of the Supreme Court. That their decisions should not be subject to the revision of the very authority that appointed them, seems not intelligible, and, as before urged, Sec. 14 does not refer to decisions of an Assistant Judge *on a suit*, but on matters and questions specially referred to him *in a suit*. It is more than doubtful whether the Court at Yokohama is anything more than a Provincial Court, presided over, because of its importance, by the Assistant Judge, in lieu of being presided over by a non-legally trained Consul.

10th.—Section 14 shows that decisions of the Assistant

Judge upon questions *in a suit* are not final, and this seems probative of my contention that his decisions *on a suit* were not intended to be final. It would be contrary to common sense that a judicial officer whose decisions on even mere incidental points referred to him in a pending suit are subject to re-hearing as of course, should be able to deliver final judgments from which, when involving less than \$2,500, there is no appeal whatever, and from which whatever the sum involved, there is, practically, no appeal whatever. The learned Judge of the Court at Yokohama must be regarded as appointed under Section 38 and not under Section 14, and there is absolutely nothing whatever in the Order to show that the right of appeal to the Chief Judge from a Provincial Court is taken away by the mere substitution of the Assistant Judge by the Chief Judge for the ordinary Judge of such a Court.

11th.—The Court here must be either—1st. a subordinate, *nisi prius*, or circuit portion of the Supreme Court, in which case it is contended that the common law right of appeal to the Full or Supreme Court not having been expressly taken away by the Order in Council, still subsists, and must be exercised either in the manner directed to be observed in the case of appeals from a Provincial Court, or in that to be followed in appeals to the Privy Council. Mr. Hannen, it is believed, is of opinion that he has Vice Admiralty jurisdiction. He does not possess jurisdiction in Matrimonial causes, nor, it is contended, a lunacy or contentious probate jurisdiction. And it appears very doubtful whether he possesses Admiralty jurisdiction, but, if he does, that is not sufficient to make the Court a Supreme Court for the purposes of appeals, not even in Admiralty cases, or at all events, for the purposes of appeals generally.

It is obvious that special reasons may exist, however, for bestowing final Admiralty jurisdiction upon any Court sitting at Yokohama on the ground of public interest.

Or, 2nd.—A Provincial Court, with or without certain increased jurisdiction, in which case the right to appeal is clear.

It is difficult *a priori* to conceive how a Court can be Supreme with no inferior courts subordinate to it, and equally difficult to conceive how, if the Court here is the Supreme Court for China and Japan, and not either an inferior branch of it or a Provincial Court, it should possess only so limited a jurisdiction in Japan—a jurisdiction precisely co-extensive in area with that of the ordinary Provincial Court of the place. And I can see no authority for any sort of permanent establishment of a circuit branch of the Supreme Court. The Supreme Court cannot be sitting in Shanghai and Yokohama at the same time. Section 38 does not give the Supreme Court at Shanghai any other power than that of “visiting” a Provincial Court, not of abolishing such a Court, and the very word “visiting” implies the temporary character of the arrangement. It is contended, therefore, that in reality the Court here is neither more nor less than a Provincial Court, and that, as such, an appeal lies from it to Shanghai. It is contended that even if Mr. Hannen has a jurisdiction beyond that of an ordinary Provincial Court, which appears very doubtful, that delegated jurisdiction does not alter in any way the right of appeal. The Courts of *dernier ressort* are those provided for in the Order and none other, namely, the Provincial Courts in cases involving less than \$250, the Supreme Court at Shanghai in cases involving no more than \$2,500.

This Court, if not the former, is, at least, a branch of the latter, a subordinate and inferior portion of it, bound by its decisions and as such, not such Court of *dernier ressort* as to induce the Privy Council Committee to hear appeals from it.

12th.—The motion to which this argument is attached closes with a request for a partial re-hearing for the purpose of raising the question whether in the event of an appeal not being grantable, a partial re-hearing similar in effect to an appeal, can be accorded under Section 14 of the Order in Council.

#### APPENDIX.

*Blankart v. Galdy* Salkeld 411.

Any uninhabited country newly discovered and inhabited by the English is governed by the laws of England.

*Adv. General v. Rance Sarnomoye Dossee* 2 Moore P. C. C.

When Englishmen establish themselves in an uninhabited or barbarous (the case referring to India shows that under barbarous, for legal purposes to a considerable extent, are included non-Christian countries) country they carry with them their own laws.

*Lantour v. Teesdale* 8 Taunton 830.

British subjects resident in a British settlement abroad are governed by the laws of this country. Thus a marriage at Madras according to the canon law (which was the common law as to marriage, obtaining in England before the Marriage Act which was applicable to England only) though not according to custom at Madras, was held valid.

*Bentinch v. Willink* 2 Haro 1. The general laws of this country, not being peculiar or technical merely, are applicable to questions relating to laws in a colony where a different jurisprudence prevails, unless it is shown that the colonial laws have provided for and are different in such questions.

So, too, in America, to this day in many cases the English Common Law is still applied. I wish I could refer to a case lately before the Supreme Court of New York in which a very long and elaborate judgment was delivered by the most eminent Judge on the New York Bench, Judge Daly, I believe. The case related to a lunatic Parsee in New York whose friends in Bombay wished to get him back again, while on his side it was urged that his relatives were more anxious about his money than about him personally. The evidence as to whether it would be good for him to go back or not was on the whole very conflicting, but in the end the Judge ordered him to be taken back. The lunatic passed through this port on his way to Bombay in charge of Major Constable who kindly lent me a printed copy of the Judgment to peruse. For guidance upon the numerous points arising in the case and not provided for in the Municipal law of New York, the Judgment constantly referred to the principles of the English common law as it existed at the time of the separation of the States from the mother country. So, too, Mr. Mayne, in his notes to the 4th Section of the Indian Penal Code contained in his treatise on that Code, shows that to certain classes of persons in the Indian Empire the old criminal law of England is still applicable, not by virtue of any special arrangement, legislative Act, or Act of Parliament, but simply because the criminal law of India does not provide for the punishment of offences committed by individuals belonging to such classes.

F. V. DICKINS,  
Defendants' Counsel.

#### JUDGMENT.

13th August, 1872.

FINDLAY, RICHARDSON & Co. v. PITMAN & Co.

The order against which it is sought to appeal, purports to be an order of the Supreme Court.

All the documents, both those of the Defendants and the Plaintiffs, are headed in the Supreme Court. Had the decision of the Court been in the Defendant's favor, he would have derived from this fact the same advantage that the plaintiffs now obtain. It does not therefore lie in the mouth of either the Plaintiffs or the Defendants to deny that the Court before which they appeared, was the Supreme Court.

The Order in question must also be taken to be an Order of the Supreme Court, and as such can only be appealed against under the provisions specified in the Order in Council. These provisions direct an appeal to the Privy Council, and not an appeal to whoever may be the superior judicial officer of the person rendering the decision.

It has also been contended that if there is no right of appeal, there is at least a right of re-hearing under Section 14, but I am of opinion that cases tried in this Court before the Assistant Judge come neither within the spirit nor the wording of this Section. The cases are not

"matters from time to time referred to the Assistant Judge," they are cases of which the Assistant Judge takes cognizance under the concurrent jurisdiction of the Supreme Court, given to it in Section 37, and which he is sent to enquire of and determine under Section 38.

It is evident that the appeal to the Privy Council is an unsatisfactory method of reviewing the decisions of this Court. How can this be remedied? If all powers of the Supreme Court are withdrawn from the Assistant Judge while residing here, the Court will remain a Provincial Court, and its decisions will be subject to review under the sections relating to appeals from Provincial Courts. The same device of making this a Provincial Court will take away from suitors even the pretence for claiming a right to a rehearing as of course—for such right can only refer to causes originally instituted in the Supreme Court, and until the Order in Council is amended, so as to give the Assistant Judge resident in Japan the authority and jurisdiction which now pertains only to the Supreme Court, this Court will remain a Provincial Court under the presidency of Her Majesty's Assistant Judge. I shall however take measures to enable him to exercise an admiralty jurisdiction.

The defendants in the present case can therefore apply for leave to appeal to Her Majesty in Council if they think fit.

I may, however, say, that I have read over the pleadings, the evidence given in Court and the Judgment of the Assistant Judge, and that I concur with the latter. As a matter of right, the sum claimed being under \$2,500, there is no appeal to the Privy Council, but I am willing to hear the defendants' application for leave to appeal, if they desire that I should do so, and a day may be fixed during the first week in September for that purpose.

#### Law & Police.

##### IN H. B. M.'s CONSULAR COURT.

Before Mr. Consul ROBERTSON.

Monday, August 12th.

Thomas Ryder, of the *Leander*, was charged with assaulting the mate of that ship. He "did not think he was quite guilty." The prosecutor said that on Saturday morning he was in charge of the ship. Ryder came aft and demanded half an hour's liberty to go on board the *Salamis* which prosecutor refused. Prisoner asked three times, and then told him he could hoist the police flag as he didn't intend to do any more work. Witness ordered him to go forward and gave him a slight push, on which prisoner turned round and struck him with his fist. Whilst securing him, prisoner bit him in the shoulder very severely, and when in irons, contrived to break his handcuffs. On behalf of the prisoner a man named Cornish swore that the mate gave prisoner a blow over the eye first, and then, as he was descending the steps from the poop, kicked him on the back.—Prisoner bared his shoulder, whence a good sized strip of skin was missing.—The mate said that this had resulted from the man's back grazing the ladder, and not from a blow. There was no blackness, or appearance of bruise about the wound. The captain gave the man a very good character, and he got off with a fine of a dollar.

David Wilkes and William Cornish left the ship without leave on Saturday,—the latter after having been taken back by the Police boat just before. The latter went to gaol for a fortnight, and the former for a week.

Thomas Stanley was charged with being absent without leave, assaulting the master of the *Leander*, and refusing duty. This man had been brought off shore by the police, and when still under the influence of liquor kicked the skipper's hat off. Next morning he refused to turn to. He was sent gaol for a month.

Tuesday, August 13th.

Three men of the *Seaforth* were charged with repeated refusal of duty.

His Honour sentenced them to three weeks' imprisonment.

## IN THE UNITED STATES CONSULAR COURT.

Before Mr. Consul SHEPARD.

Tuesday, August 13th,

J. Conolly was charged with fraudulently obtaining goods from a Japanese and assaulting him. From the evidence it appeared that last night he went to a restaurant-keeper and refreshed exhausted nature with a dozen eggs, seven cups of coffee, and other inconsiderable trifles. The proprietor began to entertain doubts as to his customer's solvency toward the conclusion of the repast—when he asked for sherry, but did not get it—which were confirmed when he asked for payment. Trembling on the brink of financial ruin, he threatened to procure the intervention of the police to prop his failing fortune. Prisoner "propped" him—in the eye, and knocked him down.

The Consul recommended the man to get paid in advance in future, before he served such customers.

The prisoner said that a man called Fitzgerald ordered the provisions. He was willing to pay what was due—two boos and two tempos. He didn't pay it last night because he hadn't any money with him. He didn't kick plaintiff on the foot; he might have stood on his foot when the Japanese had seized him by the coat, and was asking him for money. He had been discharged from the *Audax*, and had since earned \$6 for rigging the *Maria Luz*. He had drunk part of the money, and paid part for a pair of boots.

The Consul told him he was getting to be quite a noted character about Yokohama.

The Vice-Consul said he had been confined in gaol once, but had caused a great deal of trouble about the town.

Prisoner said he didn't know what he had been sent to gaol for, unless it was contempt of Court. He spoke rather hastily, as he had a little whisky inside him. It could be nothing else.

The Consul enquired if prisoner considered whisky a good thing to drink as a morning beverage.

Prisoner evaded the question, saying that he hadn't drunk any since 1860 till he came to Yokohama. He boarded round at Whites', and guessed his advance would pay what he owed the Japanese. He was going away in the *Maria Luz*.

The Consul was not so sure about that as prisoner had not at that moment the option of controlling his own movements.

The case was adjourned, and after a while, a man named Fitzgerald said he ordered the food consumed by prisoner, and would pay for it.

Conolly was sent to gaol for 20 days,—but to leave the place if he could be shipped in an American craft before the sentence expired.

Wednesday, 14th August 1872.

J. Chase was charged with assaulting a Chinaman in the employment of Textor & Co., at the Custom House yesterday. He was fined \$15, and warned that if again found guilty of a similar offence he would be deported.

Friday, August 16th.

George Miller pleaded guilty to a charge of assault and battery upon James E. Keely. He was fined \$25.

Thomas Hocken was charged with assaulting Japanese police officers and a jinrikisha coolie, and breaking the vehicle.—Kambetto, a policeman, cautioned said: Yesterday I was on duty at the Hatoba and saw the prisoner strike complainant two or three times on the breast. I went up to them and asked what was the matter, on which the jinrikisha man said that he had been dragging prisoner about the town and had not been paid. Prisoner tried to assault me, and in the scuffle the middle cross piece of the jinrikisha got broken in the end. Hocken had got angry, because the man would not take him to No. 75.—Complainant said that when he refused to pull prisoner further, because he had not been paid, the other struck him several times; but did not hurt him much. He had ridden for four hours. The charge for that was two boos and a half.—Hocken admitted being intoxicated, but denied any intention of doing damage. He was fined \$1 and costs besides payment of \$1 to the jin-riki-shaman.

—Badcock, an officer of the *Ariel*, was charged with assaulting Japanese customs officers.

Michi-toshi, deposed that he was a tide waiter and it was his duty to see that all goods or articles brought off from the shore to ships on which he was stationed bore the Government stamp. On the 11th day of the 6th month he was on board the *Ariel*, when Badcock wanted some sheep taken in. He told him to wait a moment. Defendant first put his hand upon witness' shoulders and afterwards struck him in the eye. He did not know if the

sheep were for ship's use. He was instructed that all goods for the provision of the ship were allowed to be passed on board without a permit. He did not enquire if they were for the ship, nor did he provoke Badcock. He did not know if there was any duty on sheep, but he was placed on ship board under strict orders from his officers to require a permit for everything taken on board. He thought if the sheep had not a permit, it was not proper.

The Consul asked if he thought it was proper for a passenger to come on board without a permit?

Witness said he had nothing to do with that.

S'zuki Tadachika, another officer, deposed that he saw these sheep which had come off to the ship and asked if they had a permit? Last witness enquired whence they had been brought, and was told from the foot of the hill (P. M. S. S. Co's. shed). He saw last witness go towards Badcock, and the latter strike him on the eye. He went between them and stopped the fight.

For the defence, John Farrier, the P. M. S. S. Co's. butcher, Kerry, the steward of the *Ariel*, and the defendant, deposed that the sheep were kept over half an hour alongside, the tide-waiters refusing to allow them to be hoisted in, though they were repeatedly told, and must have understood, the sheep were for the ships. The defendant was called on to interfere, and ordered the sendos to bring them up. The complainant tried to rush past defendant as he was descending the gangway, pushed him back and tore his shirt, on which the other lifted him on the guard and struck him.

His Honour said the only question involved was as to who struck the first blow? He must, however, say the Japanese Custom House officer was greatly in the wrong for not allowing the sheep to be taken on board. He could not help expressing surprise that the Customs authorities should permit men to hold such positions, the duties of which they were not conversant with. He could not blame the officer very much for stopping the sheep, as he was doubtless acting under instructions from his superior officer, but he must really deprecate such proceedings on the part of the Custom House officials, which in themselves amounted to little, but caused great annoyance and delay to ships. He was, moreover surprised to find that the authorities should think a company like the P. M. S. S. Company would condescend to such a mean action. If the Custom House officials did not know that, according to treaty, ships' supplies were allowed to be taken on board without paying Customs' duties, it was quite time they learned; whilst he was always ready to punish any offender against the Custom House rules, the authorities must be made aware that on the other hand, he could not permit ships to be stopped in the manner they are, and he wished the Custom House interpreter who was present in court to convey these sentiments to the authorities. As regards the assault, the balance of evidence was in Mr. Badcock's favour, and he should therefore dismiss the case.

## Extracts.

## THE INDEMNITY, AND WHAT BECOMES OF IT.

(Economist.)

ONE of the promises in the speech of the German Emperor at the opening of the Reichstag was to introduce a Bill for the distribution of the indemnity and other monies which France paid to Germany, or has engaged to pay, on account of the war. The promise has now been fulfilled, and the Bill, with its "motives," enables us to say, subject to one condition, what the ultimate disposal of the money will be. The Bill is not quite final, for though it says what is to be done with the residue after making all other payments, it leaves the door open for farther legislation by which the residue may be farther diminished. Still it would appear what the general payments have hitherto been or are arranged to be, and we may also infer what the present estimate of residue is, a fact which is of some interest whatever the farther legislation may be.

The first point to be clearly apprehended is one which we have often dwelt upon, and is quite openly stated in the introduction to the present Bill. The Germans receive altogether not merely two hundred millions sterling from France, the round sum of the indemnity, but a good deal more. Besides this round sum they receive, or have received, interest on unpaid instalments, the unpaid taxes and contributions they levied in France, and the ransom of Paris. The account in full is as follows:—

1.—The indemnity ... ..	£200,000,000
2.—Interest due on March 3rd, 1871 ... ..	6,000,000
3.—Contribution levied on Paris ... ..	8,000,000

4.—Taxes levied in France, and district contributions not spent for special military purposes, deducting the cost of administering the localities of France where levied—to end of 1871... 2,203,000

216,203,000

Add—5 per cent. interest on £120,000,000 from March 2nd, 1872, to March, 1874, if not previously paid ... 12,000,000

Total ... 228,203,000

Thus the Germans count on receiving altogether about £230,000,000 in cash, or its equivalent, from France, should the last instalments of the indemnity not be paid before the term stipulated by the Treaty of Peace. If the instalments were to be paid now, they would still have received 216,000,000l plus the interest accrued on 120,000,000l since the 2nd of March last. We doubt if even these large figures cover everything. The payments by France on account of the German army of occupation are not mentioned, though they must amount to more than the actual cost incurred. What is still more important, nothing is said of the value of Alsace and Lorraine as a revenue-producing province, though the acquisition of that province is, in all strictness, as direct a gain of capital to the German Government as the indemnity itself. The cost of Government undoubtedly increases with the increase of population and territory, but not in exact proportion. The task of German defence, the main cause of expenditure, is in no way made more difficult as a military operation by the annexation of Alsace and Lorraine; but the annexation really gives Germany between two and three millions sterling a year with which to provide the defence. But we make this remark *en passant*. Without estimating anything for Alsace and Lorraine, or for the sums received in excess of the cost of occupation, the Germans frankly acknowledge the acquisition in money from France, when the indemnity has been paid them, of very nearly 230,000,000l.

One of the items in the above list will strike people as very curious—the item of 2,000,000l odd for taxes and contributions levied in France, and not appropriated for military purposes, or spent in local administration. We know from the French accounts that the inhabitants of the invaded provinces claim 16,000,000l in all for the German contributions, taxes and requisitions which they paid, not to speak of what may have been paid by the annexed districts of Alsace and Lorraine. But small as these requisitions are, remembering that the Germans had half-a-million of men in France for nearly seven months, and what outcry was made about them at the time, it would now appear that they were in excess of the actual needs of the Germans. The latter have two millions and upwards to spare. The explanation must be that the requisitions of an invading army do not necessarily sweep a country so clean as might at first sight be expected. Military operations conducted with thoroughness, and the Germans, with every disposition to live upon France, undoubtedly found it most convenient to bring up the bulk of what they wanted from home. Thus it happens that, while levying a comparatively small amount, they have actually saved 2,000,000l for subsequent disposal.

The second point is the disposal of the above sum of from 216,000,000l to 228,000,000l. The sums already appropriated to general purposes are stated to be:—

Purchase money of Alsace and Lorraine railways, taken from instalments of the indemnity.....	£ 13,000,000
Indemnities to German subjects (Law of 14 June, 1871) .....	5,505,000
Do. for shipping losses, &c., (Law of 14 June, ) .....	900,000
Assistance to German subjects expelled from France (Law of 14 June, 1871).....	300,000
Do. to dependents of Reserve and Landwehr (Law of 22 June, 1871).....	600,000
For dotations (Law of 22 June, 1871).....	600,000
Imperial war treasure.....	6,000,000
Repairs and reconstruction of Imperial railways (Law of 22 November, 1871).....	1,716,000
For pensions, &c., in Budget of 1872 under Law of 4 December, 1871.....	2,205,000
Loss of income in Budget of 1872 through abolition of tax and excise credits .....	2,970,000
Extraordinary expenses for Imperial army and marine in Budget of 1872.....	1,424,000
Total.....	35,220,300

These were the appropriations for general purposes until the law which is now proposed, and they absorbed obviously but a small part of the indemnity.

The law now under discussion carries us a little farther. 1. It appropriates to the enlargement and construction of fortresses and military buildings in Alsace and Lorraine a sum of £5,888,000, of which £2,500,000 is to be spent before the end of the present year.

2. It provides for reimbursing to the individual States of the empire certain expenses recognised to be in connection with the war, without, however, specifying the amount. An approximate estimate appears, nevertheless, to have been made, showing the amount claimed by the several Governments to be about £9,000,000, viz.:

	£
Arming and disarming of fortresses.....	1,471,000
Siege material .....	1,192,000
Extraordinary expenses of Prussian marine .....	1,368,000
Purchase of site for artillery experiments and construction of works .....	206,000
Coast defence, etc. ....	454,000
Repair and reconstruction of railways.....	906,000
Field telegraphs .....	103,000
Provisional civil administration in France .....	697,000
Miscellaneous expenses (including £2,000 for managing war indemnity and £67,000 for English ships sunk at Duclair.....	87,000
Imperial head-quarters .....	151,000
Post and telegraph administration during occupation of France .....	82,000
Excess of peace expenditure on account of occupation (1st July, 1871, to 31st December, 1872) .....	1,920,000
Additional expenses for garrisoning Alsace and Lorraine in same period.....	140,000
Total.....	8,777,000

3. Provision is made for expending £500,000 for a military academy, cadet barracks, and other military buildings at Berlin. These three sums amount together to about £15,000,000, and will make the total appropriations out of the war indemnity almost exactly £50,000,000. The indemnity being £230,000,000, there is a residue of about £180,000,000 to be the subject of farther legislation, or to be handed over to the separate States of the Empire.

We are thus brought to the question of the disposal of the residue, whatever it may be found to be. A peculiarly complicated arrangement has been resolved upon. Three fourths of it are to be appropriated to North Germany, Bavaria, Wurtemberg, Baden, and South Hesse in one way, and one-fourth is another way—the three-fourths according to the military preparations of the respective States during the war, and the one-fourth according to the proportion of soldiers enrolled (*matrikular beiträge*) in 1871. The actual proportions in which the three-fourths will be appropriated are ascertained to be:—

	Parts.
North Germany ... ..	107,679,125
Bavaria ... ..	14,638,825
Wurtemberg ... ..	4,345,150
Baden ... ..	3,768,450
South Hesse... ..	1,869,975
Total... ..	132,201,325

In other words, Germany is to get about nine-elevenths of the three-fourths, that being its indicated share in the military preparations. The arrangement for the division of the remaining fourth is understood to be more favourable to the South German States, and to be in the nature of a bonus, the military preparation being popularly accepted, according to the Berlin accounts, as the equitable basis for the division.

Such is the account of the indemnity; but while it is very clear on some points, it is very dubious on others about which a good deal of interest would be felt at the present moment. Above all, it tells us really nothing as to the disposal of the money actually in hand. Of the above 228,000,000l, the amount still to receive is 132,000,000l, so that the Germans have actually had to dispose of 96,000,000l—actual cash in hand or its equivalent. Deducting 13,000,000l for the purchase of the Alsace and Lorraine railways, there is still 83,000,000l to be accounted for. What has become of the money? So far as we can judge, very large sums must be retained by the Berlin Governments. The appropriations for general purposes amount to 50,000,000l altogether (including 6,000,000l for the war treasure), and are only in process of being spent, though how much is being spent we do not know. A large part being only just appropriated, we should say very little has been spent, provision being made, in the case of several items, for only spending less than half before the end of the present year. There would remain 33,000,000l of the residue appropriated to the separate State Governments, and probably the bulk of this has been divided and spent by the separate Governments chiefly in repaying debts, but any balance left over would swell the large unexpended balance of fifty millions. The exact facts cannot be known, but we should say it is quite clear from the figures that the Berlin Governments must at the present moment have large sums of cash in hand, or lent at short notice, which can be

\* See *Economist* of May 18, 1872, p. 611,

speedily called in; and that, according to the arrangements for spending the indemnity, they must retain large amounts for a long while to come, whether or not they ever get the last three milliards of the indemnity.

Another conclusion is suggested by the figures—the immensity of the sum which Germany is receiving far above what the war actually cost it. Its receipts can hardly be reckoned far short of 300,000,000, viz. :—

Indemnity and war contributions already received..	£ 96,000,000
Three milliards to receive with interest ... ..	132,000,000
Capital value of taxpaying resources of Alsace and Lorraine ... ..	60,000,000

Total ... .. 288,000,000

And its war expenses, including compensations and other extras in the above £50,000,000, were in comparison insignificant. They were :—

Expended on the war to end of 1871* ... ..	£34,000,000
Arming and disarming of fortresses, and other miscellaneous expenses, as above ... ..	9,500,000
Indemnities and pensions, included in first appropriations of £35,000,000 for general purposes from the indemnity ... ..	12,000,000

Total... .. 55,500,000

This sum of £55,500,000 includes apparently about everything which Germany has spent or will spend on the war, including all sorts of miscellaneous compensations. As she receives £288,000,000, she is, in other words, a gainer of £232,000,000, by the war. Deducting the capital value of Alsace and Lorraine, she would still be a gainer of £172,000,000, or about £4 per head. It will be said perhaps that the £172,000,000 will only compensate the indirect losses of individual Germans; but it would be difficult indeed to show that the indirect losses could amount to so enormous a sum. The conclusion must remain that the war has yielded to Germany a net profit of unexampled magnitude in military history.

#### "GOETHE AND MENDELSSOHN."†

(*Pall Mall Gazette*.)

In one respect this little book is the most important contribution that has yet been made towards a correct estimate of the genius of Mendelssohn. It brings out more distinctly his distinguishing characteristic—namely, his unexampled precocity. In this point he stands alone among musicians. Great musical gifts, indeed, always exhibit themselves very early in life, in comparison with ordinary reasoning or imaginative genius. No man has ever become a great musician who did not play and compose astonishingly well while yet a boy. In other cases, in fact, precocity is usually the token of a premature development which ends in hopeless mediocrity. But from some unknown cause it is not so with musical growth. Handel, Bach, Mozart, Haydn, Beethoven, and all the lesser men to whom has been given the faculty of vigorous and original musical writing, began life by surprising everybody around them by the rapidity with which they mastered the mechanical difficulties of performance and the theoretical difficulties of composition.

In every instance, at the same time, except that of Mendelssohn, their earlier works have displayed no originality. They thought the thoughts of the composers whom they studied, only that in expressing them they employed a vigour of musical language which at once attracted the attention of every capable critic. With advancing manhood their striking talent developed itself into individual genius, and the longer their lives were prolonged the more fruitful and energetic was their creative fertility. But not so with Mendelssohn. At sixteen years old he was a master. He not only treated his musical ideas with the breadth and unity of purpose which other musicians attain after years of laborious study and practice in composition; but, what is even more remarkable, he invented new

\* See Economist, of May 18th. The following is the account of this item :—

Army ... ..	£29,260,000
Marine ... ..	191,000
Postal department ... ..	133,000
Telegraph department ... ..	134,000
War preparations ... ..	1,484,000
Interest of North German war debt...	88,000
Miscellaneous expenses ... ..	396,000
Compensation to shipping trade ... ..	1,812,000
Replacement of war damages, &c ... ..	600,000

34,102,000

† "Goethe and Mendelssohn." Translated, with additions from the German of Dr. Karl Mendelssohn-Bartholdy, by M. E. Von Glehn. With portraits and facsimile, and letters by Mendelssohn of later date. (London: Macmillan & Co. 1872.)

melodies themselves, which were no mere reproductions of other men's tunes, but bore that stamp of individuality which his works retained until his dying day. His octet for stringed instruments stands unrivalled among the compositions of boys. In two years more he had achieved as absolute an originality as any composer ever attained. Both in its melodies, in its progressive development, in its truth of picturesque ideality, and in the subtleties of its orchestral details, the "Overture to the Midsummer Night's Dream," stands alone among the works of young composers.

But the penalty had to be paid. This unnaturally early originality was accompanied with a vivacity of temperament and generally premature growth of mind which issued in brain exhaustion when he was barely entering middle life, and the wonderful boy died just when more healthy frames are attaining their complete growth. The much more remarkable fact, however, is this, that Mendelssohn's early genius remained to the last what it was when he was quite a young man. There is but little more power in his later than in his earlier works, and there certainly is no greater originality in melody. In studying them chronologically, there is not much to be traced of those successive changes in style which have marked the advance of the genius of other great men, whether painters or musicians. Taking the portions of his unfinished oratorio "Christus," and comparing them with his orchestral writings produced eighteen or nineteen years before, it is surprising to observe how little real advance has been made, and how, to the last, he failed in suggesting that transcendent sense of strength and intensity of which we are conscious in Bach, in Handel, and in Beethoven. Comparing, for instance, Mendelssohn's treatment of the scenes in the Hall of Pilate with Bach's treatment of the same in his "Matthews-Passion" and "Johannes-Passion," the effect is comparatively poor and cold.

In the monograph of "Goethe and Mendelssohn" written by his son, Karl Mendelssohn-Bartholdy, this unprecedented precocity of the composer's nature is exhibited in all its attractiveness. For nothing was more surprising in the extraordinary boy than the charm of his disposition and the simplicity of his character. Every one who knew him tells the same story. Of course, he had his faults, and those faults which were the results of his highly wrought temperament were naturally not lessened when excitability was merging into incipient brain disease. But it is impossible to resist the testimony of so many competent witnesses, themselves by no means apt to be misled by mere musical enthusiasm, as to the nobleness of his nature and the wideness of his general intelligence. The quickness with which the much-worshipped auerant of Weimar took to the boy of twelve years old is unlike anything else in the poet's own intercourse with others. His master, Zelter, having some good excuse to offer for it, carried young Felix with him, professedly "to show him to Goethe." The experiment was hazardous, for who could say what the boy might prove under such a trial to his modesty, or how far Goethe might sympathize with and understand a nature so singularly unlike his own? The experiment, however, succeeded. Goethe was actually charmed with the child's simplicity, attractiveness of look and manner, and amazing powers of performance. He stroked and patted his head and fondled him, till Felix lost all his bashfulness, and gave way to his ordinary animal spirits in all their freshness. "My friend Zelter," Goethe wrote to Rellstab, "has brought his little pupil to see me; we are to have a trial of his musical powers, but he has extraordinary gifts in other ways as well. You know the doctrine of temperaments; every one has all the four in him, only in different proportions. Well, this boy, I should say, possesses the smallest possible modicum of the phlegmatic, and the maximum of the opposite quality." When he played, Goethe was enthralled, wisely abstaining, at the same time, from those extravagant praises which he knew to be the very worst food with which a child can be fed. But he kept him several days at Weimar; made him come again the next year; and always held him in affectionate remembrance. The whole story forms as pleasant a little episode as can be found in the lives of musicians and poets. Dr. Karl Mendelssohn has put together the letters and reminiscences at his command with much good taste and naturalness of feeling, and the translation reads well and easily. The sketch first appeared as a lecture delivered before the "Historical Science Society" at Freiburg in Breisgau, in March, 1871, when the society met to celebrate the establishment of the German Empire. It is significant of the German nature that such an occasion should be celebrated by such a characteristic mode of rejoicing. The "letters of later date" which have been added by the English translator, and which make up one-third of the volume, are for the most part without interest, and we can easily imagine what would have been the astonishment of Mendelssohn himself if he had foreseen that some day they would be published to the world.

## Shipping Intelligence.

## ARRIVALS.

Aug. 12, *Engelbert*, N. G. barque, Ballehr, 460, from London, March 13th, General, to Hudson Malcolm & Co.  
 Aug. 12, *Oregonian*, Am. steamer, Dearborn, 1,914, from Shanghai and Ports, August 3rd, Mails and General, to P. M. S. S. Co.  
 Aug. 12, *Tai-Bun-Maru*, Brit. barque, Chesterman, 403 from Newchwang via Nagasaki, June 21st and July 27th, General, to Chinese.  
 Aug. 12, *Thracian*, Brit. barque, Ifay, 538, from London, February 15th, General, to Strachan & Thomas.  
 Aug. 12, *Devana*, Brit. ship, Thomson, 795, from London, April 21st, General, to Wilkin & Robison.  
 Aug. 13, *Kate Covert*, Brit. barque, Stewart, 856, from Cardiff, March 13th, Coal, to Order.  
 Aug. 13, *Jessie Isabel*, Brit. ship, Ochiltree, 721, from Hongkong, July 22nd, General, to A. Heard & Co.  
 Aug. 14th, French str. *Godavéry*, Vailhen, 950, from Hongkong, Mails and General,—M. M. Company.  
 Aug. 14th, Am. three-masted schr. *Emma Augusta*, Gilman, 285 from Nagasaki Aug. 5th, Coal,—Pitman and Co.

## DEPARTURES.

Aug. 10, *New York*, Am. steamer, Furber, 2,119, for Shanghai and Ports, Mails and General, despatched by P. M. S. S. Co.  
 Aug. 11, *Salamia*, H. M.'s despatch boat, Lieut. Smith, 867 tons, for Hakodate.  
 Aug. 11, *China*, Am. steamer, Morse, 3,836, for Hongkong, Mails and General, despatched by P. M. S. S. Co.  
 Aug. 13th, H. M. Gunboat *Teaser*, Bloomfield, 464, for Kobe.  
 Aug. 13th, Brit. ship *Red Riding Hood*, Robertson, 709, for Kobe, Ballast,—Despatched by Jardine, Matheson & Co.  
 Aug. 14th, Brit. schr. *John M'Kean*, Taylor, 196, for Niigata, General,—Hudson, Mulcolm & Co.  
 Aug. 17, *Godavéry*, French steamer, Vailhen, 960, for Hongkong, Mails and General, despatched by M. M. Co.  
 Aug. 17, *Ashuelot*, Am. corvette, Wallace, 950, for Hiogo.  
 Aug. 17, *Oregonian*, Am. str., Dearborn, 1914, for Shanghai, general, despatched by P. M. S. S. Co.

## PASSENGERS.

Per P. M. S. S. *Oregonian*, for Yokohama.—Rev. J. W. Lambeth and daughter, Mr. F. White, wife, two children, and two servants, Messrs. S. Bradford, F. J. Pullman and servant, Voight, Bavier and servant, Restalio, thirty-six Japanese officers, and 161 in the steerage. For San Francisco.—Miss Etta Chase.  
 Per P. M. S. S. *New York*, for Hiogo.—Messrs. Van Doom, J. Andrews, L. Joseph, M. Mourilyan, E. Rosenthal, and 26 Japanese in the cabin, 50 in the steerage. For Nagasaki.—3 Japanese in the cabin, 39 in the steerage. For Shanghai.—Mr. John Wilson, Dr. S. Wells Williams, and 3 in the steerage.  
 Per P. M. S. S. *China*, for Hongkong.—Miss Cora Bell, Mr. J. Nesmith, and 1 Chinaman in the steerage.

## CARGOES.

Per P. M. S. S. *Oregonian*, from Shanghai:—  
 Treasure..... \$912,150

## REPORTS.

The *Engelbert* reports after leaving London met with strong S.W. winds down channel and till well to the westward of the land; found the N.E. winds very moderate, crossing the equator on the 10th of April in 26° west: met with favourable S.E. winds and the same wind prevailed till near the Cape. Made the casting in 41° South, the usual strong westerly wind blowing, and arrived at Anjer July 13th. Two days before spoke the Dutch ship *Elizabeth*, from Rotterdam to Batavia. Coming up the China Sea had S.W. and southerly wind with heavy rain at times. Passed through the Bashee channel and met with S.W. winds and generally fine weather up to the Japan coast. Got a pilot on board on the 10th, and anchored here next morning, 150 days from London.

The *Tai-bun-Maru* reports, after leaving Newchwang met with some severe weather before reaching Nagasaki, and thence along the coast to this Port had some heavy gales, commencing at North and veering round by the East to South, when the wind would ease.

The P. M. S. S. *Oregonian* reports having left Shanghai August 3rd at 10.30 a.m. Anchored eight hours in the Inland Sea on account of thick weather. Left Nagasaki August 6th at 12.29 p.m. Left Hiogo on the 9th at 5.25 p.m.

The *Devana* reports leaving Gravesend April 18th; had a good run down Channel, but beyond had very unsettled weather as far as Cape Finisterre. On the afternoon of the 27th, off there, had a sharp and remarkably short gale, lasting only four hours, the captain wondering how the masts stood it out. It began at E. and veered to N.N.W., from which quarter it blew hardest; thence fine weather to the equator, which was crossed May 17th in 26 deg. 54 min. W. S.E. trades were moderate for a few days, hauling to S. and S.S.W. Was beating about till May 30th, when westerly winds set in, taking the vessel clear of the land. Were off the Cape June 15th, 57 days from Gravesend. Strong northerly and N.E. winds to St. Paul's, passing it June 26th. Had a very severe N.W. gale, the ship labouring considerably. Passed Java Head, July 12th. In Gaspar strait spoke the ship *Cully Lark* and *Thermopylae* from Shanghai; came up through Formosa channel, were off the North end of it, August 1st: thence light N.E. winds up to Linschoten on the 8th; afterwards strong S.W. to S.E. winds, with dark and cloudy weather. Made

Rock Island at 4 p. m. on the 11th, and anchored here next morning, 115 days from Gravesend. The captain remarks that for seven days, between Formosa and Linschoten, his barometer never stood higher than 29.60, and at times was even considerably lower.

The *Thracian* reports leaving London Dec. 29th. On the 2nd of January anchored in the Downs on account of heavy S.W. gales blowing—while lying there a vessel drove foul of the ship carrying away stanchions, bulwarks and rails on the port side, with the poop rails and stanchions and other damage, had to put back to London for repairs; left again February 12th, and for 30 days afterwards experienced heavy S.W. gales. Had light winds up the China Sea. Calms from Lat. 23 to 27° North, lasting for nine days; S.W. winds prevailing since. On the 9th inst. encountered a severe gale from the S.W. which lasted for five hours.

The *Devana* spoke the British barque *Kate Covert* from Cardiff to Yokohama July 20th in Lat. 2° North and Long. 106° 45 East, and the British barque *Helen* from Hongkong to Japan August 4th Lat. 27° 55 N. and Long. 124° 30 E.

Coming up the Gulf on Monday morning, the *Emma Augusta* ran on the Saratoga Spit, and had to throw overboard nearly half the cargo before she could be got off again. The U. S. *Ashuelot* subsequently towed her up to the anchorage. The vessel apparently has not sustained any damage, and is not making any more water than usual.

JAMES GILFILLAN, Esq.

**T**HE Provisional Committee being now in possession of legal opinion on the subject from London, have decided to establish the Bank by registration under the Companies' Act of 1862. A permanent Board of Direction will be formed in London—as required by the Act—with a Board of Management in Shanghai.

The Provisional Committee therefore give notice that applications for Shares will be received by the undersigned not later than the 31st August, 1872.

It is the intention of the Committee that the business of the Bank shall, if possible, be commenced simultaneously in China and London on the 1st January, 1873. By order of the Provisional Committee.

## FORM OF APPLICATION FOR SHARES.

To the Provisional Committee of

THE BANK OF CHINA, (LIMITED).

GENTLEMEN,

—request that you will be pleased to allot—  
shares of One Hundred Taels (Tls. 100) each in the  
above-named Bank, and—agree to accept such shares,  
or any less number which may be allotted to—  
(such allotment not to be made before the Bank has been  
legally constituted as a limited Company), and—  
agree to pay a call of Twenty-five Taels (Tls. 25) per  
share on allotment, and further calls as may be deemed  
necessary by the Directors.

—also agree to confirm the acts of the Provisional  
Committee, pending the appointment of a permanent  
Board of Directors, and to Subscribe to the Deed of  
Settlement, when called on to do so.

—Gentlemen,

Your obedient Servant,

## Notes of the Week.

ALL attention this week has been fixed upon the enquiry into the case of the *Maria Luz* with coolies from Macao. Reports of the proceedings will be found elsewhere and some comments which the present position of the case suggests.

THE railway traffic is increasing at a prodigious rate and much difficulty is found in meeting its requirements, a difficulty which will be largely removed when the section between Shinagawa and Yedo is open.

WE extract the following from a recent issue of the *Alla California*. The action of England at Hongkong has crushed the coolie trade there, while it is notorious that that of the Portuguese Government has fostered it at Macao. The Government of the United States has also taken a warm part in the question, and little by little our hopes increase that it will be put down. It is on this account that we heartily rejoice over the action of Japan in the present conjuncture, and feel certain that in any negotiations to which it may give rise the Anglo-Saxon Powers at least will support her cordially.

A sharp official correspondence is passing between the British and Portuguese Cabinets about the Coolie traffic at Macao. When the attention of the Minister of Foreign Affairs at Lisbon was called to the abuses practiced by the Portuguese officials and merchants in China, he replied by saying the Englishmen at Hongkong were just as bad, assuming that that statement was true and that it relieved him and his countrymen from all further responsibility. The British Secretary denies the charge against Hongkong, offers to have an investigation whenever Portugal will present specific charges and to punish the offences if proved, and asks whether the Lisbon Cabinet intends to investigate and correct the abuse under its own dominion. We trust that our Government will unite with that of Great Britain in using its moral influence at least to suppress this Coolie traffic.

Although the line is not yet publicly open, telegraphic communication has been completed between Kobe and Yokohama, and various official messages have passed over the line.

THE statement made in our daily issue of the 13th July in respect of the death of the six men on board the *Maria Luz* on the passage from Macao to Yokohama, was based on the assertion to that effect of the Captain or the mate of the ship made to our reporter at the time of his first visit. We mention this for the sole reason that the statement has been contradicted, and it has been said that only one man has died, and he in Yokohama. The cause of death of the six men was stated to have been yellow fever. Subsequently to this first statement of our reporter, we have, in commenting on the case said eight men, and though we were assured of the truth of this, we are anxious that as far as we are concerned no misstatements of any kind should prejudice the case of the Chinese or the Captain, and thus prefer leaving the number as six. If any doubt should be thrown over this, we can only say that the information was obtained at head-quarters.

The following correspondence will show the amount of truth contained in a paragraph in the *Gazette* of Thursday evening, in which it was stated that an apology had been offered by the editor of the *Japan Mail* to Mr. Loureiro, for comments made in that journal upon the case of the *Maria Luz*.

The explanation which we shall demand from the Editor of the paper must come later.

Thursday Evening.

MY DEAR SIR.—I send you the *Japan Gazette* of this evening, and pending a reference to the Editor, I shall be glad to know whether there is any and what truth in the statement which it contains in which your name and my own are placed in juxtaposition.

I am, my dear Sir,  
Yours faithfully.

W. G. HOWELL.

E. LOUREIRO, Esq.

I will thank you for a reply at your earliest convenience.

Thursday Evening.

MY DEAR SIR.—In reply to your note regarding a paragraph in the *Japan Gazette* of this evening in which your name and mine are mentioned, I beg to inform you that the said statement is incorrect, and without any authority whatever.

I am, my dear Sir,  
Your obedient Servant,

E. LOUREIRO.

W. G. HOWELL, Esq.

## THE MARIA LUZ.

WE shall not affect to ignore the force of the arguments which have been brought against the action of the Japanese Government in the detention of the *Maria Luz*, and which are embodied in the protest of the captain and in a letter which will be found elsewhere in our columns. Speaking generally, there is not a word in either with which one who supports the position of the Government would not agree. The whole question would seem rather, are these arguments exactly to the point? Is not the position rather that which, in the few following words, written in no affectation of legal knowledge, we shall attempt to define with such general accuracy as is possible to us?

It comes to the knowledge of the Japanese authorities that the captain of the *Maria Luz* has committed illegal acts while in their waters and under their jurisdiction, and he is arraigned on this charge. The com-

plaints of those against whom the alleged acts have been committed reveal facts which seem to demand investigation. The ship has sought the hospitality of Japan, and this involves the extension of that hospitality to her passengers. Allegations are made by those passengers which if disregarded would involve a slur upon that hospitality. They complain that they have been carried off from their own country against their will; that they are held in duress; that they are cruelly treated, insufficiently fed and severely punished. The complainants are examined, and the conditions under which they are held in duress investigated. Strong *prima facie* evidence is adduced to show that they have been kidnapped, and that the contracts they are said to have signed are either fraudulent in their nature or that the signatures to them have been obtained by intimidation of the severest kind. As the examination proceeds this evidence becomes stronger, until the conviction is arrived at that whatever may have been the care exercised at Macao, there are strong grounds for believing that measures have been resorted to there which, with or without the knowledge and connivance of the local authorities, are repugnant alike to law and the instincts of humanity. It is wished to give the benefit of the hospitality sought to all those who claim it, and the coolies are landed and examined in a body. All this involves delay, but having once entered on the examination, this delay is inevitable. It not only reveals a vast amount of indisposition to go to Peru, which could neither be considered unnatural nor worth very much—but further, the strong presumption that illegal measures were resorted to to entrap the coolies into going on board. They were at first called passengers by the captain. They are landed here at the request of the Government. The evidence that some of them have been kidnapped is strong. By what law of Japan can they be forced again on board the vessel? The Japanese Government has the sovereign right of issuing what we barbarously call a writ of *Habeas Corpus*, demanding by what right the liberty of men who have come within their jurisdiction and who seek at once their hospitality and protection is curtailed. This writ is in a general sense the prerogative of a Government attaching to it by right of an universal morality, and the force of it is claimed on the same grounds. It is the protest of this universal morality against slavery in the disguised form under which it appears in the coolie trade, and is issued as such, not in our form, indeed, but in a similar sense and with a similar force.

And that this trade is only a disguised form of the slave trade cannot be doubted. The contracts which bind the coolies are assignable. No provision is made in them for their return to China, and the late insurrection of Coolies in Peru with all its attendant horrors must convince any rational being that their condition there is in no sense better than that of slaves. Even if the ship and captain are to be treated solely according to law of their own country, that law must assuredly agree that no fraudulent contract can be enforced, while the fraud with which some at least of these contracts were obtained can neither be denied nor concealed.

As regards the decision given by Mr. Joshua Bates, to which reference has been made, it cannot be pretended that this, the decision of a London merchant, has the binding force of international law. It was made at a

time when American law was strongly tainted with the necessity for upholding slavery, a taint from which it has been thoroughly purged since the civil war, and would assuredly be disputed now by the more advanced average morality of America upon this point.

Japan, therefore, in this whole matter is taking a ground based rather upon an accepted universal morality than upon the nice refinements of international law. She showed but two years ago her own detestation of this trade by sending down a Commission to Hawaii to enquire into the condition of some of her own subjects, who during the Tokugawa *régime* had been transported thither in a position more or less similar to that of the Chinese in Peru, and released those who wished to return to Japan. And the instincts which led her to do this have supported her in her present course of action. It is conceivable that this course might be impugned on strict grounds of international law, and that a claim for compensation might lie against her for her humane action. But the spirit and instincts which led her to adopt the course are sound and noble. The cause she supports is one based on the advanced principles of the most advanced nations, and she, the youngest in their comity, has shewn that she can rise to the height of these principles. Technical objections may be raised against her act, but she will assuredly win by it the sympathy and respect of the civilized world, whose sentiments will be touched and whose admiration will be extorted by conduct inspired by so much spirit and so much humanity.

#### HALF-VIEWS.

IN the *New York Tribune* of the 5th July there is a long and able letter upon Japanese affairs. It deals chiefly with the relations actual and possible between Japan and the United States, and from internal evidence would seem to have come from the same hand which lately defended the cause of the American politicians against an article which had appeared some time previously in this Journal entitled "Dangers from Without." That article was accused of being pointed against Americans generally, and the letter referred to indirectly reiterates this charge. We disproved the accusation very effectually at the time, and therefore need not refer to it again, further than to say that the article was written solely in view of the danger of bad appointments for this country being made through American political influence. How far circumstances which have since transpired have justified it, we leave to candid Americans to tell, but assuredly we, at least, have no cause to retract a word of it. As the letter from the *Tribune* has been republished here, we shall presume our readers to be familiar at least with the outline of it. Speaking generally, it may be characterized as a plea upon the downfall of English influence in this country, the rise of American influence in its place, the advantages which will accrue to Japan from this, the number of appointments in this country held by Americans, and the irritation which the change has caused to our countrymen. Now, it is of course open to any writer to depict his country in the position of a dog quarrelling over a bone and running off with it. But the picture is not one calculated to raise it in the eyes of the Japanese, or to gratify those self-respecting Americans who are content

with the legitimate influence to which the geographical position of America relatively to Japan and the enterprise of the American people must necessarily sooner or later produce. But it comports so little with our notions of the dignity of England or Englishmen in the East to accept this picture as in any sense one which fairly represents us, that we shall not even dispute the truth it is supposed to embody. We refuse entirely to regard this empire as a hunting ground for placemen, and are so little solicitous to determine the relative number of English or Americans now in the service of the Japanese Government, that we shall not even stop to question the correctness of the statements made by the correspondent of the *Tribune*. But we would have him remark that truth alone possesses bottom. He may fire off these rockets to his heart's content in the eyes of the American people, and by constant persistence in this may persuade them of the truth of his assertions. But attentive listening to the fall to the sticks may produce legitimate misgivings as to the permanence of those lights to which they were once attached. Of late there has been a cruel shower of them, and theories which rejoice in an airy independence of facts possess an annoying propensity to imitate these descents. We shall however do the writer in the *Tribune* the justice to say that we are convinced he believes what he writes. He commends to his countrymen and his Government a policy of honesty towards this country and does it evidently from his heart. He makes admissions in regard to that policy which only an honest man would make. In his own words regarding the appointments of Americans in this country ;—"The Japanese have uttered no complaint concerning them and in one or two cases they are undoubtedly as good as are required. They are not, however, altogether of a class which will give satisfaction in the future. The ministry here want solid counsel upon almost all of their foreign associations. They will not take anything of the sort from English, French, and German sources, but they would gladly accept it from the United States if they could fairly feel that our representatives here were animated by a genuine regard for the welfare of their country." These admissions are frank indeed, and amount to this—That Japan, for some mysterious cause unintelligible to the writer, is desirous of confiding in America alone, but cannot do so because she has no security that her confidences will be honestly met. We ask the writer to tell us frankly whether these appointments made at Washington to posts in the Japanese service—the very thing we warned the Government against, and for doing which we were rewarded by the abuse of this very writer—are not the main causes of the growth of this distrust? And if this is so, who was the real friend of America—we leave Japan out for the moment—he or we? He who denied the danger, or we who demonstrated it? We who rang the fire-bell, or he who said there was no danger of fire?

He goes on to say that a great majority of the higher public offices are either advised or directly administered by citizens of the United States. Now, there is not a single department of the Government directly administered by a foreigner of any nationality whatever, and though it is true that some of them are advised by Americans, it is wholly incorrect to say that this is the case in the great majority of instances.

The writer says that "of nine-tenths of the murderous assaults committed upon foreigners since Japan was opened, Englishmen have been the victims, while so far as I can learn, no native-born American has ever suffered the slightest injury. A feeling favourable to Americans doubtless exists," etc., etc. Now, would it not have been more fair to have added that for one American in this country there are perhaps five Englishmen—including the troops, perhaps, many more? Englishmen, too, are, we think, much more inclined to roam through the country than Americans. For one American who has made the ascent of Fusiyama, we should think there must be twenty Englishmen. We carry our old roving pedestrian habits with us. It is not a month ago that a young naval officer told us that he and a brother officer made their seventy miles in two days under this broiling sun. Americans are undoubtedly less addicted to these feats, and are perhaps also more easy and amiable in their dispositions than Englishmen, who, for better or worse, are undoubtedly a more irascible race.

The simple truth in these matters is this. The majority of Americans labour under an obvious disadvantage in being placed at a great distance from the leading Powers of the world, and seeing and hearing of little but their own country except through newspaper reports. An Englishman rises in the morning and, if he wishes it, may be in the heart of a country as great as his own to dinner on the same day, in Berlin the next day, in Vienna the day after, or in St. Petersburg the day after that. He thus is constantly brought face to face with Powers which rank with that of his own country. The doings in Paris, Berlin or Vienna are nearly as important to him as those in London, and he is surrounded by and in constant immediate contact with all these great Powers. In America it is wholly different. The average American is brought up upon histories which are notoriously one-sided. He is taught to think of America as a country growing every day in vigour while others are daily going to decay. He reads American newspapers, is launched into life at fifteen, and from that moment, save under exceptional circumstances—America is all the world to him, almost as

sufficient opportunity for abstraction and comparison, and in consequence these mental processes are not performed. The passion for bigness gets possession of him and he looks at everything in a distorted light; he sees America everywhere and nothing else anywhere. It is the same here. An American comes to Japan and settles in Yedo, associates with Americans, and possibly does not talk to an Englishman once a month. He sees the railway managed under the Japanese by Englishmen, but all he says of it is that \$10,000 a week are required to pay the interest of the money expended on its construction, a statement which is not only incorrect, but ludicrously so. He sees the coinage of the country, and that the Master of the Mint should be an Englishman is nothing against his theory, because he is not accustomed to look at all facts, but only such as tally with that theory. At night he may see the light-ship, or in his travels round the coast, the lighthouses, and it is nothing to him that the lighthouse department is in charge of Englishmen. Some one mentions the arsenal of Yokoska, but he does not hear—or

does not heed—because M. Verny, the foreign superintendent of it is a Frenchman. He sees one hospital in the hands of a German, another in those of a Dutchman and so on, but it never occurs to him that this weakens his theory. It is not even the witty *Tant pis pour les faits*. It is an absolute insensibility to the fact that there are facts on the other side. Now we say this in all possible good humour. There is nothing morally wrong in it. It does no harm. But is it wise to go about the world in this state of mind? Do men get or give clearer perceptions of truth by it? Do they apprehend the relative proportions of things better for indulging in this propensity? Or does it not rather make men, as Bacon says, see things “as they would,” that is, as they would have them, and not as they really are? If we are right in associating the correspondent of the *Tribune* with our old assailant—we would say antagonist with pleasure had he addressed his letters, as he should have done, to us—is not this the same spirit which made him say that we imputed the dangers against which we forewarned the Japanese to the “national corruption” of America,—placing the words in inverted commas as if we had used them, when not only was this not the case, but when we expressly disclaimed all such inferences or the possibility of their being fairly made? But is this intellectual honesty or compatible with it? Is there not rather a very distinct intellectual immorality in it? Are we only to see that which flatters us, and then pronounce judgment as if we had seen all? Are those the habits of mind we should desire to cultivate in our countrymen? Is it not better to wait until we can say—“So and so is true, and nothing else is of any account?” It was an old argument in England against too great an extension of the franchise that men should be taught to win it, which they could only do by rising. Would not this argument apply in the case we are considering? It might be very pleasant to have all this influence as the result of our virtue, our genius, and our attainments. But have we got it? Is there no illusion about this towering supremacy? In other words, is it true? This is what honest Americans naturally ask.

Whatever may be our faults, they do not lie in this direction. We are far too calm and self-respecting to be of a jealous character. The world's opinion of us troubles us little, and we have never yet had any misgivings about holding our own if there is fair play.

We should be sorry to be misunderstood, however. There is some excellent American influence at work in Japan. Its foreign education is largely in American hands, and for the most part in excellent hands. The disposition which in secular life takes the form of that kindliness of character so remarkable in Americans, becomes, when intensified by religious fervour, an ardent and enduring desire to promote the progress of a beneficent faith, and the missionary cause has been and is represented in this country by American men and women of truly noble character. In these two departments of work America seems to us to be far before England, and no reader of this journal can doubt the high estimate we have ever set upon such work. But far from having any jealousy in respect of good American influence we sincerely rejoice in it. We have

ever been perfectly frank and outspoken on the whole subject. Where the influence has appeared to us good, we have congratulated both Americans and Japanese upon it, and where it seemed to be dangerous we have openly said so. We will never believe that the frank open temper of the Americans—touchy though it undoubtedly is—has been really wounded by our remarks, for tolerance of different opinions is a great American characteristic, and respect always attaches to the disposition which openly states them. Mr. Facing-Both-Ways gains no more regard here than he did in the old allegory, and even if he did, he most find some other imitator, for we utterly forswear his example.

In conclusion, we must generally deprecate, as we have already often done, all such comparisons as those which have been instituted between the respective influence of America and England in this country. They are not calculated to do any good, or to exhibit the two nations in their true light. From any statement of facts the world can draw its own conclusions. But such statements should as far as possible be truthful, not only in stating what may be said on one side, but what should be said on the other. Meanwhile let all our work tend to the good of this country, and the preservation by ourselves of that attitude in which alone the Japanese can learn to respect us.

#### NIHON GUAISHI.

#### ACTUAL HISTORY OF THE MINAMOTO FAMILY.

#### VOL. III.

(Continued from our Last.)

In the seventh month he preferred a petition for leave to chastise the Fujiwara family in Mutsu, on account of its having given shelter to Yoshiakira. Yoshiakira was Yoshitsuné. Yoritomo had erased him from the rolls (out-lawed him) and had changed his name. When Yoshitsuné left the capital he went to Daimotsunoura<sup>(198)</sup> by ship, but encountering a storm, he and Yukiyé were separated. He concealed himself at Yoshino<sup>(199)</sup> during five days. The priests assembled together to capture him. Satô Tadanobu said: “Your servant's elder brother sacrificed his “life at Yashima, and your servant will now die in place “of his lord.” He then falsely declared himself to be Yoshitsuné, and shot fiercely. Yoshitsuné profited by the interval to make his escape and came to Tônomine, whence he again removed to Totsugawa<sup>(200)</sup>. He then came back to the capital and concealed himself there. Tadanobu also came and concealed himself, but was discovered. He fought with the officials and their men, and finally killed himself. Yoshitsuné then with his wife the lady Kawagoyé, Benkei and the rest, assumed the costume of *Yamabushi* and fled into Mutsu by way of the Hokurikudô. Yoshitsuné's mistress Shidzuka had in the first place followed him to Yoshino, but Yoshitsuné persuaded her to separate from him; and he made his servant escort her back to the capital with funds for her use. The servant stole the funds and abandoned Shidzuka, who travelling alone and exposed to the wind and snow was captured by the priests, and sent to Hôjô Tokimasa. Tokimasa forwarded her to Kamakura where she was examined as to the whereabouts of Yoshitsuné. Shidzuka firmly asserted that she was ignorant, and she was detained there, being with child. Yoritomo's wife Masago having heard that she sang and danced well, wished to see her, but she pretexted illness and did not go. Yoritomo and his wife paid a visit to the Shrine of Tsurugaoka, and summoning Shidzuka ordered her to dance, and placed themselves behind a transparent blind to look on. Shidzuka firmly declined, but after being pressed two or three times, she arose and ascended the stage. Kudô Suketsuné beat

(198) At the mouth of the Yodokawa, at Osaka.

(199) In Yamato.

(200) Both in the province of Yamato.

the drum, while Hatakéyama Shigétaka kept time with the cymbals. Shidzuka having arranged her clothes, advanced and sang a farewell song. She also composed a verse, which expressed the love she felt for Yoshitsuné. The whole company shed tears, but Yoritomo changed countenance and said: "Does this low concubine venture to omit my praises, and to express love for a disturber of the peace?" and he desired to slay her. Masago remonstrated and stopped him from doing this, and making her a present sent her away. Sukétsuné, was Kajiware Kagétoki's youngest son. He got drunk and tried to seduce Shidzuka, who became angry and said with tears: "I once served Yoshia, <sup>(201)</sup> and is he not younger brother to my lord of Kamakura?" "How dare you, a retainer of his Lordship, to treat me so insolently?" "If my lord had done his duty as a brother, would you even have the gratification of knowing me by sight?" Kagémochi was greatly ashamed. Shortly afterwards she was brought to bed, and bore a boy. Adachi Kiyotsuné received orders from Yoritomo to seize the infant and put it to death, while Shidzuka was released and sent home. Masago loaded her with gifts before dismissing her. Yoritomo had previously heard that Fujiwara no Hidésato had afforded a home to Yoshitsuné, and accused him to the Emperor of harbouring a disturber of the public peace. The Cloistered Emperor issued a mandate reprimanding Hidéhira, who made excuses in his defence. Shortly afterwards he fell sick and died, leaving injunctions to his son Yasuhira and the rest to place the two provinces <sup>(202)</sup> at the disposal of Yoshitsuné, so that he might be able to resist Yoritomo. The Cloistered Emperor issued a mandate ordering Yasuhira to plot against Yoshitsuné's life, which sore perplexed him. In the second month of this year Yoritomo made representations to the Emperor, saying: "Yasuhira harbours a traitor, or, and has thereby committed treason himself. Your servant prays the Imperial commands to smite him." He consequently levied a large army. On the last day of the fourth month Yasuhira sent troops to surprise Koromogawa [where Yoshitsuné was living] Benkei, Tsunéharu and the rest fought valiantly and died. Yoshitsuné slew his wife and children with his own hand and then committed suicide. In the fifth month Yasuhira sent a messenger to bring Yoshitsuné's head and present it at Kamakura. Yoritomo was just celebrating the completion of the Buddhist temple at Tsurugaoka, and sent a messenger to stop the head on the road. In the sixth month it arrived, contained in a lacquered box, and moistened with strong wine. Yoritomo caused Wada no Yoshimori and Kajiware Kagétoki to inspect it. Some one said: "Yoshitsuné is not dead. He is concealed in Yezo," but Yoritomo did not pursue the inquiry. He then reported to the Emperor that Yasuhira, presuming upon the inaccessible nature of his position, had defied the Imperial authority, and that as he (Yasuhira) had not at once carried out the imperial orders it was necessary to smite him. The Court discussed the matter, but refused its consent. The troops called out by Yoritomo, nevertheless, gradually assembled. He asked Oba Kagéyoshi what he should do, who replied: "When a commander-in-chief is about to proceed to action, he does not take heed of his Prince's orders. Besides Yasuhira's predecessor was a retainer of my Prince. If my Prince will chastise his crimes, why need he wait for the Imperial Sanction? Do not let the cost of collecting these troops be wasted." Yoritomo followed his advice. Having left Kagéyoshi, Miyoshi Yasunobu and others to defend Kamakura during his absence, he divided his army into three. The Hitachi and Shimôsa troops advanced by the Tôkaidô under the command of Chiba Tsunétané and Yada Tomoiyé; those of Musashi and Kôzuke by the Hôkurikudô under the command of Hiki Yoshikazu and Usami Sanémasu. Yoritomo himself commanded the central column, and made Hatakéyama Shigétada commander of the vanguard. He entered Mutsu direct by the Tôzandô, and passed the night at Tako. <sup>(203)</sup> Oyama Masamitsu came forth to welcome him, and to feast his troops. When he was admitted to audience, he saw a samurai in attendance clad in armour, and inquired his

name. Yoritomo replied: "This is Kumagai Nawoiyé, a valiant warrior whose equal does not exist in this realm. Masamitsu said: "The reason why this fellow has so easily gained his reputation is that he advances alone, unlike your servants. Why should any difference be made amongst warriors who aid their Prince in time of peril?" He turned round to his sons Tomomasa and Tomomitsu, and said: "Do you also advance alone." In the eighth month Yoritomo advanced as far as Shirakawa. Yasuhira was encamped at Muchidatô and had built a castle on the north of Mount Atsugashi, <sup>(204)</sup> of which he appointed his illegitimate elder brother Kunihiro commander with twenty thousand picked troops. Kunihiro's lieutenant Kongô Hidétsuna commanded the vanguard, consisting of several thousand men. He dug a great trench at the bottom of the mountain and led the river Abukuma <sup>(205)</sup> so as to fill it up. Yoritomo ordered Shigétada to go and attack him, and to send forth labourers to fill up the trench. Tomomitsu marched ahead of the army and advanced to the attack with Katô Kagékado and others. Shigétada followed close behind, and inflicted a severe defeat on the enemy. Hidétsuna retreated and effected a junction with Kunihiro. The sun had now set. Yoritomo issued orders throughout his army to attack the castle on the following day. Miura Yoshimura and Kasai Kiyoshigé were foremost in the assault, and killed several thousand men. When the day broke Yoritomo advanced in person to the attack. The castle was very strong, and Kunihiro made a good defence. Tomomasa, Tomomitsu, and their followers all fought with desperation. The sound of their cries shook the earth, and the arrow-heads were heaped in piles. Tomomitsu and his relation Tomotsuna had previously sent seven fearless warriors to climb the precipice at the back of the castle, and so effect an entrance. They shouted loudly and discharged a flight of arrows. The garrison imagined that a large force was attacking them in front and rear, and fell into great confusion. Kunihiro forced his way through the besieging force, and fled northwards. Wada no Yoshimori bent his bow and pursued him. Kunihiro also turned his horse round and shot, but Yoshimori shot first, and hit him in the left side, and Kunihiro fled wounded. A certain Ogushi, a divisional commander under Shigétada, pursued him and cut off his head. Tomomitsu also pursued and caught Hidétsuna, while Yasuhira fled on hearing of the defeat. Yoritomo advanced to the provincial capital. The army of the Tokaidô having decapitated Satô Motoharu, one of the enemy's commanders, and eighteen of lesser note, came up and joined him. Yoritomo was still ignorant of the whereabouts of Yasuhira, and despatched Tomomasa and some others to attack the Monomi hill, while he himself laid siege to the castle of Tagababa. All the garrison surrendered, upon which he issued orders, saying: "As our army reaches Tsugumo-hashi, the enemy will evade it by going to Hiraizumi, <sup>(206)</sup> which he will defend with desperation. Let not the commanders of the vanguard, in their greed for glory, advance too lightly, or hurt a single one of my warriors." He then advanced with the whole army, and took the forts of Kurihara <sup>(207)</sup> and Sannohasama, <sup>(208)</sup> one after the other. At last he reached Hiraizumi, whereupon Yasuhira burnt the castle and fled, sending a messenger to make an offer of surrender, which was not accepted. In the ninth month he advanced and encamped at Jingaoka. The army of the Hôkurikudô having passed the barrier of Nezu, <sup>(209)</sup> and decapitated Tagawa Yukibun, a commander of the enemy, and others, came and joined him. The whole of his force amounted to three hundred thousand horsemen, and the white banners filled the sky. Yasuhira fled towards Yezo. On his arriving at the stockade of Nié, one of his commanders, named Kawada Jirô, sur-

prised and killed him, and came to offer his submission with the head in his hand. Yoritomo reproached him bitterly, saying: "Yasuhira was within my grasp. Did you imagine that I needed your assistance? You have forgotten what gratitude is in your hope to profit yourself. Parricide and villain;" upon which he had him decapitated, and commanded that Yasuhira's head should be pilloried. At this moment the Cloistered Emperor's mandate arrived. He then advanced as far as the Kuriya river. Toshihira, a kinsman of Yasuhira's, and others of lesser note come forth and surrendered. Yoritomo had thus subdued Mutsu and Dewa in forty odd days from his leaving Kamakura. He then demanded the archives, but they had all been burnt in the fires necessitated by the war; having however heard that Sanétoshi and Sanémasa knew the affairs of the province by heart, he summoned them to his presence, and made them write down what they remembered. By this means he ascertained the number of houses, the extent of the population and the configuration of the soil. He recalled the scattered people, relieved the old, released the prisoners, and forbade the practice of plundering. He derived all his supplies from Kôdzuké and Shimotsuké, and did not trouble the natives an atom. He then reached the capital of the province, and wrote up in large characters at the government offices: "The laws of the province shall follow the practice of Hidéhira, nor shall they be changed." He ordered Kasai Kiyoshigé to remain behind in order to put the affairs of the province in order, and despatched a messenger to announce his victory and to apologize for his having made war without asking leave. At the same time he sent in also a list of the services performed by his officers, and asked leave to divide the lands of the two provinces among them. In the tenth month he returned to Kamakura. In the eleventh month the Cloistered Emperor having expressed a desire to reward him for the services he had performed in the field, he despatched Oyé no Hiromoto to decline; asking leave at the same time to relieve the poor of Mutsu by loans. In the twelfth month the Cloistered Emperor granted him the provinces of Idzu and Sagami as a fief, and pressed him to pay his court at the capital.

Some time previously the agent in Dewa had surveyed the villages, and wished to put a tax on all lands held in excess of the assessment. Yoritomo forbade this, and by so doing tranquillized the minds of the people. Shortly afterwards Ogawa Kanétô, a former retainer of Yasuhira, being in Dewa collected several thousand men, and falsely gave himself out to be Minamoto no Yoshitsuné and Kiso no Yoshitaka<sup>210</sup>. In the first month of the first year of Kenku (1190) he proceeded on to Mutsu. Yuri Koréhira went forth to fight him and was killed. Kiyoshigé reported the troubles. His messenger by mistake reported that Yuri Koréhira had run away, and that Tachibana no Kinnari had been killed. Yoritomo said: "Koréhira is not the man to run away, and Kinnari is not the man to be killed." On inquiry it was found to be as he had said. Yoritomo then ordered Ashikaga Yoshikané, *suké* of Kadzusa, Chiba Tsunétané and Hiki Yoshikazu, to go and smite Kanétô at the head of some troops. Oyama Tomomitsu and others of lesser note who possessed villages in Mutsu were instructed to joined them on the way. The provinces from Sagami westward were to set troops in readiness and await orders. Those who had been forced to go over to Kanétô against their inclinations were not to be killed. In the second month Yoshikané and the others fought with Kanétô at Kurihara and inflicted a severe defeat on him. Kanétô retreated and encamped on the other side of the Koromogawa, but Yoshikané and the others forded the stream and again inflicted a severe defeat on him. Kiyotsuné having come to join them at the head of the troops of the province, Kanétô fled to Sotogahama<sup>211</sup> and threw up earthworks on Tômaizan. Yoshikané and others laid siege to the place and slaughtered all the defenders. Kanétô escaped and fled, and was slain by a woodman with an axe in crossing Kaméyama. Yoritomo reprimanded his agent in Dewa for having misgoverned, and fined him a hundred suits of armour.

The Empire being now entirely restored to tranquillity, Yoritomo proposed to go to Court. Shigétada commanded the van of his train, and Tsunétané brought up

the rear. He left Kamakura in the tenth month, and went to Court by way of the Tôkaidô. On the way he passed Utsumi, and visited the tomb of Yoshitomo. On reaching Awobaka, he summoned the woman Yenju. Some time before, on hearing that Yoritomo had risen, she had sent back to him the sword Beard-cutter, which had been entrusted to her care, and now they had an interview and talked over old times. In the eleventh month he entered the capital and abode at Rokuhara. He first had audience of the Cloistered Emperor, and paid his respects to the reigning Emperor on the same day. The Emperor immediately invested him with the office of Acting (*Gon*) Dainagon, and shortly afterwards gave him that of Ukonyé no Taishô. The Cloistered Emperor treated him with the greatest kindness. Every time he went to see the latter he was not dismissed until several hours had elapsed by the water-clock. In the twelfth month he resigned both his offices and received a hundred *chô*<sup>212</sup> of land as a reward for his services. He recommended ten of his own retainers who had done good service to be appointed to offices in the Guards; and after having appointed Fujiwara no Takayoshi to guard Kokuhara in his absence, he took his leave to return to Kamakura. Whenever he had requisitions to make on his way to the capital or back, he was careful not to burden the peasants, so that far and near submitted joyfully to him.

In the first month of the second year (1191) he changed the name of the Kumonjo and called it Mandokoro. The whole administration was carried on by means of decrees issued from it.

In the second month he repaired the Palace of Hôjiuji. In the winter the Cloistered Emperor (Go-Shirakawa) fell ill. Yoritomo fasted and prayed for him, but he died in the third month of the third year (1192). Yoritomo caused magnificent services to be performed on the occasion, and provided baths for the populace during one hundred days.

In the seventh month the Emperor issued a decree creating Yoritomo Sei-i-tai-shôgun (Barbarian subjugating Generalissimo), and sent Nakahara Kagéyoshi to invest him with the office. Yoritomo said: "Shall I who am but a military vassal dare to sit still to receive the commands of my sovereign?" and he despatched Miura Yoshizumi to meet the Imperial messenger at the shrine of Tsurugaoka and receive the letter containing the decree. Yoritomo conferred this honour upon him because he recollected how Yoshizumi's father<sup>213</sup> had died in defence of the right cause. In the first month of the fourth year (1193) he determined the relative ranks of the officers. In the fourth month he hunted at Nasuno.<sup>214</sup>

## Correspondence.

### THE CASE OF THE MARIA LUZ.\*

TO THE EDITOR OF THE *Japan Weekly Mail*.

SIR,—Those who are stirred to a holy indignation by the reported proceedings on board the *Maria Luz*, and are endeavouring to move the Japanese Government to adopt the strongest measures against a vessel driven by distress to seek Japanese hospitality, should remember that two wrongs do not make a right, and that in urging any course of action upon a new-born and inexperienced government such as that of this country, already sufficiently beset with perils of its own, although we may listen to our sympathies, we must not be guided by them; we ought simply to allow them to awake our minds to a consideration of the question, and then, if we can, we may well tender such advice as may be warranted by the law and practice of nations. Our sympathies, when unregulated, prompt us to view the sufferings, real or imaginary, of others with a pain equivalent to that we think we should experience were we, in our own persons, to endure similar

<sup>212</sup> A *chû* is three thousand *tsûbu*, or about 2½ acres. *Kôden*, or grants of land in reward for good service, are frequently mentioned. As Yoritomo owned the freehold of two provinces, the gift of 250 acres could be but of nominal value to him.

<sup>213</sup> Yoshizumi's father Yoshiakira had lost his life at the taking of Kinugasa at the commencement of the civil war.

<sup>214</sup> In Shimotsuké, in the department of Nasu.

sufferings; but nothing can be cheaper than the benevolence which permits us to satisfy *vi et armis alienis* an indignation aroused in us, however properly, by any sufferings we may witness or be informed of. It may, therefore, be not out of place, briefly to set before your readers some reasons why the course recommended to be pursued in the case of the *Maria Luz* ought not to be adopted together with the main points of International Law applicable to the matter in question, premising that in my treatment of the subject, the Japanese government is considered as being on a par with the civilized governments of Europe.

A private vessel coming within the limits of a foreign state is subject to the jurisdiction of that state only so far as may be necessary to ensure the preservation of the public peace, and to protect the public interests of such state, and the private interests of its individual citizens. Thus Halleck, a deservedly esteemed publicist, at page 171 of his treatise, explains the state of International Law on the subject of private vessels in a foreign port as being, briefly, that so far as regards the general regulation of the rights and duties of those belonging on board, the vessel is exempt from local jurisdiction, but if the acts done on board affect the peace of the country in whose port she lies, or the persons or property of its subjects, to that extent the state has jurisdiction. The Municipal Law of France, as explained in a decision of the Conseil d'Etat in 1806, follows in express terms this rule of International Law, and by it, offences by the officers or crew or any other person on board the foreign ship do not come within the local jurisdiction unless the peace of the port is disturbed. Now the charge against the Captain of the *Maria Luz* seems to be simply that he maltreats his human cargo—this general charge being founded upon isolated instances of ill-treatment alleged to have occurred in port, upon the conduct of some among the Chinese on board, and upon general surmise much helped by a profound detestation of the traffic the ship is employed in.

Now, for maltreatment of persons on board, whether belonging to the crew or not, while in this port, the captain is clearly liable and deserves punishment. But the Japanese Government is asked to retain the ship, to inquire into the treatment of the Chinese passengers, not in this port only, but during the whole voyage, and if the result of the inquiry should be unfavourable to the ship, to send the Chinese back to China—I suppose at the expense of the ship and her captain. In plain words, the Japanese are asked to institute an inquiry, detaining the ship for the purpose, with a view of doing that which, in consequence of the inquiry, will amount to a confiscation of the cargo and to a part confiscation of the ship—indeed, to be logically consistent, to a total confiscation of ship and cargo.

The Japanese Government, wishful to act even towards non-treaty powers in accordance with the rules of civilized nations, will not, I am sure, commit the serious breach of hospitality they are urged to commit, without some far stronger reasons than any yet pressed upon them to break through the rules followed by all western nations under circumstances analogous to those of the *Maria Luz*. No moderately-informed student of International Law could advise them to adopt a course of action against a coolie ship which no European nation, except under treaty, could adopt against an actual slaver.

In the case of *Madrago v. Willes* (*vide* B. & A., vol. 3, p. 353), the plaintiff, a Spaniard, sought compensation in a British Court for the seizure of slaves on board a ship employed by him, and openly engaged in the slave trade. His claim was admitted by the full court of Kings Bench to be good, in that there was no treaty with Spain for the suppression of the slave trade. Mr. Justice Best, in his judgment, referred to various authorities in support of the doctrine that the slave trade is not condemned by International Law, however contrary it may be to justice and humanity, and that a ship cannot be confiscated unless acting contrary to the law of nations, and decided that until the slave trade should so come under the ban of International Law, a subject of a State by the laws of which the slave trade was legal, was entitled to the protection of the Tribunals of those States by the laws of which traffic in slaves was made illegal. Mr. Justice Best, in common with the rest of the Bench, deplored the

necessity of affirming the plaintiff's demand; but the rules of international law were binding upon the Court, and the Tribunals of no country could interfere with the prosecution of the slave trade by subjects of countries which permitted it to be carried on.

If, then, the slave trade is not contrary to International Law, and if contracts of which the subject matter is the traffic in slaves are capable of being upheld in the Courts of a country by whose laws such traffic is illegal, *à fortiori* is the traffic in coolies entitled to a similar protection, or at the least, ships engaged in it are entitled to a freedom from official interference in the port of a country which has no law at all upon the subject,—except, indeed, such interference is necessary to protect the public or private rights of the sheltering state or its citizens in a port, too, entered solely for the purposes of repairing sea-damage, and not for any other purpose, not even for taking in water or provisions. The following case corroborates the views above expressed. A full account of it may be found in Wheaton. In 1841 the American brig *Creole*, sailed from a Virginian port for New Orleans with a cargo of slaves. A portion of the slaves rose and took possession of the ship, and forced the mate to take her to Nassau. On her arrival there the rest of the slaves got on shore, chiefly, as it appeared, by the positive and officious interference of the authorities of the port. Mr. Webster expressed the views of the American Government in a letter to Lord Ashburton from which the following is an extract:\*

Mr. Wheaton in an article upon the subject in the *Revue Française et étrangère* upheld the views contained in the above extract, expressing his opinion that not only was the master of the *Creole* entitled to freedom from any officious intermeddling in the part of the British authorities, but was further entitled to their assistance in regaining possession of his vessel.

Restoration of the slaves was demanded, but refused. A claim for pecuniary indemnity was afterwards submitted to the commission under the Convention of February 8th, 1853, by which Convention the whole question was finally referred to Mr. Joshua Bates, of London. Mr. Bates decided generally in favour of the *Creole*, finding more especially that English law did not authorize a forcible dissolution of the relations which, according to the law of his own country, the master was bound to preserve on board.

What Dana says in his note on this case is quite correct. The local authorities ought to assist the master in carrying out the law of his own country. But they are not bound to render active assistance against persons quietly dissolving a relation between them and the master existing only by the laws of the flag, and regarded by the foreign country as against common right and public morals.

What the Japanese are asked to do is not merely to encourage the Chinese passengers to break their contract, but to break that contract for them without any indemnity to the ship. And this not in the case of a slaver, but in that of a vessel engaged in a traffic in which numerous English and French vessels are engaged.

No doubt if the coolie traffic were interdicted by Peruvian law the case would be far other.

Torture is against English law and the municipal laws of all civilized countries. Suppose the Captain of a Japanese ship in an English port in due exercise of his powers as captain under Japanese custom exercised the power of torture, would any English Court do more than convict the Captain of an assault?

If any of the coolies escape ashore the Captain of the *Maria Luz* has only a personal remedy against them. Whether he could ask a Court to compel them as he could ask the Court to compel a sailor to return to the ship, is a question into which I will not enter here.

Finally the coolie traffic is not slavery, and if it were, slavery is not piracy, and not therefore punishable in any other than the country of the offender. Whatever the Captain may have done on the high seas is utterly out of the jurisdiction of Japan. Whatever he may have done in port tending to disturb the peace of the port he may

\* The demand for Wheaton has been so great that we cannot get the work for the extract. We will publish it early next week.

justly be punished for. For all other acts he is only responsible to the tribunals of his flag, and if the Japanese government usurp any of the jurisdiction of that flag, they do so in the most direct opposition possible to International Law.

Necessity, doubtless, overrides law, and there may occur extreme cases in which a foreign state may rightly enough overstep its jurisdiction. But the present is not such a case. Your reporter described the vessel and its accommodation in almost glowing terms. A gentleman of experience, a member of this community, describes the accommodation as superior to that of most emigrant vessels. One Chinaman, however, has had his tail cut off—no doubt a grievous offence if done with full knowledge of the severity of such a punishment to a Chinaman—and two or three out of 200 to 300 have swum to other ships in the harbour, whether from ill-treatment by the Captain or from quarrelling with their countrymen is not quite clear. This is surely slender evidence—what other evidence there is is entirely *ex parte*—on which to found the high handed proceedings advised. Again, good and evil are relative terms, and fairly to appreciate the present condition of the coolies on board the *Maria Luz* one ought to compare it with their former condition as peasants of South China who, so far as my experience, a pretty varied one, of the world goes, lead an existence which is about the most wretched and precarious imaginable.

I trust I shall not be considered as for a moment defending the traffic in which the *Maria Luz* is engaged. I have no desire to do so. But I believe that coolies are just as badly treated in the colonies of France and England as in Peru, and that we as Englishmen cannot decently raise a howl against Peru; we are, by the bye, her chief customer for the produce of coolie labour in this matter of coolie-traffic and transport. There is a good deal of insolent hypocrisy in the dear old country, where people are too often loud enough in reprobating a system of which they pretty contentedly reap the benefits. Just as, I daresay, not a few members of the Society for Preventing Cruelty to Animals swallow *pâté de fois gras* without a scintilla of remorse. But whatever may be the evils inherent in the coolie traffic as at present conducted, such high handed measures as are advised are the very worst and most ineffectual means of remedying them. There are no unjust means of rendering justice. If the regulations adopted at Macao and in Peru for the protection of the coolie's interests are insufficient, let them be amended. Proper diplomatic action, if pressed with sufficient energy, would be amply adequate to ensure due protection to the coolie both in the inception and in the performance of the contract made with him. But to treat a ship, as only a pirate ship ought to be treated, when not only is there no violation of the rules of International Law, but not even an infringement of the Municipal Law of the country in whose port she lies, is monstrous. The *Maria Luz* at the worst could be held a slaver, and a slaver is no pirate. The Municipal Law of Japan, such as it is, may perhaps forbid slavery, though a modified slavery of the very worst description certainly exists in country. But the Municipal Law of Japan cannot have any application to acts done outside of Japanese territory except when committed by Japanese subjects. If the captain of the *Maria Luz* has maltreated any person under his command while in port, let him be punished. If an enquiry be thought necessary into his conduct while in port, let that enquiry be held, and if in the course of it, it should appear that he has systematically ill-treated his passengers, or neglected to furnish them with proper food and accommodation, let the Japanese Government request the treaty powers to draw up a joint note on the subject to the Peruvian Government which cannot, dare not, fail to inflict such punishment on the captain as the circumstances of the case may require. What the Japanese are asked to do is what no European Government could do or ever has done under analogous circumstances. I trust that the captain of the *Maria Luz* will get some impartial person to board his vessel in company with a Chinese interpreter, whose report may put the public in possession of the real facts of the case, for I must confess that in my poor judgment the facts alleged hitherto are miserably inadequate to sustain the serious charges brought against a gentleman, who, as an officer of the Peruvian Navy, has, *primâ facie*,

a claim to be considered and treated as a man of honour and humanity.

I am, Sir,

Yours, &c.,

AUDI ALTERAM PARTEM.

Yokohama, August 17th, 1872.

## Law & Police.

### CORONER'S INQUEST.

An inquest was held at No. 82 on Saturday August 17th on the body of Joseph Searle, who met his death on Friday at Kanasawa.

Mr. Consul Russell Robertson, Coroner. Jury, Messrs. W. H. Smith, Tripp, and T. Wallace.

A Mitchell, sworn, said that on Friday afternoon, at Kanasawa, Mr. Searle proposed a bathe. Mr. Gray and himself acquiesced, and the three went in. Mr. Gray came out first, followed by witness; the deceased went in for another swim. On their return to the shore they saw deceased and told him to come in. Mr. Gray and witness then commenced dressing. They missed deceased and called to him to come in; no answer was returned, Mr. Gray then went to a small hillock and at first saw nothing, but he afterwards said he saw something on the water; they both undressed and went in and got within three or four yards of the object. Mr. Gray then said he was afraid of the mud. A boat was obtained immediately they landed, and they then went in search of the deceased, within three minutes; the body was in the mud, and great difficulty in getting it out was experienced. Deceased was got in the boat, and a lot of mud was clinging to the feet. The body was taken to the tea house and all remedies were applied with no effect for the space of an hour and a half. Japanese doctors were called in but they pronounced him dead. The body was then removed to Yokohama and Dr. Siddall was sent for.

To Mr. Smith. The water was not deep, mud could be touched.

To Mr. Wallace. Deceased was very nervous, but he appeared in good health.

To Mr. Smith. About three minutes only elapsed after returning to the shore to our missing him.

To Mr. Wallace: He stood upright, and must have been two feet in the mud.

To Mr. Tripp: The deceased had been subject to fits, and had mentioned that he had had a paralytic stroke the day before.

J. G. Gray, steward of the *Thabor* gave similar testimony.

To Mr. Tripp: We made no attempt to get the body out of the mud, because we said it was useless, and were afraid of sticking fast in the mud the same as the deceased. We swam out to it.

Tanakoi Kozo said he was a doctor at Kanasawa. Yesterday, at about four o'clock, at a tea house at Kanasawa, he was called on to attend an urgent case. The body had just come out of the water. It was quite dead. Restoratives were applied, but to no effect.

The jury then returned a verdict to the effect that the deceased met his death by accidental drowning.

### THE MARIA LUZ.

IN THE KANAGAWA KENCHO.

Before OYE TAK, Governor.

Monday, 19th August, 1872.

This hearing of this case was continued to-day.

During the proceedings the Governor was assisted by Mr. W. Hill and Mr. Peshine Smith, who was attired in Japanese costume, and Mr. Hannen, also by the Consuls for England, Germany, Holland, Portugal, &c.

On the opening of the Court, the Governor stated that concerning the case of the men who had been punished for trying to escape from the *Maria Luz* he had been ordered by the Foreign Office to further inquire as to a complaint made by some coolies, who stated that they had been kidnapped, and he begged the Consuls then present to assist him in the matter.

A coolie said that during his stay in Macao he was asked by a Chinaman to go on board a ship and help to discharge the cargo,

He did so, and went below, but the ship then set sail. He had also been beaten and put in irons, and had not enough to eat, having only two small tins of rice twice a day. Had a contract, which was handed into court. This agreement was given on the 23rd day of the 4th month. Went on board the ship some days before the agreement was signed. The ship sailed on the 22nd day of the month. He had been on board a short time only when the ship sailed. He did not understand the terms of the contract. A man forced him to sign the contract. The contract was signed a day after he sailed. He did not know who sealed the contract, but the seal was on before he signed it. The interpreter on board the ship took it away when he had signed it. He did not know who it was that forced him to sign the contract, but it was one of the sailors. He signed the contract on deck; he signed two, one being kept by the captain. There were other Chinamen who signed contracts at the same time. He never was in a house in Macao where contracts are signed. He had only been there three days, living always in Hongkong. The interpreter did not read the contract over to him. When he made a noise they threatened to lock him up, but he never was locked up. A Chinaman, Quong Hing, asked him to go on board to discharge cargo. Quong Hing was a gambler at Macao. He went on shore in the afternoon. There were then no goods on the ship, but a great many coolies. He was born at Whampoa and had lived one year in Hongkong. He went on board a little past one p. m. with Quong Hing, who left him directly he got on board the ship. He was in the hold, and could not get away, the hatches being closed. He went down by a ladder, which was taken away as soon as he got down, the hatch being closed at once. Other Chinamen came on board on the same day, and were put into the hold by the same means. He subsequently came on deck. He had only been in Macao three days, and had never been there before. He was to receive \$4 a month; this was told him by the man who took him on board and by the interpreter. He went to Macao in search of work. He met Quong Hing as he was walking in the street. Quong Hing asked him if he had found work, and on his answering "No," asked him if he would help discharge cargo. Three Chinamen, an European, and Quong Hing went with him on board. He never went on shore after going off first. He had received \$8. When he went on board the ship he cried out, and the captain said he would give him \$3. He also told him that he would return in half a month. The captain did not tell him where he was going and he did not know where the ship was bound. He now knew the ship was bound to Peru. He did not get any passport or permission from the Chinese authorities to leave the country. He had spent his \$8, the interpreters asking \$1 for a drink of water. The interpreter and the doctor took all his money; that is, he bought things from them. He had no father, but had a mother. She had no one to support her (witness here commenced crying). He complained of ill-treatment on board. He did not want to go on board the ship again. After he left Macao he never went on deck except for actual necessity. There were no ladders on the voyage. When he did come on deck the ladder was let down. The ladder was kept below in charge of a head man, Ah Quing. When asked, at the suggestion of Mr. Loureiro, if he wished to be sent back with his contract to Whampoa, he replied, "Yes," and fell on his knees. He could not write his name. Sing Hoa was his name.

After the recess in the middle of the day, Mr. Peshine Smith said, addressing the press and in reference to an article in the *Japan Herald* on the case of the *Maria Luz*, that there was a mistake in it. Peru had entered into anti-slavery treaties with the United States and other countries and the coolie traffic was as illegal there as anywhere else.

Another coolie, No. 176, was then called. He said he was nineteen years of age. He first went upon the *Maria Luz* on the 22nd day of the 4th month. He had a copy of the contract (produced). It was given him by the interpreter on board the ship, on the 23rd day of the 4th month. It was signed on board the ship. There was only one copy made.

Mr. Peshine Smith said that he wished the Captain to be present and that the coolies should be told that they need not fear anything, but that the Court would protect them.

Mr. Loureiro acquiesced in this suggestion. Some discussion followed and it was arranged that when the Captain came he should be allowed to be present to cross examine the witnesses.

Examination continued: He had done no work on board. Two Europeans asked him to make some clothing and when on board they put him down below. He was not allowed to come ashore again. He was confined below, and he was not told where he was going. He had been told that the ship was going to Peru.

The Chinese interpreter here explained that the witness lived in the mountains and his dialect was difficult to understand.

Examination continued. He first knew he was going to Peru when the mast broke. The ship sailed on the 22nd day of the 4th month. The ship was lying very far from shore. They did not tell him how much he was to receive a month; but he had been paid \$8. He did not know what it was for; but it was given him by the interpreter. He did not know what it was for, and therefore first refused it; but the money was put in his hand. He did not know what were the contents of the contract. He could not read Chinese characters. His name was Ah Fat. He did not understand the contents of the contract; but it was read to him on board ship. His contract was read some time during the sixth month by a Chinaman, but he did not know his name. He first went on board about six a.m. He did not know what day of the month it was at the present time. It was about two months ago that the contract was read. He thought it was now about the 17th day of the 7th month. The contract was made about two months ago. He had not enough to eat, and he went to get some rice and the Captain cut off his queue. He had two tins of rice for one meal. He complained that the Captain ill-treated him. He went to get water and the Captain beat him, his body being much bruised. He wished to be sent back to China; he would rather die than go on board ship. He did not get enough to eat and was beaten and wanted to go to see his parents. His parents lived in Fychoo. He came down from his home to Macao in the first month. He wanted to go home. He had spent all his money in buying water at the rate of \$1 per cup. They had one small cup of water at each meal. He went on board with two Europeans only. When put on board the two Europeans put him in the hold. These men are not on board now. He did not go on deck that day. He came on deck to wash about two or three times. He was in irons until he came here. He was put in irons because he wanted to come on deck. Several other Chinamen had their queues cut off. Their queues were about seven, but he did not see them. Their queues were cut off because they tried to come on deck.

Captain Hereiro, called as a witness, but before giving evidence asked for an adjournment to obtain legal advice.

Case adjourned till 10 a.m. next-day.

Tuesday, August 20th, 1872.

On this occasion the Court was composed of the same officials as before, the English Consul, however, being absent, the *Pakwan* case occupying his attention. Mr. Anabusa, of the Foreign Office, was present, as on the day before.

Coolie No. 182 was first called. He said that he met a Chinaman in Macao, who told him to go on board to clean ship, etc. He was to have \$4 a month wages; when he went on board he was given \$8 and put in the hold. He had enough to eat, but not enough to drink. He spent all his money in cakes and water. He had an agreement (produced); Ah Tai was his name. He signed the contract on the 22nd day of the 4th month; he signed it on board the ship; the contract was sealed before he signed it; somebody else wrote on the contract after he signed it. Witness pointed out a signature which was written after he had signed, and another which was already written when he signed. He did not know the contents of the contract; but was compelled to sign it. He was told that if he did not sign it he would not have the dollars; he signed the agreement because he wanted the money. He did not know where he was going, and he had no wish to go in the ship. The contract was not read over to him, and he did not know its contents. The ship sailed on the 23rd day of the 4th month at night. He did not know where the ship was bound; he had been since told that the ship was bound to Peru; the interpreter told him when the mast was broken. Between the time of his going on board and the sailing of the ship only one day elapsed. He had never been put in irons, but he had been beaten three or four times, the reason being that he was talking. He had not enough to eat—only two tins of rice at each meal. He also had bean-cake and potatoes—one of the former and two of the latter at each meal; he had one tin of water at each meal—the same every day; the victuals were always the same for all the coolies. Three Europeans went on board with him. The first person who asked him to go on board was a Chinaman—his friend—named Lew-Ah-He; when he went on board he intended only to stay one or two months. He went on board at Macao. He only came on deck during the voyage when he wanted to wash. He wished the Court would take him out of the ship and send him back to China. He had suffered much on board the ship, not being sufficiently supplied with food and drink; he did not want to stay in the ship even if he did have enough to eat and

drink; he had aged parents at home, and he was the only one to work for them. When he went on board he was to return on shore, but was not allowed, nor was he able to go on deck; the interpreter would open the hatches when it was necessary for the coolies to go up; he was on deck, and they would call out for him. The food supplied to the interpreter was not the same as that given to the men; he dined with the captain; he was a Tonquin man. He signed two contracts; a man took hold of his hand, dipped his forefinger in the ink, and made him stamp the contract; an European caught hold of his hand; no one else was present. That man was not on board the ship, but in Macao. He subsequently stated that the man was on board the ship, but he did not know him. He again corrected himself, and stated that he did recognize the man. He first heard of Peru when the mast broke. He did not know what was intended by Peru; when he signed no other Chinaman signed; but the captain was present though he said nothing. This was about 3 p.m.

Another coolie said, a Chinaman kidnapped him and two Europeans put him on board ship, and putting him in the hold closed the hatches. He had not enough to eat. He was beaten and put in irons on the ground that he was talking. A Chinaman told him to go on board and work as a tailor at \$1 a month. He was to go for a year and a half, and then come back to Macao. He had an agreement, which was signed on board without his knowing the contents. He understood that he was to work for a year and a half. The contract was read by a Chinaman, but he did not know the contents. He signed it about 1 p.m. in the day. On the next day the ship sailed. He now knew that the ship was bound to Peru, but when he went on board he did not know where he was going. He heard of the destination of the ship from a Chinaman quite lately. He did not know what he was going to do or who was going to employ him in Peru. He was 19 years of age. There were more than 200 coolies on board when he went. There were no boats alongside; but there were ships' boats; the ship lay very far off. He got two meals a day and at each meal two tins of rice, with potatoes and bean cake, besides a little beef, four ounces to ten persons. The beef was not served out every day. All the coolies were treated in the same manner. They had each man half a tin of water at each meal. Since leaving Macao he had never been on deck except to wash, &c. He was put in irons for talking with another man. He had received \$8, but he did not know how much he was to have per month. He was told that if he went on board ship that he would get handsome pay, \$6 or \$7, but he never settled as to the rate of wages. The Chinaman told him this. When he went on board and found over 200 coolies and no work to do there was no confusion or any attempt to escape. When the ship made sail, many were put in irons for making a noise. The ship sailed at about 7 p.m. The irons in which the coolies were confined were chains attached to a long iron bar about five feet long. He was in irons from the time the ship sailed till she arrived in Yokohama. Before the ship sailed no foreigner came on board and explained the contract. They were never asked if they wanted to go on shore before the ship sailed. He could not write. The contract was sealed before he signed it. He only signed one agreement and that was wrapped up with the \$8.

After the mid-day adjournment,

Coolie No. 157, was again called. He said he was anxious to return to his country, because he had not enough food or drink, and because he was beaten. A tin was here exhibited holding about  $\frac{1}{4}$  of a pint, which witness said he had full, twice at each meal and one similar tin of water.

Coolie No. 205, was called, but the interpreter said he was a Fokien man, and he could not interpret his dialect. This man was in a fearful state of consumption and could scarcely speak. His bones were barely covered by skin and he looked as if hardly able to live.

Another coolie, who burst out crying, said he was also from Fokien, and an interpreter for these men was sent for.

No. 175 was called—a strong heavy man. He also spoke a little known dialect and two Chinamen had to be employed to reach the English language. He said one day when he had finished his work as stone-mason he went to the seaside, and on the plea of getting more work a Chinaman and an European took him to the ship put him in the hold and did not allow him to come up for three days. He was also deprived of food. He was told to sign an agreement and refused; but he was forced. He was then told to take \$8 but he refused, saying that he knew the ship was going to a foreign country and he would not go. The interpreter took a revolver and aiming at him threatened to shoot him if he did not take it adding that he was not to be killed or eaten. Under these threats he took

the money. He had no agreement. The interpreter and chief mate wanted him to sign, and he replied that even if they gave him \$80 he would not sign. He did not sign, but he got \$8, though he refused it. He was put in irons. He had spent the money in buying water, etc. When they asked him to sign the agreement it was not first read to him. On the 22nd day of the 4th month he went on board, and the ship started next day. He did not know where the ship was bound to, but he afterwards learned that she was bound to Peru; this was when the mast was broken. He could not read. He did not take the contract when offered, and it was subsequently lost. When he went on board there were many Chinamen on board; he was one of the last to go on board; he was confined in the hold for three days after the ship sailed; the hatches were closed; he was the only one kept without food; he was kept in irons from Macao to this port; when the Governor came on board, the irons were taken off; two men were chained together, while those who tried to jump into the water were also chained to an iron bar. He had the same kind of food as the others, and when in irons was able to sleep in the berths provided in the ship, but not easily; No. 116 was chained to him; he was chained to No. 116 for three days before arriving in Yokohama. He wished to go back to China; his parents were 60 years of age, and there were three generations of his family dependent upon him (witness here commenced to cry); he was locked up as soon as he was on board, and the ship sailed next day. No officers came on board at Macao. The interpreter and the chief mate put him in the hold; when he went on board he was searched, but nothing was found on him. Kiang Chow was his name. He could write (witness here wrote his name and number); he knew none of the other coolies before he went on board. In buying tea, they paid \$1 for a tin full, not the same size as that in court; he only bought tea, never water. A mug was used for the tea; the tin in court was used for rice; each man had his own cup, all of the same size; those who came first got most rice, the others less; they got salt-water every day to wash with; five or six men washed together. If only two washed together the captain beat them. On being sent out, the witness, like several others, began to cry.

The case was adjourned till next-day at 10 a.m.

Wednesday, August 21st, 1872.

Coolie No. 88 said he never had sufficient to eat. His name was Ah Foo. He could not write or read his own name. A Chinaman named Lo Tom brought him down from Canton to Macao and told him there was a ship going to Japan; he took him on board ship and put him down the hold: he promised him \$4 per month; he had as yet received \$8 but had spent it in cakes, water and tea. He had had bought these because he was sea-sick. He paid \$1 for a small cup of water, sometimes more and sometimes less; he had not been put in irons. One night he had a dream and God appeared and told him not to sign any document that the Captain offered. He took the \$8 because he was sick and wanted to buy some thing to relieve it. He did not sign any agreement. The ship sailed on the 23rd day of the 4th month. He went on board on the 21st day accompanied by ten other coolies who were all forced to sign the agreement; they tried to make him sign but he would not. The stamp on the contract is false, it is not his. The contracts of the other men were signed on board. They caught hold of his hand to force him to sign but he wrested it away and would not sign.

At this point the Court adjourned till 10 a.m. next-day.

Thursday August 22nd.

As announced, the whole of the coolies of the *Maria Luz* were brought into Court. They were all dressed in thin and clean clothes, and most of them were physically in apparently a good condition, very much in contradiction to the statement that they had been half starved. Scarcely one showed signs of want of food. They were ranged round the room four deep.

The Court was assisted by the Consuls, as hitherto.

Mr. F. V. Dickins represented Captain Hereira, who for the first time was in Court officially.

Mr. Dickins then applied for permission to read the following protest.

PROTEST.

Don Ricardo Hereira, a lieutenant in the navy of the Republic of Peru, and at present captain of the above-named vessel, by his counsel, Mr. F. V. Dickins, of No. 59, Yokohama, begs to protest against the inquiry now being held at the Saibansho at Yokohama into the acts of himself and others in connection with the above-named vessel or her passengers, so far as such inquiry is or may be

directed towards acts of himself or others in connection with such vessel or her passengers done within the jurisdiction of the Japanese Government, and not merely relating to intended discipline. And the above-mentioned Don Ricardo Hereira, by his counsel above-named, respectfully urges the following among the reasons in support of the present protest:—

1.—The proceedings now pending in the Saibansho, were not founded upon any sworn information laid before the Japanese Government, nor has the Captain ever had any definite notice, in writing or otherwise, of the object of the pending proceedings or of the limits within which such proceedings were or are to be circumscribed, nor has any opportunity been afforded to him of disputing the grounds upon which jurisdiction in respect of his vessel is assumed.

2.—The inquiry having been extended to acts done on board the *Maria Luz* in the waters of Macao and China and upon the high seas, and entirely without the territorial jurisdiction of the Japanese Government, and the ship having been detained for the purposes of such inquiry, the Captain conceives that the inquiry is being held with a view of proving evidence whereon to make him and the ship liable in respect of such acts, and as no such acts done by any person owing no allegiance to Japan without the jurisdiction of that country can come within the cognizance of the tribunals thereof, unless distinctly charged with and proved to be piratical.

3.—A foreign ship while upon the high seas is regarded by the municipal laws of all civilized peoples and by international law, as a portion of the territory of the state under whose flag she sails, and all crimes, however heinous, committed on board her while on the high seas, are cognisable by the tribunals of her nationality alone unless under special treaty. Thus, in Kent's Commentaries on American Law, vol. 1, p. 188, of the 11th edition, we are told that "it is a clear and settled principle that the jurisdiction of every nation extends to its own citizens on board of its own public and private vessels at sea."

So in the cases of the *Queen v. Lopez* and the *Queen v. Sattler*, reported Law Journal Magistrates Cases, vol. vii., p. 48, fourteen English Judges sitting in the Court for Crown Cases Reserved, the highest court of criminal appeal in England, decided so late as 1858 that a ship must be held as a part of the territory of the nation to which she belongs, and all persons on board her bound by the law of that nation, and by none other. The first case was one of manslaughter, the other one of murder. The persons charged in both cases were foreigners on board English ships, and in both cases conviction was affirmed in the last-named case; the persons charged had been forced on board unlawfully, which makes it a very strong one.

French law is precisely similar.

Again, in another case before the Court for Crown Cases Reserved, the case of *Queen v. Lewis*, Law Journal Magistrate Cases, vol. xxvi., p. 104, a foreigner on board a foreign ship on the high seas struck another foreigner, who died from the blow in England, shortly after the arrival of the ship. The assailant was charged with manslaughter, and found guilty, but on appeal the conviction was quashed, the Court declaring that there was no jurisdiction in England over crimes committed by foreigners on board foreign ships on the high seas.

*A fortiori*—are persons guilty of crimes within the local jurisdiction of a State exempt from the jurisdiction of any other State than their own and the State in which the crime was committed?

Both in France and America, the law is precisely the same, in support of which statement authorities will be produced, if required.

From the above it is clear that even were Captain Hereira guilty of the most heinous crimes on board his ship at Macao, within Chinese waters, or on the high seas, according to the practice of western nations he would be entirely exempt from all criminal or other jurisdictions, except:—1st. That of his own country or the country of the flag under which he sails. 2nd. That of the state within the local waters of which any crime charged against him was committed. But no definite charge of any kind has been alleged against him, yet his ship is detained and the present inquiry instituted in order to procure evidence whereon a charge may be founded against him. The ship has been detained simply *vi et armis* upon no legal warrant issued under any legal process of any legal court, nor since its detention has any such warrant been notified to the Captain who on every occasion on which he has demanded the reasons of his detention has been met by a contemptuous refusal to assign any reason whatever. The enquiry is being held simply at the request of certain among the representatives of the treaty powers, not by any duly-established and regular tribunal and not under any law or custom in Japan nor under any Imperial edict or decree but under an authority, if any, quite unknown to the captain and his

counsel. The mode of selection and examination of the witnesses is quite contrary to the rules of all western nations, and at the one examination at which counsel for the captain then acting as adviser to the representative of His Most Faithful Majesty was present, almost all the questions were suggestive of the answers. Not only that, but questions have been put during the inquiry by persons acting as advisers to the Japanese Government and by an Acting Judge of Her Britannic Majesty's Provincial Court—persons whose right to put any question whatever, the captain by his counsel respectfully denies, though no objection can obviously be entertained to the Court under the sanction of the Government obtaining such advice as may be deemed necessary.

5.—It is submitted, therefore, that if the enquiry is being held with a view to charging any person connected with the ship with any ordinary crime, however heinous, committed out of Japanese territory, the inquiry is unjustifiable, and should at once cease, proper indemnification being made to the captain for the detention of his ship.

If, on the other hand, it is sought to bring the Captain within the jurisdiction of this country by charging him with the international crime of piracy it is submitted that without facts being first sworn to affording a sufficient *prima facie* basis for such a charge and such facts being notified to the Captain and an opportunity afforded him of refuting them or of arguing their insufficiency it is contrary to the practice of nations to enforce such detention of his ship as he by his counsel now complains of or to hold the enquiry now protested against.

No distinct act of piracy is even alleged against the ship nor any act which according to the ordinary meaning of the word piracy can be called a piratical act neither is any act alleged upon which any suspicion of piracy could arise. The acts alleged are kidnapping or decoying coolies while in Chinese or Macao waters and cruel treatment of the coolies on board the vessel upon the high seas. Even if such allegations were completely proved they would not—however contrary to right and morality—amount to proof of piracy and the captain would be responsible for the acts alleged only to tribunals of his flag as to those committed in the high seas to the tribunals of Portugal and China (save under treaties) for those done within Macao or Chinese waters. Piracy is of two kinds: international piracy and piracy according to the municipal law of a country. The latter kind is punishable only by the Courts of the country by whose law it is established and in no case does the mere declaration by a country that a particular species of crime is piracy make it so in an international sense.

Piracy according to international law or piracy *jure gentium* is defined by Blackstone as "robbery and depredation upon the high seas."

The definition given in Wheaton (Dana's 8th Edition p.p. 192, 3, 4, 5, &c.) and in the notes of Mr. Dana on Wheaton's text is similar. The note III. on page 195 is especially referred to. By that piracy *jure gentium* is only possible upon the high seas and no act done within the jurisdiction of another state can be under any circumstance piracy and so justiciable anywhere. Not only must the act of piracy be committed upon the high seas, but beyond the "jurisdiction which all nations concede to each nation over vessels sailing the seas under at once its *de facto* and *de jure* authority and responsibility and in the peace of all nations." "Crimes therefore" Mr. Dana's note proceeds to say "of whatever character committed on board by inmates of such vessels are not justiciable by all nations."

This seems amply probative of the position that in the absence of any kind of treaty between Japan and Peru, and of any sort of universal and formal condemnation of the coolie trade, as such, the acts of the Captain or other persons done in connection with the vessel in Macao or Chinese waters are under all circumstances whatever justiciable in Macao or China (or in Peru) only, and the acts committed by the Captain, &c. upon the high seas are justiciable only in his own country, unless acts of depredation and piracy coming within the definition of piracy *jure gentium*, not one of which acts is alleged against him either positively or by way of suspicion.

8.—It may be alleged that the acts suspected amount to a carrying on of the slave trade. So far as concerns the acts done in Macao or China even if amounting to a carrying on of the slave trade those acts are cognisable in Macao, China or Peru and nowhere else as has already been sufficiently proved. More cruelty on the high seas cannot under any circumstances amount to slave—or other piracy *jure gentium*.

9.—It may, however, be alleged that continuing to carry beyond Macao or Chinese jurisdiction persons originally decoyed on board within those jurisdictions, is nothing more than trafficking in slaves,

But there is a difference between kidnapping and slavery. If any of the coolies have been decoyed on board the *Maria Luz*, they have not been so decoyed for the purpose of making them slaves (which is a robbery of the whole of their liberty), but for the purpose of forcing them into a contract (which is a duress upon their will, and—however reprehensible—a very different thing from slavery). They are not, and upon arrival in Peru will not be, in any mode capable of being considered as slaves. Their status will not be altered; they will be paid; their time of service is fixed (just as the time of sailors' and apprentices' service is fixed, and sailors and apprentices can be forced to perform the services promised), and they have all the rights of Peruvian citizens, or at all events of all aliens of whatever nationality resident within Peruvian jurisdiction.

10.—Even, however, if the captain should be guilty of practising the slave trade, and the slave trade should be condemned by Peru as piracy, whether or not in connection with treaties with other powers, it is submitted that the captain is not—even if a slaver—a pirate *jure gentium*. It has been shown that a declaration by a country that the slave trade is piracy, binds its own citizens in its own courts, or in the courts of those nations with whom the country of the flag has entered into treaties, creating mutual jurisdiction over offences denounced by both as piratical. Such declarations by a State are invariably made for the purposes of treaties, and only under such treaties can proceedings be taken in respect of such declarations against foreigners. Peru has no treaty of any kind with Japan. No State has the power of declaring what is piracy *jure gentium*—that can only be done by common consent, and no common declaration, express or implied, can be referred to denouncing the coolie trade as piracy *jure gentium*. Nor can the mere decoyment of persons into a contract of service be under any circumstances construed as slavery, and even if so construable, slavery is not piracy *jure gentium*. Slavery is only piracy as between powers parties to treaties declaring slavery to be such. The case of *Madrezo v. Willes*, 3 Barnewall and Alderson's Reports, is clear to that effect. There a foreigner recovered compensation in a British Court for the seizure of slaves on board his vessel. The Judges declared that the slave trade was not international piracy. Justice Bayley said that the foreigner could maintain the action his country not having declared by treaty with England or otherwise the slave trade piracy. If the trade were piracy *jure gentium* then he could not maintain an action nor could he, if by treaty with England, Spain (the foreigners country) had declared the slave-trade illegal.

Now whatever treaties with respect to the slave trade Peru may have made with the powers they do not give any authority whatever to Japan with whom no treaty has been made. Nor has Peru even declared that considering slave trade as piratical she assents to her citizens being justiciable in respect of that trade in any country. No country ever committed so absurd an abandonment of its sovereign rights or is likely ever to do so. Hence even were the *Maria Luz* an actual slaver with slaves on board the Japanese Government would have no right to detain her to visit her or to hold any inquiry relative to her except as to acts done while in a Japan port.

11.—An exhaustive discussion of the question of what is and what is not piracy is contained in Kents Commentaries 11th Edition vol. 1 Section IX. He says "Piracy is robbery or forcible depredation on the high seas without lawful authority and done in the spirit and intention of universal hostility." It is in fact the "universality" of the hostility that is of the gist of the offence and that explains the universality of the remedy or punishment—the universality of the cognisability of the offence.

The question whether the slave-trade is now to be considered *jure gentium* piracy is then elaborately argued. The conclusion after reviewing the principal English and American cases is that the slave-trade though "immoral and unjust" is not "piratical by the common law of nations" page 201 See. also 202 and 203.

11. A.—The Captain expressly denies any decoyment has been practised by him or by the Macao authorities or by the Peruvian Consul at Macao upon any of the China passengers and asserts that all documents and proceedings were perfectly regular.

The Captain of the *Maria Luz* therefore by his counsel respectfully submits the following propositions as established by the above argument in accordance with the rules of International Law.

1st.—Any non-piratical offences committed at Macao or in Chinese waters on or upon the high seas on board the vessel are not within the jurisdiction of any Japanese tribunal.

2nd.—Any offences of whatever nature committed at Macao or within Chinese waters on board the vessel are without the jurisdiction of any Japanese Court—such offences not being under any circumstances looked upon by International Law as piratical offences *jure gentium*.

3rd.—That the ship is not in any legal or other sense of the word a slaver; even if all the allegations or suspicions made or entertained should be confirmed.

4th.—That even if she were a slaver with slaves actually on board—slavery not being piracy *jure gentium*—she cannot by any possibility be justiciable on that account in a country not under treaty with the country of the flag.

5th.—That the Captain is responsible to the Government of Japan only for acts done within Japanese jurisdiction; and even then, according to the strict law of nations only for acts affecting the peace of the port or the rights or interest of the Japanese Government or its subjects.

6th.—That neither by Japanese law or custom is slavery prohibited; a *fortiori*, any such contracts as those entered into between the passengers on board the *Maria Luz*, and the parties named in the contracts. Such contracts are common enough in all countries; for example, in the case of sailors and apprentices in England and America.

7.—That the proceedings now pending have been irregularly commenced, and are irregularly prosecuted, before a Court irregularly constituted and composed in part of elements which the Captain has a right to refuse to recognise as a constituent portion of the Court.

8.—That the ship being ready for sea ought to be allowed to depart and a proper indemnity paid to the Captain for the detention and expenses he has suffered and been put to.

9.—That the Japanese Government cannot take advantage of any facts alleged or proved during an enquiry such as the one now pending: such enquiry being contrary to the practice of nations—in its motives, inception, prosecution, and object.

F. V. DICKINS.

He subsequently pointed out that a set of irons produced in Court, were the only set on board and were such as are used on all ships, whether British or foreign, and were such as the captain had a perfect right to use. Under these circumstances the irons ought not to be produced to prejudice the captain's case. Mr. Dickins also held that no one ought to put questions but the Court.

The Governor asked the coolies through the interpreters, what complaints they had to make.

One Coolie replied that they had not enough to eat or drink.

On being asked if there were any headmen, a number of men singled themselves out.

Mr. Dickins again objected to the jurisdiction of the Court.

According to Japanese law, the Governor said they had power to enquire into the complaints made as to the acts of the captain beyond Japanese waters.

Mr. Dickins replied that in such case he would retire, and so would the captain and the Portuguese Consul (Mr. Loureiro).

Mr. Hill said the Governor thought it would be a good opportunity to give some explanation of the case. The vessel put in here in distress, and subsequently one of the coolies jumped overboard and escaped. He was returned by the Japanese authorities; but afterwards on the application of one of the treaty powers—it being stated that this coolie had been ill-treated, on account of his having escaped—an enquiry was held. As yet no decision had been arrived at; a number of witnesses had been examined, but no result had been come to. During the course of the enquiry the Central Government ordered a much fuller enquiry, extending over the whole operations of the ship and crew on her voyage. A further investigation was now to be commenced, the object being to hear any complaints made by the coolies. It was not a criminal enquiry. There was also another aspect in which the case might be regarded. While the charge of ill-treatment in Japanese waters was still pending there was still another. In fact it might be said that there was a criminal and a civil charge, the latter having reference to the validity of the contract. The criminal charge referred to the alleged ill-treatment in port. The civil charge was that now about to be heard.

Mr. Dickins asked for right to reply. He said no notice had been given to the captain of any charge brought against him or the ship. He found his ship stopped *ri et armis*, and that an enquiry was held having reference to a ts said to occur outside of Japanese waters, and the captain could not but think that a criminal charge was being heard against him. He would say a word or two with reference to the two charges. The criminal charge had reference to the ill treatment of passengers in Yokohama. To this he demurred; the authorities had not the right to institute the inquiry upon the slight evidence brought before them, and if even the evidence had been stronger, he demurred on the ground that by international law the Government had no right to do anything with respect to the interior discipline of the ship. There was a large number of coolies on board, and considerable rigour and apparent harshness had to be

exercised in order to keep full control over the passengers, who, it should be mentioned, had during the entire voyage been mutinous in the extreme. They complained that they had not enough to eat. A single glance at the coolies as they stood round the court-room would convince everyone that the complaint was unfounded. As to the civil action—who were the parties? No notice or summons had been served, and the Court illegally took cognizance of affairs outside the jurisdiction of the Court. It might be called a civil action, but was the course adopted by the Kencho the proper way to stop a ship which had put into the port in distress, and had placed itself under the protection of the Japanese authorities? Besides the captain had been afforded no opportunity of rebutting the testimony of the men or bringing arguments before the Court. The Chinese passengers had never *spoule sues* made any complaint. They had been instigated by the representative of a foreign power, and the Court having with every question suggested the answer had instigated the men to give evidence upon which to found a charge. The Court proceeded in an illegal manner, upon an illegally brought charge, and whatever damages or loss had been occasioned, the Governments of Peru and Portugal would hold the Japanese Government liable for.

Mr. Hill said that the Captain was not charged with any offence but was summoned as a witness and could not go without the permission of the Court.

Mr. Dickens replied that no notice of the reason of the ship's detention had been given and the Captain not being charged ought to be allowed to withdraw.

The Governor intimated that the Captain not being a treaty subject was liable to Japanese law.

Mr. Dickens said that the Captain claimed the protection of international law, but

The Governor maintained that the Captain was under his jurisdiction and it being intimated that questions having reference to acts committed outside of Japanese waters would be put,

Mr. Dickens withdrew and the court adjourned.

After the recess.

Coolies 185, 183, 108, 175 were asked in turn if they wished to go to Peru, and all said they did not wish to go. They had all been kidnapped.

Coolies 177, 178, 192, 196 did not wish to go to Peru. One had not enough to eat or drink; he did not wish to go at first; another said he was kidnapped; a third had been kidnapped; and the fourth was also kidnapped.

Another coolie said he was kidnapped, the agreement was signed on board.

Another coolie was a Fokien man and was put on one side, as were a second and a third and a fourth.

A fifth said he did not want to go to Peru because he had not enough to eat.

Several more Fokien men were brought in.

Another coolie said he did not want to go to Peru because he was kidnapped: His contract was signed on shore.

Coolie No. 119.—He had no intention of going to Peru when he went on board. He was induced to go on board by a European. His contract was made on board.

Another coolie produced his contract. He had no intention of going to Peru. He was asked to go and work on board ship, but he signed the contract on shore, No. 127 had been induced to go to Macao and then made to sign the contract. He had been put on board by force.

Coolie 185 was kidnapped.

About thirty other coolies were then examined, and almost without exception they averred that they had been induced to go on board by Chinamen to work for \$4 a month. None wanted to go to Peru, but all wished to return to China, except one, who wished to remain in Yokohama.

The case was adjourned till 10 a.m. next-day.

Friday, August 23rd, 1872.

The Court to-day was constituted in the same manner as before, the French legal adviser of the government being also present.

Captain Hereira examined.—He was an officer in the Peruvian navy; he still held that position. The Chinese passengers were all allowed to go on deck; nor was the ladder taken away. When the ship was in Yokohama, however, the ladder was taken away, but the men were allowed to go on deck. He had cut the tails off three Chinamen, because the Saibansho did not put them in prison; he had requested that they should be put in prison on the day the Chinamen jumped into the water. He did appear on the day appointed

for the trial of the Chinamen; he was in Mr. Benson's office. He asked that the men should be imprisoned, but instead they were sent on board, where they commenced to quarrel and he sent them all below and cut their tails off. He was told that the government could not put them in prison or in irons. He did not go to the Saibansho at 11, but he was there at 10.30, and was ready for the Chinamen to be put on trial. He said then that he would himself settle the matter with the Chinamen because the Court said they would do nothing further. By the Court he meant Mr. Benson, for he it was that was told by Mr. Hyashi (interpreter) that nothing could be done.

Mr. Hyashi explained that when the Captain came to him he could not understand him, so he took him to Mr. Benson who interpreted. The captain asked for permission to put the Chinamen in irons; and he replied that he had not power to give the permission without an examination. The day following at 10 was appointed to hear the case, but the captain did not come till 11, and then asked that the case should be dismissed, as he had settled the matter.

Captain Hereira said, he asked one day to have the men put in prison, and next day at 10.30 he was told the time was past, and nothing could be done.

Mr. Hyashi again insisted that the captain on the second day told him that he did not want the case to go on.

Captain Hereira explained that, of course, he said so, because he was told nothing could be done. The case was settled on board, and so he did not come any more. The Chinamen promised to give no more trouble; they were afraid when they came here to the Saibansho. He did not give the passengers permission to go on shore, because as they did not pay their passage, he did not know who he was to get it from. He had a right to prevent the passengers from going on shore. The crew, but not the passengers were allowed on shore. He cut the tails of the three passengers off, because they escaped three times, made a great noise, and tried to fire the ship, with paper, matches and straw. They were all engaged in the attempt. The three men he punished were the ringleaders. He discovered weapons in the possession of the men. Passengers have a right to carry knives for proper purposes, but not in the manner that coolies would employ them. If the passengers paid their passages they could go where they liked. The Kencho had the charter party, and there they would find that the Chinamen would pay their passage in Peru. If they escaped he would lose his passage money and the money expended on their sustenance during the voyage. None of the contracts were signed on board nor was the money given them on board and all was done before the Superintendent of Chinese Emigration. It was to his interest to feed the Chinamen well. He had enough food for 400 Chinamen and they had each more than enough to eat. Had he known that any one sold food or water to the Chinamen they would have been punished just as if they were passengers.

The Court then adjourned, and after the recess, the captain was again examined.

He said that they attempted to fire the ship about 7 days since. He did not catch them in the act of firing the ship. All tried to fire the ship; the interpreter discovered the plot and the mate went down and found that all preparations had been made. He cut the queues off the three men, because they jumped overboard, tried to escape and because they tried to fire the ship. These three men made a disturbance and were the ringleaders in all troubles. If their passage money had been paid, they would have been allowed to go ashore. The three men gave much trouble; they tried to set fire to the ship; to get up a conspiracy and for these, not only because they escaped, it was that he cut their hair. These men also had knives and when the Saibansho officers were on board they at once commenced to quarrel. They got up a conspiracy and 140 men joined them. Cutting their hair was the least punishment he could inflict. He had never beaten any of the men in port. If the Court did not believe him they could go on board and make a further examination. He cut the hair of the three men at the same time. What could he do with a ship with 250 coolies if they quarrelled and set fire to the ship? Mr. Benson had been on board and knew these facts. Of the thirteen minors on the ship he only sent twelve yesterday because the other was a girl named Maria. She had a contract, and the \$4 a month would be paid to her every month. The contract was signed by her mother. He himself would pay her. Her contract was not among those handed into Court; but it was on board. He had only that one contract. The girl's contract was similar to those in Court. When Mr. Benson was on board the coolies were making a noise.

Mr. Benson said that when he was on board there was considerable noise and confusion on board, but it only lasted a short time.

Captain Hereira said he had only to go down and stop the noise. He was only away two minutes and he neither beat them nor cut their hair off.

Captain Hereira was then instructed to come to the Court next day at 3 p.m. to sign his deposition.

The case was adjourned till next-day at 3 p.m., and then till Monday.

#### IN H. B. M.'S CONSULAR COURT,

Before Mr. Consul ROBERTSON.

Tuesday, August 20th.

J. Johnson, steward of the "Pakwan," was charged with having committed an aggravated assault on certain Japanese at Yokohama on the 31st ultimo.

Pleaded not guilty.

Nogozo said he recognized accused. He owed him some money for a long time. On the 31st. during the night, and after a visit in the afternoon, he came accompanied by other men to his house at Yokosuka and beat him.

Cross-examined. He did not call accused in as he passed his shop.

Denkitchi said he remembered seeing accused go up to the house of last witness and break the shutter but did not see him strike complainant.

Sakakibara, a policeman, said he knew the accused, and saw him break the shutters of Nogozo's house; he went up to arrest him, but accused struck him and afterwards escaped.

Accused said that one evening he left the ship and went to Nogozo's house. On going away from him he met two men who deliberately stole his hat from his head. He borrowed a cap, and on the following evening he went ashore to return the cap to Nogozo together with some more men of the "Pakwan" whom he met. He asked Nogozo if he knew the Japanese who stole his cap; he flew into a passion and said he knew nothing of it. He then ran into the street. We all then went away and King, the midshipman, and himself went to return the cap. He met a Japanese who invited him to his house. After some refreshment he proposed to go aboard and was going. They had to pass Nogozo's house, and Nogozo was standing at the door, he called them in, and he went to see what he wanted; upon that he clapped his hands and a crowd of Japanese came up and commenced beating accused; he received several blows and ran away to make his escape; he found himself in a swamp surrounded by about 30 Japanese, who all set upon and beat him with long sticks, they battered his head; he tried to crawl to a neighbouring house but the Japanese dragged him out by his legs and bound his hands tightly behind, striking him all the while; they threw him in a cell at the police station and tied his hands to the wall and he lay there all night in his blood. On the next morning the Japanese took him to the bench to wash the blood away, a doctor came and had half sewn up the wounds before he recovered consciousness; he was not drunk on that night.

George King. He did not see accused strike complainant nor break open the door. No one spoke to Nogozo; he spoke first and called accused in. He and accused were in company that night, they left the ship together. Accused was not drunk that night.

His Honour said that there was no doubt that an assault had been committed by accused, but taking into consideration the injuries already suffered by accused he should dismiss the case.

Thursday, August 22nd, 1872.

Three men, two Portuguese and one German, of the *Seaforth* were charged with repeated refusal of duty.

His Honour said, he could not go on day after day, hearing such frivolous complaints. He should remand the case until Saturday 24th, at 10, in order that the Portuguese and German Consuls might be communicated with. His Honour said he had given the decisions in recent cases in favour of the ships, but he began to think now that there must be some truth in what the sailors said respecting the discomfort of the ship.

Remanded till Saturday at 10.

Saturday, 24th August.

Messrs. Loureiro and Zappe, the representatives of Portugal and Germany, occupied seats on the bench.

E. Antonio, C. Donnel, and J. Bernardino, three men of the *Seaforth*, were brought up on remand, charged with repeated refusal of duty.

Capt. Porter said that the men, after undergoing imprisonment for refusal of duty, were brought on board. He asked them if they would return to their duty? They refused, and he sent for an officer and had them taken on shore again.

The men were severally examined by Mr. Loureiro and Mr. Zappe, and they all averred that they had been struck by the captain and mate and were otherwise assaulted by them.

His Honour, addressing Capt. Porter, said Mr. Zappe had informed him that since he had been here not a single complaint had reached him from either captains of German ships towards the crew or vice versa. It seemed very strange that the British Consulate should be the only one at which complaints were made, and he could not help thinking that the masters of British ships—at all events those that came here—were competent to deal with crews. He should order the men to be discharged from the ship.

Friday, August 23rd.

A seaman named Christopher, was charged with deserting from the *Thracian* pleaded guilty; but said he had left the ship because he wished to join the Royal Navy. He had been at the Consulate yesterday, but could not see the Consul who was engaged at the Saiban-sho.

Captain Hay said that he had left the ship on the evening of the 21st with his clothes. He had gone ashore in the morning at 9 a.m. with permission and returned at 5 p.m., but afterwards left the ship.

The Consul observed that this made it simply a case of absence without leave, and sentenced prisoner to three weeks imprisonment with hard labour.

Geo. Larbalaster, was charged with desertion. He had been absent with since August 3rd from the *Seaforth*. He pleaded guilty. The Captain deposed that he left the ship with his effects on the morning of the 2nd inst. He was arrested in a wooden shanty on the swamp kept by an American named White. They apprehended him believing him to be John on another deserter from the *Seaforth*.

Prisoner said he had been working on board the Peruvian barque some days, and the rest of the time on shore. He left because he could not stop in the ship.

Sentenced to six weeks imprisonment with hard labour.

Thomas Bray was charged by Captain Carr with refusal of duty. He pleaded guilty. Prisoner had been brought on board by the police this morning from the Gaol, his time of imprisonment not having expired. When asked if he would turn to, he said he would not do another day's work in the ship.

Prisoner alleged the captain had said before the corporal that he would pay him all his wages to get rid of him.

Constable White said that this was a man the captain was trying to get rid of on account of sickness.

Captain Carr said there were £11 or £12 due to him. The gaol expenses were \$12 50. He thought the man was sick, and Dr Buckle had told him he would send a medical certificate to that effect to the Consulate.

The Consul said: No such certificate has reached me. If I discharge you from the ship, that is just what you want, and its no use imprisoning you. I shall order you to forfeit two days' pay. Captain Carr, you will take him back to the ship, and if he refuses to do duty, put him in irons. When you have got outside the port, use your own measures to make him work.

#### IN THE UNITED STATES CONSULAR COURT.

Before Mr. Consul SHEPARD.

Wednesday, August 21st.

C. A. Ennis, a coloured barber of No. 59 Main Street, was charged with assault and battery on one J. Pietro. The assault was proved by the evidence, even the accused himself admitted having kicked complainant in the eye. His honour fined him \$10 or in default 20 days imprisonment.

A charge of assault against one J. M. Rappipot was also heard, but the evidence being insufficient to convict, the charge was dismissed.

Friday, 23rd August.

John Smith, of the *Lackawanna*, was charged with using abusive and insulting language to officers of the Police Station.

His Honour said he would not have the police abused, but in this instance, as the charge had not been brought in proper form, would dismiss the prisoner with a reprimand, and a caution as to his behaviour in future.

## IN H. B. M.'s PROVINCIAL COURT.

Before Mr. Acting-Assistant Judge HANNEN.

Wednesday, August 21st, 1872.

Wm. Somerville was brought up under an order to be deported to Hongkong in default of finding security for \$100. He was allowed to make a final effort to get employment on board ship.

John Bolton, Thomas Moore, and Andrew Hobbs were brought up to take their trial upon a charge of robbery at the house of one Kinsaburo in Homoco, and of putting his wife in bodily fear; the indictment also contained the usual counts of aiding and abetting. Prisoners all pleaded "Not guilty."

Mr. Hodges, acting as Crown Prosecutor, said that it was not as yet established who was the actual or principal offender; but the indictment would cover all. It was for the Jury to determine who was the offender and how far all were guilty.

Kinsaburo called.—He lived at Homoko and remembered the 12th July last. He recognized the prisoners. He saw them at about 5 p.m. on that day. He had some small fowls and the prisoners asked for them as a present and this being refused they offered to buy them. This was also refused and they then asked for his wife. He refused to call her and he left the house, and his wife came and told him there was robbery going on. He went back and found the men at the money box. He saw Moore at the box. He saw him take 36 tempos. Fifty-five boos in all were stolen. Moore was lying down and in getting up the money fell from him. On being questioned he said he saw the prisoners at the money box taking tempos out. He saw Moore taking out tempos. He did not see either of the other two actually taking money. He missed five and a half rios, one dollar and 36 tempos. He asked Moore to return the tempos but he refused. Hobbs struck him and hurt him considerably; they knocked him and kicked him. Hobbs was very violent, and Moore also struck him with his hand. When he had been struck he remained in the house and the prisoners ran away, he subsequently following. They then beat him again slightly and one, who had a gun, pointed it at him. Hobbs was the man who had the gun. He did not discharge the gun then. They went away and when up the hill the gun was fired but not at him. It was, however, pointed towards him. Hobbs had the gun from first to last. Going back to the robbery the witness said his wife came out of the house to him. Subsequently one dollar and one boo were picked up by a neighbour but he did not see it. The woman was at home. He told the Japanese police. He did not offer his wife to the foreigners or make any arrangement with them.

To the prisoner Bolton.—He did not leave the house so that his wife could offer herself to the prisoners; he did not invite the men into his house, but they did have some saki in his house; there was some spirit which he drank; he did not see Bolton do anything whatever; he was present, but only stood by and laughed; the men were arrested at the instance of the Japanese authorities.

To the prisoner Moore.—Witness saw him take tempos out of the cash-box; he did show him some eggs.

To the prisoner Hobbs.—When the money was stolen witness was next door; he did not first strike Moore.

Re-examined by Mr. Hodges.—He only heard that a man took off his trousers; he did not see it; he saw Moore take the tempos.

To the Jury.—He was a rice merchant; next door was a spirit house; soldiers were in the habit of going to the spirit store. Hobbs and Moore was in liquor, but Bolton was not; he did not turn them out when they first came, because, having first been in the shop, they came into his house and asked about the fowls; he often asked them to go out; when he went out he only went as far as next door, in order to be out of what looked like a row.

Chiwo, Kinsaburo's wife, remembered the 12th of July; she recognized the three prisoners, seeing them about 5 p.m. They came into her house and asked her to give them some chickens, but she did not ask them in nor did she hear her husband ask them. The foreigners were not in the habit of coming in her house. They picked up a chicken and asked for it. She refused and they then asked her to sell it. Some argument followed and her husband left. Moore and Hobbs came into the house and took off their belts. She then ran out to the back of the house and on returning back saw then with a small box. Hobbs and Moore had the box. She positively saw Moore with the money in his hand. Bolton was in the doorway. Her husband was next door. Hobbs and Moore intimidated her; both exposed their persons, and then struck her so that she still felt the effects of it. Just then she called for her husband and all three prisoners beat her husband. Her husband went away because the prisoners were so importunate in their demands for the

chickens. She asked him to come back but he refused. She knew of no arrangement between her husband and the prisoners for her use by them. Moore had the gun; Hobbs discharged it. She corrected herself and said that Hobbs had the gun and she heard the gun fired and was told that Hobbs fired it. One dollar and one boo were picked up by a woman next door and were returned to her. She did not see it picked up.

To the prisoner Bolton.—The gun was fired after her husband had been beaten; her husband did not send for any saki; there was some in the house; her husband took a little saki; she knew nothing as to any promise made by her husband to allow Moore and Hobbs to use her; he did nothing but beat her husband.

To the prisoner Moore.—She saw both Moore and Hobbs taking money; she saw Moore kick her husband; she did not hear her husband invite the prisoner to see some eggs.

To the prisoner Hobbs.—She did not know where her husband was when the gun was fired as she ran away at that time; she did not know who was in the house then.

Re-examined by Mr. Hodges.—She was not in the habit of drinking liquors.

Masatada, a constable, remembered the 12th of July, being then requested to arrest the prisoners; he arrested Moore on the hill; the wife of Kinsaburo complained that they had taken some money; the three men were together when they saw the police coming; the men were lying in the grass; one, Hobbs, had a gun; he heard a gun fired; he did not see it fired.

To the Jury.—He noticed no marks of violence on Chiwo; Kinsaburo had been beaten and there was blood on his clothes; he considered him badly hurt.

Bolton said that on the 12th July he went out shooting with Moore and Hobbs, and they went to the saki house. Hobbs and Moore were asked to go in, and they went in and gave the Japanese some gin in return for some saki. The man offered his wife for their use, and she objecting, they went up to the hills shooting.

Mr. Hodges addressed the Jury on the part of the Crown, pointing out that the evidence was very plain, and he left it in the hands of the jury to decide upon its value.

His Honour summed up. He thought that the people had not told deliberate lies. The charge was one of stealing although it might be true that there had been some arrangement about the wife, yet that of itself though it might affect the credibility of the witnesses yet it did not effect the charge. If the witnesses were to be believed Moore and Hobbs—Moore certainly—took the money and it was for the jury to judge of what took place in the house; it was for them to decide if the woman was put in bodily fear. The jury would have to decide

1st. Was any money stolen, if so, by whom?

2nd. Was Chiwo put in bodily fear, and if so by whom?

3rd. Were the other prisoners, if all were not implicated in the two previous offences, guilty of aiding and abetting.

The Jury then retired and after a short absence returned to Court and rendered a verdict of guilty of theft against Moore and Hobbs with some violence, and not guilty against Bolton. The charge of intimidating Chiwo was not sustained.

Christopher Fagan, Lieut. R. M.—Moore's character is good, Hobbs very good.

His Honour sentenced Moore and Hobbs to three month's hard labour.

## Extracts.

## THE END OF THE INDIRECT CLAIMS.

(Spectator.)

The Indirect Claims have, very appropriately, been indirectly considered and indirectly buried. The Tribunal of Arbitration at Geneva has taken them into extrajudicial consideration, before they were formally before them, and has spontaneously declared that on general grounds totally unconnected with the construction of the Treaty of Washington, they were inadmissible as international claims. That is a decision which Great Britain did not ask for and did not support, and to which, though it is in entire agreement with her Government's expressed view, she does not defer; indeed she has no occasion to regard it as in any way judicially binding upon her. But that is no reason why she may not avail herself of its first consequence,—the declaration by the Judges, with the assent of the United States, that "the Indirect Claims are, and from henceforth will be, wholly excluded from their consideration," which has been embodied in the Protocol. It is not candid of Lord Cairns to say that "the Arbitrators at Geneva have decided the particular and

special point which I thought we had all agreed they should not be allowed to decide, namely, the scope and extent of the Treaty, and the question of what should properly come under their cognisance by virtue of that Treaty." For, in the first place, the decision was not given on "the scope and intent of the Treaty" at all. The Arbitrators state that "they have arrived individually and collectively at the conclusion that these claims do not constitute, upon the principles of international law applicable to such cases, good foundation for an award of compensation or computation of damages between nations, and should, upon such principles, be wholly excluded from the consideration of the Tribunal in making its award." Nothing can be clearer, than that is not "a decision on the scope and intent of the Treaty," but an *obiter dictum* as to the general admissibility of such claims on principles of international law. If the Arbitrators had said just the opposite, namely, that such claims were admissible on general principles of international law, Great Britain would not have been bound to quarrel with the statement, though she would not have agreed with it. She would still have said, "Well, whether admissible under general principles of international law or not, these claims are not admissible under the Treaty of Washington. In the next place, the decision, such as it was, was not one which we had invited or on which we had asked the Arbitrators' opinion. It was given to soothe the feelings of the Government of the United States, which had oddly professed that it brought forward these claims only in order to have them rejected. And though they were not rejected at all by the Court of Arbitration,—for the Court as a Court could only decide on what was submitted to it by both parties,—and were rejected only by the individual and collective opinion of the persons who formed the Court, still that was a sufficient loophole for Mr. Fish's pride to creep through. Whatever may be said against Lord Granville's conduct of these negotiations, no one can fairly say that he has not maintained most tenaciously, and without the concession of a single hair's-breadth of principle, the position he so tardily took up. The feeling of the country will not only be one of intense relief that this political Frankenstein is disposed of,—probably to no one's satisfaction more than that of his unhappy maker,—but of just gratitude to Lord Granville, to whom most of us have been at times unfair, for the patient tenacity he has displayed in holding his ground.

And now, looking back to the history of these troublesome political Christmas-boxes, which for six months have darkened counsel by words without knowledge, let us point the moral of the whole negotiation. The most obvious and most important is for the benefit of the American Government,—namely, the great ease with which a grasping government,—or a government which puts itself into the hands of grasping subordinates, it matters not which,—may overreach itself, and by asking too much bring itself into anguished unspcakable, and the ridiculous position of not knowing how to get free of its own demands. We have never known anything in politics more pitiable than Mr. Fish's misery under the double necessity of proving at once that the Indirect Claims were in the Treaty, and yet that they were not put there from any wish of the United States to desert their historical policy by sacrificing the interests of neutrals to the interests of belligerents. He has been compelled by the universal disapprobation of all the international lawyers in Europe, to take up the ludicrous ground that the magnificent language in which he asked for these incalculable damages was a mere request to be non-suited; and if common rumour may be trusted, he has positively staggered under a burden of anxieties quite too heavy for him, and all of his own making. Even now, the hole at which Mr. Fish has crept out of his false position was hardly large enough for his exit, and glad as we are that he is rid of his self-made misery, it is not very easy to avoid smiling over the diplomatic make-belief of his excuse for retreating from that dismal cul-de-sac in which he has been so long bemoaning his fate.

But the result is not without its moral for the British Government also. Say what Lord Granville may on the advantages reaped by the seven weeks' delay before the British protest was made against the unexpected interpretation put upon the Treaty of Washington by the American Government, we hold that if he were as candid as we have been when we admit that we have at times unduly depreciated his steady and wonderfully suave tenacity of purpose, he in his turn would admit at once that it was the Press of this country which really put the Government up to their duty, and that they had been languid and even obtuse to the magnitude of the danger, till it spoke. Nor do we doubt that the Lords in their turn, by that debate which the Government so piteously deprecated, gave an impulse to the negotiation without which we should never have arrived at this successful issue. The errors of the Government have been the want

of quickness in seizing the situation at first, and too great and visible a desire for success afterwards. The former error was remedied by the pressure of the Press, the latter in some degree by the stimulus of the House of Lords. Indeed we suspect a happy result would sooner have been arrived at,—would have been arrived at through the success instead of in spite of the failure of the Supplemental Treaty,—if Lord Granville had shown less of that intense desire to get the Treaty into working order, which convinced the American Government that nothing was so near our hearts as to save it. Nothing succeeds like success, and we willingly admit that some of our criticisms on the negotiations must have been unduly impatient, since the method we deprecated has borne such good fruit at last. Still the turn of affairs for the better really dates from the moment when the American Government saw that there were plenty of Englishmen who did not mean to make any sacrifice to save a Treaty which was in itself a liberal concession to the United States. And though Lord Granville's complaisant inexorability has been crowned with a tardy, but perhaps on that very account not the less brilliant triumph, the plain language of the nation and the brusquerie of the Peers have furnished no insignificant quota to the forces which have contributed to this complete, though long-deferred victory.

#### THE CAUSES OF POPULARITY IN AMERICA.

(Spectator.)

It is quite evident from all the accounts received from America that Mr. Greeley's chances of the Presidency are beginning to be considered serious. Mr. Grant's friends have left off smiling, and his papers no longer treat the candidature as ridiculous. The Democrats in eleven States have already pronounced in his favour, and there is now scarcely a doubt that he will be nominated by the Democratic Convention of Baltimore. His own especial party, the Liberal Republicans or Seceders, after a brief pause of surprise, have accepted his nomination, while numbers of journals of both parties, including papers so influential as the *Chicago Tribune*, are giving him a support which is almost enthusiastic. They fight for him with a cordiality very seldom seen in politics. His name turns out to be unexpectedly popular in the West, the Pacific States are inclined to welcome him, and if General Grant is not supported very earnestly by a body of voters hitherto silent, Mr. Greeley may yet attain the summit of his ambition and be installed at the White House. Should that be the result of the contests, the election will bring into a strong light two or three facts in American politics, none of which are altogether favourable to the Presidential form of Republican government. One is, that Parliament, as we call it, is no longer the only or the best avenue to power. For twenty years past no distinguished Member of Congress has been elected President, and only one "statesman," in the ordinary English acceptance of the term, has had any serious chance of election by the whole body of the people. Either Americans do not care about legislative ability, or that kind of capacity fails to make its possessors sufficiently visible to the masses, who, as we shall shortly show, desire above all things to realise their candidate to themselves. This is a loss to the country, inasmuch as it tends to deter the ablest from seeking power through Congress, and therefore to diminish the sum of capacity in the national Legislature. Very few Members of Congress seem now-a-days to exercise a general influence over American opinion, and those few are almost invariably Senators, the leaders among the Representatives being comparatively insignificant. Another fact is the rapidly increasing power and still more rapidly increasing visibility of the successful journalists. Mr. Greeley was selected by the Cincinnati Convention, and will be selected by the Baltimore Convention, because he was the best known man in the party, the one who would attract most votes, and Mr. Greeley has gained his reputation and his power almost exclusively as a journalist. He was never held office, he has never attained the front rank as a political orator, though he speaks well, and though he has sat in Congress, he made but little figure as a debater. It is his work on the *Tribune* that he has come into contact with the masses of the electors. It is well known that if the late Mr. Raymond, of the *New York Times*, had lived, his chance of a nomination would have been a fair one, and the wide acceptance accorded to Mr. Greeley seems to prove that journalism is becoming in the States one of the surest roads to executive power. The journalist, like the soldier, comes home to the imagination of the people. That may not be bad for the country, though the critical faculty and the administrative faculty rarely exist together, but it certainly is bad for journalism, which will be more and more employed to serve political ends. The moment a journalist writes with the object of catching votes, he ceases to be free to write, becomes not a journalist but a politician, hampered and rendered comparative-

ly useless by the necessity of pleasing rather than of instructing his audience.

And the third fact is the increase in the popular preference for "plain men" as candidates for office. It is quite natural, of course, that the splendid success achieved by a rail-splitter, who happened also to be a man with a genius for government, should have increased this tendency; but it advances more rapidly than Mr. Lincoln's career will altogether explain. Mr. Adams was beaten at Cincinnati mainly by the impression that he was an "aristocrat," or as one candid delegate bluntly put it, that he "was not a man to be slapped on the back, and asked to take a drink," and the feeling comes out in the electioneering campaign in a hundred different forms. Mr. Greeley is undoubtedly an able journalist, he has culture of a kind, though it is not the culture we understand by the word, and he has much of the distinctive American humour, but it is not by any of these qualities that his friends endeavour to recommend him to the electors. Their cue is evidently to represent him as a "plain man," one who has worked with his hands, "a second Benjamin Franklin," one of those persons to whom the English labourers instinctively apply the epithet "old." They tell tales of his white hat and careless dress and gruffly frank ways, and even circulate photographs intended to make him appear more "common" than he is. His taste for gardening, perhaps the commonest of all tastes among English gentlemen, is described as proof of his simplicity, and consequent sympathy with the immense class of freeholders; while his worst intellectual quality, his liking for literary Billingsgate, is paraded as proof of his directness and hatred of refinement. All manner of nicknames are fastened on him, and they are all of one kind. He is called "Old Horace," "Old Honesty," "Old White Hat," "the Sage of Chappaqua," and "Trib." In fact, the effort of his supporters is to represent an eccentric and original person of great character, and, on many points, decidedly aristocratic ideas, possessed of a great income, and lavishly frehanded, as a kind of farmer with a gift for political management and discussion. As American wire-pullers are very shrewd, and understand their people, the necessary conclusion is that American electors do prefer a man of their own kind as President, and it is a curious speculation to discover why. That is not the taste of the masses as a rule. French democrats prefer an effeminate aristocrat like Rochefort to Nadaud the mason, probably the ablest man the Reds ever turned out; and English democrats always seem to prefer either a gentleman or a millionaire to any workman who may offer himself for Parliament. We very much doubt whether if we elected Presidents in this country Lord Shaftesbury would not be found a very dangerous candidate, and entirely disbelieve that Mr. Odger or any man of his type would have anything like a fair chance. It certainly would not help an unknown man to have been a rail-splitter, and the fact as certainly proved a great help to Mr. Lincoln, whose opponent, Mr. Douglas, by the way, tried by every kind of art to prove that he himself possessed no refinement at all, that he was "plainer" than the plainest elector. We are unable to believe that Americans are stupid enough to regard refinement as of itself a disqualification, and doubt greatly whether they dislike men in any way different from themselves. That, we know, is the popular explanation; but envy is not the characteristic of the Anglo-Saxon democracy, which has always in England preferred gentlemanly tribes, and in America shows a strong preference for men of marked and exceptional character. Jefferson, the most popular President ever elected, was an aristocrat, and self-will like President Jackson's, self-will beyond that of a Czar, has always been accepted as a recommendation in American elections. We suspect the preference for "plain men," which seems so deep-rooted that it pays to "belittle" one's own candidate's social status, arises partly from the delight which the People, like any other Sovereign, feels in making its own men, in being sole author of their fortunes; partly from the love of the dramatic, which is especially strong in the Union, because a startling rise in life seems to justify the elector's pride in their institutions; and partly from the one trait in the American character, which is not to be found in the English, the kind of hunger they feel for sympathy. The masses want their President to sympathise with them, to feel as they feel, to be themselves incarnate, and they think a "plain man" will do this more fully than either an aristocrat or a very rich man, or a man of exceptionally large culture. The are conscious of this in some degree themselves, and their politicians have invented a word to express the quality the people desire, declaring as the highest conceivable recommendation of any candidate that he is "magnetic," by which they mean that he gives those who approach or hear him an impression that he is strongly in sympathy with them. Any one who is "magnetic" is sure, they think, of election, and their effort is to describe him as such, whether he is or not. General Grant certain-

ly is not, while Mr. Greeley can be made out to be so, and the calculation is that the attraction naturally exercised by a victorious General can be counterbalanced by the attraction of a "plain man" for men who feel themselves to be very plain. The result of all this is beneficial so far as it keeps up the American impression that any man may be President—a great cause of self-respect—but most injurious so far as it tends to the ostracism of the cultivated and refined, and to the election of men like Mr. Greeley, who from want of a certain breadth of culture are liable to be suddenly carried away by an impracticable idea. The danger of Mr. Greeley at the White House would be, that if suddenly moved by any strong emotion, say his horror of the Cuban brutalities, no consideration of consequences would stop him from acts which would lead to instant war.

## Shipping Intelligence.

### ARRIVALS.

Aug. 19, *Lackawanna*, U. S. corvette, Captain Paul Shirley, 2,200 tons, from San Francisco, June 22nd.  
Aug. 19, *Volga*, French Steamer, Flambeau, 960, from Hongkong, Mails and General, M. M. Co.  
Aug. 20th, Am. Str. *Great Republic*, Howard, 3,831, from Hongkong August 12th, General.—P. M. S. S. Co.  
Aug. 20, *Costa Rica*, Amr. str., Williams, 1,917, from Shanghai, August 12th, general to P. M. S. S. Company.  
Aug. 21, *Lothair*, Brit. ship, Peacock, 794, from Foochow, July 23rd, Ballast, to Order.  
Aug. 22, *Alexandra*, Brit. barque, Norman, 300, from Hongkong August 7th, General, to Order.

Watanabe, and 3 in the steerage. For Shanghai.—Messrs. Eli T. Sheppard, F. T. Lockwood, Abijah Fitch, E. Godeaux, Genl. Robt. O. Tyler, A. D. Jessup, Professor E. Hitchcock, Professor J. H. Seelye, Vernon, and Seaman. For Hongkong.—Messrs. Jose Fabregar, E. Negrevering, and 175 Chinese in the steerage.

### CARGOES.

Per *Godavéry* for Saigon.—  
Silk ... .. 481 bales.  
Per P. & O. steamer *Madras*, for Hongkong:—  
Silk.....1,087 Bales.

### REPORTS.

The U. S. corvette *Lackawanna*, reports fine weather and light winds during the passage

The P. M. S. S. *Great Republic*, H. L. Howard, Commander, left Hongkong on August 12th at 3 p.m. August 14th were in company with M. M. Str. *Volga*. First part of passage light S.W. and W.S.W. winds and smooth sea; latter part strong S.E. winds and heavy swell. Arrived at Yokohama August 19th.

The P. M. S. S. *Costa Rica* reports having fine weather throughout the passage.

The *Lothair* came in last night with loss of masts having been in a typhoon off the Kii Channel.

The French Gunboat *Linois* reports having returned from Yokosuka yesterday.

The *Alexandra* experienced fine pleasant weather throughout the voyage.

The *Lothair* reports leaving Hongkong July 14th and Foochow on the 23rd. After passing through the Islands, threatening weather set in with increasing gales till the 30th, when they had a tremendous hurricane, during which, when under mizen staysail only, the vessel was thrown on her beam ends, the ballast having shifted; wind at the time, E.N.E. To save the vessel, the captain cut away main and mizen masts; by so doing got before the wind, and after seven days hard labour, managed to rig jury masts, but had drifted a long way to the S.E. during the time. On the 17th instant saw a steam corvette or frigate under sail; hoisted the ensign, but it was not seen and no attention was paid to it, as the ship did not stop or answer the signal. Took a pilot on board off Susaki, August 20th, and anchored here the same night.

The P. M. S. S. Co.'s Str. *America*, S. Doane, commander, sailed from San Francisco August 1st. On the 7th communicated with the S.S. *Japan*, all well; on the 16th with the S.S. *Alaska*, all well; and on the 23rd with the S.S. *Great Republic*, all well. Had fine weather during the entire voyage.

### Standing Counsel.

R. W. M. BIRD, Esq., *Barrister-at-Law.*

**Secretary to the Provisional Committee.**

JAMES GILFILLAN, Esq.

**THE** Provisional Committee being now in possession  
of legal opinion on the subject from London, have  
decided to establish the Bank by registration under the  
Companies' Act of 1862. A permanent Board of Direc-  
tion will be formed in London—as required by the Act—  
with a Board of Management in Shanghai.

The Provisional Committee therefore give notice that  
applications for Shares will be received by the under-  
signed not later than the 31st August, 1872.

It is the intention of the Committee that the business  
of the Bank shall, if possible, be commenced simulta-  
neously in China and London on the 1st January, 1873.

By order of the Provisional Committee.

## FORM OF APPLICATION FOR SHARES.

*To the Provisional Committee of*

**THE BANK OF CHINA, (LIMITED).**

GENTLEMEN,

—request that you will be pleased to allot—  
shares of One Hundred Taels (Tls. 100) each in the  
above-named Bank, and—agree to accept such shares,  
or any less number which may be allotted to—  
(such allotment not to be made before the Bank has been  
legally constituted as a limited Company), and—  
agree to pay a call of Twenty-five Taels (Tls. 25) per  
share on allotment, and further calls as may be deemed  
necessary by the Directors.

—also agree to confirm the acts of the Provisional  
Committee, pending the appointment of a permanent  
Board of Directors, and to Subscribe to the Deed of  
Settlement, when called on to do so.

— Gentlemen,

Your obedient Servant,

*It is easily dimmed—never gets out of order—saves great annoyance, trouble, and expense.*

**ROWATT'S PATENT SAFETY STABLE LAMP**

Is the only Lamp that has yet been made to burn the above Oils out of doors

With perfect Combustion & perfectly Windproof,

*It is easily managed, simple in construction, and inexpensive.*

**THOS. ROWATT & SON,**

White Lion St., Bishopsgate, LONDON, N.E.; Lothian Road EDINBURGH; Kilkenny Oil Works, ANSTRUTHER, FIFE.

**MARAVILLA COCOA.**

For Breakfast.

THE GLOBE SAYS—

"Various importers and manufacturers have attempted to attain a reputation for their prepared Cocos, but we doubt whether a thorough success had been achieved until Messrs. Taylor Brothers discovered the extraordinary qualities of 'Maravilla' Cocoa. Adapting their perfect system of preparation to this finest of all species of the Theobroma, they have produced an article which supersedes every other Cocoa in the market. Entire solubility, a delicate aroma, and a rare concentration of the purest elements of nutrition, distinguish the Maravilla Cocoa above all others. For homœopaths and invalids we could not recommend a more agreeable or valuable beverage." Sold in packets only by all Grocers of whom also may be had Taylor Brothers' Original Homœopathic Cocoa and Soluble Chocolate. Steam Mills—Brick Lane, London. d12m.

### DIED.

At Yokohama, August 30th, J. O. P. STEARNS, Esq., aged 40 years.

### THE LOSS OF THE *AMERICA*.

From the *Japan Mail Daily Advertiser*, Monday, Aug. 26.

NEVER, since the year 1861 when the steamer *Golden Gate* was burnt off Manzanilla and over 300 lives were lost, has the Pacific Mail Steamship Company suffered so severe a loss as that caused by the burning of the *America* on Saturday night last. The loss of life by the latter catastrophe is, it is true, far less; but the *America* was the finest wooden ship in the world. Built only in 1869 at a cost of about \$1,600,000, with a registered tonnage of 4,554 tons, she has since been the pride of Company, and her loss will cause many a pang of sorrow, even among those whose interests were in no way connected with her fortunes.

Our readers all know that she left San Francisco on the 1st August with about 150 Chinamen, 30 first-class passengers, a large miscellaneous freight and about a million and a half in treasure. After a pleasant voyage she arrived at this port on Saturday morning, and during the day large quantities of freight, both for Yokohama and Shanghai, were landed or transhipped, and all the treasure with the exception of \$400,000 was removed. At the same time a large quantity of coal was taken on board. In the evening, as usual, the coolies stopped work, and most of them went to sleep on the fore deck. The watchman went his rounds and reported all safe, and no one dreamed of the danger which was so shortly to befall them. At 10.15, when the writer of this left the ship, all was quiet: the officers for the most part were turned in or about to do so, and there was probably no one but the stewardess and a quartermaster near the saloon. A little before 11 the stewardess said she smelt something burning, and on a quartermaster going to look he discovered dense volumes of smoke just rising from the freight deck below the ladies' saloon. At once the fire alarm was sounded, and every man was at his post in a moment, ready to do the orders of Captain Doane, who, as good fortune would have it, was, with nearly every officer of the ship, on board, although asleep. Captain Doane was the first in the saloon with the hose, and despite the smoke, so dense that nothing could be seen of the seat of the fire, he worked against the advancing destruction with all the energy of desperation. At this time it began to be evident that the fire was one which could not be extinguished in a few minutes, and when Captain Doane was driven back, unable to stand the smoke, the thought was rather to save life than to do aught else. But still all fought on; inch by inch, foot by foot they retired as the smoke forced them back, and then, with a sudden and furious roar, burst forth the flames, filling the saloon and in fact practically deciding the fate of the gallant ship. To flood the magazine was Captain Doane's next desire; but so far as could be learnt from the officers, this was not done, it being impossible to reach the magazine, owing to the smoke, which, by this time, had advanced even to the bows; the wind, however, leaving a few feet clear in the very eyes of the vessel. Captain Doane, still intent upon his duty, tried to go forward to see what could be done, and he contrived by an energy inspired by the approach of death to reach this one safe spot. Once there the flames rolling onward

compelled him to jump overboard. Either from the effects of the high leap or the inhaling of the smoke Capt. Doane, as he struck the water, found his legs paralysed and himself unable to swim. Twice he sank and none were near to help him, but on rising for the last time, the friendly hand of Capt. Williams of the *Costa Rica* grasped him by the collar and he was saved. He was at once taken on board the *Costa Rica* and restoratives were applied, by the aid of which he gradually revived, and by Sunday morning he was comparatively restored to health though suffering much from the effects of the smoke.

But to return to the ship. The officers seeing that all that could be done to save the ship would prove ineffectual turned their thoughts to saving the passengers, and the Chinamen, a few of them with their baggage, were soon sent down the gangway into the boats which had been lowered. But so great was the crush, and so many Chinamen crowded on to the ladder, that it gave way, and about 50 Chinamen were precipitated into the water. Of them many were picked up; but as all those who were still on the ship had to jump overboard, and as many could not swim, a great loss of life ensued. Up to Sunday evening, however, only five or six bodies had been found, but as our readers will subsequently see many more have since been discovered. The passengers safe, the officers themselves jumped overboard and, so far as we could learn, all were saved without difficulty; some doubts, however, being expressed with regard to two men, Stevens, the third mate, and Barker, the engineers' storekeeper. It was some time after this that Captain Doane left the ship.

By this time the flames had enveloped the vessel from end to end, and crowds of persons put off in boats to witness the sad scene and if possible to save the lives of any unfortunate beings struggling in the water. To do any thing to save the ship was impossible. She was inevitably doomed to burn to the water's edge unless indeed it should be found possible to scuttle her. This was indeed attempted; several launches put off from the men of war with howitzers, but the effect of the shot on the sides of the ship, three feet thick at the water line, was like that of a pistol bullet against a stone wall. The shot fell back into the water scarcely doing more than denting the sides of the great ship.

Time went on; the flames roared with incessant fury; but the ship still towered above her fellows, and presented a spectacle of surpassing splendour. Her hurricane deck was consumed; her main deck followed; but still she towered above the surrounding vessels. The flames were searching every nook and crevice in the ship. They had penetrated into every part of the hold, and the coals, burning with inconceivable fury, rolled up vast columns of smoke out of the smoke stack, which, like the masts, still stood erect and defiant. Bye and bye, as the fire crept down, and rushing out of the port holes, licked the sides of the ship, the mizen mast, burnt through, fell; some time after the foremast followed, and then about 2 a.m., the mainmast. Now nothing rose above what was once the main deck, but the rudder post, the fore binnacle, and the machinery and funnel. Soon the binnacle went and then the bell, burnt from its fastening, tolled a dying knell and fell with a sound heard above the roaring of the flames, while ever and anon the cartridges on board burst with the rattle of a mitrailleuse. Then the fastenings of an anchor at the bow were burnt through and it dropped with a splash into the water, followed by the chain red hot and almost melted out of shape. About this time much fear of an explosion was entertained, it being thought that the magazine was still dry and that the boilers would explode.

But although the steam from the donkey engine rushed out at the fore port, with a fury heard above the roar of the flames, no explosion took place. The sight as viewed from the *Costa Rica* at 3 a.m. was a sad one indeed. The fine ship, the largest wooden vessel in the world, destroyed, as it were, in a moment, and no matter how willing, none could help her! At 3.30 the fore guard fell with a crash, carrying with it an iron boat which rested on it and with a roar fell into the sea; the after guard followed with another boat, which actually white hot, sent up a cloud of steam as it fell into the water and sank. Then the flames attacked the wheels, and the paddle boxes of wood were soon lost, leaving the iron work exposed to the fire, which, however, could only excite their glowing defiance. Not so the walking beam, which becoming unloosed at one end, slewed round, and turned the wheels one last half turn, the last of a series of so much success and pride.

And still she burned on. The fire gradually crept down, the ship rose from the water as she burned, till as daylight came she was one body of flame. Then the glare of the bright flames paled, and those who had spent the night on the *Costa Rica* returned on shore. Just as they arrived the fire reached the powder magazine; but its contents being flooded by this time burnt gradually and harmlessly. And so all day she burned, till the advancing rain and wind somewhat quenched the determined blaze. And then it was decided to let her drift over to Kanagawa, and, loosened from her moorings, she was towed off, but unfortunately on her way fouled three ships, each of which was somewhat damaged. And now she lies sunk in the harbour off Kanagawa with only her protruding funnel and side wheels to mark her resting place, a sad memento of what fire may in a few hours do to one of the finest works of man.

What is lost in her we cannot estimate. The treasure safe remain uninjured; and this alone contained \$400,000. The officers of the ship lost all they had, while the saloon passengers, only two of whom were on board, lost everything, except the clothes they wore.

The origin of the fire is entirely unknown. It broke out as we have said in the after hold, but its cause is a mystery to all.

Such are the circumstances connected with this sad event, but we cannot conclude without saying one word as to the officers and indeed all concerned. Captain Lane and Captain Doane were untiring in their efforts, while every officer worked as if imbued with that same spirit of gallantry which animated their chiefs.

August 27th.

SINCE the above was written, but few facts concerning the loss of the *America* have come to hand. As to the origin of the fire, doubt still reigns, though it is not improbable that the fire was caused by a coolie or some native smoking, and accidentally emptying the ashes of his pipe within reach of some inflammable freight. The cargo or fire smouldered till the smell of smoke induced a search, when a draught was at once created and the flames burst out and spread. We would say, however, this is only a supposition.

With respect to the loss of life we regret to find that three Europeans are missing. Stevens has turned up, but Barker, the second cook, and the steerage watchman are missing, and we fear drowned or burnt. It is known that about fifty Chinamen were lost; but as all were scattered after the fire, no opportunity has as yet been afforded for the number of the missing to be ascertained. The officers and crew have now all been quartered in the various hotels, and the Chinese passengers have also been afforded excellent accommodation.

During yesterday a report was spread to the effect that most of the officers were on shore; that a gross want of discipline was evinced on the outbreak of the fire, and that great carelessness was shown in not towing the ship away when she caught fire. These reports are as false in suggestion as in fact. All the officers but the doctor were on board, and within a few seconds of the alarm being given all were at their respective stations. It was impossible to approach the ship within a very few minutes after the outbreak of the fire, and no effort to tow her off would have been successful, and even if so it would

have been dangerous in the extreme to tow a burning ship in a crowded harbour. When it was found that the ship must be lost the first thought was to avoid any damage to the other vessels and the wisest course was undoubtedly adopted. When the ship was at last towed over to Kanagawa, no one, even then, could board her, and the anchor which fell overboard during the fire dragged on the ground, thus rendering her unmanageable, and despite the greatest care being exercised the collisions which took place were inevitable. We may mention that the actual amount of the treasure on board was a little over \$375,000. This will be saved, as the treasure chest is easily available. With the ship nothing will be done till advices are received from New York.

August 28th.

It has now unhappily become evident that the five deaths we chronicled on Monday do not nearly cover the total mortality consequent upon the loss of the *America*, for during the whole of yesterday numbers of dead bodies were found floating about the bay. It appears that out of 250 persons 204 have been actually accounted for, while some others are known to have been saved and to be living with their friends.

On Tuesday morning the P. M. S. S. tug was employed in searching the bay for dead bodies, and by noon about sixteen had been brought ashore, only one woman being among the number, the body of Barker being also discovered. From an inspection of them it appeared that nearly all the men were heavily weighted with gold \$20 pieces. This doubtless caused them to sink when they first fell overboard, their bodies not rising until filled with gas. A gun was taken on board the tug to fire, it being a well-known fact that a body, when slightly decomposed, will rise to the surface if a gun be fired over the spot where it rests. In this way seventeen bodies in all were discovered and brought ashore near the P. M. S. S. wharf, and arrangements were at once made for their burial, coffins being constructed for the Chinamen at the expense—when required—of the P. M. S. S. Company. These, with the five before found, make a total of 22. The appearance of the bodies as they lay on the sand was one which we prefer to allow our readers to imagine—suffice it that all were burnt and scorched, but apparently all died from drowning. Nearly all had money in their clothes, and there seemed to be a general desire on the part of the Chinese passengers to claim those bodies evidently heavily weighted with dollars. Great care, however, was exercised by Mr. Brown, of the P. M. Company, to prevent any stealing, and two men who had taken \$400 away from two bodies, which they asserted were those of their relations, were compelled to place it in Mr. Brown's hands pending investigation. At 4 p.m., the body of Barker was interred, and the burial of the Chinese will take place as soon as possible. The woman who died was, when we last saw her, decked out for burial, while her relations performed the customary religious ceremonies. This was the only instance in which we saw anything like a natural feeling displayed; one man, indeed, was remarkably anxious to get his "cousin's" money and a handsome ring which he wore, intimating, moreover, that he must have the money before he bought the coffin.

We have also to add to the list of mortality in the burning of a Chinaman and his child (her mother being a Peruvian), while another child is now at the hospital very severely burnt, though we apprehend in no danger. We should also add that the body of Barker was very badly burnt; his death having been probably caused by suffocation in the hold of the ship.

With respect to the absence of the Doctor, it should be mentioned that he was on shore in attendance on an invalid passenger, and had in point of fact only left the ship with our reporter a short time before the alarm was given.

It has not yet been mentioned in our columns that the Hong-kong mails were burnt, and it is also worth noting as a singular coincidence that the steward of the *America* was also steward of the *Golden Gate* at the time she was burnt in 1861.

At present there yet remain the bodies of several more Chinamen to be discovered, and also those of the second cook and steerage watchman. These will doubtless be found during to-day.

Since the above was written, an inquest has been held on the body of Barker. He was identified by all the officers of the ship, and a verdict was returned by Messrs. Church and E. Smith to the effect that the deceased died of either burning, suffocation, or drowning.

We also hear that Captain Lane estimates that there were on Wednesday evening a number of bodies yet undiscovered.

(August, 29th.)

THE search for the bodies of those lost by the burning of the *America* was continued yesterday, unfortunately with too much success. Twelve were found over at Kanagawa, another near Mr. Dare's house and several others at both Benten and Homoko. The sum total of bodies recovered up to this morning amounts to fifty-one. The body of the European cook has also been found, as has that of a China cook, who, it is reported, had about \$3,000 on him at the time of the fire. When recovered not a picayune was to be found, and his friends charge the Europeans at Homoko with having committed the robbery. How far this is true no one knows, and the same applies to a statement to the effect that the Japanese at Kanagawa robbed the bodies which went on shore in their neighbourhood.

It is said that the Chinese guild has passed a resolution condemning the conduct of the officers of the ship, and asserting that the death of their countrymen was the result of the negligence and carelessness displayed.

A visit to the wreck, as it lies over at Kanagawa, reveals a most sad picture of destruction and desolation. That great ship, once without its equal in wooden vessels, now lies burnt to the water's edge, with the water washing the sand up in every crevice and crack. She lies from stem to stern under water, with the exception of her bows, stern-post, and upper machinery, while the starboard paddle-box has floated away, and grounded some ten feet from the stern; the stem was still smoking at 4 p.m. yesterday. Along the sides of the vessel the diagonal braces, which once bound the planks together, are bent over on each side towards the middle, and would seem to present a formidable obstacle to recovering the treasure. Still we are told that the divers, who are already at work, have reached the tank, and there is no doubt that its contents will be eventually recovered.

The machinery seems comparatively little injured. The walking-beam and other heavy portions of the engine are discoloured and loosened from their bearings, but neither they nor the shaft are broken. But the connecting rods and iron supports, &c., are all curled and twisted into the most extraordinary shapes. The funnel still stands, but a gang of men are employed removing it. The paddle-wheels, too, are intact, the starboard wheel being quite under water, but the floats are nearly all much burnt and charred. The vessel has a decided list to starboard. The copper of the vessel is but little injured, only the first row of plates being burnt. The stern is just above water, the wood being charred nearly through, while the rudder-post, which once stood on a level with the main deck, has sunk considerably below the line of where was once the freight deck. The paddle-box, which stands by itself, is scarcely burnt at all in places, the paint on the outside not being even blistered.

At present every effort is being made to recover the valuables and treasure known to be in the ship, and we hope that in a day or two we shall be able to report that these efforts have met with success.

An official enquiry into the causes and incidents of the calamity is to be instituted, and commences this day. Its proceedings so far will be found elsewhere.

(August, 30th.)

THE bodies of two Chinamen who were lost in the *America* were discovered yesterday; on one was found the sum of \$3,000.

Scarcely had the excitement caused by the burning of the *America* somewhat subsided on Sunday afternoon, than a typhoon sprung up to induce another. The barometer fell to 28.30, but beyond tearing up the Bund no damage of importance was done.

CAPTAIN THOMPSON, of the *Devana*, has kindly furnished the following reading of his barometer during the storm on Sunday, August 25th :—

	Wind	Bar.
10 A.M. ....	South	29.70
3 P. M. ....	S. S. E.	29.50
4 P. M. ....	S. E. $\frac{1}{2}$ S.	29.40
5 P. M. ....	S. E. by E. $\frac{1}{2}$ E.	29.30
6 P. M. ....	the same	29.10
7 P. M. ....	S. E. by E.	28.70
7.30 P. M. ....	S. E. by E.	28.60
7.45 P. M. ....	A lull	28.50
8 P. M. ....	Shift to N.W. in a calm	28.60
9 P. M. ....	N. W. by W.	28.90
9.30 P. M. ....	W. N. W.	29.10

WE have been forced to confine our remarks this week upon the detention of the *Maria Luz* to the general question which it raises. The judgment of the Japanese Government upon Captain Hereira will be found elsewhere, together with a statement showing the action of the various foreign Consuls in regard to it.

CONJECTURES will be rife as to the effect of the typhoon on Sunday upon the railway works. It is therefore gratifying to have to state that the line between Yokohama and Shinagawa remains perfect, without fault or flaw. The embankment between Shinagawa and Yedo was exposed to the full force of the wind when it shifted to a northerly direction, but suffered in no other respect than that a little ballast was washed from under the ends of the sleepers. This was repaired with less than an hour's work, and the ballast trains were running Monday morning.

The trains were run to time as usual on Sunday, and not one was stopped or delayed by the fury of the storm.

Ample provision has been made for the late great increase of traffic, and the regularity with which it is conducted must be held to show satisfactory management of the line.

WE stated some time ago that a project was on foot for converting into a public library for the city of Yedo a collection of books which had belonged to the Tokugawa Shoguns, and were mouldering away in certain godowns inside the Castle. These books have now been removed to a building not far from the Education Department which will be open to the public, on the payment of certain fees from the third of September. We publish a translation of the rules elsewhere.

THE steamer usually called *Joshiu Maru* by foreigners is the *Riujō-kan* to natives; the builders in England were not furnished with the correct spelling of the word Riujō, and painted Jho Sho on her stern, of which Joshiu is a corruption. Kan is the termination used to distinguish men-of-war from transports and merchant vessels which are called Such-and-such a *Maru*.

The steward's boy who deserted from the *Lackawanna* has been found in the Yoshiwarra. He had on his person \$160 out of the \$200 he took with him.

The *Denshin Maru* is making preparations to go south with the cable for the Simonoseki Straits. She has already taken on board one mile and three quarters of cable which measures nine inches in circumference.

By the death of Mr. J. O. P. Stearns, Yokohama loses one of its oldest inhabitants. The port was opened in July 1859, and Mr. Stearns came here in January 1860.

The Japanese Government steamer *Thabor* will leave in a few days on a tour of inspection in the south.

WE publish elsewhere Mr. Consul Gower's Trade Report for Hiogo and Osaka for the year 1871. We must defer the publication of the accompanying tables until next week.

It is well to caution the public against the acceptance of such letters as that which appeared a few evenings ago in the *Gazette*, purporting to have been written by Dr. Livingstone. If that letter came from his hand, there is an end of all speculative criticism from internal evidence. Vulgar, egotistical, meagre, and essentially poor and bald in diction, it differs entirely from the style exhibited in his works, which is extremely vigorous and always full of his subject—never of himself. A more palpable forgery never was palmed off on the public, be the origin what it may. There can be little doubt, we think, that Livingstone has been found, though even this must not be taken as entirely certain.\* The next six months will probably produce a large crop of such letters, though it is not easy to find words sufficiently strong to condemn newspapers which, knowing them to be false, as they must, publish them as genuine. We are glad to see that suspicion has already been aroused in England, and we hope it will not relax its vigilance for a moment until the question has been settled on grounds which place its solution beyond dispute. Meanwhile, though it is impossible to pronounce positively on what is genuine, it is easy to pronounce on what is manifestly fraudulent.

MANY of our readers doubtless know that a road is being constructed in Yezo, but few are aware of the details concerning it. The road starts from Hakodate, and going almost due north, crosses a high range of mountains to Sawara. Thence a steamer will run across Volcano Bay to the small village of Moororan, comprising in all only about fifty houses, and situated at the entrance to Endermo Harbour. Thence the road runs in a north-easterly direction through a flat country to Yobutzi. From this a northerly direction is taken to Sapparo, the new capital of Yezo, situated on the river Ishikari.

The construction of the road has been entrusted to Major Warfield, on General Capron's staff. It will be well finished, with gutters on each side, and will be macadamized throughout. At present not much more than twenty-five miles have been completed, the loss of the *Tokei Maru*, having on board tents, tools, and a variety of implements, having thrown them back considerably. Altogether, the length of the road may be roughly estimated at about 100 miles the gradients being easy throughout.

We hear it reported that two paddle-wheel steamers are building in America for use in the north, one to run across Volcano Bay, the other to run from Hakodate to Awomori.

WE observe that the charge of assault brought at Hiogo against Lieut. Emory and Dr. Tryon of the U. S. Navy before the American Consul was concluded by the case against the former being withdrawn and a small fine inflicted on the latter.

Cobbett said that the Liberty of the Press would involve the Liberty of the Cudgel, and the proprietors of the *Hiogo News* were justly punished for the publication of insults against Dr. Tryon, which are all the more infamous that they are written by one who skulks under the mask of an *incognito*, and who an hundred fold deserves the chastisement which he is only too content should fall upon others.

#### THE COOLIE TRADE.

IN fighting this coolie trade we fight very much in the dark. We are opposed by unknown assailants of undetermined numbers and armed with base weapons. It is a trade the opposition to which might fairly have been expected to enlist the warmest sympathy of Englishmen, yet we find men claiming to be Englishmen degrading the question to a mere personal matter, rioting, as only ignoble natures can, in personal details respecting the controversy and its incidents, and showing that they are as insensible

to the appeals of truth as they are to the promptings of humanity.

Nothing but idiot gabble!  
For the prophecy given of old  
And then not understood,  
Has come to pass as foretold;  
Not, let any men think, for the public good,  
But babble, merely for babble.

This is the only criticism which seems to us adapted to the comments which have found their way into print this week upon such part as we have taken in this question. But it is deplorable that this mere geographical severance of men from their native land and its immediate moral influences should crush out their inherited instincts, and make them traitors to responsibilities which, elsewhere, very shame, if nothing else, would have forced them to recognize.

The position seems to us this. This coolie trade is attended with horrors and iniquities such as realize the old days of the slave trade. The Governments of Europe for the most part, and that the United States have acknowledged this. Petitions to and debates in Parliament, representations in Congress, official correspondence without end, accounts of horrors which have never been surpassed, sights and scenes under men's eyes which have recalled all that was worst in the old negro traffic, all these things have awakened the conscience of the world to the evils inseparable from the trade, and cry aloud to Heaven and to humane men, who are Heaven's instruments, to put a stop to it. Every additional exposure of its nature is so much gained to the cause. Every fresh protest against it is an additional blow levelled at it. Every fresh blush it causes to those who conduct it is a fresh acknowledgment of its hateful nature. In this question it is not lawful for the mind to sway to and fro. Entire steadfastness in the attempt to repress the trade is the only attitude worthy of us. Here, it has accidentally become the question of the moment, and it would be obvious folly for us who have but slight pretensions to more than a local existence to make it a subject of constant remonstrance. But as the question of the moment accidentally brought before us, one course alone seems open to us, and this we have followed. It is not merely a question for lawyers. It must, indeed, be dealt with according to forms of law and the rules of international observance. But the indestructible sentiments of humanity claim a hearing in the case, and insist that their unlettered force should also be acknowledged. We cannot shut our eyes or close our ears because we are told we must not see and it is unlawful to hear. If lawyers in this case represent the agreements arrived at between nations as to rightful methods of proceeding, we must be content to represent only the instincts and appeals of simple humanity. We shall not deny the importance of their functions; but we cannot forgo the exercise of our own.

It is useless to tell us in the face of all the evidence which has been adduced on the subject that this or that observance in respect of the trade ensures its being properly conducted. We are told that before the ships sail the coolies are mustered and individually questioned as to their willingness to carry out the contracts which it is professed they have signed. But knowing what we do of the manner in which they are constantly entrapped, is it to be supposed that they dare assert their free will at such a

\* Telegraphic despatches now place this beyond a doubt.

moment? The men who have kidnapped them are still on shore, and can dog their footsteps from the moment they land. What scruples is it presumed should deter them from this course? What chance of resistance has a poor wretched simple creature, brought down possibly from the interior, separated from friends and deprived of assistance, possibly speaking a dialect utterly incomprehensible at the port of shipment, when in the hands of his old oppressors? He has already had one taste of their tender mercies; what wonder if at the last moment his tongue gives the lie to his heart, and, like an innocent man under torture which he cannot sustain, he confesses to what is false. His fears are stronger even than his desire for freedom, and, in dread of what might befall him ashore, he gives his last fatal consent to the instrument which consigns him to slavery and in all probability to death. This is what we meant by saying that no proof can be adduced to show that the contracts are not fraudulent and are not extorted by intimidation of various kinds. The nature of the case obviously does not admit of such proof, and if in a somewhat *brusque* note to Mr. Loureiro's letter—wherein, if we wounded his feelings, we are heartily sorry—we showed some impatience that any documents or declarations whatever could be held as proofs, that impatience had reference to them as regarded, not from an official, but a purely philosophical standpoint. The consecrated wafer has been the means of administering poison, though the priest through whose hands it passed may have been guiltless. The visits to the ships of fifty Port-captains and the signatures of an army of Governors can only prove that these officials have obeyed their instructions and mechanically carried out their duties. Presuming them to be honourable men, they have exercised such vigilance as the nature of the case permits. But more they cannot do, and it is in this very fact that all the evil lies. They cannot prevent the kidnapping; they cannot know the threats of death or torture to which the victims of this trade have been subjected. The facts which lie on the surface they can see; but what this surface conceals they cannot see. What do the very last telegrams from China announce? That "the Canton authorities are diligently hunting down the coolie kidnappers." But where are the kidnapped coolies? If every one of them were returned, the trade would no longer be profitable. We insist that the trade from its very nature involves this special iniquity, and that the precautions taken against it are neutralised by the very conditions of its existence.

We insist, also, that no such proofs can be adduced which can satisfy the minds of men accustomed to probe things to their depths. You may make regulations on these matters and conform to them. You may have them administered by honourable men, whose consciences may be satisfied that so far as they themselves are concerned, they have done their duty. You may tie a thousand knots and multiply your regulations until you seem to have left no possible opening for injustice and compulsion. But if your regulations encourage the existence of the receivers of stolen goods, you call into being a race of thieves; and the worst of thieves are those who steal men.

As regards the position in which the Japanese Government has placed itself by its action in the case of the *Maria Luz*, to be once thorough and logical it must choose one of

two alternatives. It would be ridiculously partial and unjust to send back eleven men to China, and compel the remainder, many of whom may have just as fair a claim to be returned, to go on to Peru. To make the accident which brings one man's case a little more forcibly before the public than that of another man the ground for a radically different treatment of those cases, without thorough investigation into the merits of both, would be highly unjust. The eighteen men on whom the tower of Siloam fell were not sinners above all men that dwelt at Jerusalem; neither are the eleven of the *Maria Luz* whose cases seem worst the only aggrieved men among her freight. The Government has landed the coolies, and has examined, though perhaps informally, the contracts under which they are held to servitude. By what law can it compel them to re-embark? Can it regard those contracts as valid and binding? Can it not rather, in view of the known nature of this trade, take the noble position which the English and American Governments have taken, and declare such contracts from their nature to be null and void? They may be made with adult men, but not with men who do, or can, know the nature of them; they have barely intelligence and certainly have not knowledge enough to enable them to understand the nature of the obligations imposed by those contracts. In this respect they resemble children, and contracts made with children are from their nature regarded as invalid. The Japanese Government could assume this position and refuse to compel the coolies to return on board. It could then reship them for China, and stand to consequences in which it would have the sympathy of all the world except Peru and Portugal. It is not too much to say that the agitation on the subject of the coolie trade has become universal, and one opinion only prevails in respect of it. Japan may show that she shares this opinion, and is prepared to carry her views into action.

She has no code of laws, as we understand the expression. She acts upon her instincts; and these instincts have proved themselves sound. Let her, in one great axiom embodying principles of freedom which will amply involve this position for which we plead, lay the foundation of the new code she is now preparing. Let her declare that such contracts are from their nature without force; that in no form, open or disguised, will she acknowledge the slave trade; and that if men held in such duress as are some of these coolies come into her waters, they shall be free. Let the instincts on which she has now acted take the form of an Imperial Edict. The Cabinet could not be reproached for acting on a retrospective law, for the principles embodied in that law were already operative, and the very action of the Government, antecedent to all such formal legislation, proves it. If Peru claims compensation for the delay of the ship, and impartial arbitrators award her this, let Japan pay it. But if she claims indemnity for wounded honour, let Japan refuse it; and trust to herself, her cause, and the sympathy which her action will arouse throughout the world.

#### THE LOSS OF THE AMERICA.

THE destruction by fire of the steamship *America* is nothing less than a national calamity. She was the pride of the company to which she belonged and whose

most precious jewel she was ; the representative specimen of a noble science on which human ingenuity and the resources of art had been lavished with an unsparing hand ; a triumph of man's mastery over nature ; a splendid illustration of the skill, the energy, and enterprize of a great people. As her stately form appeared in our Bay, with a precision akin to that of one of the heavenly bodies, she filled us all with pride and admiration, and moved a generous sentiment in every breast towards the nation whose flag she bore. And if this sentiment glowed while she yet floated, much more is it excited by the sight her gaunt skeleton now presents. In prosperity we discuss and debate, and sometimes words are written or spoken which differences of view or of temperament seem to render harsh and gratuitously antagonistic. But as the warmth on one side, so the warmth on the other ; and when adversity comes, all feeling but that of sympathy is suppressed. The blood that is thicker than water rises, the unarguing hand is outstretched, the force of kinship asserts itself, and all thought of mere superficial variance vanishes like dew in the warmth of the noon-day sun. The relations between this community and the Company of whose fleet the *America* was the pride have passed from the hard region of political economy to that of personal attachment. The relation is no longer that between the mere shipper and carrier. Many of us see in some one of these steamers the floating caravanserai which constituted our home during the longest unbroken voyage which any steamers can take—a voyage beguiled by all that genial fellowship can do to beguile it. The hand of the Company is everywhere, and it scatters benefits with the impartiality of Nature. It does the carrying trade of Japan ; it promotes the mining enterprize of Nagasaki ; has placed the Island of Yezo in close intimacy with the capital of the Empire ; assists in the maintenance of a multitude of native labourers at each of its ports of call ; and, above all, has brought us into close contact with "that precious stone set in the silver sea," towards which some of us so ardently and unceasingly yearn. These benefits are not measured by the passage of gold from hand to hand ; they are not terminated with the discharge of a bill of lading or the fulfilment of a contract. Sentiments cling to them which warm, we might almost say, into close personal attachment ; and as we have learned to rejoice with the Company in its successes, we cannot forget to grieve with it in its adversity.

And adversity has now overtaken it. The pride of its fleet is no more. Its organization is crippled by the lopping off of a splendid limb, the mere bones and indestructible sinews of which alone remain to attest its gigantic strength and proportions. Its "Mountain of Light" has consumed itself in one costly blaze.

Of the origin of the fire, of the cause of the wholly unparalleled rapidity with which it spread, of the obstacles to its suppression or its limitation only to one part of the vessel, nothing is yet known ; and it would be wholly unbecoming to enter upon any speculations on the subject until the Court of Enquiry which commenced sitting to-day has made its report. But in view of the great loss of life which has attended this most unhappy accident, a loss of life which took place within five hundred yards of the shore in a harbour teeming with small craft, and in which no less than seven men of war, representing five different

nationalities, were lying, the responsibilities of this Court cannot be underrated ; and we trust that it will, at whatever expense of feeling or prepossession, investigate the whole matter under a deep and real sense of those responsibilities. We speak earnestly in the interest of the travelling public, of America, and of the Pacific Mail Company itself, in urging that the enquiry be of the fullest and broadest nature, unswayed by any lower motive than to arrive at—if necessary, to extort—the whole truth, and determined to do so. There are circumstances attending this loss of life and property which go far to explain it ; how far they excuse it is a matter on which any speculation would be as premature and improper as any attempt to prejudge the case in any other direction. All that we can do, after urging this deep sense of responsibility upon the Court, is to express a warm sympathy with the unfortunate Chinese who formed the majority of the victims, with the Company which has suffered this severe blow, the officers and crew of the vessel, and the country to which she was a source of so much legitimate pride.

#### THE DEATH OF JAMES NOBLE.

WE have to call the attention of Her Majesty's Chargé d'Affaires to the following circumstances.

In the middle of this month, the sultriest of the year, a British subject, NOBLE by name, was sentenced by Mr. WILKINSON, acting in his consular capacity at Osaka, to seven days imprisonment for some offence for which that term of imprisonment was supposed to be the proper punishment. There being no English jail at Osaka, NOBLE was confined in the Japanese prison, of which the following description is given in a letter signed *Scrutator*\* addressed to one of the Hiogo papers :—

*We then visited his prison, and there a sight and smell of filth met us that is difficult to describe, and which would have tested the strongest stomach. The cell was 6 ft. long by 5 ft. 6 in. wide, with a door on one side 1 ft. 10 in. by 2 ft. 1½ in., which was the only ingress. In one corner stood a urinal—about 8 inches from the opposite corner is an opening 15 in. by 4 in., used as a water closet. The stench of this cell was almost unbearable, and the heat intense, the thermometer ranging over 100 F.*

Another account says :—

The lock-up is one of two low sheds, each some 30 or 40 feet long situated in a small compound near the Custom-house bridge. One of these sheds is used as a stable, being separated only by a narrow passage from the jail. In the latter are two wooden cages, one of which is much smaller than the other. It was in the latter that, according to Mr. Miles' evidence, the poor dazed prisoner chose (how kind to let him choose it!) to be placed. The dimensions are much as your correspondent "Scrutator" stated, being about 6 ft. square, and the height from the floor to the bars under the boarded ceiling is about 6 ft. 2 in. The roof of the shed is some feet higher, and there is a narrow passage running between the walls of the shed and the bars of the cage, and also between the two cages. The bars are 3 inches square and are 3 inches apart. The floor of the cage is curtained ; first by a low trough or sink, about 20 inches by 18 inches, for washing upon, in one corner, and by a kind of partition about 3 feet high, which projects a distance of two feet from the middle of the opposite wall. To the right of this partition, and in the opposite corner to the sink, is a long narrow slit in the flooring, which is neither more nor less than an open privy. By this it will be seen that, practically, the unfortunate occupant's movements are restricted, when lying on the ground, to a space very much less than 6 feet square. The door is just such an one as you would see in a menagerie cage, being about 2 feet square, and close to the floor.

NOBLE was sent to this den on Tuesday the 13th of August, and died in it on the 18th early in the morning. At the inquest held on the body, it was deposed by one MILES, who appears to be the constable of the Consulate at Hiogo, that NOBLE when taken to jail seemed satisfied with his quarters and chose his own cell. On the night of the 15th it was deposed by one of the jailors that the

\* It is a thousand pities that instead of putting a Latin name at the foot of letters of this kind, men do not put their real names and addresses.

prisoner began to show symptoms of violence by beating on the prison bars. The following day he seemed to pass more quietly. On the night of the next day he was violent at intervals, but towards daybreak he grew quiet and his breathing short. A doctor was sent for, who pronounced that he had been dead some time, and that apoplexy was the cause of his death. One of the jailors deposed that NOBLE had been violent during the night previous to his death, but that about daybreak he grew very quiet and breathed short and with a gurgling sound, and while he (the jailor) was looking on, NOBLE expired. The verdict delivered at the inquest was in accordance with the medical evidence, and three Englishmen sitting as Jurors were found to assent to this verdict without the addition of a single word to it. The settlements of Hiogo and Osaka and described as being in a state of extreme indignation at the occurrence, but it is remarkable that the Press seems paralyzed under the responsibility of bestowing the blame on the right quarter. A letter published in the *Hiogo News* from its correspondent in Osaka puts the blame on "the system which permits Her Britannic Majesty's Consuls at Hiogo to monopolize the whole of the European Staff voted for Hiogo and Osaka." "Mr. WILKINSON," the same correspondent says "did but do his duty, <sup>†</sup>for it is to be hoped he had no conception of the horrors he was condemning his unfortunate countrymen to." Next he blames the prosecutor of NOBLE for protecting his servants against such acts as that for which NOBLE was punished, viz., beating those servants—an act for which he was clearly punishable. The *Hiogo News*, in an editorial, makes some feeble and fulsome excuses for Mr. WILKINSON, such as might be expected from a paper which fills its columns with the sewage of Yokohama scandal; the *Hiogo and Osaka Herald* we have not yet seen on the subject.

We shall make no such difficulties. We shall ask whether Mr. WILKINSON knew the nature of the place in which he had ordered NOBLE to be imprisoned, and if not, whether it was not his duty to make himself acquainted with this previously to issuing his warrant. NOBLE was a strong man when he entered the prison on the 13th; on the 18th he was taken out of it a corpse; and we attribute his death to his imprisonment in a jail unfit for the reception of Europeans during the month of August in this country. We regard the verdict as one of a most craven and unsatisfactory nature, and the conduct of the Hiogo Press as of a piece with it. The causes of NOBLE's death were investigated at an Inquest on which three Englishmen sat as Jurors. They must have seen the prison in which he was confined and of which we have given a description, and that prison was not only not one in which an European should never have been placed, but it was one calculated to produce upon an European the very results it did produce. We shall therefore record our verdict upon the case, and we trust it will have the effect which we intend that it should have. "That JAMES NOBLE died of apoplexy at Osaka on the 18th day of August in the Japanese jail, in which he was imprisoned on the warrant of Her Majesty's Acting Consul Mr. Wilkinson. There is no evidence to show that Mr. Wilkinson knew the nature of the cell into which the said Noble was consigned by his orders, but that he was gravely culpable in not being

<sup>†</sup> The italics are ours; the logic is that of the correspondent.

fully informed of this, and in our opinion Noble's death was mainly attributable to his imprisonment in a cell in which it is impossible to maintain European life in health at any season of the year. We further consider it a grave reflection upon the administration of British law in the open ports of this Empire that under any circumstances whatsoever a British subject should be placed in a Japanese jail and abandoned to the care of native jailors."

We grieve to write in this manner in regard to a gentleman in Her Majesty's service whom we believe to be an amiable member of society. But a Press which abandons its duty on such an occasion as this is a shameful catchpenny, worthy the scorn of Englishmen whose rights have been largely secured by the Press. NOBLE was a poor man, and, as such, his case had all the greater claims on it.

#### BRITISH CONSULAR TRADE REPORT FOR HIOGO AND OSAKA FOR 1871.

BRITISH CONSULATE FOR HIOGO AND OSAKA,  
Hiogo, February 29th, 1872.

SIR,

I have the honor to forward the enclosed Tabular Returns of the Trade, Shipping &c. of this Consular District during the year 1871.—viz:

- 1.—Imports.
- 2.—Ditto, compared with Chamber of Commerce Returns.
- 3.—Exports.
- 4.—Ditto, shewing difference from those given by the Chamber of Commerce.
- 5.—Resumé of Enclosure Nos. 1 to 4, for 1870-71.
- 5A.—Hiogo Direct Trade in British vessels to Great Britain and the Colonies.
- 5AA.—Ditto for Osaka.
- 5B.—Hiogo Carrying Trade in British bottoms to and from other countries.
- 5BB.—Ditto for Osaka,
- 5C.—Hiogo Coasting Trade in British ships.
- 5CC.—Ditto for Osaka.
- 6.—Shipping at Hiogo.
- 6A.—Ditto at Osaka.
- 7.—Valuation of General Carrying Trade.
- 8.—Ditto of the Coasting Trade.
- 9.—Resumé of Enclosures No. 6 and 8.
- 10.—Foreign Steamers sold to Japanese.
- 11.—Return showing Improvement in the Foreign Settlements.
- 12.—Increase of Residents at the two Ports.

I have purposely refrained from comparing the Imports and Exports of 1871 with those of the previous year, for the reason that the information furnished by such a comparison would be misleading, owing to the worthlessness of the Japanese Returns. These, in enclosures 2, 4, and 5, have been compared with those of the Chamber of Commerce, which latter, it is well known, do not entirely represent the actual amount of trade, and the great discrepancy between the two will serve to show how little reliance can be placed on the statistics of the Custom Houses.

In compliance with instructions, however, Enclosures 1 and 3 have been compiled from the application for Permit Forms received by the native officials. Although these are printed with the headings necessary for a full statement of the description and value of the merchandise, they often are not properly filled up; so that the labour spent in endeavouring to compile correct tables is little better than lost. Indeed, even when details are furnished, I have reason to suspect that these are not always correct, from the fact that these documents show more "White Shirtings," "T-Cloths," "Chintzes," and "Merinos" than actually were imported; and I must therefore conclude that under these denominations were allowed to pass "Turkey Reds," "Taffachelas," "Velvets,"

and "Thibets," for the purpose of evading the difference of duty on these more expensive goods.

It will also be observed that in Imports 5,994, and in Exports, 1,257 "*Cases*," "*Bales*," &c., have been recorded in the Returns as "*Miscellaneous*," without description or valuation, as none could be obtained from the Custom Houses.

I have so often spoken to the local Authorities on this subject that I can hardly believe the officials could so obstinately persist in such carelessness without some reason, which it is not my province to investigate; and I regret to think that these very unpleasant precursory remarks, to report the true state of things, are likely to be repeated in future, unless the Japanese Government adopt—for a few years at least—a Foreign Inspectorate to protect their Commercial Revenues, well as the interests of honest merchants.

I shall therefore restrict myself to the Chamber of Commerce data, as giving the most reliable information.

Although these show a decrease in the grand totals, if compared with the Exports, and especially the Imports of 1870, I am glad to observe that the most important and regular trade has decidedly improved. The great difference in the aggregate of the latter is easily accounted for by the unusually large quantity of Rice imported during the previous year: a fact in itself proving that for the disposal of our manufactured goods we might reasonably look forward for better times which are now already being realized.

**Imports** are beginning to be forwarded direct from foreign markets. The accompanying tables, however, cannot show this fact clearly, as many of the ships on the berth for "Yokohama and Iliogo" are on arrival detained at the former Port by the Agents, who find it more convenient to forward our goods by transshipping them in the large American Mail Steamers which call here every week on their way to Shanghai and back; and this also accounts for the decrease of our regular shipping. Through these vessels we are likewise supplied with many of the Imports originally intended for the north of China; and we shall doubtless be in a better position to continue in thus helping our neighbours when the railway to Kioto and Tzuruga will also enable us to supply the north-west coast.

Under this head can be included four Steamers giving a total of \$159,000. And the same may be said with reference to Gold and Silver, which were almost entirely imported as bullion for the use of the Mint.

**Exports.**—The tea from the neighbouring districts has already acquired such a repute for superiority, that American Houses have specially sent for ours in preference to that produced near the other open Ports. The demand has so much increased that, to meet it, some native dealers endeavoured to dispose of old leaf by mixing it with that of the new season; but of course that did not succeed, and they naturally had to sustain losses which are not likely to encourage a repetition of such a fraudulent speculation, which also might have seriously affected the good reputation of our principal Export.

**Silk.**—Does not shew favourable results during last year. The native merchant, who could not understand that the war in Europe would greatly diminish the demand for this produce and silkworm eggs, instead of reducing his prices, preferred as a last resource to forward in native steamers the greater quantity of these articles to Yokohama where he had to incur heavier loss than if he had disposed of them here.

I may here mention that the "Sho-sha" or Government Trading Steamers, in endeavouring to monopolize the coasting trade and to secure freight, are supposed to concede certain advantages to the Japanese merchant; so that many from Osaka have actually been induced to take from thence native produce to Yokohama and there purchase our goods. This experiment however has generally caused a loss to the duped native; and not much experience will therefore be required to correct these questionable speculations.

#### General Observations.

With reference to Iliogo I shall limit these to a few words, because when I have mentioned that the Port has been provided with a lighthouse, that the railway works are progressing slowly, and that some wide roads are being

made on the Kobe side of the native town, all other naturally expected improvements have either been altogether checked, or badly executed by the late Gonchiji, Mr. Nakayama, whose short sighted policy appears to have been that of accumulating money by illegally interfering with trade, or spending it badly when compelled to do so.

I shall not here repeat my detailed complaints against his mistaken and arbitrary acts, but shall only express my regret that he should have so long been allowed to remain in charge of this Ken, as I feel convinced that he has done more to retard its prosperity than can possibly be regained during the next two years.

To prove this, I need now quote a quantity of minor facts, amongst which I shall also class that of surrounding us with guard-houses, which though erected for our protection at the time, have also served to levy, in direct contravention of the treaty and tariff, an extra tax on all Imports and Exports, said to consist only of  $\frac{1}{2}$  per cent., but amounting to as much as the officials chose to exact, it having reaching twenty per cent on cattle for the consumption of foreigners. Suffice it to say, however, that instead of having our hills dotted over with nice country residences, foreigners have for a long time been, and still continue to be, unlawfully prevented from obtaining lots of land for that very desirable purpose.

In consequence also of the diversion of the Ikuta river, which was accomplished without the advice of a competent Engineer—(and is therefore not only dangerous, but sure to prove a source of future heavy expense to the Government) Mr. Nakayama somewhat made public a large plan which he had traced for the useless continuation of the settlement eastward. This, if ever carried into effect, will certainly not take place for many years; and it therefore had the prejudicial effect of discouraging improvements on the rear lots of the present concession, by deluding their owners with a hope of soon obtaining front situations on the supposed extension.

To these misfortunes, which might have been avoided, I must also add that of our having been visited by a most frightful typhoon in July last, which caused much damage and greatly retarded the completion of our municipal works. The sea wall in front of the foreign settlement, which on this occasion was entirely washed away, was after a considerable delay replaced with a similar inadequate protection which now extends all along the native town. This certainly improves the appearance of the place,—but it has been built on such economical and faulty principles, that it is sure to crumble down at the very first severe test.

At Osaka a Lighthouse has also been placed near the mouth of the river, rendering it approachable by night.

Exclusive of numerous native sailing crafts, the communication between the two ports is kept up by 24 small river steamers, some of which have been constructed at Iliogo; but never more than half the number are simultaneously running, in consequence of constant repairs being generally required by those which are entirely under Japanese control. This wonderfully increasing traffic with the commercial capital would also be greatly furthered by the completion of our railroad; but I suppose that before we can hope for any active steps towards this very necessary end, we shall patiently have to wait until the line between Yokohama and Tokei is entirely finished and in good working order.

**The Mint**, under the able direction of Major Kinder, commenced to work on the 4th of last August, and has proved successful beyond all anticipation. The bullion sent in for coinage has hitherto far exceeded the powers of that establishment as originally constructed; and, indeed, the Mint Authorities have been compelled to decline receiving any more silver until the completion of a large melting-house now in course of erection, which will also save much time in facilitating the valuation of larger quantities of that metal. Corresponding enlargements wherever practicable, and strongholds which on Major Kinder's tasteful plans improve the front aspect of that edifice, are also being constructed—so that on the arrival of the expected new coining presses from England, the Mint will soon be able to meet any demand that may eventually arise.

The coins struck to the end of 1871 were as follows:—

## SILVER.

1 Yen pieces ...	...	...	2,168,406
50 Sen „ ...	...	...	1,191,884
20 Sen „ ...	...	...	840,910
10 Sen „ ...	...	...	2,585,770
5 Sen „ ...	...	...	1,438,080

Their total value being \$3,263,011.

## GOLD.

20 Yen pieces...	...	...	37,249
5 Yen „ ...	...	...	156,639
2 Yen „ ...	...	...	52,047
1 Yen „ ...	...	...	63,191

Giving a value of Mexican \$1,695,499.

Total Gold and Silver ... \$4,958,510.

The Financial Department, however, which in that establishment is entirely under the superintendence of Japanese, has given good reasons for complaint by not equally affording from the beginning the naturally expected impartial facilities, and this went far to protect somewhat privileged capitalists in thus ruling for a short time fictitious fluctuations, and unfairly speculating to the detriment of the majority.

The public Educational Institutions of that large town do not of late appear to have received that attention and assistance they deserve, which does not reflect much credit on the local authorities.

At Kioto, however, great improvements have been made under the active supervision of Daisanji Makimura, who has not only provided for the instruction in the English, French, and German languages, but has also established sixty-four public schools for the tuition of girls as well as boys, a step which in Japan has hitherto been unprecedented.

On a short visit to that capital—which has always maintained an undisputed superiority for dyeing and manufacturing silks—I found that the authorities had likewise taken effective measures to introduce and promote the sericulture in that “Fu,” which praiseworthy example will doubtless be followed by the neighbouring provinces, said to be very well adapted for it.

Filatures on European models have commenced to work in Tosa; and I am told on reliable information that small parcels brought to Yokohama have in consequence of superior reeling, obtained higher prices than silks of better quality; to the great astonishment of some native dealers, who will I hope begin to understand the importance attached to the preparation of the thread, which of late years they have so much neglected.

The last enclosures, 11 and 12, respectively show an improvement in our settlements with an increased number of foreign residents; and in conclusion I may add to this the rapid extension of the native town in our neighbourhood, which is also a good sign of progress.

I have the honour to be,

Sir,

Your most obedient,  
humble servant.

ABEL A. G. GOWER.

&c., &c.,  
Japan.

## JAPANESE NOTES.

With the object of nourishing talent and of aiding the progress of knowledge a Library has been established inside the Museum in Yushima at Tôkiô. The general public will be admitted to this place, and allowed to read any books they may wish to see, either of those Japanese, Chinese and Western books which have hitherto been stored up in the godowns or which may henceforth be added to the library to supply its deficiencies. Let every one understand this, and all who feel inclined should apply for leave to borrow and read.

The world is great and the number of books therein is so large that there must inevitably be some works still wanting. If there are any persons who feel inclined to present any book whatsoever, in order to cover a deficiency and also to preserve the book itself to all time, they should

apply to this office, if they be residents of Tôkiô, and if resident in the country, to the local authorities of the district in which they reside.

*Note.*—Persons desirous of presenting books should forward a list showing the number of volumes; the charge for conveyance will be defrayed by the library, and where the donation is over a certain value the donor will receive a reading-ticket free of charge.

THE MUSEUM OFFICE OF THE MOMBUSHÔ.  
(Education Department.)

6th month, 1872.

## RULES UNDER WHICH THE PUBLIC WILL BE ADMITTED TO BORROW AND READ THE BOOKS IN THE LIBRARY.

Readers, gentle and simple, will be admitted every day from eight o'clock in the morning until four o'clock in the afternoon.

*Note.*—Persons untidily dressed will not be admitted into the library.

Applicants for permission to read will hand in to the librarian their cards with their place of residence written thereon, and, if they be officials, the name of their office also.

It is permitted to come and read or copy every day, but the books are not allowed to be taken out of the library.

Readers are not allowed to bring in other books, unless they have particular reasons for wishing to bring books of their own for comparison with those in the library, in which case they must apply before-hand to the librarian, whose permission must be obtained before any book can be brought in.

The books will be divided into two classes, the first containing rare books and such as are required for consultation by advanced scholars, the second containing those useful for beginners and the general public.

Readers will have to pay the following fees in advance:

	1st CLASS.	2nd CLASS.
Less than ½ month ...	30 sen.	15 sen.
One month .....	50 sen.	25 sen.
Six months .....	2 yen.	1 yen.
One year .....	3 yen.	1½ yen.

*Note.*—Persons who have paid the fee for reading in the first class are entitled to read in the second class without any additional payment.

No one is allowed to see more than two separate works in the same day, even for the purpose of consultation.

The library will be open every day except on the great festival days and the *Secku*.

Strict precautions against fire are observed inside the library, and therefore smoking is forbidden.

*Note.*—Smoking apparatus will be found in the waiting room.

If from carelessness in the use of a book it is stained with ink, or in any other way damaged or defaced, the offender will have to pay a fine in proportion to the damage done.

Talking in a loud voice, as well as reading aloud, is forbidden in the library.

As there are tables and benches in the library, sitting about on the mats is prohibited.

The rules of the library must be observed in taking out or putting back books.

A catalogue will be found on a table in the reading room, and blank forms for application for books, which will have to be filled up and handed to the librarian.

THE MUSEUM OFFICE OF THE MOMBUSHÔ.  
(Education Department.)

Sixth month 1872.

## NIHON GUAISHI.

ACTUAL HISTORY OF THE MINAMOTO FAMILY.

## PART III.

(Continued from our last.)

In the fifth month he held a great hunt on the Fuji wilds accompanied by his eldest son Yoriyô. When the hunt was over and they were about to return home, a certain Itô Sukénari and his younger brother Tokimune entered the lodging of Kudô Suketsune by night, and murdered him. It happened that a storm of thunder and

rain occurred at the moment. The soldiers issued forth to fight and a large number were killed. At last Sukénari was cut down, and Tokimune, who had broken into the Shôgun's quarters, was captured. On the following morning Yoritomo in person interrogated him. Now Sukéyasu, the father of Sukénari, had been slain by Sukétsuné, and his fief of Soga siezed by the latter, which was the reason why Sukénari took this revenge on his enemy. Yoritomo asked: "Why did you attack my tent?" He replied: "My grandfather Sukéchika was the Shôgun's foe. Besides Su étsuné is my enemy, and favoured by the Shôgun, for which reason I hate the latter." Yoritomo admired his courage and wished to spare his life, but Sukétsuné's son objecting, he was decapitated. The taxes of the fief of Soga<sup>215</sup> were remitted in order that the obsequies of the two orphans might be performed therewith.

A false rumour was circulated in Kamakura about the attempt made by the two orphans, to the effect that Yoritomo had been assassinated. His wife was alarmed and grieved. Noriyori said: "Be at ease about it. Noriyori is here." Yoritomo hated him when he heard of it. Before this, when Yoshitsuné had presumed on his services to behave with arrogance, Noriyori had in every matter taken orders from Yoritomo, but when Yoshitsuné revolted, and orders were given to Noriyori to chastise him, Noriyori had firmly refused. His refusal was disallowed, and being on the point of starting, he went to have an interview with Yoritomo. The latter said to him: "Are you also Kurô's partner in the dance?" Noriyori was greatly frightened, and did not dare to start, but gave him a number of oaths in writing. On the present occasion also he gave more. He went to Oyé no Hiromoto and apologised for his heedless words. Yoritomo saw that his oaths were signed, "Minamoto no Noriyori," and said: "He uses the family name in an uncalled-for manner." The messenger endeavoured to explain, but without effect. That night Yoritomo heard some one breathing hard under the floor of his room, and summoned the guards in haste. Yûki Tomomitsu tore up the floor, and found a man, who turned out to be Tayéna, an athlete in Noriyori's service. He said: "Your servant beheld the grief and despair of Sanshiu,<sup>216</sup> and merely wished to hear what went on at the council of the Shôgun." They put him to the torture, but he did not alter his statements. In the eighth month orders were finally given to the Kanô family to keep Noriyori in custody at the monastery of Shiuzenji,<sup>217</sup> in Idzu. All Noriyori's retainers assembled and occupied his palace by the sea-shore; troops were sent to reduce them. Kajiware Kagétoki advised Yoritomo to put Noriyori to death, and surprised the latter with five hundred of his own men. Noriyori shot ten odd men dead, and then setting the house on fire, killed himself.

In the eighth month of the fifth year (1194) Yasuda Yoshisada was also put to death. Yoshisada's son Yoshisuké had once attempted to seduce one of Yoritomo's hand-maidens, but the matter being discovered by Kagétoki, he was decapitated. Yoshisada was indicted with him, and dismissed from office, to his great indignation. Some one said he was going to revolt, whereupon he was put to death.

In the third month of the sixth year (1195) Yoritomo visited Nara with Masago and Yoriyé, to celebrate the completion of Tôdaiji. This monastery had been burnt to the ground by the Heishi, and the Cloistered Emperor had restored it, Yoritomo finding the money. He had made the priest Mongaku superintend the works, and presented the monastery with a gift of one thousand horses. He then paid his respects to the Emperor at the capital and returned to Kamakura in the following month.

At this time Hiraga Yoshinobu was *jitô* of Musashi, and the people were satisfied with his rule. Yoritomo caused a tablet to be set up before his office, with the inscription: "All Governors of provinces should take pattern by Yoshinobu."

In the eighth month he gave orders that all *ji tô* in the Eastern provinces who had harboured traitors should be deprived of their appointments, which should be bestowed on those who had arrested them.

In the sixth month of the seventh year (1196) a certain Taira no Tomotada collected troops at the capital and plotted to surprise Fujiwara no Yoshiyasu, the husband of Yoritomo's younger sister. Yoshiyasu had previously obtained Yoritomo's leave to invite Gôtô Motokiyo to enter his service and watch over his personal safety; when this event happened Motokiyo attacked and slew Tomotada, and so the remaining partisans of the Heishi were thus completely destroyed.

In the twelfth month of the eighth year (1197) Yoriyé was raised to the rank of *jiu-go-i-no-jô*, and created Gon Shôjô of the Ukonyé Guards.

In the twelfth month of the ninth year (1198) Inagé Shigénari repaired the bridge on the Sagami river<sup>218</sup>, and Yoritomo went in person to celebrate the completion of the works. On his way back he fell from his horse, and was taken ill. In the first month of the following year he died, at the age of fifty-three. Yoritomo took up arms at the age of thirty-three, and in six years annihilated the Heishi. At the time of his death he had held the military power of the Empire in his hands during fifteen years.

An Imperial decree was issued creating Yoriyé Gon Chijûjô of the Ukonyé Guards and appointing him chief over the *shûgo* and *jitô* throughout the Empire. This year was the first year of Shôji (1199). Yoriyé was aged eighteen. Hôjô Tokimasa, being his maternal grandfather, administered the Government, and would not allow Yoriyé to hear causes in person. The latter merely amused himself with five favourite retainers, and gradually became more and more vicious and self-willed. His mother Masago frequently admonished him, but he did not reform, while Tokimasa affected not to hear or know of it.

Yoriyé had a younger brother named Semman, who had been Yoritomo's favourite. On one occasion, having laid the child in his bosom, he summoned his relatives and the officers, and prayed them to take care of him. Oyama Tomomitsu was present on the occasion, and when Yoritomo died, wished to become a monk in token of his grief, but delayed carrying out this intention on account of the trust which had been bequeathed to him. One day he declared his sentiments [with regard to the young prince] in a general assembly, and Kajiware Kagétoki slandered him to Yoriyé, saying: "Tomomitsu has declared that a faithful vassal does not serve two lords. I fear that he means treason." Tomomitsu having heard of this, became anxious about his safety, and asked Miura Yoshimura for advice. Yoshimura was the son of Yoshizumi, and was on the best of terms with Tomomitsu, and thereupon, in conjunction with Wada no Yoshimori, Adachi Morinaga and sixty-six other men, drew up an indictment against Kagétoki, which they sent up to Yoriyé by the intermediary of Oyé no Hiromoto. Hiromoto wished to bring about an amicable settlement, and refrained from giving it in, and on being pressed by Yoshimori told him so. Yoshimori reproached him, and he then sent it in. Yoriyé showed the petition to Kagétoki, who fled to his fief of Ichinomiya, from which he shortly afterwards returned secretly to Kamakura, but Yoriyé commanded Yoshimori and the rest to expel him, and to demolish his palace. Kagétoki took refuge in his fief and collected troops. In the desire of becoming the protector of Takéla Ariyoshi, the son of Nobuyoshi,<sup>219</sup> and making him Shôgun, he undertook to proceed to the capital and call out the troops of the Kuansei. In the first month of the second year (1200) Kagétoki fled west with all his kindred. Yoriyé sent troops to pursue him, but on arriving at Kusunégasaki<sup>220</sup> he was utterly annihilated by a certain Kikkô, an influential landowner, to the delight of everyone. Up to the end of Yoritomo's life Kagétoki had enjoyed undiminished confidence and favour. During

(220) In Suruga.

the period Kenkiu (1190-1199) Kumagae Nawozane had a dispute with Kuge Nawomitsu about boundaries, and laid a complaint against him. Nawozane stuttered and could not make himself understood, whereupon he became angry, and said: "Kagetoki is a partisan of Nawomitsu. Your servant withdraws his claim." He then ran out, drew his sword and cut off his hair, and fled westwards to the capital. Yoritomo sent a man to cut him off, and did not find fault with Kagetoki. Yoshimori falling ill, Kagetoki borrowed his appointment of Samurai-dokoro no Bettō, and refused to return it, but when the circumstances just narrated occurred, Yoshimori recovered his functions.

In the first month of the first year of Kenin (1201) Jō Nagamochi made a tumult at the capital, and surprised the palace of Oyama Tomomasa. The latter was absent, having accompanied the Emperor on a journey, but his troops defended themselves and forced Nagamochi to retreat. The rebels then surrounded the Palace of the ex-Emperor, and begged him to decree the chastisement of Yoriyū. This was refused, upon which they fled and concealed themselves at Yoshino. Yoriyū issued orders for immediate search to be made. In the second month they were captured and put to death. Nagamochi's nephew Sukemori having raised the standard of revolt at Karasuzaka<sup>(221)</sup>, Yoriyū ordered Sasaki Moritsuna to smite him. Moritsuna was just going forth and the order met him outside his gate. He started without returning into the house, and arrived at Karasuzaka on the third day. His son Morisuyū was first in the assault. Sukemori fled. His aunt, named Han-gaku, was ugly but endowed with great bodily strength, and was a skilful archer. She was at last taken prisoner, and sent to Kamakura. Asari Yoshitō begged leave to espouse her; Yoriyū asked him what his object was. He replied, saying: "I merely wish to make her bear brave warriors, to the profit of my prince." Yoriyū laughed and granted his request.

Yoriyū rose step by step. In the seventh month of this year he finally succeeded to the office of Sei-i-Tai-Shōgun, and was raised to the rank of *jiu-ni-i*.

In the fifth month some one informed him that his uncle Zensei, who was at Ano<sup>(222)</sup>, was planning a revolt, and he sent Takeda Nobumitsu to arrest him. He exiled him to Hitachi, and shortly afterwards ordered Yada Tomoiyū to kill him.

At this period the administration of the Bakufu was entirely in the hands of Tokimasa, from the least to the most important matters, and his kindred and partisans filled one half of the public offices. Yoriyū had to obey his orders and could not keep his temper. In the eighth month Yoriyū fell ill, whereupon Masago took counsel with Tokimasa to make him hand over the superintendence of the *Shiugo* to his eldest son Ichiman, and parting off the *jitō* of twenty eight provinces of Kuansei to give them to Semman. Ichiman's maternal grandfather was Hiki Yoshikazu, and told this to Yoriyū by his daughter, saying: "The proposal that has lately been made will 'divide the power and create strife; nothing could be more undesirable.'" Yoriyū also was indignant at the acts of the Hōjō family, and secretly summoned Yoshikazu into his bed chamber, to discuss and plan with him. Masago put her ear to the outside of the shutters and hearing this, sent a man galloping to inform Tokimasa. Tokimasa took council with his partisans, placed some armed men in ambush, and summoned Yoshikazu on the pretext of some business. Yoshikazu's younger relations all said: "Do not go. If you do go, take precautions 'for protecting your safety with troops.'" Yoshikazu replied: "That would cause bad feeling to arise. Why 'should they have treacherous intentions?' Upon this he went, but the armed men arose and slew him. His follower ran home and informed Yoshikazu's son Munékazu, who collected his kindred, and possessing themselves of Ichiman's person, they occupied the Ko-Goshō<sup>(223)</sup>. Tokimasa sent his eldest son Yoshitoki at the head of the chief officers to attack them, but Munékazu and his companions fell upon them vigorously and forced them to retire. Then Hatakéyama Shigétada took some picked

men and attacked them fiercely, and Munékazu's strength became exhausted. He burnt the palace and killed himself, and his kindred were thereupon annihilated, while Ichiman was put to death. All who had been intimate friends of Yoshikazu were destroyed. Yoriyū heard of these events while he was lying ill, and was both grieved and offended. Tokimasa laid the blame on Nitta Tadatsumé, and put him to death. It was Tadatsumé who had put Yoshikazu to the sword. He then spread a report that Yoriyū and Tadatsumé had been plotting against his life, and so forced Yoriyū to shave off his hair, and having confined him in the monastery called Shiuzenji, made Semman his successor. Yoriyū disliked being kept in confinement, and sent letters to his mother and younger brother, begging that he might have some of his former immediate retainers to attend upon him. No answer was returned, but Miura Yoshimura was sent to ascertain his state, and communication by letter was forbidden to him. In the seventh month of the following year Tokimasa sent men to plot against his life, who, fearing Yoriyū's great bodily strength, waited till he was taking a bath, and then surrounded him. They threw a rope round his neck, and so killed him. He was twenty-three years of age. His son Ichiman had died before him, but he had still two sons, the elder of whom was four years of age. Masago made Semman adopt him, and finally made him take orders. He was called Kugio<sup>(224)</sup>. The second was named Senjiu Maru, and was adopted by some one who was a *jū* of the Nakadzukasa.

Semman succeeded at the age of twelve. A decree of Emperor raised him to the rank of *jiu-go-i no gé*. He succeeded to the office of Sei-i-Tai-Shōgun, and the name of Sanétomo was bestowed upon him. His place of residence was the palace of the Hōjō family, whence he issued orders intended to tranquillize the officers. An oath of fealty was also demanded from the officers at the capital, in the home provinces and in the western part of the country, and Hiraga Tomomasa, the *kami* of Musashi was dispatched to lead the *jitō* of the Kuansei to garrison the capital.

In the third month of the first year of Genkin (1204) brigands arose in Iga and Isé. Sudō Tsunétoshi, the *Shiugo* of Iga, fled. Sanétomo ordered Tomomasa to chastise the robbers, and he captured their ringleaders, Taira no Motonori and Taira no Moritoki. He then deprived Tsunétoshi of his appointment and gave it to Tomomasa.

Tomomasa was the son of Yoshinobu. Both he and Hatakéyama Shigétada had married daughters of Tokimasa, but she whom Tomomasa married was the offspring of his second wife, the Lady Maki. For this reason Tokimasa was partial in his affection for Tomomasa, and gradually began to hate Shigétada, so that at last he conceived a desire to put him to death. He falsely accused him of plotting a revolt, and ordered his two sons, Yoshitoki and Tokifusa, to attack Shigétada's son Shigéyasu in his palace and kill him. Shigétada at the time was at his fief. Tokimasa sent men to deceive him by saying that there were troubles at Kamakura, and that he ought to go to the rescue. Shigétada thereupon started with a following of over a hundred horsemen. On the road he observed a large force advancing and spreading over the open country, upon which he knew the truth for the first time. His followers unanimously advised him to ensconce himself in his fief and collect troops, but Shigétada refused, saying: "I will not imitate the example of Kajiwaru Kagetoki, 'who was anxious to escape even at the peril of his good name.'" He fought bravely, was hit by an arrow and died. Inagé Shigénari, Hanganaya Shigétomo and others of Shigétada's kin were all decapitated on the same day. At first Shigénari had fawned upon Tokimasa and had contrived the ruin of Shigétada, but in the end he was put to death by him. The Hōjō family had disliked Shigétada for a long time, for he was brave and had a large following. When he followed Yoritomo to battle he usually commanded the van. He was of a loyal and generous disposition, and did not dispute the rewards of

merit with others. Yoritomo was profoundly aware of his superiority, and entrusted to him the conduct of affairs after his death, but he was brought to his ruin by the Hôjô family. The Empire was convinced of his innocence. In the seventh month the fiefs of the Hataké-yama family were distributed as rewards among the officers.

### Correspondence.

TO THE EDITOR OF THE *Japan Weekly Mail*.

Yokohama, 26th August, 1872.

SIR.—Referring to an article in your issue of 24th instant headed "*The Maria Luz*" in which the statement appears that "while the fraud with which some at least of these contracts were obtained can neither be denied nor concealed," I most emphatically contradict such statement, and am in a position to prove that had they been obtained by fraud the contracting parties had full liberty given them to ventilate, and complain of such fraud before the ship was cleared by the authorities at Macao. Requesting that you will publish this letter in your first daily issue so as to remove the erroneous impression such remarks are tended to convey to the minds of the public,

I am, Sir,

Your obedient Servant,

E. LOUREIRO.

TO THE EDITOR OF THE *Japan Weekly Mail*.

SIR.—Will you kindly allow me through the medium of your valuable paper, to thank the Captains and Commanding Officers of the *Decapolis*, *Thabor*, *Seaforth* and *Velocity*, for the kind manner in which they came and offered their valuable assistance, when the burning wreck of the late steamship *America* fell across my ship's bows and placed her in imminent danger. These gentlemen were unceasing in their endeavours to extricate the burning ship, and I beg to offer them my sincere thanks for their prompt assistance.

R. E. HARRIS,

Commander Ship *White Adler*.

Ship *White Adler*,

Yokohama Bay, Aug. 27, 1872.

### THE LOSS OF THE *AMERICA*.

#### BEFORE A COURT OF ENQUIRY.

H. E. Mr. De Long.  
Captain Shirley.

Mr. Consul Shepard.  
Captain Pursell.

On the opening of this enquiry into the loss of the P. M. S. S. *America*, the names of the officers were called over and all but captain Doane were ordered out.

Captain Doane, sworn: He was a shipmaster; his last command was the *America*, and he was on board at the time of the fire. It occurred at 11 p.m., August 24th, 1872. He first heard of the fire by the 1st officer calling to him that the ship was on fire. He was asleep at the time. He rushed into the saloon and saw that the men were at their stations and that all was ready. Each man had his own station. The rules governing the P. M. S. S. Company were then put in evidence. He saw flames through the skylights of the cabin; the position of the light in question being about half way between the main mast and mizen mast, the lights were of glass and the flames were seen through them. There was no evidence of fire, but the flames. He at once went down into the saloon and then returned to his first station whence he saw the flames. The men when he first went into the saloon wanted to break open the hatch but he told them to wait till they had a supply of water. When the water came they first open the light and directed the hose through the hole thus made. The water thus reached the seat of the fire—that is as far as he could see, the body of flame rendering it almost impossible for him to see whence the fire sprung. It was not till he came back from the saloon that the skylights were broken open. Being asked to describe the ship Capt. Doane said there were two bulkheads dividing the ship from the hold up to the steerage deck. This made three compartments, in the after one of which—or rather over it—the fire broke out. There were five decks—the orlop deck, the freight deck, the steerage deck, the engine deck, and the

hurricane deck. The orlop deck was used for freight, as was the freight deck, and sometimes part of the steerage deck. The coal bunkers were amidships, extending only so far as the engines either fore or aft. The after bunkers would be about half way between the mizen and main masts. The fire was first discovered on the steerage deck, forward of the after bunkers; there being both coal and freight beneath it. At the same time it must be remembered that he could not tell the exact position of the seat of the fire because of the volume of flame. After his return to the saloon he tried to go down again, but going down by the gangway amidships he only got as far as the after part of the forward steerage. There he only remained for one minute, the smoke being too strong, though he was on his hands and knees. So thick was the smoke that he could not tell if it was burning on the steerage deck, only the flames had burst through from the freight deck; nor could he tell what was burning. There were watchmen stationed all over the ship, the steerage watchman being in charge of the spot when the fire broke out. His name was Lymart and he was now dead. There were also two quarter-masters on board who went through the ship every half hour. The first could tell who it was that went through; he himself did not know. He remained only about one minute in the steerage; and could to the best of his judgment give no reliable evidence as to the cause or nature of the fire. A few minutes sufficed to drive all hands out of the saloon, and in going up on deck he ordered the passengers to be got out. To the best of his belief all the officers were at their posts; had they not been he thought he should have known it. When he first went into the saloon there were hoses stretched, but no water flowing.

After waiting for 4 or 5 minutes water began to flow and in as many minutes more stopped. There was only one hose in the saloon but there were 4 or 5 in the gangway. No one could go on the steerage deck after the fire had once got well started: there were altogether about 12 sets of hose on this deck supplied from a cast iron pipe running fore and aft and supplied with valves and taps. There was ample hose if connected to reach fore and aft. The water when once stopped did not flow again, and the hose remained unused afterwards and he had to abandon it. There was little doubt that there was not enough steam; it not being usual to keep enough steam on the donkey boiler to work all the pumps. All the engine fires but those of the donkey boiler were out; and of his own knowledge he did not know that there was steam on the donkey boiler; but at the same time he was morally sure that there was fire there. The Engineer only has general instructions from him, and he usually looked after all matters pertaining to his special department. All the officers were on board except the Doctor. There was a life raft on board the *America*; it was placed on the starboard paddle box guards; but it was not used, because nearly everyone was out of the ship before the officers and crew had ceased making efforts to extinguish the fire. The 2nd officer had charge of the boats, which were all on the hurricane deck. Four boats were lowered, but at what stage of the fire he did not know. He knew, however, that one was lowered at the last moment. In this the first officer, an officer of the *Lackawanna* and others left the ship. He himself left the ship at 11.40, by jumping overboard; this was after the boat left. All the officers were apparently at their posts. The donkey-engine only was kept going in port, but at sea if a fire occurred they had all the full power of the main boilers; The donkey-boiler was used principally for handling freight, to wash decks, and other general work. It was supposed that the donkey-engine had power enough to do all that was required in port. The rules ordered frequent and regular drill; this was done, the drill being gone through on the second day out on each voyage. The last voyage of the *America* was no exception to the rule. The galley fire was never alight after 8 p.m. This was part of the duty of the first officer. He inspected the ship at 10.15 for his own satisfaction; but it was the duty of the first officer to inspect the ship daily. When he went round there were lights in the upper saloon, but, to his knowledge, there were no open lights.

To Captain Pursell.—All the hose in the ship was not stretched out. Buckets were passed when the pumps gave out for some ten minutes. If there were a pressure of 25lbs. to 30lbs. on the donkey-engine, it was enough to drive the pumps. He really knew nothing as to the steamer. All the engineers were at their stations. There were in all on the steerage and main decks thirty-two sets of hose which led into the large iron pipe which he alluded to before. At sea the main boilers were used, but in port the donkey-engine was used. There was no fire in the main engines, and though the donkey-engine could supply the pumps, there was not enough force, and in his opinion could not supply the pumps to put out the fire; nor did he know how many hose it ought to supply—probably twelve streams should be turned on. There were not twelve streams turned on, because they had not water sufficient to supply four streams. The donkey-engine was in charge of the engineer. He saw the engineer, and said—"My God, Graham, there's no water!" but Graham rushed on to the engine-room, and he saw him no more till he left the ship,

In his opinion, there was not enough steam; but he knew little of his own positive knowledge. He presumed that the fire must have gained great headway on the freight deck and burst through the steerage deck. His reason for thinking this, was because the ship burned so quickly. It was possible to inject steam in the cargo decks, but the fire had got such hold that it was impossible to reach the valves. Even if the donkey-engine had had a full head of steam it could not have put out the fire, and such a fire could not have occurred at sea. He did not know what caused the fire, but he thought it might be attributed to the carelessness of coolies working on the cargo. There were valves at the bottom of the ship to sink her, but to have opened the valves when they could be reached would have caused immense loss of life, when the ship was clear, the valves could not be reached. In his opinion the loss of life was caused by the Chinese overloading themselves with valuables and baggage. There were boats lying all round the ship, and he did not therefore lower his own boats—there was no necessity. The gangway was broken by a rush of Chinese, but he did not see it broken. There were 59 persons lost altogether. It was not possible that the coal could have caused the fire. Most of the coal they had on board, was Australian or Liverpool coal. The water buckets were passed on deck for ten minutes.

Hallet, first officer, at 11.15 on Saturday August 24th, he was in his room when he heard a quartermaster call "fire" saying that it was on the after steerage. He rushed out and down into the after steerage and tried to get the hose in order. In a minute the smoke drove him back and he came out into the air and then went back. Driven out again he went to the saloon where he saw the Captain and then went on deck to get the hose stretched. There was, however, no water and he managed to throw some on the fire with buckets. Subsequently he found water on the hurricane deck and after lengthening the hose tried to play upon the fire. He did so as long as he could stand the heat, and then poured water down the ventilators. By that time the flames burst out forward, and both he and the Captain said it was "too late." He then worked to clear the boats and he and others then lowered a boat, and soon after left the ship. He could see no one else on board then. He reached the boat by sliding down the falls. He then picked up a number of Chinamen and pulled away to the *Leander* and left them. He returned but could not find a second load having been mainly picked up by the numerous boats alongside. He then went on board the *Costa Rica*. Quartermaster Wilson was the first to cry "Fire!" When on the steerage deck he smelt burning hay. He did not think the fire was below the steerage deck; but he could see no flames, only smoke. In the saloon the captain had some hose, but he did not know if there was any water. He thought ten minutes elapsed before he obtained water. He only saw one hose with water. He did not know if there was any steam on the main boiler. In port it was the rule to keep steam only on the donkey engine. There were eight hose, and the donkey-engine ought to have worked them. If there had been steam there was no reason why there should not have been water. He did not go down into the engine-room; but if he had been able to obtain a good supply of water, he could have put the fire out in ten minutes. It was a lack of water which prevented the fire from being extinguished. There was no water because there was not enough steam; that was his opinion. At sea there was an inspection every hour. At ten he inspected the ship and went on the freight deck, but not on the orlop deck. There was no cargo on the freight deck near the spot over which the fire originated. He did not think the coal could have caused it. The coolies had been working on the freight and orlop deck, and it was possible that they might have lit a pipe among the hay. This was the more likely since in reaching the main from the freight deck they passed the hay. The steerage watchman was in charge of the steerage deck, Wilson went round between 10 and 11, all was right at 10.30, but at 11 Wilson smelt smoke. He could not swear that every officer was at his post, but he thought so. Half an hour elapsed from the breaking out of the fire to the time of his leaving the ship. All were at work doing their best obeying all orders promptly. If he had had water at a proper time he could have put out the fire, and if it had been below the steerage he should have known it earlier, because the smoke would have ascended by the ventilators. The fire could have been put out at once, if it had occurred at sea. He believed that the steam usually kept up in port was ready at the outbreak of the fire. The rule said a "steady pressure" of steam was to be kept up, and he believed the rule had been carried out. There was not enough steam, and he subsequently said that if all the rules had been carried out that the ship would not have been burnt. It was the Chief Engineer's duty to see to the steam. The freight deck hatch was locked. The Chinamen drowned themselves by carrying their money with them also by the throwing of boxes overboard and the breaking of the ladder.

Graham Chief Engineer. He was on board and he heard the alarm about 11 got up and went down to see where the fire was. He went into the saloon and saw the flames through the

dead light in the deck. He then went to the Engine room and then to see that, the other men were at their stations. There were six assistant engineers on board. There were three at the pumps amidships, and two forward. He went to see if there was a full supply of water; he went on deck and found water running out of the outboard discharges. These he and others stopped and then ran out on deck and saw the fire coming through, the men were all at their stations and he went to the forward donkey room and then found he could do no more. He was driven out by the heat, and, crawling through a port-hole, dropped into the water and swam round to the buoy. The alarm was given at 11.5 p.m., but he did not know who it was that gave the alarm, though he thought it was Miller of the P. M. S. S. coal-wharf. At sea his station was in the engine-room, but in port he had no particular station. There were 12lbs. pressure on the donkey-boiler when the assistant engineer went down. The donkey-engine was not used for hoisting out cargo. There were thirty-two pumps on board, but the engine would only drive two, sending out about five streams. About 20 lbs. steam was necessary to do that with good force. They had only 12lbs. of steam on, but it was rising. There were four jets of water turned on. To throw forty or fifty feet 20lbs. pressure was required, but to keep them in port was not considered necessary, the more so that it would be more difficult, require constant blowing off, and be inconvenient to all on board, and expensive to the Company. He had no special orders as to steam, but he thought 12lbs. amply sufficient, though 20lbs. would be better. The fifth assistant engineer was on duty receiving coal from alongside and trimming it. The rule that the senior engineer on watch should be in the engine-room only applied to sea duty, and not port duty. He went to his station by the saloon—the nearest way to it. He saw the reflection of the light from the door. He met the assistant engineer at the engine-room door. The sixth assistant engineer was at the pump in the forward hatchway.

To Mr. de Long.—The amount of steam on the boiler was only reported to him. He did not see the gauge himself. At no time that he was on board during the fire was he aware that there was a lack of water. He saw the fire on his way to the engine-room. The outward discharges were shut before the alarm bell was rung. The steam was increasing until they left the ship when there was 20 lbs. pressure. They carried 20 lbs. while working, and 10 or 12 lbs. while at rest; the latter would throw 3 jets of water 40 or 50 feet. Five or six minutes after the alarm of fire, there was a supply of water. He saw that at least two hoses were supplied with water. The boiler in the eyes of the ship did no work at all, it being customary for only one boiler to be kept going while in port. If the main engine had been going he was doubtful even then the fire could have been put out. He judged so because he had never seen so large a fire as this, though he had seen fires on the *Baltic* and the *Golden Gate*.

C. G. Williams, sub-Lieutenant H. M. S. *Rinaldo*, testified that he went on board the *America* to render assistance. He got on through the coal port and found his way to the bridge where he saw the Captain. He found he could do no good and went back to his boat and picked up two boat loads of Chinamen and took them to the *Leander*. The Chinamen threw their boxes over and many were so laden with property that they must have sunk.

John Durnford, Lieutenant H. M. S. *Rinaldo*, testified to going alongside and picking up a number of Chinamen and taking them to the *Leander* many Chinamen, he said, were killed by the ladder breaking, and all were so heavily laden with money and baggage, that it took four men to left one into the boat. He saw smoke 20 minutes before the bells rung.

J. Allen 1st assistant Engineer, was not on duty at the time of the fire, but was awakened by an alarm of "fire." He got up and went to the donkey engine and saw that both steam and water were ready. The pressure was then between 10 or 12 lbs. He ordered the steam to be got up immediately some pump was started. His orders were to keep 11 or 12 lbs. of steam on the boiler when not working. At 6 p.m. soon after finishing work there was no Engineer in the Engine room, only a fireman. He himself, however, was in the Engine room off and on during the whole evening. A log was kept, but no entries were made in port. Mr. Graham gave him orders to keep "sufficient steam," he did not mention the exact number of pounds of steam, while working 20 lbs. of steam was kept up, but he did not know how many streams of water, the boiler could drive, at sea his station was in the main Engine room, in port in the donkey Engine room.

He knew nothing of the regulations in Court, but he knew that was his station because his chief told him so. He stayed at the donkey engine till driven away, the pressure when he left half an hour after the alarm of the fire being 19 lbs. The pumps never stopped working during the whole time though at one time the supply of water slackened.

—Hawley, 2nd assistant engineer.—When the alarm was given he ran to the donkey and started it, staying by it all the time he was on board. He came up once to see what the pres-

sure was but could not because of the smoke. He did not know what time he left the ship. He jumped overboard. His station was at the forward donkey engine. He did not know who gave the alarm, nor did he know the pressure on the boiler.

J. S. Baurheit, 5th assistant Engineer. He was on watch, trimming coal when the alarm was given at about 10.45. He himself smelt the smoke. He awoke the 1st assistant and went to start the pump and then to see to the hose. When he went to the Engine there was 15 to 17 lbs. pressure on the boiler. He knew little that occurred except as to the steam, and through some cross-examination he held to his first statement, though he admitted 20 lbs. was better than 15.

—Wilson said he heard the fire alarm, and at once helped to start the donkey pumps, and then helped to man the hose. He afterwards jumped overboard. At 11 p.m. there were 12lbs. or 13lbs. pressure on the boiler, and the pumps worked directly they were started. At first there was plenty of water, but the supply afterwards slackened. He was picked up by a boat.

The Court then adjourned till Monday at 10 a.m., in respect to the memory of Mr. J. O. P. Stearns.

### Law & Police.

#### THE CASE OF THE *MARIA LUZ*.

IN THE KANAGAWA KENCHO.

Addendum to the Protest put in the above by Captain Hereira, on the 22nd day of August, 1872.

Captain Hereira by his Counsel Mr. F. V. Dickins, respectfully presents the following addendum to his Protest in the above.

1.—The adviser to the Kencho in his statement made yesterday, seemed, though obscurely, to hint that the proceedings now pending in the Kencho concerning the *Maria Luz*, are in the nature of a civil action—a civil action it is supposed against the ship, since the ship is detained.

2.—It is submitted that, if that is the case, the grounds of action ought to have been notified in writing to the Captain and an opportunity afforded him of rebutting them by evidence or argument, proper security for indemnification being given in the event of the grounds of action proving insufficient, and that an opportunity ought to have been afforded to the Captain of putting in bail to release the ship. This it is submitted cannot be against the law of any civilised nation, and is in accordance with the laws of all civilised peoples known to the Captain or his Counsel.

3.—Permission is requested to bring to the notice of the Saibansho that in accordance with the rules of International Law the contracts between the Chinese passengers or coolies *Maria Luz* and the other parties named in those contracts ought to be interpreted according to Portuguese or Peruvian law; that an essential part of such contracts is obedience on the part of the Chinese to the discipline on board, and an engagement to proceed to Peru in the *Maria Luz*; that the contents being valid in form, the burden of proving their invalidity rests on the party asserting such invalidity; that contracts for personal services, &c. may be specifically enforced according to the laws of all countries and according to the customs of Japan; that it is illegal so to interfere between the ship and her passengers as to cause any civil proceedings to be brought by the latter, and that in questions between foreigners Japan is, as a civilised nation, bound to take notice of the rules established by the courts of civilised nations.

It is not an absolute rule of international law that the tribunals of any country will entertain suits between foreigners especially as to matters originating in foreign countries.

Thus by French law controversies between foreigners respecting personal rights and interests are not entertained (except in a few special instances) by French Tribunals. (Vide *Parcours Droit Commercial Tome 5*, Articles 1476 to 1478). Hence Japan is not obliged by the courts of nations to take any civil cognisance of matters relative to the *Maria Luz*, pending between parties not one of whom is a Japanese subject. The Captain and his Counsel are equally unable to refer to any Japanese authorities, as to what the laws or customs of Japan may be, and hence as a matter of international courtesy and fairness conceive themselves entitled to the benefit of the rules of international law in the event of the Japanese Government determining to bring some kind of civil action or proceeding against the ship or her Captain.

5.—Upon the grounds herein set forth and upon the grounds already previously set forth, the Captain respectfully renews his protest against the continued detention of the ship and passengers, and for such detention is constrained to hold the Japanese Government responsible.

F. V. DICKINS,  
Counsel for the Ship *Maria Luz*.

#### THE *MARIA LUZ*. IN THE KANAGAWA KENCHO.

Before OUYE TAK, Governor.

Friday, August 30, 1872.

The Court met as heretofore, Mr. R. Robertson, H. B. M.'s Consul, alone of the foreign Consuls, occupying a seat on the Bench, the other Consuls having withdrawn, and after having stated that the judgment and finding had been submitted to the Foreign Department, Mr. Hill said that the judgment had also been considered by the Consular Board and approved by the English Consul.

#### JUDGMENT.

The *Maria Luz* came into the port of Yokohama in distress. Her master asked the privilege of lying here while she was undergoing repairs, and as she sailed under the flag of a power having no treaty with this Empire, he deposited her papers in this Kencho.

Meanwhile a communication was addressed by H. B. M.'s *Chargé d'Affaires* to their Excellencies the Ministers of Foreign Affairs, respecting a man who, it was said, had escaped from this vessel in this harbour, and had swum on board H. B. M.'s ship *Iron Duke*. This communication stated that there was reason to believe that this man had been ill-treated, punished and restrained of his liberty, and requested that an investigation be made in the matter by the Japanese authorities.

This communication was by the Foreign Department referred to this Kencho, with directions to make such an investigation, and further to learn if there were any complaints of ill-usage, confinement, or restraint from any other of the passengers.

The foregoing is the basis of the enquiry which has been held in this Kencho. In pursuing this enquiry a great amount of evidence has been taken and all the Chinese passengers on board the vessel to the number of 230 have been brought into Court to testify. A commission was also sent by the Kencho on board the ship to make enquiries and a report has been made of other particulars.

The charge preferred against the captain that he has abused the passengers and restrained them by force from leaving the vessel is fully sustained, the master himself admitting many of the acts charged—as cutting off the tail from 3 of the Chinese, putting them in confinement etc. The charge preferred by the great mass of the passengers, that they have been forcibly detained on board the ship is sustained by the testimony of each and later by the admission of the master himself. They are, however, no longer on board the vessel or subject to such restraint. The offences thus proved have been committed by the captain in the harbour of Yokohama and within the jurisdiction of this Kencho.

The punishment which by Japanese law may be inflicted for the offences proved is severe, being no less than 100 lashes on the offender or in lieu of stripes 100 days confinement in his home, regard being had to the rank of the person guilty. Further the Court may in its mercy pardon the offender.

In the present case the Court, considering all the circumstances and all that has been urged on the master's behalf, considering also that the captain has been delayed for a long time, and subjected to much inconvenience already by reason of the proceedings and desiring to judge him leniently, recommends that Captain Hereira be pardoned his offence and be permitted to depart with his vessel.

The Court also further expresses its strong disapprobation of the conduct of the captain in inflicting these punishments upon his passengers and restraining them of their liberty.

Those passengers are Chinese subjects, and while within this realm are subject to the duties and possessed of the rights and privileges of all other Chinese residents.

The captain is reprimanded, because he did not apply for redress against alleged misconduct of passengers to this Kencho.

In pursuing this investigation, it has been found that there are 13 persons, who, it is alleged by the captain, have entered into a contract to go on board this ship to Peru, and there to serve for a period of eight years as house servants.

These contracts appear on their face to be good and valid, and are without any particularly objectionable features, except that the persons described are minors. Each of them, however, vehemently protests that he never willingly assented to such a service, and avers that he was decoyed on board the ship. Each prays that the contract be cancelled and himself set free.

As to any questions that might arise on these contracts, or others which might in connection with the present inquiry be urged respecting the so called "Coolie Traffic" it is not thought they are in any wise before this Kencho for consideration or decision.

If these questions are brought before the Kencho upon the con-

tracts by which it is alleged these passengers are bound they will then be examined and determined.

Either party has the right to institute an action upon his contract either for its enforcement or for its cancellation and to ask an adjudication thereof.

It is further recommended by this Kencho that the ship's papers and all documents and property which have been either deposited in the Kencho or taken from on board the ship be returned to the captain.

(Signed) OHYE TAK,  
Kanagawa Ken no kami.

Kanagawa Kencho.

Kanagawa, 26th August, 1872.

The following documents from the Consuls were then read:—

Consular Meeting held at the German Club, August 29th, 1872.

Present—Mr. F. de Bavier, His Danish Majesty's Consul General; Mr. E. Loureiro, His M.F. Majesty's Consul; Mr. A. J. Bauduin, His Netherlands Majesty's Consul; Mr. F. Bruni, Italian Consul, Mr. E. Zappe, His Imperial German Majesty's Acting Consul General; Mr. C. O. Shepard, United States Consul; Mr. Russell Robertson, H. B. M.'s Consul.

Mr. Zappe read his written objection to the judgment delivered in the case of the *Maria Luz* by the local Japanese Government. These objections were supported by Mr. Bavier, Mr. Loureiro and Mr. Bruni.

Mr. Robertson agreed with the finding and recommendations of the Japanese authorities.

Mr. Shepard considering that the letter of the Convention of October 1867 having been complied with by the Government, and further considering that the matter is one in which only the Japanese, Portuguese and Peruvian Governments are concerned declines to express any opinion or give advice.

Mr. Bauduin is of opinion that the Governor of Kanagawa after the Convention of October 1867 ought to have called for the advice of the Consular body about the steps to be taken in the case of the *Maria Luz*. The Governor did not do so and made himself a Court of enquiry, and afterwards submits his decision to the consideration of the Consuls, that therefore Mr. Bauduin does not agree with the steps taken by the Governor in the matter from the beginning, and wishes now to leave entirely to him the responsibility of such decision as he thinks proper.

No. 51.

Danish Consulate General,  
Yokohama, August 29th, 1872.

SIR.—With reference to the enclosed copy of the minutes of the Consular Meeting held to-day for the purpose of considering the finding and recommendation laid by your good selves before the Consular board in the case of the Peruvian Ship *Maria Luz*, I beg to forward to you copy of the recommendation and advice given by Mr. Zappe H. I. M. Acting Consul General to which Mr. Loureiro Consul for Portugal, Mr. Bruni Acting Consul for Italy and myself give our full approval.

I remain Sir,  
Your obedient Servant

F. DE BAVIER,  
H. D. M. Consul General.

OHYE TAK, Esq.,

Kanagawa Ken Gon no Kami.

I cannot approve of the finding and recommendations laid before me by the Kanagawa Kencho because:—

1.—The Governor recommends to punish an offence about which no trial has taken place. The enquiry which I have partly witnessed I have been several times assured by the Governor was to be only a preliminary enquiry and a judgment can only be given after a formal trial has taken place.

2.—Even if I admit that the proceedings just now referred to have been a regular and lawful enquiry, even then I cannot give my consent to the finding and recommendation in question because all the evidence which has been elicited is one sided, the Court having heard the evidence of the complaining parties only, and since the contract which each coolie has entered into is an agreement between two different parties in the presence of witnesses each contract bearing the stamp of the Government office in Macao, and the signatures of two Portuguese Government officers, these parties must be heard before a decision can be given about the validity of the contract.

3.—Too little weight has been bestowed on the evidence of the Captain who flatly contradicts the statement of each coolie, notwithstanding the fact that each contract produced speaks in his favour—that is to say corroborates his statements.

The construction of the Court has not been in accordance with the convention of October 1867 which provides that the Government

shall exercise jurisdiction over non-treaty subjects with the Municipal Director and with the advice of the Foreign Consuls if obtainable. In this case the Governor has not once up to the present deemed it necessary to ask my advice or to ask the advice of my colleagues, although he has taken steps towards the Peruvian ship *Maria Luz* which carry with them grave responsibilities. On the contrary the Court has in reality only been constituted by the Government and a Mr. Hill, known to me as a practitioner in Yokohama, not to mention foreign functionaries not connected with the Board of Consuls who obtained permission to put questions to the coolies, although if the stipulations of the above Convention had been observed Mr. Hill would scarcely have had a right to occupy the conspicuous place on the Bench which he did occupy, if he had been called there by the joint consent of the Consuls and Governor.

But even if I waive my former objections I come to the question which I consider the most important to be decided on, namely: the question of competency to exercise jurisdiction in this matter, and after due deliberation I must deny the competency of the Japanese authorities. The right of jurisdiction—civil or criminal—over all persons and property within the territorial limits, which is incident to a State relatively to its own subjects and their property extends also, as a general rule to foreigners *commonant* in the land. This means in other words that territorial jurisdiction may be exercised over foreigners *commonant* within the territories of a State for offences or crimes committed within the limits of a State. The right of the Japanese authorities to exercise jurisdiction over the *Maria Luz* and the captain, is therefore doubly dubious, because:—

1.—The captain and the property in his charge—the ship—are not *commonant* within the limits of the Japanese territory, but have only been forced into these limits by powers over which they had no control, by winds and weather, and would have left these limits if force had not prevented their leaving.

2.—The Japanese authorities are not competent to punish offences or crimes committed on the high seas under the Peruvian flag, which is equal to being on Peruvian territory.

3.—The Japanese authorities are not competent to give a decision on the validity or non-validity of a contract made between *foreigners* in places outside of Japan.

My advice therefore is:—

To return the coolies to the ship and put the captain on formal trial for offences committed in this harbour, if such is deemed necessary.

(Signed) ED. ZAPPE.

The Captain was then told he could have the papers &c. of the ship on making application.

The Chinese were then told that they were dismissed, as they had unanimously refused to go on board. But as an action might be brought against them they would for some days be kept in the charge of an officer.

The Captain remarked that he had been kept 19 days in port. Who was to pay for the delay?

He was told to apply in writing and the Court then adjourned.

#### IN H. B. M.'s CONSULAR COURT.

Before Mr. Consul ROBERTSON.

Tuesday, August 27th, 1872.

Thomas Newsome and William Cornish pleaded guilty to a charge of desertion from the *Leander*. On Sunday morning Nugent asked twice to go on shore to get some medicine, and on the second time of asking was given an hour to go on shore to get what he wanted. He did not return. Cornish came out of gaol on Sunday, and refused duty; he asked to be permitted to go on shore to get some clothes. The captain told him he could not till Nugent came back. Cornish had been imprisoned before, and Nugent had been guilty of refusal of duty and been brought off by the police. Each was sentenced to three months, with hard labour.

#### CORONER'S INQUEST.

An inquest was held yesterday morning at the U. S. Consulate, on the bodies of John H. Barker and Joseph Lymart, who came to their deaths on Saturday night last.

Mr. C. O. Shepard, U. S. Consul, Coroner, Messrs. Howard Church and E. R. Smith, Jurors.

After an inspection of the body of Lymart, that of Barker having been seen yesterday, the following evidence was adduced.

John Graham said he was Chief Engineer of the *America*. He saw the body of Barker yesterday; he was engineer's storekeeper. He met Barker in the gangway between decks near midships on the evening of the fire, this was the last time he saw him alive; this was

about ten minutes before every one abandoned the vessel, he had the hose with him. He did not see him after that alive. He met his death in witness' opinion by drowning.

To Mr. Church. When the fire broke out witness was in his room; there was steam on all the engines sufficient to drive the pumps; two pumps were going by steam about ten minutes after the alarm. Did not know Joseph Lymart.

James Allen said he was first assistant engineer on the *America*. He was on board at the time of the fire, he had seen the bodies and recognized both. He last saw Barker in the port gangway near midships: he had been in the engine room to get fire buckets. The smoke was so oppressive that he had to stand to get his breath, this was the last time witness saw him alive. He next saw Barker after his death. He came to his death in witness' opinion by being drowned. As regards Lymart he saw him last alive in the donkey ash room, he was trying to get the hose stretched, this was about ten minutes after the alarm, he came to his death in witness's belief by drowning.

George C. Hawley stated that he was second engineer. He had seen the two bodies, and recognized them. He was in bed when the alarm was given. He was at his station on the alarm being given. He saw Barker last at the forward donkey. Lymart came in at that time. He thought the men came to their deaths by drowning, not burning.

Angus Leslie, steerage steward of the late *America*, said he was in the ship at the time of burning. He saw the body of Lymart; he recognized it. The last time he saw Lymart was at the donkey room door. He spoke to Lymart, and told him to leave the ship. He asked if he could not do any more? Witness replied "no," and again told him to reach the hurricane deck. Death, in his belief, was caused by drowning.

James Wilson said he was quarter-master. At the time of the burning he was on his watch. He had seen Barker's body. He could not see Lymart's body; it was too strong. He last saw Lymart near the steerage; he was screwing the ports up. He did not believe death was caused by drowning. The hair of the head appeared to be burnt.

J. Graham, recalled, said he found Barker's body very much discoloured but this, he thought, was owing to the action of the water. He could not say what the station of the steerage watchman is in case of the fire. The assistant storekeeper was at his station; it was his duty to fetch the buckets, if ordered to do so by his superior officer.

Angus Leslie, recalled, said the duty of the steerage watchman in case of the fire was to close the ports.

Adjourned until the body of the third European is discovered.

#### IN THE UNITED STATES CONSULAR COURT.

Before Mr. Consul SHEPARD.

HOWARD CHURCH, } Jurors.  
E. R. SMITH, }

The following verdict was delivered in the inquest held on the bodies of the three Europeans who met their death on the night of Saturday last.

"An inquisition taken for the people of the United States at U. S. Consulate, Kanagawa, Japan on the 29th August, 1872, before Mr. C. O. Shepard, Consul, and Howard Church and E. R. Smith, assessors duly sworn."

"After due deliberation and enquiry the court is of unanimous opinion that John H. Barker Engineer's storekeeper, Joseph Lymart, steerage watchman, and Thomas B. Cook came to their deaths on the night of the 24th August, by drowning whilst trying to escape from the burning P. M. S. S. Co.'s Steamer *America*, then lying in the harbour of Yokohama."

Signed C. O. SHEPARD, Consul.  
HOWARD CHURCH, } Assessors.  
E. R. SMITH, }

#### IN H. B. M.'s COURT OF PROBATE.

Before Mr. Acting-Assistant Judge HANSEN.

Maria Searle, widow of the late Joseph Searle, draper, &c., formerly in business at No. 82, Main Street, Yokohama, applied for probate of his will, as sole executrix. Edward Powys filed an affidavit in proof of due execution of the will, and the executrix being also duly sworn, probate was granted. The personality was sworn under \$15,000.

### Extracts.

#### THE COINAGE OF GOLD FOR TWENTY FOUR YEARS.

We subjoin a few figures, which we hope will throw some light on the important questions raised by Mr. Thomson Hankey in his letter to us, which appeared in the Economist of the 15th inst. They are an account, in a condensed form, derived from official publications, of the actual coinages of gold at the principal mints of the world—those of France, England, the United States, and Sydney—since the date of the gold discoveries. In a discussion on the production of gold and its effect on prices, such figures are the most useful to obtain. Direct estimates of the gold produced can, from the nature of the case, be no more than approximately correct; but the mint reports at least furnish us with definite and trustworthy figures so far as they go, and fortunately they cover a large part of the subject, because it is the additions to the coinage, and not merely the gold production, which are most important in the question of prices.

The first impression of our table, we think, will be that Mr Hankey has certainly not exaggerated the additions to the quantity of gold in the world since 1848, or the importance of our now "taking stock" of the subject. The general result of the table is that since 1848 the immense sum of 600,000,000 of gold has been coined at the above mints, in the following proportions:—

	£
England .....	123,608,000
France .....	259,801,000
The United States.....	185,579,000
Sydney .....	28,799,000
Total .....	597,787,000

It is difficult not to believe that so large an addition to the previous amounts of the gold coinage can have been without important consequences, both direct and indirect. Of course, a deduction ought to be made for re-coinages—the same gold having sometimes been coined twice over in different countries;—but even if the whole coinages of the United States and Australia had been re-coined in England and France,—and this is most unlikely,—the sum of £100,000,000, which would remain, would still be an immense amount. To appreciate the magnitude of the sum, it is only necessary to remember that the current estimate of the gold in the world in 1848 was £560,000,000. Assuming that estimate to have been approximately correct, we have a coinage in twenty-four years equal to the whole stock of estimated gold existing at the commencement of the period.

Before discussing the effect on prices however the facts must be scrutinised more narrowly, and other questions considered. In itself, there is no fact more difficult to trace than a general rise or fall in prices, which is clearly due to a change in the supply of gold. A general rise due to such a cause, which would be in effect a fall in the value of gold, is sure to be checked, like a fall in the price of any other raw material, by a stoppage of production at a certain point. A general fall of prices will be checked, on the other hand, by an increase of production. No such checks can occur without considerable fluctuations, and as prices are constantly fluctuating from other causes, the exact bearing of an increased or diminished supply of gold becomes the more difficult to trace. Mr. Jevons, in his very able inquiry, supplied good reasons for believing that at the time he wrote gold had fallen in value compared with other raw materials; but the difficulty with which ever this limited conclusion was arrived at by so able an inquirer is the best proof of the obscurity of the facts. It appears to be possible however to make certain assumptions respecting the tendency of the facts, judging from the known effect on prices of similar movements in the supply of other articles; and also to examine the bearing of other economic facts of the last twenty-five years on the effect of the supply of gold.

The subjoined figures then appear to us to contain some intrinsic evidence that the effect on prices may not have been so great, or at least is not now so great, as the great addition to the supply of gold in the last twenty-five years would imply. First, there has been a quick diminution in the rate of coinage since 1857-59, when the climax of activity, which began in 1851, was obtained. The total coinage—

In the three years ending 1859 was —	£
1857 .....	41,738,000
1858 .....	32,700,000
1859 .....	37,161,000
	111,599,000
Giving an annual average of.....	37,200,000

And in the three years ending 1871 was—£

1869 .....	24,426,000
1870 .....	8,516,000
1871 .....	18,052,000

50,994,000

Giving an annual average of..... 16,998,000

Average annual decrease..... 20,202,000

In other words, the current rate of coinage has fallen to less than half the maximum rate since the period of the gold discoveries. That the change has been very steady is shown by a glance at the annual totals in Table II., and a summary for the quinquennial periods shows it just as clearly:—

#### TOTAL COINAGE IN QUINQUENNIAL PERIODS.

	Total. £	Annual Average of Period. £
Four years (1848-51) .....	48,880,000	12,220,000
Five years (1852-56) .....	160,126,000	32,025,000
Five years (1857-61) .....	168,980,000	33,396,000
Five years (1862-66) .....	127,611,000	25,522,000
Five years (1867-71) .....	92,190,000	18,438,000

Total..... 597,787,000 ..... 24,908,000

Thus from a maximum average of 33,000,000 in the five years 1857-1861, the rate fell to 25,000,000 in the following five years 1862-66, and to 18,000,000 in the last five years 1867-71—the latter average being also considerably under the average for the whole period. The fact, according to the usual rule of the effect of supply on prices, has only one interpretation. The previous supply of gold tending to diminish its value there has ensued a check to production which would tend to counteract that effect. This would be the general argument from such statistics. More information would be needed before the effects could be measured with any accuracy, but the tendency of the fact by itself is clear.

The second fact shown by the above figures is the enormous absorption of coin by a single country—France—indicating, we should infer, that there was in operation a very special new demand, and in consequence that a large part of the new supplies of gold was not thrown in to compete with the old stock. France coined, in round numbers, between 1848 and 1869 the large sum of 260,000,000, more than twice the amount coined in England in the same period; although we have so much more trade, and virtually coin for Brazil, Portugal, Egypt, and other countries, as well as for ourselves. Nearly half the new coinage has in fact been for France, which has thus by itself absorbed a large part of the new gold. Of course it may have been enabled to do this because of the gold falling in value, but the absorption followed so quickly on the events of 1848 that it would operate in time to check a very extensive fall. It was in the first years that France coined most—

#### FRENCH COINAGE.

	Total £	Annual Average. £
Four years (1848-51).....	16,880,000	4,220,000
Five years (1852-56).....	71,471,000	14,294,000
Five years (1857-61).....	91,525,000	18,305,000
Five years (1862-66).....	49,011,000	9,802,000
Five years (1867-71).....	30,914,000	6,168,000

Total..... 259,801,000 ..... 10,825,000

No doubt the low average of the last five years is partly caused by the cessation of coinage operations, which we assume to have taken place in 1870 and 1871 because of the war and the issue of inconvertible paper; but even if an amount equal to the addition to the paper circulation had been coined, the average for the five years would still have been much under the average of the period from 1852 to 1861. Thus the new demand of France was most effective when gold was coming forward in greatest abundance, and of course would tend, at the most critical period, to check the effect on prices of the new supplies.

There is thus some reason to conclude, from the intrinsic evidence of the figures, that in the actual circumstances of the world there must have been a good to counteract the fall in the value of gold, which we should look for as the effect of a largely increased supply. The assumption as to the effect of supply on prices is always made on the condition of other things being equal; but in the case of gold other things have not been equal. It we inquire further we shall find that, besides the new demand for France, which is exhibited in the figures themselves, there been numerous causes at work since 1848, partly aggravating and partly neutralising the effect of an increased supply of gold.

The neutralising circumstances can be very easily stated. They

are principally the great increase of population and wealth which has occurred in the countries making use of a gold coinage since 1848. Omitting France, which is the case of a country substituting gold for silver, we find that altogether the coinage since 1848 has been £338,000,000, which, without any deduction for re-coinage, is equal to an increase of 60 per cent. upon the supposed previously existing stock of £560,000,000. But the increase of population in the countries concerned has been about as great, and in wealth has been much greater.—

#### INCREASE OF POPULATION IN PRINCIPAL COUNTRIES using GOLD COINAGE since 1848.

	1848.	1871.	Amount.	%
United Kingdom.....	28,000,000	32,000,000	4,000,000	14.3
United States.....	22,000,000	39,000,000	17,000,000	77.3
Australian Colonies.....	500,000	2,000,000	1,500,000	300.0
	50,500,000	73,000,000	22,500,000	44.5

The people who use the gold have thus multiplied largely, so that if we are to assume the effect of the supply of gold on prices to be proportioned to the population, the great coinage since 1848 has clearly been called for by an increase of population.

As regards the increase of wealth, the figures are even more remarkable. The increase of population has been at the smallest rate in the United Kingdom, but its trade and profits have expanded enormously—

The property assessed to income tax is now.....	£ 435,000,000
in 1848 was.....	256,000,000

Increase ..... 179,000,000

—equal to an increase of 70 per cent.

It may be said that this increase of annual value is an artificial one, caused by the fall in value of the measure in which it is reckoned, but a detailed examination would show that it is largely due to the creation of new properties—railways, mines, houses, and the like—the old properties having risen very little, although much new capital must have been sunk in them.

The statistics as to trade are equally remarkable. Omitting altogether the estimates of value, we note the following changes of quantity:—

#### Exports.

	1848.	1870.	Amount.	%
Cotton piece goods.....yds	1,068,751,000	2,311,064,000	1,204,313,000	110.9
Cotton yarn.....lbs	135,831,000	198,387,000	62,556,000	37.9
Linen yarn.....lbs	11,722,000	37,122,000	25,400,000	217.1
Linen piece goods.....yds	89,002,000	228,457,000	137,455,000	153.9
Iron and steel.....tons	628,000	2,716,000	2,060,000	333.9
Woolen yarn.....lbs	8,429,000	36,523,000	28,153,000	336.2
Woolen cloth, &c.....yards	10,194,000	32,540,000	22,346,000	220.0
Flannels, &c.....yards	6,083,000	15,901,000	9,818,000	160.0
Worsted stuffs, &c.....yards	67,437,000	236,062,000	168,625,000	250.9

Thus our production of these articles has enormously increased during the last twenty-four years—at a much greater rate than the increase of 60 per cent. in the measure of value.

And this increase is not confined to the foreign trade alone. Since 1856 only the production of coal and iron has increased as follows:—

	1856.	1869.	Amount.	%
Coal.....	66,645,000	107,428,000	40,783,000	60.8
Iron.....	3,586,000	5,446,000	1,860,000	53.2

—and the imports of the raw material of manufacture retained for home consumption have also increased in a similar manner.

The raw cotton imported for home consumption in	lbs.
1870 was	1,101,675,000
1848 was	639,000,000

Increase.....462,675,000

—equal to an increase of 72.3 per cent.

The wool imported for home consumption in 1870 was.....	lbs.
1870 was	170,708,000
1848 was	64,289,000

Increase.....106,419,000

—equal to an increase of 167 per cent.

The conclusion to be drawn from the increase of our foreign trade is thus supported by the leading facts respecting our home industry. Our production and business have doubled or more than doubled in the last twenty-four years.

In these ways then a very large supply of new gold may have been absorbed in the last twenty-four years without prices being affected. Although the supply has increased, the communities making use of it have also increased both in numbers and in productive energy. Were these the only facts our wonder should rather be, that

gold has not rather risen in value as the increase of the production of other commodities is so much greater. But the circumstances which would aggravate the effect of an increased supply of gold have also been very powerful. Most prominent among these is the multiplication of expedients for economising the use of money in the gold using countries. The spread of banking in England, and the development of the use of cheques, have checked a demand for gold which might otherwise have sprung up. The London Joint Stock Banks especially have been admitted to the clearing since 1848, and branch banks been greatly multiplied in the country. The effect of this economy is very difficult to measure, but its direct tendency is unmistakable, and must have been very powerful in England.

A second set of measures tending in the same direction, has been the introduction of inconvertible currencies into America and France. By this operation a substitute has been provided for gold in the countries which would otherwise have used it. But the effect, as regards France at least, has been very little. The paper circulation has increased about 30,000,000*l*, very little more than what had lately been the ordinary annual coinage of two years. The paper therefore has taken the place of the old coinage only to a very small extent, the notes being made for circulation and the coin for hoarding. As regards America the circumstances are different, the inconvertible paper having been about for ten years, and having long stood at so great a depreciation as to displace the gold. But the inconvertible paper has, after all, been limited and in consequence of the local action in California, where the currency of paper has been forbidden by custom, and of the necessity for paying customs duties in gold, there has always been a customary gold currency side by side with the legal paper currency. The figures we subjoin certainly show that, notwithstanding the paper currency, there has been a steady demand for gold coin during the last ten years—the coinage having fallen off since 1862 just as it has fallen off in England and France, but not to any greater extent. The tendency of inconvertible paper must undoubtedly be to reduce the demand for gold, but in the actual conditions of the issues since 1848 the practical effect has apparently been less than theory would lead us to expect.

We conclude therefore that while the effect of the new supply of gold, as shown in the enormous coinage since 1848, would naturally be a great reduction in its value, there is at least some evidence for holding that this natural effect has been largely checked or counterbalanced by other circumstances. France has caused a large new demand by substituting gold for silver, and the great gold-using communities have increased enormously in population and industry. Expedients for economising money have on the other hand increased as well, and issues of inconvertible paper in France and America tend to increase the abundance of gold. But these causes are difficult to measure, and have as yet been partial in their effects. It is curious that, as regards the future, the influence of increasing population and increasing commodities will apparently operate as powerfully as hitherto in checking the effect of an over-abundant supply. The issue of inconvertible paper by France is being balanced by the adoption of a gold currency in Germany, and the approximation in the value of paper to gold in America, coupled with the limitation of paper, will tend to increase the demand for coin there. We must reserve these points, however, for a future article, in which we propose to inquire more minutely into the whole question of the production and distribution, of gold since 1848.

## Shipping Intelligence.

### ARRIVALS.

Aug. 27th, Brit. Str. *Ottawa*, Hockin, 1,281, from Hongkong and Ports, Mails and General.—P. & O. Company.  
Aug. 28, *Maryaret*, Am. ship, Crosby, 683, from Newcastle, N. S. W., July 9th, Coal, to P. M. S. S. Co.

### REPORTS.

The P. & O. Str. *Ottawa* reports a cyclone having passed her during the night of the 24th, near Cape Chickakoff, but the vessel being well prepared to meet it, no accident happened.

The P. M. S. S. steamer *Relief* left Shanghai on the 19th at 1.30 a.m., and arrived at Nagasaki on the 21st at 1.30 p.m., left again at 9.30 a.m. on the 22nd, and arrived at Hiogo on the 24th at 1 p.m., were detained one day at Hiogo owing to a severe gale, left Hiogo on the 26th at 3 p.m., and arrived at Yokohama on the 28th at 9 a.m. passed the *Costa Rica* at 3 p.m. on the 27th.

The American ship *Magnet* experienced moderate westerly winds, and pleasant weather for 10 days after leaving Newcastle, then met with stormy weather, heavy gales blowing from S. E. to S. W. a cyclone passing them on the 19th; and again on the 25th when about 250 miles to the eastward of this coast had to lie to for several hours during the heaviest of it, a tremendous cross sea running which kept the deck constantly covered with water: during the heavy weather lost several sails but sustained no material damage.

The Brit. barque *Emulation* having a typhoon passed the vessel on the 23rd, the wind veering by the north.

### Standing Counsel.

R. W. M. BIRD, Esq., *Barrister-at-Law.*

### Secretary to the Provisional Committee.

JAMES GILFILLAN, Esq.

**THE** Provisional Committee being now in possession of legal opinion on the subject from London, have decided to establish the Bank by registration under the Companies' Act of 1862. A permanent Board of Direction will be formed in London—as required by the Act—with a Board of Management in Shanghai.

The Provisional Committee therefore give notice that applications for Shares will be received by the undersigned not later than the 31st August, 1872.

It is the intention of the Committee that the business of the Bank shall, if possible, be commenced simultaneously in China and London on the 1st January, 1873. By order of the Provisional Committee.

## FORM OF APPLICATION FOR SHARES.

To the Provisional Committee of

THE BANK OF CHINA, (LIMITED).

GENTLEMEN,

—request that you will be pleased to allot—  
shares of One Hundred Taels (Tls. 100) each in the above-named Bank, and —agree to accept such shares, or any less number which may be allotted to —  
(such allotment not to be made before the Bank has been legally constituted as a limited Company), and —  
agree to pay a call of Twenty-five Taels (Tls. 25) per share on allotment, and further calls as may be deemed necessary by the Directors.

—also agree to confirm the acts of the Provisional Committee, pending the appointment of a permanent Board of Directors, and to Subscribe to the Deed of Settlement, when called on to do so.

— Gentlemen,

Your obedient servant,

(Name) \_\_\_\_\_

(Address) \_\_\_\_\_

J. GILFILLAN,

## Notes of the Week.

THE entire section of the railway to Yedo is to be formally opened a fortnight hence by the Mikado in person.

THE letter from M. de Turenne, repudiating the action taken by the French Consul in the *Maria Luz* case, is significant both from its matter and manner, and we heartily rejoice to find the sympathies of the French Chargé d'Affaires apparently on the side of the Japanese Government.

With Mr. De Long's action we are grievously disappointed, as we think most of his countrymen will be. We earnestly hoped that on his return from America we should have no more occasions to criticize him unfavourably. The larger experience of life, of politics, and mankind which his stay in Washington must have afforded him, cannot but have expanded his views, and shown him how greatly agreement between the leading Powers of the world tends to promote the interests of humanity and to further the general cause of progress. He should have remembered that on this question of the coolie trade America is at the head of the world—for we were not quite correct last week in saying that America and England regarded the contracts which bind these men to servitude as invalid. America alone monopolizes the honour of so regarding them, and the Representative of America should, as it seems to us, have taken not a mere lawyer's view of the case, but the combined view of the statesman and the humanitarian. Such action would have constituted a legitimate source of pride to his nation. It is not by professions of influence, real or imaginary, in this country; not by appointments to office, the advising or controlling of departments, or the insertion of inflated speeches in newspapers, that the influence of America or Mr. De Long will be either measured or increased. It will be by uniting in friendly and supporting action with other Powers; in making the first thought, What is good for Japan? not—What is good for me or for America? in doing the best possible for this country, and taking popularity and power and advancement as accidents. It is the absence of all evidence of this spirit which has made us sometimes write bitter things about Mr. De Long—things which we almost regret having written; which it was yet just to write; but which we should wish never to be called on to write again. It is no light misfortune to any man to alienate friends, to seem almost to foster divisions in a society whose best interests lie in friendly union, to be accused of petty personal motive, trumped-up passions, or illiberal national prejudices. We declare that if convinced that the expression of our views, however just, had the unsalutary effect of playing into the hands of mere vulgar British prejudice against America, or the equally vulgar American prejudice against England, we would never write one more word on the subject, because no good that we could effect would neutralize such positive harm. But the actions of nations and the acts of their representatives demand criticism. Those who make it are under serious responsibilities that it is just and truthful as far as their knowledge extends; and those against whom it is directed may not seldom find that the lower motives to which they impute it are wholly without foundation, and that it contains truths which are not the less salutary because they are bitter.

Mr. F. Lowder, formerly H. M. Consul at this port, has resigned the British Civil Service, and accepted a post of influence in the Imperial Customs.

We shall not pay Mr. Lowder the bad compliment of enumerating the qualifications he possesses calculated to make him a good servant of the Japanese Government. But we think the appointment a very good one, and we trust that not only will Mr. Lowder do efficient service to this country, but use all his influence to place the Custom House administration on such an amended footing as will promote and facilitate business, and make the working of the Department at once more profitable to the Government and more easy to the mercantile community.

THE arrest of Mr. Cousens at Hiogo by Mr. Wilkinson, and his subsequent imprisonment by Mr. Gower have caused great excitement and indignation there. We believe the circumstances connected with this arrest are as follows:—

About 4.25 p.m. on Sunday, the 1st instant, Mr. Cousens, in a native sampan with one boatman, came alongside the steamer, and immediately afterwards a boat with four men rowing came up, and a struggle for first places ensued. A boatman on board the Consular boat pushed Mr. Cousens's sampan astern, when Mr. Cousens struck at the *sendoe* with a piece of matting, and warned him that a repeated attempt of the same nature would meet with similar punishment. Mr. Wilkinson, who was unknown to Mr. Cousens, made some remark relative to the striking of his boatman, when the latter making another attempt to send his boat forward to the detriment of Mr. Cousens was struck again, when Mr. Wilkinson exclaimed in an excited manner, "Do you know who I am Sir?" Mr. Cousens replied "no" when Mr. Wilkinson said: "You shall hear from me, sir!" All this took place during a squall of wind and rain, and did not occupy more than one minute. At a few minutes to five the steamer started on her voyage, when she was hailed by Mr. Wilkinson in the Consular boat, who stood up in the stern-sheets, and, displaying a paper, called out, "Arrest that man!" He came on board and, at once calling out, "I call on all subjects of Her Gracious Majesty the Queen of England to assist me in arresting that man," arrested Mr. Cousens, and, refusing all bail took him ashore, without even allowing him to fetch a change of clothing from his cabin.

Now, Mr. Cousens was manifestly wrong in striking the Japanese boatman, and it is quite time that means should be taken to repress that readiness to strike the natives of Asiatic countries which we are sorry to say is too common a characteristic of Englishmen abroad. And he not only offended once. He struck the boatman a second time, and, whatever may have been the provocation, he placed himself in the wrong by doing this.

On the other side it must be allowed that the assault was neither brutal, savage, nor unprovoked. His boat was pushed aside, and taking up a piece of matting he struck the boatman who committed the act. It may safely be averred that nine men out of ten would have done the same thing, and many would have done so with more passion than Mr. Cousens exhibited. He says he was placed in danger by the act of the boatman, besides being pushed aside from a place which more politeness indeed, would have induced him to concede, but to which he had full natural right. The boatman, as far as we know, alleges no injury done him; the blow was slight; and, had he taken out a summons against Mr. Cousens, a fine and a reprimand would have constituted a sufficient punishment.

But the excitement—and we must add the very undignified excitement—subsequently shewn by Mr. Wilkinson gives some colour to the idea that he acted vindictively; and no man with judicial powers in his hand should do this, or even lay himself open to the suspicion of doing it. As Mr. Gower is Consul at Hiogo, it is presumed that Mr. Cousens was committed to

prison by him, and it may be fairly supposed that Mr. Wilkin-son's feelings were shared by Mr. Gower. But, in our opinion, both have shown a grievous want of judgment. It may have been strictly just to detain Mr. Cousens at Hiogo, though it was undoubtedly a severe measure. He was on his way to England—his baggage went on in the ship—and he must have been placed in great inconvenience by this. Had his offence been a very serious one, wholly unprovoked, and knowingly and intentionally insulting, it would have been quite a different matter. It was none of these, and the only conclusion we can come to is that the sentence on Mr. Cousens was unjustifiable on any grounds of natural justice.

We trust that Mr. Cousens will be able to obtain redress for what we conceive to be the grievous wrong done him.

A LETTER published a few days ago in the *Japan Herald* and signed "An American" charges us with having refused to insert an account of the burning of the *America* written by an American, and not scrupled to work up the facts thus forwarded to us into an article. We were wholly unable to understand the charge at the moment, and treated it as we are wont to do all similar communications levelled to us. We have since understood that some notes taken by an American eye-witness of the fire were given to our reporter and received by him with a promise that they should be submitted to the Editor and, if approved of, appear in the pages of the *Japan Mail*. His own account was all that could be set up for Monday's paper compatibly with its issue at about the usual hour, and this account did not contain one line written by the American eye-witness, who, finding that his own version was not inserted, requested the return of it. This is a representative instance of the kind of charge trumped up day by day against the *Japan Mail*.

It is a remarkable fact that the *Japan Gazette* only produces opinions after the occurrence of striking natural phenomena. About eighteen months back a severe earthquake took place here, and the *Gazette* produced a small opinion. For these eighteen months it has remained sterile. Last Sunday week a typhoon occurred, and yesterday evening the *Gazette* produced another small opinion. It need hardly be said that both were equally ridiculous.

Mallet, in his work on earthquakes, says that after severe shocks, slender whitish filaments like threads are found on the edges of the crevasses formed on the earth's surface, and the opinions in the *Gazette* may bear some such relation to the paper as these filaments do to the earth. It is duty of the philosopher, however, to note all the particulars connected with natural phenomena, and it is noteworthy that the opinion of yesterday appeared within a few hours of the departure of the mail; proving that its parent, with a very proper estimate of the disgrace attaching to the paternity, shipped it off by the very first opportunity; and also showing that instincts of some vigour may be preserved even when decrepitude is the general condition of the subject.

The following is the list of tea and silk shipments per the P. M. S. S. China:—

We understand that Captain Hereira, of the *Maria Luz*, has commenced proceedings in the Saibansho to enforce the coolies shipped by him at Macao to continue their voyage to Peru.

We observe that the open spaces in front of the English and American Consulates are to be filled with large shady trees. The work was commenced a few days since under orders from the Governor of Kanagawa.

Mr. George, Chief Superintendent of Telegraphs, leaves tomorrow in the *Denshin Maru* for Shimonoseki with the cable for the Shimonoseki Straits.

#### THE COOLIE TRADE AT MACAO.

A CERTAIN Mr. P. G. MESNIER, dating from Macao, sends a letter to the *Hongkong Daily Press* of the 28th August, criticising, in no gentle temper, the article which appeared in the *Japan Weekly Mail* of the 10th August on the subject of the *Maria Luz*. An old humorous rule of barristers whose case is bad bids them abuse the opponent's attorney, and Mr. MESNIER in an evil moment has resorted to this line of conduct, imagining, we suppose, that such a method of procedure will serve his turn. We are far too much accustomed to impertinences of this kind from opponents of his class to trouble ourselves about them. There never yet was a bad case which wanted defenders; but a bad defence of a bad case seems to us of all possible things the worst, and this Mr. MESNIER has made with entire success. He shows that Macao can be as rhetorical as we feared, but more abusive than we expected. The curious circumstance is that while the Portuguese theory is admirably humane and irreproachable, Mr. MESNIER's chief bitterness is reserved for "that radical depravity of ideas" which has shewn itself in our protests against the slave trade in the disguise of the coolie trade. If any one will take a certain glass out of a telescope he will see things upside down. Nature seems to have provided Mr. MESNIER with some such mental instrument, and thus to him humanity becomes depravity; the coolie trade a beneficent system of emigration; and the defender of it (himself) a very lofty and noble person.

Some of the coolies had their queues cut off, and we spoke of this as a cruel punishment inflicted on them. The gentle criticism on this is as follows:—"Such an abstraction would be cruel indeed, on quadrupeds, but it is not so clear in this case." Just so. Here we have a specimen of the mental inversion spoken of. It is not clear to Mr. MESNIER, but this is not the fault of the abstraction, as he is pleased to call it. We shall not doubt that the operation itself in one case would give a great deal more physical pain than in the other. But we are sure that in ten days time a quadruped so treated would hardly remember his sorrows; while a Chinaman, to whom his queue is almost more than life, would brood over its loss in revengeful torment and bitter humiliation until he would be ready to do and dare anything which even involved his own destruction and that of others. We shall not dispute that severe punishments must be administered when you have to deal with a cargo of unruly human beings, many of whom possibly have been forcibly taken from their homes. But what creates this necessity but the nature of the trade itself? It is very well for Mr. MESNIER to institute comparisons between quadrupeds and men to the evident disparagement of that moral qual-

ity in the one in which consists his superiority to the other. Men are prone to make their estimates of human nature tally with their experience of themselves. We all know the demoralizing effects produced on men by association with slavery in any form, and it is no wonder that the advocate of the coolie trade ignores other feelings of humanity besides those connected with the love of freedom. But when he talks about our "depravity of ideas," we frankly tell him that the charge comes ill from one who has constituted himself the apologist of this nefarious traffic and of the cruelties which attend it. But the inversion of Mr. MESNIER's views is not solely intellectual.

In real truth, however, we can hardly blame him for being angry. Men naturally are more or less the creatures of their surroundings, and he who lives near barracoons and the apparatus of this trade cannot be expected to preserve the instincts and sympathies of men uncontaminated with such associations. Mr. MESNIER must pardon an uncomplimentary estimate of the value of his standpoint, but we are indebted to him for no civilities, and if he tries conclusions with us he must be prepared for the consequences.

We have before us the papers presented to Parliament containing the correspondence respecting the emigration of Chinese coolies from Macao, a trade characterized by Mr. DORIA, the English Envoy at Lisbon, in his despatch to the Marquis D'AVILA, as "this nefarious traffic in human beings." It is impossible within reasonable limits to give a full *précis* of this correspondence, but in justification of the warmth we have manifested on the whole subject, we shall present our readers with a few of its most salient points.

It opens with a letter from the Acting-Governor of Hongkong, giving an account of the destruction by fire of the *Don Juan* (formerly known as the *Dolores Ugarte*) in which 500 out of 650 coolies on board were burnt or suffocated on the deck to which they were confined, and from which egress was closed by iron barriers. General WHITFIELD admits that there are grounds for believing that exertions are used by the Portuguese authorities to give to the emigration that freedom which can alone justify its maintenance, and elsewhere it is shewn that Admiral DA SOUZA, the present Governor of Macao, has done much of late to improve the system. But General WHITFIELD adds that there is no reason whatever to doubt that a large number of coolies are deceived by their countrymen through whose agency they are collected, and that they are intimidated into giving such answers to the inquiries made by the authorities as are calculated to deceive them. This letter is followed by a statement made at the Magistracy of Hongkong by one WONG AFAHT, who shows how he was entrapped into a barracoon at Macao, and when asked whether he had any complaint to make, confessed that he dared not make it because he was threatened with gaol in case of such an avowal. He was one of the wretched cargo of the *Don Juan*, and sketches the hideous story of her destruction by fire, with all the horrors of the locked gratings, the suffocation, trampling to death, and drowning of her human cargo. Three other Chinese tell the same story of being entrapped into barracoons, of being asked whether they were willing to go aboard, but of all answering in the affirmative under stress of intimidation.

ALBERT HERKER, an Austrian seaman on board the *Don Juan*, next gives evidence. Twenty men were ironed together, two by two, and others were brought up to see them as warnings. Early in the morning of the fire an outbreak occurred among the coolies, when the hatches were closed and the captain ordered the crew to fire downwards and forwards on them through the gratings. The fire broke out immediately afterwards.

All these facts are brought by Lord GRANVILLE to Mr. DORIA's notice with instructions to him "to urge the Portuguese Government in the strongest manner, on the part of Her Majesty's Government, to take efficient measures to repress, or at least to regulate, a system of traffic which inflicts such misery upon unoffending persons, and which must be so utterly repugnant to the feelings of justice and humanity of the Portuguese nation." In answer to Mr. DORIA's representations the Marquis D'AVILA writes rather a bitter letter, stating that the Chinese emigration carried on from Hongkong was worse than that from Macao, and politely insinuating that a recent judgment delivered from the Bench at Hongkong *à propos* of this subject "was evidently intended to stop the emigration from Macao alone." A little further on we have another Portuguese document, written with fine rhetoric and passion, and which, if Mr. MESNIER wishes to know the kind of figure he cuts in his letter, he would do well to read. It says that "the British Judge impugned the extradition of a guilty coolie on the ground that the coolies at Macao were forced to embark, that they were not cognizant of the act they committed &c., &c. In that sentence the said Magistrate not only censured the Portuguese laws, but he also attacked with the greatest animosity the emigration from Macao, to which he has been a bitter enemy, as well as the *Journal Daily Press* which advocates the same principles. He (the Judge) was not ashamed to publish that the object of that sentence, and that his intention, was to put an end to the emigration from the port of Macao." Among other things the document shows that 169 brokers at Macao had been punished for having entered the Superintendent's office as false emigrants for the purpose of entering coolies to ship. Anywhere else it might have been supposed that this large amount of punishment naturally implied a large amount of unpunished crime of the same kind. But Mr. MESNIER is not the monopolist of the inverting mental process we have spoken of.

Then comes a despatch from the Governor of Hongkong to Lord KIMBERLEY forwarding "detailed, fresh, and accurate refutations of the assertions contained in the Portuguese Minister's despatch, and charging the Portuguese Government with "inexcusable misstatements," amongst others, that the emigration by the Pacific Mail Company's steamers from Hongkong to San Francisco is of the same character as that from Macao to Peru. The correspondence is closed with a letter showing the peculiar features which make the emigration from Macao so objectionable, and concluding with these words;—"The regulations under which emigration from Hongkong may be conducted will be found in Sir R. MACDONNELL's despatch of the 19th July, 1869. As, however, emigration from Hongkong to any but British colonies has been forbidden, and as emigrants cannot be collected for those colonies in China without the employment of native agents, which is not

allowed, emigration from Hongkong is for the present at an end."

We must address a parting word to Mr. MESNIER, whom his fellow citizens may thank for this special exposure of their favourite trade. If he is so indiscreet as to appear as its apologist he should avoid all moral reflections about others. He should avoid ill-bred personal abuse, which damages even a good case, and covers the defender of a bad one with peculiar disgrace. And, lastly, he should take a more modest measure of himself; try to get his distorted vision corrected, and give up the hopeless task of white-washing the Ethiopian, and trying to scrub the spots off the leopard.

#### THE ENQUIRY INTO THE LOSS OF THE AMERICA.

**A**FTER four days of patient and searching enquiry into the causes which resulted in the loss of the *America*, a judgment has been rendered which can fairly be characterized as full, careful and exhaustive. Such Courts as that held last week are, we believe, not customary in the United States; but their great utility in ascertaining the cause of the loss of a ship on the very spot where it was lost, and within a few days of the event, is so generally conceded that Mr. SHEPARD did well in breaking through a rule in every way calculated to have an injurious effect.

With respect, however, to the constitution of the Court we should have been pleased, had it been possible, to have seen some merchant of high standing on the bench. He would, as it were, have represented the travelling public as well as the shippers of cargo, while the fact of his having a voice in the judgment rendered by the Court would have inspired greater confidence in the minds of those upon whom the Company mainly depends for its support.

The evidence, which has already been published, together with the judgment, tell us very clearly the history of the fire. The ship, it appears, arrived in port early on the morning of the 24th August, and the officers, after working hard all day in discharging cargo, went to rest some time before 11 p.m. Within a few minutes of that hour Quartermaster WILSON perceived a smell of smoke. The stewardess also discovered it at the same moment, and they, together with the saloon watchman, who saw the reflection of the fire, gave the alarm. WILSON went below to the after-steerage, and when within a few feet of thirty-five bales of hay which were stowed in that part of the ship, saw the flames, which had then attacked the four inner corners of four bales of hay, but which did not cover a greater superficial area than about three feet square. He at once ran to the hurricane deck, where he knew some light and easily-handled hose was placed, and seizing that, returned to the main deck, and was going down into the after-steerage, when he discovered that there was no water. The hose being thus useless, WILSON left it, and afterwards rendered such general assistance as he was ordered or was able to give. He explained to the Court that he did not use the after-steerage hose because he thought he could get the lighter deck hose in a shorter time.

Meanwhile, Captain DOANE and his officers put forth every exertion. Under the supervision of the Captain,

four lines of hose were laid into the saloon, but only from one could any water be obtained, and that only for a few minutes. The first officer laid a line of hose in the steerage, but he could get no water, and it was not till the fire had assumed almost entire control of the ship that there was water in the hurricane deck hose. The other officers, not connected with the Engineers' department, were, it appears, assisting with every effort at their command to repress the flames.

From this evidence it seems that the great want was a supply of water, though whether or not the fire could have been overcome with anything short of the full power of the main boilers, is somewhat uncertain. The cause of this deficiency of water must be sought in the evidence given by the Engineer's department. Deferring for the moment any analysis of the opinion given by the Court of Enquiry, we see that the engineers, one and all, did all in their power to extinguish the fire. All maintained that the pumps never stopped working from the moment they were started, and there was an unanimity of opinion that there was a pressure of about 12 lbs. of steam on the boiler, when the alarm of fire was given. This was soon raised to 19 lbs., and it was at that point when the donkey-engine was abandoned. The Chief-Engineer, in his evidence, stated that he considered 12 lbs. of steam should suffice to throw three streams of water a distance of forty to fifty feet with a moderate force. There seem to have been six lines of hose stretched, and water—practically speaking—came through none of them till towards the end of the time during which the officers were still on board. The details of what the engineers individually did scarcely need repetition; it is only for us here to state that no engineer was in the donkey-engine room, a Chinese fireman being on watch, while the sixth engineer was at the cargo port on the forward freight deck tallying or trimming coal.

It appears to us, as it appeared to the Court, that the cause of the deficiency of water was the lack of sufficient steam, and in this opinion the majority of those who have read the evidence will join. Who is to blame for this would seem to be the principal point to discover: how far the engineers are to blame, if at all; and to what extent the regulations of the Company have tended to this unfortunate result.

The opinion of the Court of Enquiry, after a most patient investigation of all the facts connected with the affair, is as follows:—

That from that time the supply through this one line of hose was full and continued to pour through it until the ship was abandoned. To our mind this fact proves the fire pumps and supply pipe of the vessel to have been in good working order, and the presence of water for a few moments through one line of hose in the cabin is proof that steam was so low in the donkey-boiler that when turned on it supplied one stream for a very few minutes only, and then fell so low as to be useless, until just before the ship was abandoned.

We are of opinion that the long time which elapsed before even this one stream was started denotes great want of preparation or great tardiness in the Engineer's department, and we entertain no doubts that had steam to the amount of twenty pounds, or more had been on in the donkey-boiler, at the time the alarm was given, the fires under that boiler in proper condition, and proper expedition used in getting the fire pumps at work, the fire might have been extinguished and the ship saved.

In this opinion we fear that we must coincide. We are most anxious that in these remarks we should do no injustice to the Chief-Engineer, Mr. GRAHAM—who has been twenty-two years in the service of the Company—or

to his assistants; but the fact remains that with the Engineer's department alone rests the *onus* of the deficient supply of water; whether or not it is to be held responsible for the loss of the ship, as maintained in the judgment, is another matter. Mr. GRAHAM maintained that he had carried out the instructions of the Company, and that everything had been done in his department in accordance with long usage; and upon his evidence of custom we think some reliance should be placed. But first let us look at the instructions of the Company. Under the head of "General Regulations," Rule 21, the following "precautions against fire in port" are to be found:—

When in port, except at Benicia, steam must be kept at all times to work the fire-engine, with hose properly attached, etc. At night, the first officer must see that every precaution against fire be taken; that a good watch is kept on deck; that the engine-room has a light in it, and one of the engineer's crew on watch there; that no small packages of cargo are allowed to lie on deck, and that the holds and baggage-rooms are properly secured; that no boats leave the ship or remain on shore after nine P.M., without the captain's permission.

Mr. GRAHAM maintained that this rule was complied with, though it would appear to us that it was broken. We have seen that the steam was not sufficient to work the pumps *efficiently*, and though this qualification is not to be found in the rule, it must be taken as implied. The evidence of all the engineers proves that none of the "engineer's crew" were on watch in the "engine-room," and the chief engineer has said that the term "engine-room" could not be taken to mean the "donkey-engine room." In this particular the rule was broken, though at the same time it is only fair to state that an engineer on watch in the engine-room could, in that place, do nothing to extinguish the fire. The other clauses were doubtless obeyed.

Under the head "Engine Department" is Rule 76, which says that "the senior engineer on watch is not to absent himself from the engine-room without being relieved." Rule 78 also says: "The engineer on watch must be careful to see that a steady pressure of steam (according to orders) is kept, and, with a view to economy, will direct his attention to the fires and mode of firing, so that the fuel may be used to the best advantage." The former of these two doubtless applies principally to such time as the ship is at sea, and might also—if Mr. GRAHAM's reading of the term "engine-room" is to be accepted—be taken to refer to the engineer's crew, who, by Rule 21, should be on watch when in port: the latter evidently refers to the ship at sea. Rule 82 says:—

The chief engineer is to see that the steam pumps and all pumps attached, or to be attached to the engine as well as the fire engine and heating apparatus, are in an efficient state, and at all times ready when required. He will also see that the ship is kept free of water, and report daily to the captain the water in the pump well.

This, in conjunction with Rule 21, has reference to the pressure of steam in port, and on these the question of the responsibility mainly rests.

These, then, appear to be the only rules which have any direct reference to the Engineer's department, in cases in any way parallel to that now under review. Rules 21 and 82 applies to precautions against fire; the others, Rules 76 and 78, apply either to matters not directly connected with fire or to the ship and engines when at sea. With regard to Rule 21 we can hardly adopt Mr. GRAHAM's reading. The term "engine

room" must we think be taken to apply to such engine rooms as are in use at the time, and in this particular instance to the donkey-engine-room. If our view be correct, the rule was complied with, for it was proved that a Chinese fireman was on watch in the donkey-engine-room, and he, according to rule 71 which says "crews will consist of chief-engineer, assistants, water-tenders, oilers, storekeepers, firemen, and coal-passers," was without a question one of the engineer's "crew." Upon this point the Court in the judgment says

That owing to the fact that on that evening coal was being received into the vessel forward, for some reason, seemingly insufficient to us, the sixth engineer—the only engineer then on duty in the ship—was attending to the receiving and stowing of this coal, leaving a Chinese stoker alone on watch in the donkey-boiler room.

Here the Court relies upon rule 76 which, in our opinion, applies to the ship while at sea, but it may fairly be argued that upon this matter the rules are by no means explicit, and any conclusion arrived at is, after all, only an opinion based upon no actual regulation of the Company. With regard to rule 82 the Chief-Engineer states that the pumps were all in good working order; but it has been shown that the heating apparatus was hardly "ready at all times when required."

This brings us directly to the question of the pressure of steam. The rules say steam must be kept up to work the fire-engines (efficiently) and that it must be always ready (in sufficient quantity) when required. Mr. GRAHAM, we do not doubt, felt fully satisfied that about 12 lbs. of steam was sufficient to work the fire engines efficiently, and long usage had perhaps warranted him in taking that view; but the burning of the *America* was an exceptional case, in that the fire commenced in an inflammable material like hay, and that it spread with such inconceivable rapidity, and these cases have to be provided for. It is now evident that 12 lbs. of steam are not sufficient to extinguish a fire such as that on the *America*, and yet we learn that even were 20 lbs. of steam kept up on the donkey-boiler—an amount which then would only exhibit one sixth portion of the whole fire-extinguishing capacity of the ship—there would, when not working, be a great waste of coal, a frequent blowing off of steam, and a consequent inconvenience to the officers and crew. The two latter would have a little weight compared with the safety of the ship; still the Company might, before the fire, have with some reason objected to the extra expenditure of fuel—against which we have already seen that there is a special rule. But with all this, the argument remains untouched. The rules, to our thinking, demand such a supply of steam as to work the fire pumps *efficiently*. This has not been forthcoming, and it is clearly the fault of the Chief-Engineer—who acted through a mistaken idea of economy and an error of judgment as to the capacity of the steam kept up—that this was so. Upon him, much as it is to be regretted, must rest the *onus* of the want of water, and we must also agree with the Court in thinking that had there been plenty of water when the fire was first discovered, the *America* would never have been lost.

The engineers are, by the Court, accused of "tardiness." This is hardly in accordance with the evidence. They and their crew had been working from early morning, and all but one who was still at work were tired out and in their rooms. Yet all were at their stations in a minute or

two after the alarm, and all that was possible was done to remedy what has since proved a fatal error.

But while it is apparent that the error of the Chief-Engineer led to the loss of the ship, we cannot but point out that the rules of the Company are in the highest degree embarrassing. It is, of course, desirable to leave much to the discretion of the Engineer, but some distinction between the main-engines and the donkey-engine, and between the rules at sea and in port, should be made. This has not been done; but perhaps after this reverse the regulations will be revised, when, if possible, some rule should be inserted with reference to the ordinary pressure of steam to be maintained in port. At sea the fact that there is always an abundance of steam on the main engines is sufficient precaution against fire; but in port, when only the donkey-engine is in use, it would be well to define more closely the pressure of steam requisite to work the pumps efficiently.

With the conclusion that the fire was the result of intention, and not of accident, we cannot concur, and we do not see how, on the evidence, the Court could arrive at that decision. The evidence of the sailors must be set against that of the Japanese women, and though there may have been reasons which prompted the Court to come to the conclusion that the fire was the work of an incendiary, the evidence is by no means unequivocal. With the other portions of the judgment we fully agree. It is evidently the result of much painstaking criticism of the evidence, and has brought to a satisfactory conclusion a case which at one time threatened to terminate in unpleasant mystery.

#### CUSTOM-HOUSE ADMINISTRATION.

THE recent appointment of Mr. LOWDER, formerly H. B. M.'s Consul at this port, to a position in the Customs' Service of the Imperial Government, offers a fitting occasion to make a few remarks upon certain points connected with the Customs' administration here, in the hope that they may produce an amendment in methods of procedure which at present are sources of much irritation to the mercantile community, which necessitate the maintenance of useless and expensive machinery in the Customs' Service, and cause a great loss of time to the merchant shipping visiting the port.

It was only natural that in the early days of their intercourse with foreigners the Japanese should have collected their Customs' duties in a manner analogous to that prevailing throughout the Empire in connection with their native trade, and to this, as well as to other legitimate causes, may be attributed that rigid and suspicious course of examination which they have exercised up to this moment, though it would have been thought that, with the increase of trade and the liberal ideas they have shown latterly in respect of other matters, more change for the better would have been made in the administration of the Customs' Department. A special Mission was sent a short time ago to enquire into the working of the Customs at Shanghai, and hopes were entertained of seeing that system adopted here. But unfortunately, so far, the only result shown appears to be the wish to bring into use several peculiarly worded forms of application for landing and shipping merchandise, which fail to replace with any advantage the forms previously adopted.

There is no doubt that so long as the lower native officials on the part of the Customs' authorities, and chiefly Chinese shipping men on the part of merchants, arrange the examination of merchandise and payment of duties, the same vexatious difficulties will arise and always stand in the way of any improvement or facility in the landing and shipping of cargo, for it has frequently been said, and doubtless not without much of truth, that small native officials are open to bribes, whilst the system of compounding for duties is so common amongst the Chinese in their own country that no wonder need be felt at their resorting to similar practices here.

Manifests of ships' cargoes have never had sufficient value attached to them by the authorities, (except when the malformation of one letter in a mark has enabled them to apply a port regulation at the cost of \$15 to an unfortunate consignee) and were these documents made proper use of, it could easily be ascertained when the whole amount of duty had been paid into the Customs, and in case of any deficiency this could easily be traced. The most beneficial measure, however, that could be granted would be for the Customs to adopt the plan of stamping all Bills of Lading or delivery and shipping orders. This would enable merchants to take delivery of their cargo at once from the Hatoba, and to send it off in like manner, thus preventing that loss of time necessary for examination, during which process the objectionable compromises take place. It would be an easy matter in any case of suspicion of entry, or where the contents of packages are doubtful, to attach a note to the stamp saying "to be examined by the Customs authorities"; and all vessels could be notified that it was against the port regulations to deliver or receive any package except on production of a stamped Bill of Lading, delivery or shipping order, and any consignee violating such a regulation could certainly be held amenable to fine. Too much value could not be attached to such an arrangement, as it should work advantageously to both the authorities and merchants. To the former it would secure the full payment of duties; it would necessitate only about half the amount of accommodation now required for stowing goods awaiting examination and landed too late for examination; and it would dispense with a large number of the examiners now employed; whilst to merchants the saving of time and the security of merchandise stored in their own godowns, instead of lying undiscovered by insurance at the Hatoba, would be inestimable. It can hardly be supposed that respectable merchants would willingly lay themselves open to the charge of defrauding the Customs, but in the present state of affairs it remains a very doubtful question whether they are not responsible for the acts of their servants, and it is a serious responsibility to incur, though it must undoubtedly continue so long as the present system lasts.

We would suggest to the Customs' Authorities the expediency of obtaining from the Manifest Office at home copies of all manifests of ships loaded for Japan. The expense of obtaining them would amount to but a few guineas a year, and the declared values inserted in them of the various items of which the cargo consists would guide the Authorities in cases where they felt doubt as to the values attached to the landing applications presented here.

Greater facilities should be offered to merchants for

getting their goods from the ships. A tithe only of large parcels should be required to be sent to the Custom House for examination, and the remainder delivered straight to the merchant after a general examination on board or in cargo boats, without going through the Custom House. As matters are managed at present merchants will not send for their goods after a certain hour in the day, because they are not sure of getting them passed at the Custom House, and not willing to run the risks attendant upon storage in the Custom House godowns. It is obvious that this curtails the working hours of ships very largely, and increases the time necessary for their discharge.

#### NIIGATA.

NIIGATA, now the largest town and official capital of the most important portion of the province of Echigo, was founded by some Echidsen merchants about 1649, and soon realized the hopes entertained both by them and their patron Makino Bidsennokami, Daimio of Nagaoka, that it would become a large and flourishing sea-port. Thanks to its central position as regards the rich provinces of Echigo, Echiu, Noto, Kaga, Iwashiro, Dewa, and the Island of Sado, together with the facilities afforded by excellent water communication, extending in various directions from 60 to 130 miles into the interior, Niigata for nearly one century and a half was annually visited by thousands of large junks from all parts of Japan, there being generally on an average from 200 to 300 vessels in port loading and discharging.

Besides rice, the great staple of Echigo, considerable quantities of tea, silk, copper, hemp, and tobacco are produced within a radius of 50 to 200 miles of Niigata. In addition to this, it will be seen that the mineral wealth of this district is such as must, notwithstanding the vague information obtainable from the Japanese, offer many inducements to men of genius and capital.

The principal article of export from Niigata has, up to the present, been rice, and out of an average yearly crop of 2,500,000 hundred weight about one quarter is brought to this port for sale, the balance being used for home consumption in this province and the mountainous districts of Aidsu.

The fact that foreigners have up to now shared only to a very small extent in its export, or, to use a more accurate expression, its shipment to other Japanese ports, is attributable in a great measure to the absence of a regular rice market here, and an old established custom of purchasing rice in the interior by a system of advances to the farmers before the crops are ripe; there are, however, other reasons in connection with the difficulties experienced by the shipping at this port, which I shall hereafter have occasion of alluding to.

Notwithstanding all these advantages therefore, and the gradually increasing development of the mineral wealth of Aidsu, the tea of Echigo and the silk of Dewa and Oshiu, which might naturally be supposed to contribute most materially towards the prosperity of the place, it is a fact singular to relate that trade and shipping are gradually decreasing and will probably cease in a very few years; even at present all goods for Yokohama and other parts of Japan are sent either overland or in native junks.

The root of all this evil, which I have little hesitation in affirming can be easily eradicated at a comparatively small cost, is—the bar at the entrance of the river, and the open, unprotected condition of the Niigata roadstead.

Up to 50 years ago the mouth of the Shinanogawa, one of the three large rivers of Japan, was from 20 to 25 feet deep, and it was only after the waters of the Aganokawa, which up to that time flowed with the Shinanogawa, had been diverted by a short canal dug through the sandhills into the sea about six miles from Niigata, that the bar, which at present forms such a serious obstacle to the trade and prosperity of this port, commenced to form itself: the old channel which once united the two rivers still exists, it is true, but is nothing more than a broad ditch containing only a very few feet of water and without any current.

This evil, which has already brought about so many losses to all who are in any way connected with this place,

whether natives or foreigners, is rapidly increasing and a very short time will suffice to effect the ruin of Niigata as a place of commercial note.

The difficulties and dangers which the present small volume of water on the bar entails, have a most injurious effect on native shipping, and the number of junks which annually visit this port has from several thousand dwindled down to a few hundreds.

The anchorage outside the river is a mere open roadstead, and as the straight, bayless coast runs from N. E. to S. W. it is exposed to all the fury of the most prevailing winds, which are S. W. by W. and N. E.

It will thus be observed that at present it is quite impossible for vessels, whether native or foreign, to anchor off Niigata with any degree of safety, and this fact is well known to owners and agents of vessels and the various insurance offices.

The last foreign ship which visited this port left in June 1871, and although every effort has since been made to get a ship, and unheard-of freights offered, Captains have declined to risk their crafts, and in the interest of their owners prefer to accept lower charters to safer ports, affirming that Niigata is not at present a port for vessels to go without incurring unusual danger. In one solitary instance only did a shipmaster express any willingness to come from Yokohama to this place, and then only at a rate of freight rather in excess of that paid to London.

With reference to the difficulty experienced in chartering a ship for this port it may be well to mention that the high rates demanded are also to a certain extent due to the present scarcity of vessels on the berth at Yokohama.

Insurance companies have also put their veto on this port, and premia for Niigata are at present in many cases higher than to England. Hence a complete stagnation of traffic, and an utter impossibility for merchants to obtain imports for the Japanese market or to ship native produce when purchased.

The inconvenience, expense, and danger which the bar and the exposed condition of the anchorage cause to foreign vessels, is felt as severely by owners of Japanese junks, as ships of large draft have to discharge a portion of their cargo before entering the river.

Once over the bar, there is enough water to float the largest junks, and in many places the river is from 15 to 24 feet deep; this is the average depth near the right bank, whereas the left, or Niigata side of the river is gradually sanding up, and has only a few inches of water.

Such a change of the bed, which is attributed to a want of velocity in the current of the river, is an additional source of immense inconvenience to the shipping, as junks of course cannot now, as of old, anchor alongside the wharves of the town, and goods discharged by foreigners in bar boats have to be trans-shipped into smaller craft before they can be put on the Custom-house landing-place, which has not more than one foot of water.

There is another matter, too, in connection with the silting up of the Niigata side of the river, which causes the merchants of this place present losses and great anxiety for the future; there is a gradually-increasing disposition on the part of the junk masters to transact business with Nothari, an important town on the opposite bank of the Shinanogawa, and therefore much more approachable than Niigata.

Apart, however, from the difficulty, or I might even say sheer impossibility, to induce foreign ships to visit this place, there is another dangerous and expensive matter connected with the landing of goods.

These have to be taken across the bar in flat-bottomed Japanese barges, which not only entails great expense for boat and coolie hire, which is, of course, in excess of that paid at the more favoured ports, but also exposes merchants to heavy losses, as the insurance companies decline to accept bar risks. The delay, too, in loading and discharging vessels is very great, for not only have foreign shipmasters been sometimes compelled to weigh anchor and ride out a gale of several days' duration in Sado, or as best they could on a lee shore, but it is frequently impossible to cross the bar in comparatively fine weather.

Junk-masters are also exposed to great dangers and considerable delay, and are, as a rule, unable to enter the river during the winter; consequently, they are forced

either to wait during several weeks, and even months, in Sado, or go to other ports.

Ebisu, on Sado, where a staff of nine officials and servants is maintained at the foreign Custom-house at a monthly expenditure of about 100 rios (£22 10s. stg.), is supposed to be a harbour of refuge for ships bound for or anchoring off Niigata, and would in reality be so, were it not for the following serious and well-founded objections:

As a place where merchants have a right to ship and land cargo, it has been found to be of no avail. The distance between the two places is about thirty miles, and the passage across in small boats used for passengers and cargo is frequently accompanied with considerable danger.

Sado is a small island, thinly populated, and with little or no produce of any kind; the local wants are therefore small, there is no trade suited either to foreign tastes or desire of gain, and as a place of business it has consequently no attractions.

As an auxiliary port to Niigata it has been found to be useless, for which many reasons may be assigned.

First and foremost the impossibility of getting insurance on goods sent to and from Sado in native boats.

Next comes the expense of keeping up establishments in both places, the expense of double boat and coolie hire as well as considerable delay, and last, though not least, the trouble and inconvenience of having to transact business with two sets of Custom-house officials, now totally independent of each other as they belong to different *ken*.

With a view to meeting a portion of their engagements under the agreement of 1867 for the settlement of foreigners at Niigata and Ebisu, the authorities have recently completed a 50 ton steam-lighter, with 10 horse power and going about 3 knots in smooth water, at a cost of about \$33,000,— (£7,425 stg.) which, considering the quality of the material and the workmanship, is enormous. It can now be chartered for the conveyance of merchandise to the shipping or to Sado and back; to be of any use in case of shipping business a second one will, however, have to be provided, as it would of course be quite impossible to afford the required facilities with only one. The monthly cost of the crew including a foreign captain and other running expenses amount to \$200,— (£45 stg.).

A notable fact in connection with the steamer is that the insurance officers raise similar objections to those set forth against granting risks on goods landed in ordinary cargo boats; there can therefore be no advantage to merchants in incurring the increased expense which steam entails as long as the danger of loss or damage is not lessened.

The vessel too is so small and the internal arrangements are so bad as to render it totally unsuited for heavy cargo; beside which the dimensions of the craft will prevent her from crossing the bar except in perfectly calm weather.

Although aware to a certain extent of the dangers and difficulties to which shipping at Niigata would be exposed, some influential firms knowing that the producing districts would be only a short distance off, and that valuable articles of export would therefore be cheaper than at the other ports, testified their anxiety and willingness to give the place a fair trial by establishing agencies here shortly after the opening to foreign commerce.

The obstacles which they however had to encounter in landing and discharging were of such a serious nature, that they gradually retired, and towards the commencement of 1870 there was only one firm left, which has since then been manfully struggling against odds which had already proved too much for many others.

It will be easily seen that these difficulties are of no trifling nature and appear for the present insurmountable, when I state that produce purchased on the spot last year, and then showing a fair profit on ruling prices, is still in the godowns here awaiting the success of negotiations for some vessel, which have now been carried on in vain for the last few months.

I must here note that in alluding to the impossibility of chartering a ship for this port I, as a matter, of course mean at rates which leave a margin for reasonable profit.

Another mode of communication, which is available as far as Yokohama is concerned, is the transport of merchandise overland; but the expense, delay and risk which it entails, owing to bad roads, primitive means of conveyance and an impossibility to effect insurance, are equal, if

not in excess, of that caused by the bar; it is therefore rarely patronised except by Japanese.

For the latter delay is of little importance, risk is a thing which, in the absence of Insurance Companies, the nation at large has always been accustomed to accept as unavoidable, and the item of expense is one which native merchants can well afford to incur as their daily requirements and business expenses are far below those which are entailed on foreigners.

Japanese, therefore, find it more advantageous to incur the additional expense of sending their produce overland to Tokio and Yokohama where competition, of course, gives them a better opportunity of getting higher prices.

On the one hand, the high charges of overland transport and on the other exorbitant coolie and boat hire, freight and rates of premium, which are entailed by a shipment over the bar and thence in foreign bottoms to other ports, not to make any further mention of the risk in both cases, render it, therefore, extremely difficult for foreigners to make purchases here, although prices are proportionally lower than at the other open ports.

I may here mention that to transport two of the staple articles of this portion of Japan—rice and copper overland to Yokohama, would raise the price of the former 200 per cent. and that of the latter 16½ per cent.; and, as an instance fully illustrating the wide difference occasionally existing between prices here and at Yokohama, I have merely to refer to a parcel of copper weighing 1200 piculs (70½ tons) which was sent overland to Yokohama at a cost of about \$3,000 (£637.10 sterling) and still left a small profit.

The causes which prevent a lucrative and extensive import trade from being done here by foreigners is precisely similar. A charge of \$2.50 to \$3 per picul or £9.13 to £10.96 sterling per ton on shirtings, T-cloths, chintzes, orleans, cotton yarn or other manufactured goods render it quite impossible to import these articles overland, and freight by sea at the rate of \$15 (£3.7.6. stg.) per ton does not leave any margin for probable profit.

The idea that demand creates trade is clearly a fallacy in the case of Niigata, and in the present instance, at least, it is necessary to add means of communication at a reasonable cost.

The good demand for general imports, but more particularly for grey goods, sugar, nail-rod iron and salt, which has always existed here, will never produce any favourable results until safety and facilities can be offered to the shipping and the mercantile community. Up to the present these requisites are wanting, and as foreign ships therefore seldom visit this port, nearly the whole import trade is in the hands of the Japanese, and foreign goods of a bulky nature are brought here in junks, which, by their number, give a kind of regularity to native trade.

Japanese interested in the shipping and prosperity of Niigata, are also fully aware of the necessity of having better accommodation for the junks which visit this port, and with a view to effecting some temporary improvements in the river the heads of the "Funa doya" or shipping agencies agreed eighteen months ago that a fund should be raised by a due of 1½ per cent. on all business transacted by them. This, however, appears to have been a step which could not be taken without the sanction of the local authorities, as the money collected under this head and amounting to 27,000 rios (£6,075 sterling) was seized by the government and ten of the principal men were imprisoned.

Shortly after this the authorities made an attempt to meet the views of the merchants and shipping agents of Niigata by piling a portion of the right side of the river below the town, thus hoping to force the current in an opposite direction and deepen the left or Niigata side of the Shinanogawa. As the works were, however, badly planned and executed the very first flood sufficed to undo everything which had taken months to construct, and a few stray logs of timber are all that now remain to mark the spot of an undertaking which cost upwards of 16,000 rios (£3,600 sterling.)

Owing to the wretched condition of the banks of the Shinanogawa and its tributaries, together with the total absence of any effective measures on the part of the authorities to keep the river within its boundaries, the country between Niigata and the highland some 40 miles

off has frequently been exposed to inundations causing immense loss of life and property. This was a source of considerable distress to the farmers, and the subject of numerous petitions made by them during a period of 18 months, requesting the Government to divert a portion of the water of the river when swollen during the spring by the snow and ice from the mountains and heavy fall of rain during other parts of the year; this they suggested might be done by a new canal to be dug into the sea. Consent being at length given a spot was selected, and after a few preliminary steps the new cutting was commenced.

It runs from a small village called Okoden, on the left bank, in the direction of another small town Teradomari, situated near the sea shore, and is about one mile and three quarters long: six hundred yards of it runs through some hills, the balance being through flat, low country.

The approximate cost of this comparatively trifling work has been fixed at the enormous sum of 790,000 rios (£177,750 stg.) and is divided between the two *ken* of Niigata and Kashiwadsaki, £136,917 str. being assessed to the former.

Such heavy expenses, of course entail proportionately high taxes on the surrounding country, as the Government only contributes a very small portion of the amount required. The payment of these taxes extends over a period of six years, and they are calculated at the rate of 5 to 700 rios per 100 kokus of produce (£112.10, to £157.10 stg. per 415½ bushels) for lowland or property subject to inundations, and 2 to 5 rios per 100 kokus (9/-d. to 22/6d. per 415½ bushels) on fields situated higher up and less exposed.

Two crops and sometimes three (the latter, however, rarely occurs) can be raised on land of the first quality, but inferior property only produces one, and that frequently a very bad one; when therefore the low prices which have been ruling for rice during the past six months are borne in mind, the heaviness of this extra taxation will be easily appreciated.

These taxes are not only excessive, but more ruinous by far than the occasional inundations which were recently a source of complaint, and it did not take long for the farmers to discover that they would now fare worse than formerly.

The absence of serious inundations during the past two years, the delay in the completion of the cutting, the inconvenience caused by compulsory labour at low wages, the taxes above mentioned, and last, though not least, fears that the new canal will not only cause droughts, but be liable to overflow or break through its embankments, has brought about a very general revulsion of opinion, and the neighbouring farmers are now as anxious to stop the works as they were at one time to commence them.

The authorities, however, seem determined to carry on the undertaking, and have issued orders to complete the cutting by the end of the 9th Japanese month (October).

I refrain from entering into further particulars regarding the unpleasant events which have already resulted from the persistence shown by the Government in prosecuting this work, and which will not improbably lead to further complications; but I have little hesitation in repeating the statement already made in previous despatches, that without embankments of great strength and a system of sluices and other scientific appliances, which cannot be executed without the assistance of experienced engineers, the canal will infallibly be a source of constant danger, if not of heavy losses, to the inhabitants of the neighbouring country, and very considerably reduce the water of the Shinanogawa.

This will, of course, facilitate the filling up of the mouth of the river, and a very short time will suffice to render it quite impossible for boats of the smallest description to cross the bar.

Having thus briefly detailed the resources of this portion of Japan, together with the difficulties and obstacles which prevent the growth of Niigata, and will culminate in its ruin as a place of business, whether foreign or Japanese, it will be clearly seen that the removal of the bar and accommodation for vessels visiting this port are matters of vital importance.

Scientific details about a scheme of such a nature, which, though of a certain magnitude, does not, I think, involve excessive difficulties, and could be accomplished

with a comparatively small expenditure, devolve more particularly on those who have made such matters a study and a profession, but I think I may be permitted to add a few cursory remarks under this head.

What, therefore, requires to be done—and that, too, without delay—is the removal of the bar; if, at least, apart from other weighty considerations, the desire of making Niigata worthy of the name of “the Treaty Port on the West Coast” is still felt.

An outlet for the produce of the large and rich provinces in this neighbourhood will thus be given.

To effect this and keep the mouth of the river permanently clear, I surmise that a greater scour will have to be created by artificially making the river narrower, or forcing a greater volume of water at an increased speed across the entrance, in which case a better egress would be obtained for the mountain torrents which at times devastate the crops.

The Teradomari cutting, if actually undertaken, and prosecuted solely for the benefit of the farmers, would then be rendered unnecessary and might be immediately stopped without entailing any further useless expense.

Supposing that the sum required, as already stated for the canal is correct, which I have no doubt it is, as my private information has been corroborated by the Sanji, and that some 30,000 rios have already been spent, this would effect a saving of 490,000 rios (£110,250 sterling.)

A natural result of an increased velocity in the current of the river would be the removal of the numerous shoals which render navigation for Japanese junks so excessively difficult, and make it quite impossible for cargo boats to approach the Custom-House landing place.

The scheme submitted some time ago to the Japanese Government by Mr. Brunton, one of the English Engineers in their employ, was the result of a careful survey of the bar and a portion of the river, and is peculiarly adapted for the emergency of the present case; for with the comparatively small expenditure of 600,000 to 700,000 rios (£135,000 to £157,500 sterling) the shipping of this port would, in ordinary times, enjoy some of those facilities which are so indispensable for the speedy and safe discharge and shipment of merchandise.

The removal of the bar, therefore, is an undertaking which is inseparably connected with the commercial vitality of Niigata, and is absolutely and urgently required for the benefit of everybody who has an interest at stake in the prosperity of these provinces and Niigata in particular, as it will not only be advantageous to native and foreign merchants, and the farmers of the neighbourhood, but also to the Government by thus promoting the welfare of a large portion of the nation.

Although it would not be difficult in other countries to raise money for works of such general utility, a want of funds may perhaps be alleged as an excuse for delay. I would therefore suggest that the means by which a considerable portion of the capital required might be raised (without again mentioning the saving to be effected by stopping the Teradomari cutting) are:—

1st.—The closing of the Foreign Custom-house at Ebisu, which is a useless expenditure of upwards of 1,200 rios (£270 stg.) per Annum.

2nd.—The abolition of communication by steam between Niigata and Ebisu under the regulation of 1867, by which a saving of £1,080 stg. per annum will be effected in addition to the capital which will be required for two or more steamers.

3rd.—A small tax on the inhabitants of Niigata and the surrounding country, who would all undoubtedly reap numerous benefits if a scheme of this sort were executed;

And 4th.—An additional due on all junks entering and leaving this port.

I course do not entertain the advisability of increasing the dues on foreign vessels, as these already amount to \$22, (£4.19 stg.) per bottom, and for which absolutely nothing, with the exception of a small lighthouse on Japanese principles, visible about 1½ miles and only lighted on very rare occasions, is given in return by the Government.

The requirements this place are, however, as already described, so inseparably connected with its existence as a mercantile port, that I feel sure that both shipowners and merchants would willingly contribute their quota to en-

joy advantages which any sound harbour scheme would undoubtedly secure to them.

As, on the other hand, dues levied on junks under 250 kokus (about 37 tons) burthen only amount 1,770 cash (9.4d.) with a trifling increase for those of larger carrying capacity, I feel sure that the owners would not object to pay something in excess of this for improved harbour accommodation, which would give them greater safety and quicker despatch.

I have sometimes heard merchants speak about the advisability of opening another port and closing Niigata; this is step which as far as British interests here are concerned might be easily taken, for as already stated there is at present only one firm at this place, and that a German one.

The only place which as far as I can learn is suitable and possesses the requisites for the safe anchorage for foreign vessels on this part of the coast is Nanao in Noto.

Before definitely deciding on the opening of Niigata the foreign Ministers gave this matter due consideration, but the fact of the trade of Nanao being merely of a local nature, the difficulty of overland communication, together with the distance of this place from Kanadsawa the capital of the late Daimiate of Kaga (about 42 miles of) and many of the rich northern provinces, such as Oshiu, Dewa and Iwashiro, were doubtless some of the reasons which induced them to decide in favour of Niigata.

As nothing has been done during the last few years to render Nanao more approachable for merchandise from the Echi side (or East) and the means of communication between it and the districts which surround this place are even now as primitive as they were then, the somewhat isolated position of Nanao remains the same and Niigata is therefore still capable of offering, if assisted with a little science and capital, all the requirements for becoming a large and prosperous seaport.

In conclusion I may state that if Niigata is left to its own resources and the new cutting at Teradomari completed, a very few years will suffice to effect its ruin and force the last remaining foreigner to quit it as a place totally unsuited for trade.

#### NIHON GUAISHI.

#### ACTUAL HISTORY OF THE MINAMOTO FAMILY.

#### PART III.

(Continued from our last.)

Sanétomo occupied Tokimasa's Palace, and the latter at last plotted to assassinate him and set up Tomomasa in his stead. He collected troops for this purpose, but the affair became known, and in the intercalary month Masago sent the officers to remove Sanétomo to Yoshitoki's house. All the troops gave in their adherence to him. Yoshitoki at last transported Tokimasa and his wife to the village of Hôjô, and ordered the officers at the capital to inflict the penalty of the law upon Tomomasa.

By this time all the great heroes such as Chiba Tsunétané, Doi Sanéhira and others were grown old or dead. Sasaki Takatsuna and Kumagae had fled and hid one after the other. The Hôjô family alone exercised supreme control over the affairs of the Bakufu, whilst Sanétomo looked timidly on at their proceedings. His disposition led him to take delight in literature; he had Minamoto no Nakaakira, one of the Professors of Literature, Bunshô Hakasé for his teacher, and learnt to compose Japanese songs from the Chinagon Fujiwara no Sadaiyé<sup>(225)</sup>. In military accomplishments he fell short of Yoriyé, but the latter had been wild and vicious to such an extent that he robbed Adachi Kagémori of his concubine and wished to put him to death. When Yoritomo addressed his chief officers, he never ventured to call them by their personal names, but Yoriyé had always done so. Taira no Tomoyasu<sup>(226)</sup> and others were promoted by him on account of their accomplishments, and presumed on the favour they enjoyed to override others, to the great indignation of the officers of all ranks. Sanétomo was of a kind and gentle disposition, and was loved by all the officers. In his first year he had ordered

the officers to give up to him the patents which Yoritomo had granted to them, but he had not lightly deprived the Jitô who had been appointed by Yoritomo. From the time of Yoritomo and Yoriyé constant injunctions had been laid on the *Shiugo* and Jitô not to interfere in civil business nor appropriate more than their proper allowances. The Hôjô family being thus supreme called for the patents which had been granted, made a difference between those which had been given out of favouritism and those which had been the rewards of merit, ordered the holders to perform the duty of sheriff<sup>(227)</sup> by turns, and sent messengers travelling throughout the territories under the jurisdiction of Kamakura, to inquire into the perversion of justice by the civil officials and unfairness committed against the peasants. But the administrative power remained in the hands of Yoshitoki, while Sanétomo drank and feasted day and night with *Samurai* of a literary turn, and gave himself up wholly to the cultivation of the poetic art, never inquiring about public affairs. Yoshitoki became more and more absolute.

In the first year of Kempô (1213) Idzumi Chikahira, a Shinano man, possessed himself of the person of Senjiu Maru, the son of the late Yoriyé, and raised troops with the object of chastising Yoshitoki. He sent the Buddhist priest Annen to persuade the chief officers to join him, and many of them took his side. Yoshimori's two sons Yoshinawo and Yoshishigé, his nephew Tanénaga and other were participators. He then came to Chiba Nari-tsuné who refused his support, but arrested him, and sent him to Yoshitoki. Yoshitoki ordered Kanakubo Yukichika and Andô Tadaiyé, retainers of his family, to interrogate him, and having obtained the whole facts, despatched troops to arrest Chikahira. This Chikahira was of the Minamoto *gens*, the distant descendant of Mitsuyoshi, a son of Tsunémoto. Being courageous and strong, he slew several tens of the officials and their men, and then fled. Senjiu shaved off his hair and concealed himself in the capital, while Yoshinawo and the rest were made prisoners. At this moment Yoshimori was in Kadzusa, and galloped back to have a personal interview with Sanétomo. He begged leave to buy off his two sons. Yoshimori was highly trusted by Sanétomo and had received a special commission to command his guards conjointly with Yûki Tomomitsu, and his prayer was at once granted. Yoshimori went out highly delighted, but on the following day he came with ninety-eight of his kindred whom he marshalled in the Southern Court-yard of the Shôgun's Palace,<sup>(228)</sup> and asked through Uyé no Hiromoto for the pardon of Tanénaga. Yoshitoki had long disliked the strength of his family, and desired to provoke him so as to obtain a pretext for getting rid of him. He ordered Yukichika and Tadaiyé to bind Tanénaga, to take him past Yoshimori's house and deliver him to the keeping of the officials, with orders to banish him to Mutsu. Yoshimori was ashamed and enraged, and closing his gate, kept within doors. Tanénaga's Palace was in a convenient position, and as there were many who desired to obtain it, Yoshimori obtained leave from Sanétomo to send men to guard it; but Yoshitoki on the other hand obtained leave to seize it, and having expelled those who were in charge, divided it between Yukichika and Tadaiyé. Yoshimori was very angry, and thereupon conceived the desire of destroying the Hôjô family. Day and night he assembled his family and partisans and discussed the scheme with them. The scheme leaked out, and the messengers of the Bakufu came to demand explanations. Yoshimori declared that he had no disloyal projects, but the messengers secretly perceived his younger relatives examining some arms, and returned to report. An order was given that troops should be summoned, and other messengers were sent to reproach Yoshimori. The latter answered and said: "The old man received special favours from the late Shôgun, and to plot revolt would be the last thing he would think of. Only his children are indignant at the arbitrary conduct of Yoshitoki and desire to go and demand an explanation from him. The old man has tried to dissuade them, but they will not

(228) Bakufu.

(229) Name of a Buddhist shrine just behind the Palace of the Shôgunate. There is an excellent plan of Kamakura as it existed in Yoritomo's time in the sixth vol. of the *Gokuseki zasshi*.

(225) This *Kugé* or Court noble was the Compiler of the collection entitled *Hakunin Shû* or "Century of Poets."  
(226) This is the man mentioned several times previously as a skillful beater of the drum; is nicknamed *Tendzumi Hangnan*.

"listen." He then divided a hundred and fifty horsemen into three bodies, attacking the palaces of Yoshitoki and Hiromoto separately, and made a sudden demonstration before the Shōgun's palace, in the hope of taking Sanétomo. His relation Miura Yoshimura and his younger brother Tanéyoshi had promised to hold the northern gate, but they changed their minds, and ran to tell Yoshitoki. Yoshitoki and Hiromoto entered by the north gate, and Yoshimori consequently surrounded them. His third son Yoshihidé burst in the gate and entered, and routed all whom he attacked. He met Ashikaga Yoshiuji and grasped the sleeve of his corslet; but the other whipped up his horse, and leaped over the moat, leaving his sleeve behind. Yoshihidé, Tsuchiya Yoshikiyo, and Furugōri Yasutada fought bravely in company, and all the inmates of the palace fell into confusion. Some one kindled a conflagration, and the smoke and flames filled the sky. Yoshitoki and Hiromoto carried off Tanétomo and got away to the Hokkēdō.<sup>230</sup> The combat lasted a whole day and night. When the day broke Yoshimori's troops retired fatigued, and encamped at Maehama. It chanced that Yokoyama Tokikané came to their aid with all his kindred, and they had now three thousand horsemen, so that their force was again in good condition. The troops of the neighbouring provinces came flocking in on hearing of the disturbance. Yoshitoki sent for them, but they doubted him, and refused to come. He then obtained an order in writing from Sanétomo, which he showed to them, and then they came. Yoshinawo shortly after fell fighting. Yoshimori wept, and was quite demoralized, and at last he was shot dead by Yedo Yoshimori. His seven sons all died, but Yoshihidé put to sea with fifty men and escaped. Yoshitoki distributed the fiefs of the Wada family, as rewards to the officers of all ranks.

In the sixth month of the second year (1214) there was a drought. Sanétomo fasted and read the Scriptures, after which rain fell. The taxes in the eastern provinces were diminished. In the eleventh month the remaining retainers of Yoshimori possessed themselves of Senjiu's person and assembled troops at the capital. The affair becoming known, the Oyé family suddenly attacked and slew them. In the twelfth month Sanétomo ordered the Buddhist priests to assemble for the performance of religious services. He said: "Last night I dreamt that Yoshimori came into my presence at the head of his kindred, and for that reason I will secure his happiness in the world of the departed."

Sanétomo had previously advanced step by step to the rank of *Jō-ni-i*, and had been appointed Chiunagon. In the sixth year he was further promoted to be Gon Dainagon, and in the third month he was made Taishō of the Ukonyé Guards in addition. Oyé no Hiromoto addressed him in a discreet manner, saying: "If the Shōgun desires to leave good fortune to his posterity, let him beware of filling up the measure. Why not decline all offices, and only bear that of *Sei-i Tai-shōgun*? Let him wait for his maturer years, and then obtain the office of Taishō." Sanétomo replied: "I am not displeased with what you observe. But I have a pre-sentiment that the main line of the Minamoto family is approaching its end, and I cannot take thought for descendants. I wish to obtain appointments till I am satiated, and so exalt the fame of my house. I have no time to think about descendants." Hiromoto retired without saying a word. Some time previously a Chinese carver of Buddhist images, named Chin-wa-kei<sup>230</sup>, had come to Yamato, and Sanétomo summoned him to his presence. Wa-kei pretended that he was acquainted with Sanétomo's life in a previous existence. Sanétomo then conceived the wish to visit China, and ordered a large vessel to be constructed. When it was completed it was found impossible to make use of it. This year the Hōjō family sent for Kugio, the son of the late Yoriyé. On arriving from the capital he was appointed by them Bettō of Tsurugaoka. Kugio had always felt indignation at the death of his father in confinement, and believing Sanétomo to have been his father's murderer, secretly planned how he might take revenge. Pretending that he had something to pray for, he went to pray at the

shrine of Tsurugaoka for a thousand days. It was reported about this time in Kamakura that a supernatural being existed in the Shōgun's Palace. It was dressed in female clothing, and its walk resembled flying. In the tenth month Sanétomo was appointed Naidaijin, and in the twelfth month he was promoted to be Udaijin. In the first month of the first year of Jōkiu (1219)<sup>231</sup> he went to pay his respects at the shrine of Tsurugaoka, and the hour of nine at night on the 27th was fixed by divination. As he was about to start, Hiromoto advanced into his presence and said: "Your servant has hitherto seldom shed tears, and now he sheds them without knowing any cause. Your servant is filled with dread. When the late Taishō<sup>232</sup> celebrated the completion of Tōdaiji, he took the precaution of having armour under his clothes. Let my prince imitate this example, and not act rashly." Minamoto no Nakaakira said: "Daijin and Taishō cannot wear armour." Hiromoto again besought him to celebrate the ceremony in open daylight. Nakaakira replied: "To do it by candle light is the old custom." As Sanétomo was about to go forth he made Hada Kinuji comb his hair, and pulling out one hair, gave it to him, saying with a smile: "This is my legacy to you." The high officers of state and others all accompanied him, as well as an escort a thousand strong. Yoshitoki was in attendance, bearing his sword, but as the procession entered the gate of the shrine, he excused himself on the ground of illness, and delivering his sword to Nakaakira, went home. Sanétomo then dismissed the whole of his escort, and took only Nakaakira with him. When the ceremony was over, he bade farewell to the high officers of state and descended the steps, on which a man jumped out from the side of the steps, and, raising his sword, cut off the heads of Sanétomo and Nakaakira, and fled away, bearing the heads with him. The blackest darkness prevailed at the moment, and dire confusion fell upon the company, for no one knew what man had done it. Then some one shouted in a loud voice, saying: "I am Kugio. I have taken vengeance on my father's murderer." All now knew for the first time that Kugio had done it, and they surrounded his residence. Kugio, bearing Sanétomo's head in his hand, proceeded direct to the house of one Bitchiu, and took food without losing his hold of the head. The youngest son of Miura Yoshimura was Kugio's pupil, and the latter consequently sent him on a message to Yoshimura to ask his advice. Yoshimura deceived him by saying: "I will come with troops to meet him;" but he informed Yoshitoki, who ordered Kugio to be put to death immediately. Yoshimura thereupon sent Nagao Sadakagé to the spot at the head of five strong warriors. Kugio had waited a long time for the troops who were to come and meet him, but as they did not arrive, he traversed a high hill at the back of the shrine, and went towards Yoshimura's house. On the way he fell in with the five men, and fought desperately, but Sadakagé took him in flank and cut off his head, which he sent to Yoshitoki. Kugio was aged nineteen, Sanétomo twenty-eight years of age. On the following day they buried Sanétomo, but not being able to find his head, they substituted the hair he had left behind. Thus the main line of the Minamoto family came to an end.

The author of the Gwaishi remarks: I once passed over Hakoné, and beholding the great plain of the eight provinces bounded by Mutsu and Déwa on the north, perceived how deep-lying and wide-spread was the foundation of the Minamoto power. Tradition says that Hachiman kō left a document to his family, which said: "Amongst my posterity there will be some one, who will hold the power of the Empire in his hand." Though I am ignorant whether this tradition be true or false, there certainly are reasons for its existence. For the rule of our Sovereigns began from the west and gradually extended in an easterly direction. The strong and fierce men of the east were difficult to restrain, and were a match for the whole country. Although weeding-out and tranquillizing went on in the earlier times, no great effect was produced. They submitted and rebelled again from

(231) Vul., Shōkiu.

(232) Yontomo.

(230) Pronounced Chén Huo Ch'ing in the Peking mandarin.

one moment to another, and were a constant source of trouble to the state. The Central Government grieved itself very little about this state of things. It seems, however, that the relaxation of the authority of the crown was not the work of a single day. The Fujiwara family strove for the Emperor's favour, flesh and blood worked each other's harm, and the maintenance of order was impossible. Brigands stalked abroad in open daylight, attacked the high officers of state, burnt the Imperial Palaces, and to prevent their proceedings was impossible. Under these circumstances how could the government find time to take pity on the outlying frontiers? The misdirected genius of Sadatō and Iyēhira enabled them to take advantage thereof so as to ensure the success of their own projects. Had Yoriyoshi and Yoshiyē not appeared, these large swine and long serpents would have gradually devoured the upper provinces, and who could have kept them off? This was the grand benefit which they conferred on the empire, and the rewards bestowed by the Imperial Court were not equal to one-tenth of their deserts. Yoriyoshi's post was changed with the result of exposing him to poverty and sorrow. Yoshiyē did not rise higher than a *jō* of the Guards of the fourth rank. One of his descendants was put to death for a crime and another sent into exile. In the civil wars of Hōgen and Biōji flesh and blood were made to fight against each other until the race was nearly annihilated. This was the very reverse of recompense. But it is natural that if Heaven's gifts of fortune to the ancestors are sparing, they should be bountiful to the descendant. For this reason the fortunes of the Genji received a great impulse in the person of Yoritomo, and they eventually obtained the control of the power of the Empire. Did Yoshiyē perhaps foresee that? At the same time I have often thought that the power had long previously fallen into the hands of the Minamoto family, though they knew it not themselves. Yoriyoshi and Yoshiyē settled the north and east, and afforded their protection to the inhabitants during a period of fifteen years from first to last, but the Imperial Court affected to know nothing about it. When they reported their achievements and prayed that rewards might be conferred on their officers and men, they were put off with delays and nothing was ever settled. The worst was when their wars were denominated private feuds, and the Imperial commission withheld from them, so that they were forced to take pity on their men with gifts from their own private resources. In this way the Imperial Court cast away from itself the right of putting down the rebellious, and of apportioning rewards and punishments, and gave it to the Genji, causing the heroes of the north and east to say eventually that they would rather revolt against the son of Heaven than betray the Genji. If at this time Yoshiyē had taken the law into his own hands, the whole country lying east of Hakoné would have ceased to be the property of the Imperial Court, without waiting even for Yoritomo's period. But he chose rather not to sully his virtue as a servant of the Crown even up to the day of his death, so that he left the gift of happiness to his descendants. The old histories say that when Yoritomo fled from Itō he congratulated himself in his heart, saying: "I hope I may succeed in becoming lord over the eight provinces of the Kwantō, or if not, that I may still possess Idzu, so that I may have the means of revenging myself on the Itō family." From this we can see that his first idea did not go beyond holding a small corner. But the great men who had always been the adherents of the Genji eagerly fought his battles. Wherever he directed his arms he was victorious without an exception. He also got servants of the Court, who were clever men disappointed in their ambition, to help him where his own means did not suffice, and at a time when the authority of the throne had fallen lowest, he was able to spread his devoted adherents all over the country, like the pieces on a chess-board, and to control their actions from where he sat. Although his talents would of themselves have sufficed to enable him to threaten and constrain the sovereign and his people, and to seize possession of the whole country, the result was brought about by the progress of events, and the real source of his success was the good fortune deserved by his ancestors but not enjoyed by them. I heard once from a certain Court noble,

that when Kamakura became a power, some members of the Oyé and Miyoshi families, who had secretly in their possession the records of the Internal Revenue Department went over to him. One can see from this the direction which men's sympathies took. The Imperial House itself cast away its authority, and was unable to recover it. In whom were the people to put their trust? Hereupon a scion of the Imperial race, who was competent to undertake its duties, took its place and exercised its powers, becoming the administrator of the Empire. This was an unavoidable consequence of events. The Genji, who were the descendants of the Emperor Seiwa, for generations served their Prince diligently, down to Yoritomo, who settled the country after many toils and first established the great Scheme by which a small measure of tranquillity was assured to the empire. But he never ventured to overstep the proper limit, and his acts were full of reverence for the sovereign. After handing down his authority down to two successors one after the other, heaven having not yet rewarded the Genji with a sufficient measure of fortune, the Ashikaga and Nitta families, both of which were of the Seiwa Genji, arose in turn and ruled the Empire. Both became commanders-in-chief, held the power one after the other and served the son of Heaven obediently, following, without an exception, the example given by Yoritomo. He had founded for the Empire to all time an institution which was unavoidably necessary, and had set to it the limits which were not to be overstept. The relations between Prince and servant were mutually conducted in the most perfect manner. Had it not been so we might have known a succession in this country of such men as Wang Mang,<sup>233</sup> Ts'ao Ts'ao,<sup>234</sup> Szuma I<sup>235</sup> and Tung Ch'ao.<sup>236</sup> We might thus even permit ourselves to say that the merits and services rendered by Yoritomo to the Empire exceeded those of his ancestors.

END OF VOL. III.

#### THE IMPRISONMENT OF MR. COUSENS.

This afternoon, in response to a general circular distributed throughout the settlement, about 45 gentlemen met at the Y. U. Club to take into consideration the arrest and imprisonment of Mr. Cousens at Kobe, with a view to taking further proceedings in the matter,

Mr. F. V. DICKINS was voted to the chair.

The CHAIRMAN said that unfortunately he knew but few of the facts of the case, and perhaps some gentlemen present who was better acquainted with the matter than himself would relate the circumstances of the assault and arrest in order that the meeting might be the better able to judge as to what course they should pursue. They would all be glad to hear what it was that took place that should compel an Englishman to submit to the indignity of imprisonment for an offence for which such a punishment was *prima facie* very excessive. (Applause)

Mr. TALBOT then narrated the following circumstances: Mr. Cousens, he said, came alongside the *New York* at Kobe, at about 4.15 p.m. in a Japanese sampan, closely followed, or even accompanied by, the Consular boat, with Messrs. Watson, Gower, and Wilkinson on board. She had no flag flying, and nothing to denote to whom she belonged except a small flag painted on the bows, and quite out of the sight of Mr. Cousens. The boat first collided with the sampan and, anxious to arrive first at the gangway, one of the Consular sendoes attempted to push Mr. Cousens boat back. This was repented, and Mr. Cousens struck the sendo with a piece

(233) Wang Mang poisoned the Emperor Ping-ti, of the Western Han Dynasty (15 A.D.) and seized upon the throne for himself.

(234) Ts'ao Ts'ao was a general of great reputation under the last of the Eastern Han Dynasty (190-220 A.D.). He assumed the title of Emperor, which he left to his son Ts'ao P'ei.

(235) Szuma I was a general who flourished in the wars of the Three Kingdoms. He murdered the King of Wei in A.D. 249 and seized the crown.

(236) Tung-ch'ao set aside and murdered Pien, the son and successor of Ling-ti, of the Eastern Han Dynasty [reigned 168-189.]

of matting, three times in all. Mr. Wilkinson jumped up and asked Mr. Cousens, "Do you know who I am?" Mr. Cousens replied, "No, and I don't care to." Subsequently, Mr. Wilkinson said to Mr. Cousens, "You shall hear from me about this." At a few minutes to five the steamer started on her voyage, when she was hailed by Mr. Wilkinson in the Consular boat, who stood up in the stern-sheets, and, displaying a paper, called out, "Arrest that man!" He came on board, and, at once calling out, "I call on all subjects of Her Gracious Majesty the Queen of England to assist me in arresting that man" arrested Mr. Cousens, and, refusing all bail, took him ashore, without even allowing him to fetch a change of clothing from his cabin.

Mr. SWABY then read the following letter from a gentleman in Kobe:—

When the case was finished—I had permission from the Court to advise Cousens—and when judgment was given the indignation was so great that nearly every one in Court shouted out shame! shame!! for which all but two were confined, and our names taken for contempt of court (laughter); the sentence was that none of those present should enter the Court again but as prisoners or witnesses (renewed laughter). As soon as the tumult had subsided, I asked leave to appeal against the Court's decision, and was told there was no appeal and nothing further could be said about that. I asked then where he was to be confined and was told there was only one jail and no difference was made by the Court to any one. I pleaded position, and that what to a sailor was rest from work was disgrace, ill health, and prospects blighted in a gentleman of the position of our friend. I asked to be his jailor and give bond for any amount to keep him under restraint for the 48 hours.

I waited with him for an hour in the Court-room to see where he was to be confined. Mr. Wilkinson then came out of his office and asked me whether he should send for anything for tiffin, and if he would take it in his room. I said that we felt the case too much, and saw so much personal feeling in the matter, that we would not take anything from any individual of the Court—that his friends would do what was necessary in the matter (Hear, Hear). He said, "Well, let it be a Consulate affair," and I persuaded Cousens to consent to this as the proper thing.

He also gave me his word, that my friend should be well attended, and that Dr. Harris should see the prison, and if it was not fit for a man to be in, he should not be sent there. I then asked permission to see it before the Doctor did, so that I could form my own opinion before the Doctor came. This was given under the usual prison regulations, which I promised to conform to. I wished Cousens to make his mind at ease till I saw him again, and I waited upon Dr. Harris, who promised he would never give permission for any gentlemen to be put in the Japanese gaol, which, when the Consul asked him to visit, he did, and sent his certificate to say that it was no place for a man to be put in.

I then waited upon Mr. Cratchley to see what could be done, and his advice was that Cousens had better ask for leave to appeal and be refused personally. I had some business to do which occupied me till half past three, which was the time appointed by the Court for me to visit Cousens. I went to the Court and was told, to my great joy, that he was upstairs and that I was to walk up. I saw Mr. Gower there, who was selecting his place of confinement, which was a small room, but in every way fit to put a man in. I asked for Mr. Cousens and was shown him in the drawing-room, head on his hands, on the table: looking, as I entered, most wretched. I touched him; he sprang up in his cheery manner and said he was merely sleepy. I made a note of how the appeal or permission to appeal was to be made out; asked him to keep quiet and show he really was a gentleman and the man I had represented him for his own credit and my own, and left for Osaka by the 4 o'clock steamer.

There was to be an indignation meeting at 5 p.m., but I do not know what was done. Cousens is to have a

go and tell the Engineer to get steam. The Engineer said the pumps were going, but no water came for some time. He knew there was no water for about 5 minutes. Leaving the steerage he went to the saloon. He could not think that the fire was on the freight deck because there were cartridges there and they did not explode till 3 a.m. When he first saw the fire he thought it could have been put out by 12 buckets of water. If there had been water at first they could have put out the fire. In the steerage he saw a quartermaster, Johnson, the first officer and the steerage steward. He saw hose in the saloon but no water. Leaving the saloon he spent 3 minutes passing buckets but was driven away by smoke. The ports in the steerage were all open. He saw the gangway fall; there were about 100 Chinamen on it and hanging to it. He saw many Chinamen jump overboard, and many throw their things overboard.

E. Johnson, quartermaster: He was asleep in the pilot house when the fire broke out and he went to the steerage and came back. Again returning he met the steerage steward. They stretched the hose, but could not get any water. He soon after went on the bridge and helped to put some water down the ventilators. When he went to the steerage he saw no flame, but it was full of smoke. He went very close to some of the bales. He was probably there before West. He saw only smoke in the steerage. He saw no water except a little stream. Leaving the steerage he followed the Captain to the saloon where there was hose, but no water.

A. Leslie, steerage steward: He was in bed when the alarm was given. He first went on deck and then taking some hose went down to the steerage, stretched the hose, but got no water. There was a very thick smoke. He saw Captain Doane and told him he had no water. Again he tried, but with no result. He then took the hose to the saloon, but was driven out. He then went to the passengers and told them to get out: by this time they had nearly all got out. A water tender soon after showed him that there was no hope and he eventually got off in a boat. The first thing he saw was the smoke—it filled the steerage; there was also flame. He thought that the fire was in the hay. He was ready for water when he first got to the steerage. Five streams might have put out the fire—one could not. He found no water in the saloon, though it was stated the water was coming. He went out and again returned, but got no water. This was six or seven minutes afterwards. The ports in the steerage were open—so he believed, and the draught thus caused would increase the fire. There were four ventilators. No one slept in the after steerage. He passed through the steerage at 10.30, and all was safe. There were no coolies in the steerage when he looked. He carefully examined all the rooms and the top of the hay. Anyone could get down to the steerage very easily. There were coolies in the steerage about nine, but they were driven out. At 10.30 he was down below himself. He saw no fire and smelt no smoke. He carefully looked upon the top of the hay. The coolies only stopped five minutes in the steerage; he watched them. He had no suspicion that the fire was caused intentionally by any one. There were no lights in the after steerage.

—Wilson, quartermaster: He first smelt smoke as he was going round at 11. He was near the Purser's room on the main deck. He told the stewardess and saw the fire through the ports on looking over the side. He then went to the steerage and saw the upper tiers of the hay on fire. He came back and went to the hurricane deck. When he went to the steerage the fire only occupied a space of about 3 feet. He saw no one going about the steerage. He took the deck hose because it was quickest. He only took it to the saloon door because he had no water. He only saw water when he coupled the hose. He went round the steerage at 10.30. About 3 minutes after 11 he smelt smoke. He did not know how many bales of hay there were. The lower bales were not on fire when he first saw the fire. The fire must have originated in the hay and nowhere else. He told Lymart whom he met at the hatch. "You are a nice watchman, the after steerage is on fire." He escaped by the boat; he did not see the ladder fall.

Davis, a landsman of the *Lackawanna*: He heard it said at No. 85, in the Yoshiwara, that a large American ship was going to be burnt that night. He could not speak Japanese, but a woman told him. She said, "One piece of Melican ship makee burn this night." Two or three coolies said this. A man named Easen also heard this stated. He went to the house where there were women between five and six. Soon after he heard this conversation. The coolies who were there went out when he went in. They were only women that he saw. At supper he told some friends. The Japanese women spoke pidgin English among themselves and to him.

—Allen was in the foreign town till about 8, and while there Davis told him what he had heard about the burning of the ship. He was also told that the ship would burn at about 11.30. He was in the native town four times in 48 hours. He was sure that Davis told him, but they told no one else. They thought nothing of it till he heard that the ship was on fire. He spoke of it on the Tuesday morning. When first told of it

He turned round, and meeting two persons, told them to save themselves. Afterwards Allen tried to go down, and failed. He then escaped through the wheel. He saw the engineer's storekeeper, and he went forward, but never afterwards. He thought the storekeeper was not trying to escape. He was now dead. Another man he met, Mr. Leslie, got off in the last boat. He did not know, but thought it was three minutes after he heard the alarm that he got to the engine. When he returned with some wood, 8 or 9 minutes after the alarm, there was scant 17 lbs. of steam. He saw one hose and there was some water in it. The midship pumps were always going—when he saw them, but he could not say if the forward pumps were stopped. It was about 15 minutes after he left the room till he saw to the outboard escape. He did not know if the escape valve was shut, or if its being open would stop the supply of water. Allen sent him to open the valve, but got there before witness. His opinion as to time was mere guess work.

— Fields, Lieutenant of the U.S.S. *Lackawanna*: He first heard of the fire on his way off to his ship. He saw a light and thought it was a cargo port, and therefore passed by without attention. Directly after he heard the alarm and went up on board the *America* by the gangway. He saw no fire till he was on board, and he soon saw the second steward and then men with 2 hose, the fire coming up through the saloon. He then looked for the captain and afterward told a sendo to give the alarm on the *Lackawanna*. He found several hose, but water in only one. He and the first officer got some men and lowered a boat, put the stewardess in and he and others went also. He then picked up some Chinamen. When he first saw the fire he thought it was about 11.30. He first saw fire in the main saloon right amidships coming through from the lower saloon. He saw two lines of hose in the saloon, but there was no water. Afterwards he did not see them. He saw 2 hose on the hurricane deck, one with water and he put the end, which had no nozzle on it down the crank pit. He was on board about 15 minutes. He did not see the captain. He thought if all the hose had been in use no effect could have been made on the fire, not even if the main engines were used. He saw no English naval officers. He was not in uniform. Soon after he got there plenty of boats were about. He saw the Chinese passengers hanging over the side by ropes. He did not see the forward gangway fall.

F. Klapp, captain's clerk on the U.S.S. *Lackawanna*: On going to his own ship he heard the alarm and went on board. There was much smoke, and he tried soon after he went to find hose. He found four hose and he tried to clear them. He cleared two and found one going to the engine room. He helped with the hose and went aft, but there was too much smoke to stay. He got a bucket of water from a man and threw it on the fire. There was no water in the hose; he examined them twice. He first thought the ship could be saved; but it soon stretched fore and aft and he soon found the ship was to be lost. He asked down the engine room why there was no steam. Some one said there was none, and then it was said that there was steam on the donkey. He jumped overboard and told someone else to jump overboard. He was picked up by a *Lackawanna's* boat. He saw no Chinamen on board, but plenty in the water. One white man was also in the water and he picked him up. He did not see the ladder break. Several Chinamen in the water had their trunks with them. The fire he first saw was in the dining saloon amidships.

Tuck Hing, Chinese fireman on the *America*: He was on board near the donkey engine room when the fire broke out. He was on watch alone attending to the fire. There was fire in the donkey boiler, and 15 lbs. of steam; there had been this amount for the whole night. Afterwards there were 14 lbs. only 1 lb. less. Four or five minutes after it went to 17 lbs. and then to 18 lbs. The chief engineer gave him orders that night to keep up 15 lbs. a'l night. He was alone all night. He was on duty alone every night. At sea there were several firemen with him. One engineer was with him at sea. In port the 3rd engineer was with him. Sometime after the fire broke out he came on deck and jumped overboard. He was on board about twenty minutes tending fire, putting coal and wood in the furnace. He jumped overboard near the paddle box.

E. Stevens, 3rd officer: He was not on duty at the time of the fire. When the alarm was given he was in bed. He got up and went to the saloon and helped with the hose. Some one asked for axes which he got, and when told broke the deck lights. When driven out by smoke and fire, he jumped overboard. Captain Doane and Captain Miller were in the saloon. There were two hose and one he was sure was filled with water. He did not know whether the water stopped or not; but the hose was not full. He helped to stretch the hose; one was ready when he went to the saloon. He helped to stretch another. Water did not come for about three to five minutes. He watched the hose till driven out—about ten minutes. All the time he was there water was running through the hose. The supply of water was about the same all through. He went forward and got overboard. All this took about 20 or 25 minutes. He saw the flames through the

dead-lights before they were broken. He saw smoke in the saloon. He did not know who left the saloon last, he or Captain Doane. The fire was in the after steerage, which was in the charge of the steerage watchman. He had no duties in the after steerage. He was there about 5 p.m. In the steerage was some hay covered with matting. This was close to a hatchway used as a thoroughfare. There was no other inflammable freight; but standees were piled up near by. He did not know whether the steerage ports were open or closed. If open there would be plenty of ventilation. He had no charge of the coolies aft. He put some acid off the ship and one jar broke. The acid was washed off by the pumps. When he went forward the starboard side of the ship was in flames, and he left the ship when she was hopelessly gone. The 2nd officer had charge of the after part of the ship. The after steerage state rooms were not occupied.

Dr. McAllister: From 9 to 10.15 he was on board and then went ashore, to attend a passenger who was an invalid. It was usual to go ashore to attend an invalid patient. He gave the usual notice of his going on shore.

W. Garrick 2nd officer: He was on board at the time of the fire. He was asleep and was awakened and went aft and down to the saloon and the smoke drove him back. He then went down and tried to throw water. He then found the fire breaking out amidships. He was ordered to flood the magazine but could not find the storekeeper. He then lowered a boat and he and others, the stewardess included, got in it. His station was on the hurricane deck at the after boats. He looked after the after steerage and freight decks. He went first to the saloon but the smoke was so dense he could see nothing. He did not know what was the cause of fire. He did not remember seeing any hose. He used buckets &c. because they were nearest. Persons were passing water when he got there. He saw no hose on the main deck. The smoke was so dense that he could see nothing. He went on deck for air. He left the ship by the port boat. He thought it was about 15 minutes between the time he first awoke and the time he left the ship. He went below before he left to get water. He passed buckets because it was nearest and others did it. The watchman assisted him in working cargo from the orlop and freight decks. At 2.30 the freight was discharged. After this he took on rice and worked at it till supper. He had about 20 coolies. He saw none smoking; if he had seen smoking he should have stopped it. The coolies left the freight deck by the hatchway on to the steerage deck. There was some hay and it was covered. It had not been moved. The state-rooms and standees were on the deck. Ventilation was attained by port-holes and they might be open or shut—he gave no orders concerning them. The steerage steward—Leslie—might have had them closed. The Japanese might have stayed on the steerage deck passing through. After supper, at about 8 p.m., a load of twelve cases of cartridges were taken. Then the hatches were closed and the ports shut. He saw that all was right before he closed. He went up to the steerage deck. The coolies could not have smoked upon the freight deck. Witness here corrected himself, and said not that the coolies might have stayed ten minutes on the steerage deck, but ten minutes taking in the cargo after supper. Anyone could reach the steerage deck from the main deck by a stairway. He might do so by getting past the guards. The steerage steward and the officers of the ship would stop anyone going down that night. There was no connection between the coal and the hay. The fire was very much further aft than the coal. There were about fifteen or twenty bales of hay. It was piled so that anyone could get on the top. He thought the fire took place on the steerage deck, because otherwise the fire would have been discovered earlier. Had it been on the freight deck, the smoke would have come up through the ventilators. The passage to the steerage under the saloon stairs was secured; he had never seen it opened. At eight o'clock he reported "all well." He did not know, and could not form any opinion as to the number of ports in the steerage. He had been employed by the Company since 1868. He knew nothing as to the steam. His station at sea was at the boats, but he broke the rule, and did nothing but try to put out the fire. He did not see the gangway fall. He saw no Chinamen on board, but several in the sea, and one at least trying to save his baggage. He had heard that the men lost their lives by boxes falling on them. There were plenty of life-preservers, easily accessible, with their use described in Chinese characters. The life raft was brought into use by inflation. He first thought it was only a small fire.

A West, the watchman alluded to by the 2nd officer: He was asleep in his room after working all day. He locked up the hatches. The coolies first wished to stay in the steerage but subsequently they were turned up. At 10.15 he went thorough the steerage and all was safe. At 11 he heard that there was fire and went into the steerage and saw fire in the upper tiers of the hay. He then helped to stretch the hose and also to pass the buckets, and then he also tried to go to his room and he failed. He then went on the hurricane deck and got away eventually in a boat. He was told once to

go and tell the Engineer to get steam. The Engineer said the pumps were going, but no water came for some time. He knew there was no water for about 5 minutes. Leaving the steerage he went to the saloon. He could not think that the fire was on the freight deck because there were cartridges there and they did not explode till 3 a.m. When he first saw the fire he thought it could have been put out by 12 buckets of water. If there had been water at first they could have put out the fire. In the steerage he saw a quartermaster, Johnson, the first officer and the steerage steward. He saw hose in the saloon but no water. Leaving the saloon he spent 3 minutes passing buckets but was driven away by smoke. The ports in the steerage were all open. He saw the gangway fall; there were about 100 Chinamen on it and hanging to it. He saw many Chinamen jump overboard, and many throw their things overboard.

E. Johnson, quartermaster: He was asleep in the pilot house when the fire broke out and he went to the steerage and came back. Again returning he met the steerage steward. They stretched the hose, but could not get any water. He soon after went on the bridge and helped to put some water down the ventilators. When he went to the steerage he saw no flame, but it was full of smoke. He went very close to some of the bales. He was probably there before West. He saw only smoke in the steerage. He saw no water except a little stream. Leaving the steerage he followed the Captain to the saloon where there was hose, but no water.

A. Leslie, steerage steward: He was in bed when the alarm was given. He first went on deck and then taking some hose went down to the steerage, stretched the hose, but got no water. There was a very thick smoke. He saw Captain Doane and told him he had no water. Again he tried, but with no result. He then took the hose to the saloon, but was driven out. He then went to the passengers and told them to get out: by this time they had nearly all got out. A water tender soon after showed him that there was no hope and he eventually got off in a boat. The first thing he saw was the smoke—it filled the steerage; there was also flame. He thought that the fire was in the hay. He was ready for water when he first got to the steerage. Five streams might have put out the fire—one could not. He found no water in the saloon, though it was stated the water was coming. He went out and again returned, but got no water. This was six or seven minutes afterwards. The ports in the steerage were open—so he believed, and the draught thus caused would increase the fire. There were four ventilators. No one slept in the after steerage. He passed through the steerage at 10.30, and all was safe. There were no coolies in the steerage when he looked. He carefully examined all the rooms and the top of the hay. Anyone could get down to the steerage very easily. There were coolies in the steerage about nine, but they were driven out. At 10.30 he was down below himself. He saw no fire and smelt no smoke. He carefully looked upon the top of the hay. The coolies only stopped five minutes in the steerage; he watched them. He had no suspicion that the fire was caused intentionally by any one. There were no lights in the after steerage.

—Wilson, quartermaster: He first smelt smoke as he was going round at 11. He was near the Purser's room on the main deck. He told the stewardess and saw the fire through the ports on looking over the side. He then went to the steerage and saw the upper tiers of the hay on fire. He came back and went to the hurricane deck. When he went to the steerage the fire only occupied a space of about 3 feet. He saw no one going about the steerage. He took the deck hose because it was quickest. He only took it to the saloon door because he had no water. He only saw water when he coupled the hose. He went round the steerage at 10.30. About 3 minutes after 11 he smelt smoke. He did not know how many bales of hay there were. The lower bales were not on fire when he first saw the fire. The fire must have originated in the hay and nowhere else. He told Lyman whom he met at the hatch. "You are a nice watchman, the after steerage is on fire." He escaped by the boat; he did not see the ladder fall.

Davis, a landsman of the *Lackawanna*: He heard it said at No. 85, in the Yoshiwara, that a large American ship was going to be burnt that night. He could not speak Japanese, but a woman told him. She said, "One piece Melican ship makee burn this night." Two or three coolies said this. A man named Easen also heard this stated. He went to the house where there were women between five and six. Soon after he heard this conversation. The coolies who were there went out when he went in. They were only women that he saw. At supper he told some friends. The Japanese women spoke pidgin English among themselves and to him.

—Allen was in the foreign town till about 8, and while there Davis told him what he had heard about the burning of the ship. He was also told that the ship would burn at about 11.30. He was in the native town four times in 48 hours. He was sure that Davis told him, but they told no one else. They thought nothing of it till he heard that the ship was on fire. He spoke of it on the Tuesday morning. When first told of it

they both laughed at the idea. Next morning they came to the conclusion that the Japanese had set fire to the ship.

Davis, recalled, said he met Allen and both came to the conclusion that the Japanese set the ship on fire.

Captain G. W. Miller: His duty was to transfer cargo, &c. in the tug. He was on board the *America* and he smelt smoke. He went into the saloon and sent Wilson to see to the fire. He went to the Captain and eventually they got one hose to work in the saloon; but the water only ran for four or five minutes. He was then told to get the tug out and save life. The coolies slept on the main deck forward. When he got the hose stretched no water came for ten minutes. There never was a full stream of water. There were many hoses but no water. He took the precaution to send up his coolies to pass water, because he feared that there might not be enough steam. The fire might easily have been put out with one stream of water. Indeed it was put out or nearly so but broke out again. He surmised that the reason the water failed was want of steam. Everyone asked for water. He knew of the existence of a cast iron pipe running through the ship.

Mrs. Fanny Davis, stewardess: She smelt smoke as she was sitting on the guard. She turned and saw smoke coming out of the saloon. She heard Captain Miller call "fire" and she went to see where it was. She went on the hurricane deck and saw the flame below. She saw both hose and buckets of water.

M. J. Matheson, steward: Was not on board at the time of the fire.

H. N. Bellows, purser: Was on board at the time of the fire. Was called and went into the saloon where he saw fire over the after steerage. He helped to get the hose out and then went to get water in the buckets. He did so till he was obliged to leave that part of the ship and went forward and continued hauling water. He then went on the upper deck and threw water down the ventilators. He left the bridge. He saw no water in the hose. He left the ship sliding down a rope and swimming to one of the boats. He heard calls for water; he felt that there was a lack of water. There was considerable blaze below when he went into the saloon.

J. Wilson, carpenter: He was in bed at the outbreak of the fire. He heard a call of "fire" and went to the saloon when he was ordered not to break the glasses. He waited for water but it did not come for some time and very little when it did. There were three hose in the saloon and there was no water. He afterwards went forward and soon after jumped overboard and got hold of a rope and was saved by a small boat.

R. Scott, quartermaster: He was tallying coal on the freight deck. He heard a call of "fire," and then went to his station. He afterwards took a hose, but got no water. When the fire got too bad, he jumped overboard from the hurricane deck.

D. A. Joyce, quartermaster: Was asleep at the time of the fire. He found the hose stretched, but no water; he then passed buckets as long as he could, and then jumped overboard. He saw Chinamen jump overboard and throw trunks over.

J. Bellows, freight clerk: He was awakened by some one calling fire, and ran out and helped to pass buckets, both below and above, till all saw there was no hope, and he then jumped overboard. He saw the hose, but no water.

A. Franklin, porter: He was on board the night of the fire. He saw the hose stretched, and he went to get lights. He afterwards passed buckets. He did not know whether there was water in the hose, and heard no cries for water; he got overboard by a rope.

W. H. Wrag, second steward: When called he went into the saloon and saw the light; helped with the hose. He afterwards tried to get forward but failed and then went overboard and got into a sampan. He did not think there was any water. Everyone called for water.

Captain Doane recalled: The pipe under the deck ran along the port side and would be right over the hay. It was under the main deck. The effect of the fire would be to let it fall; if the deck beams were burnt it would fall. The hay burning would have no effect. He could not account for the statement that there was steam and that at the same time no water, except by a broken pump and there was no evidence of that. There was a supply of water for 3 or 4 minutes. Afterwards he got water on the hurricane deck. He could not account for the fact that one hose furnished water while the others did not, except that the valves might have been closed. The first officer had to see to these valves. If such a fire had occurred at sea half the crew would have been on watch. In port the crew work by day and sleep at night. He himself had not slept for 40 hours and his officers had been hard at work for many hours.

— Graham recalled: He knew there was water in two hose. The iron pipe in the steerage was coupled with cast iron and the heat would be apt to crack it. At first there was no water in the pipe. He thought the hurricane deck hose was supplied by another connection entirely. When he left the ship

water was running from the hurricane deck hose. It was his opinion that the pipe burst with the heat of the burning hay. He could account for it in no other way.

— Allen recalled: The attachments of the saloon hose were all on the large pipe. He could not explain how it was that water came through one and not all the hose.

H. Wasdale, butcher: He heard the cry of "fire." He went to his quarters and after taking an axe below he helped with the hose. Did not know if there was no water. In connecting the hose there was no water. He did not know if the valves were opened. He passed water buckets along. He saw other hose but did not know if there was any water. He passed water because he was told to. He had nothing to do with the hose. He knew nothing about the hose except that he bent on one section and that when he bent it there was no water.

Captain Doane said that only 4 or 5 men were required to use the hose while the other men were detailed always to pass buckets.

The Court was adjourned till 10 a.m. next-day.

Tuesday, 3rd September, 1872.

On the opening of the Court some questions as to previous evidence were brought up.

— Hallett, first officer: He first stretched hose on the steerage deck; the valve was open when he stretched the hose; but no water came through; he stayed for 5 minutes, though it seemed 10 minutes, and then he left, because there was no water; he tried to get the after steerage hose out, but could not do so, because of the smoke; on the hurricane deck the hose was stretched and he saw the valve opened; only one hose was on the steerage deck and the valve open; on the hurricane deck there were two hose and the valves were open; he had to see to the opening of the valves; he had always done so when at drill; in case of fire he gave orders as to opening of the valves; wherever he was working the valves were open and then was no water.

Captain Doane: There were four hose stretched in the saloon; he knew on the outbreak of the fire that one valve was open, and five minutes after that all four were open; this he knew by personal inspection; the upright pipe spoken off by the chief-Engineer was connected with the main pipe; every fire hose was connected with the main pipe; he did not see how the pipe would break in a fire—at least, not till the flames had gained great headway; he could not give any reason why there was only water in one out of four hose; the one that gave water was the farthest from the engine; the probability was that as it was the first hose stretched, the valve was first opened, and the hose first filled; the fact that the hose on the hurricane deck was supplying water when the ship was abandoned would seem to indicate that the main pipe was intact; he knew of no ill-feeling on the part of the Japanese coolies against either the ship or officers.

J. Rappin, saloon watchman: Was on board at the time of the fire; he was sitting in the cabin and saw the reflection under the deck light; he then told Wilson, the quartermaster, who said he knew it; he then woke up the officers and did what he could to help, passing buckets and working generally; the reflection on the deck light was the first he knew of the fire; he saw hose stretched through the social hall into the saloon; he did not know if there was water in the hose or not; he was 20 minutes on board after the outbreak of the fire and then jumped overboard; he heard calls for water, but did not hear anyone say there was no water in the hose.

— Joyce, quarter-master: He heard a conversation between Barker and the steerage cook; the one said there was no water in the hose, and asked if the valve was open; the answer was "yes," and he went forward; he did not hear the engineers say anything.

A number of Chinese passengers were then examined. They all alleged that they had complaints. They were as follows:—

No. I: When the fire took place he tried to escape, but some Europeans would not let him; he was a passenger; he could not see who it was, the smoke was too thick; he first wished to jump overboard, but was not allowed; afterwards he went on the other side and jumped overboard, no Europeans being there to stop him; he had nothing else to complain of.

No. II: He complained that when some of the passengers wanted to escape on a coal boat, they were restrained and the lighters were shoved off; he could not see who it was, the smoke was so dense; this was on the ship, not the barge; he jumped overboard; many tried to escape by the lighter; if the Europeans had not stopped them, all would have been saved; they were all standing at the head of the ladder; he did not know that the ladder broke; he lost all his things—they were burnt; he had \$12,000 in his chest—all burnt by fire; he did not see any trunks thrown overboard.

No. III: The fire originated in the cabin, and they wanted to get on board the coal-boat, but were prevented by an European—who it was he could not tell because of the smoke; there were several tens of persons, but he did not know how many; all were at the head of the ladder; he had not his trunk; he got it out on the main deck, and there left it.

No. IV: He told the same story as the others. There were about 100 men tried to get away; an European stopped them, but he did not know him; his trunk was burnt.

No. V: When he heard fire he went on the main deck with his trunk, but was not allowed, with many others, to go on board the coal boats alongside; he could not see who it was; he had \$1,200 burnt; he did not put his money in the purser's safe because it was in his own chest, a very strong one.

No. VI: On the outbreak of the fire many Chinamen wished to try to get on board the lighter; they wanted to go down the ladder, but were stopped; he could not see who it was on account of the smoke, though he believed they were officers.

The Chinese interpreter went out of Court and found that all the Chinese told the same story.

The man who had \$12,000 was then recalled: The money belonged partly to himself and partly to friends in California; some of it was gold dust, gold coin, etc.; he did not give it to the purser because he thought it was safe in his chest.

— Leslie, steerage steward: He told the Chinese passengers to get out; this was at the time the fire had driven him out of the after steerage; he knew nothing as to their being stopped, and he saw no coal boats except early in the evening; he saw the Chinese go as far as the main deck; he knew before that they were getting off as quickly as possible.

P. Golding, of the *Lackawanna*: About 12 o'clock he was in the native town at house No. 9; a girl called him and told him that an American ship was burning.

The Court then adjourned for a midday recess, after which Captain Miller was called: He had charge of all the lighters, coal-barges as well; there was a small barge on one side and a junk on the other; the Japanese had charge of the lighters at the outbreak of the fire, since his men were called up on board the *America*; when he saw the barges after going on board they had cast off; the junk was towed off by a sampan and the barge was shoved off by the Japanese on board; he knew nothing as to her leaving the ship.

J. W. Brown: He was on board the lighter when fire broke out, when Miller told him to go up on the *America*; he left two Japanese on board the lighter, taking all the coolies with him; some time after he saw both the lighter and the junk at some distance from the ship.

The case was then adjourned till next day at 11.

#### Wednesday, 4th September, 1872.

Four girls from the Yoshiwarra were brought into Court, and Davis, a sailor on the *Lackawanna*, pointed out one as the woman who told him about the burning of the *America*.

No. I: She had lived at No. 85 in the Yoshiwarra for about three years; she did not remember the night of the 24th August 1872; she did not know of the burning of the *America* till next morning; she did not see the fire; she did not know Davis before the night of the fire, but he slept with her on that night; she did not wake him up on that night; Davis did not wake up; he came to her house about 5 p.m.; two men came and went away soon after to dinner; she did not say anything as she did not know English; she knew a few words—"ship," "fire," "American," but could not speak a sentence; she did not say that the ship was burning till next morning; the night of the fire Davis returned from dinner at about 6 p.m.; she said nothing about the fire the night it occurred; she did not hear any one say that there was going to be a fire on an American ship; she knew nothing about it; next morning she said "fire have got." There were no Japanese coolies when Davis came in; no one was in the house when Davis came, nor did she say that there was going to be a fire.

No. II: She lived at No. 85; she did not know Davis; she knew nothing about the fire till the next morning after it occurred; she did not say and did not know that there was going to be a fire.

Nos. III. and IV. were not examined.

Captain Doane: The steamer arrived at 7.10 a.m. The fires, as usual, were allowed to go out; there are two donkey boilers and 8 or 10 Engines; there were about 150 ports in the after steerage, and four ventilators; the most money found on any one of the dead Chinamen was about \$3,000 in gold coin; there were plenty of buckets on the hurricane deck round the walking beam; there were none on the main deck except in the Engine room; lines of buckets were formed on the main deck and also on the hurricane deck; none on the steerage deck; he saw water thrown; he saw the engineer about the Engine room door; he went himself instead of sending a messenger because he thought he could do it more effectively; his station in the regulations was on the port paddle box; the regulations as to fire were only intended as a rendezvous; it would be no use his standing on the port paddle box all the time.

— Graham: He went to bed at about 10.30; he only put on his trousers when he heard of fire; all his engineers were on board at the time of the fire; one had been ashore; the object of having an engineer watching the

loading of coal was to see that all was done well; the store-keeper was weighing and the engineer was superintending all; it was important to get the coal properly stored; the donkey boiler was close to the place where the engineer tallying; coal stood, and it was the custom for him to look after the boiler; the fires were banked; to get up steam quickly they spread the fire and put wood on it; he thought that all the hose were connected with the main pipe except one; the supply of water on the hurricane deck showed that the pumps were in good order; he could give no good reason for the failure of the water; he did not see how it was that one pipe supplied water and not another; he felt one hose on the main deck, and found it had water in it; he thought that if the steam was turned on at first in full force, the guage would have fallen very little, if any, as someone was watching the fire and supplying fuel; there were 2 donkey boilers; there were 7 engines.

— Wilson: He was on board at three minutes to eleven; the butcher went ashore with him. He did not know if any other engineers were on shore; when he went on board he went to the donkey-boiler and saw that there was 12lbs. of steam; he was not asleep at the alarm of fire.

— Graham: The Chinaman in charge of the donkey-boiler had been there for two years, and was a most reliable man. Wilson looked round the engine-room to see that all was right. In port, the sole dependence for pumping was the donkey-boiler. It has always been considered safe for engineers to be asleep alongside the engine-rooms. He thought this could be improved by keeping a sea watch in port as well as at sea.

Captain Doane: It was usual for the hay for ship consumption to be kept in the after steerage, and anywhere most convenient.

— Leslie: He thought there were about thirty bales of hay on board.

— Hallet: There were thirty-five bales of hay. Aft was the safest place to put the hay, out of the way of people and lights; no one occupied the after steerage; any one could easily get in or out of the steerage; the watchman went forward as well as aft, and when forward any one could get in aft.

The Court adjourned till 10 a.m. next day.

#### Thursday, 5th September, 1872.

##### JUDGMENT.

We, the undersigned, comprising the Court of enquiry assembled at the U. S. Consulate in Yokohama, Japan, on the 31st day of August, 1872, to enquire into the cause of the loss of the steamship *America*, having heard and carefully considered all of the testimony adduced in the case do find as follows.

That the steamer *America* arrived in this port and anchored about 7 o'clock, on the morning of August 24th, 1872.

That as usual with ships of that line when in this port all steam was allowed to go down except in one so called "Donkey Boiler."

That when in port steam is only kept up in this boiler for the purpose of hoisting cargo, pumping the ship, pumping the boilers and working the fire pumps.

That with steam on the main boilers, the full capacity of fire-extinguishing apparatus on board this vessel was thirty-two streams, together with a complete supply of hose to reach any portion of the vessel and flood the same if desired.

In addition to this we find that arrangements existed for ejecting steam directly from the main boilers to between the freight and orlop decks, and also below the orlop deck so as at once to smother any fire in such portion of the vessel.

That notwithstanding all this capacity, steam was only on this one donkey-boiler, and that with a full head of steam not more than five streams altogether could be supplied by this boiler to extinguish a fire.

That an iron pipe some six inches in diameter extended fore and aft in this vessel with hose attachments to accommodate every portion of the ship.

That all fire pumps on the vessel connected with and supplied this pipe.

That a full supply of fire hose, all in good order and conveniently situated, was on hand.

That the after steerage or second cabin of this vessel was unoccupied during the voyage from San Francisco to this port, and was also unoccupied during the day and evening of this fire.

That this compartment of this ship was very extensive, having numerous ports opening into it, and three large ventilators leading from it through the decks above.

That as usual when in port, the weather being fine, these ports were left open.

That this compartment of the vessel was lined with state rooms constructed of pine wood and having no doors.

That there was also in this compartment a large number of stowage berths of like material and piled up as loose lumber.

That near the after part of this after steerage a hatchway led to the freight deck below.

That this hatchway in this after steerage and on the port side of the vessel were piled about thirty five bales of hay for use on the homeward voyage.

That this hay was piled in rows, three bales deep, and was nearly under the dead-light of the main deck, which dead-light ran through the centre of the cabin dining saloon.

That during the day of arrival all freight for this port had been discharged and some freight for Hongkong received, and placed on the after freight deck under this after steerage.

That this freight consisted of some large cases, several bags of rice and three boxes of cartridges.

That in going to and from this freight deck this hatchway leading into the after steerage had been during the day used as a thoroughfare.

That whilst this freight was being received and discharged, a careful watch was kept to prevent the labourers from smoking and by 9 o'clock on that evening all work had been stopped in that portion of the vessel, the hatchway carefully closed and locked, thus cutting off all communication after that hour with the after freight deck, which compartment of the vessel had no ports, but did have one ventilator leading up through the hurricane deck.

That at 9.30, at 10, and 10.30 o'clock of the evening in question this after steerage was visited by the proper officers on watch, all of whom failed to detect any evidence of fire or the presence of any person, and reported all well.

That at the last mentioned time the steerage steward with a closed light carefully examined this hay to see if any person was lying about it.

That he was immediately followed or preceded by the quartermaster on watch, who, without a light, carefully inspected this part of the vessel, and it seems to us that if any fire had been in this after steerage it must have been observed.

That owing to the fact that on that evening coal was being received into the vessel forward, for some reason, seemingly insufficient to us, the sixth engineer—the only engineer then on duty in the ship—was attending to the receiving and stowing of this coal, leaving a Chinese stoker alone on watch in the donkey-boiler room.

That such was the condition of affairs at 11 o'clock of this evening, when quartermaster Wilson, after striking "six bells," proceeded on his tour of inspection, and upon reaching the main deck and nearing the dining saloon, he, with the stewardess and others, detected the smell of smoke—glanced over the side of the vessel—saw smoke issuing from the after steerage ports—rushed at once below into the after steerage, and then saw fire in the two upper tiers of this hay.

That this fire then occupied a space less than three feet square, and was not connected with any woodwork of the ship.

That immediately a general alarm in the ship was given, most of the officers and crew at once put forth every effort in their power to subdue the flames.

That under the direction of the first officer, a fire hose was stretched in the after steerage, the valve turned on, and water awaited; but none came before the smoke and flames drove him and his assistants above that deck.

That under the supervision of Captain Doane, four lines of hose were at once stretched in the main saloon, valves opened, and water here awaited for some minutes.

That eventually, and for a short time only, a little came through one line of the hose and then failed, no more coming through any hose until they also were abandoned, the captain and crew being driven by the flames to the hurricane deck.

That here another length of hose had been stretched, the first officer, when driven from the steerage, taking charge of it, but through this also no water came until the flames had complete possession of the vessel below the hurricane deck.

That from that time the supply through this one line of hose was full and continued to pour through it until the ship was abandoned. To our mind this fact proves the fire pumps and supply pipe of the vessel to have been in good working order, and the presence of water for a few moments through one line of hose in the cabin is proof that steam was so low in the donkey-boiler that when turned on it supplied one stream for a very few minutes only, and then fell so low as to be useless, until just before the ship was abandoned.

We are of opinion that the long time which elapsed before even this one stream was started denotes great want of preparation or great tardiness in the Engineer's department, and we entertain no doubts that if steam to the amount of twenty pounds, or more had been on in the donkey-boiler, at the time alarm was given, the fires under that boiler in proper condition, and proper expedition used in getting the fire pumps at work, the fire might have been extinguished and the ship saved.

We are of opinion that because of the peculiar location of the fire, the very combustible material in which it commenced—a general misapprehension as to its headway prevailed on all hands, resulting in some confusion. There seem to us to have been too many people for too long a time engaged at the hose waiting for water, and too great delay in organizing lines with buckets. In fact it seems to us that the glare of this light on

the large section of dead-lights in the main saloon erroneously impressed all on board with the idea that the whole after steerage and after freight decks were on fire.

That this with the unexpected failure of water led every one to follow his own judgment in doing what he could to subdue the flames.

We feel that this meed of praise is however justly due to all the officers and crew of the vessel; that they seem to have worked with great gallantry and perseverance from the moment they realized the danger, until driven from the vessel by the flames.

The great loss of life among the Chinese passengers resulted to our opinions from a variety of causes. *First*.—From the general effort made by all of them to save their property. This led some to overweight themselves with money; as for instance on one body which was recovered, some \$2,700, in gold was found, and more or less coin in various sums was found on nearly all. *Second*.—Some threw their heavy boxes overboard into the sea upon the heads of those below. *Third*.—They neglected to secure any of the great number of life-preservers within easy reach and in plain sight of all. *Fourth*.—By the carrying away of the accommodation ladder when crowded with Chinese passengers all were hurled into the sea to struggle and die together. *Fifth*.—Two boats that had been used to bring coal on board the ship and which were lying alongside when the fire broke out, were left in charge of Japanese coolies, by their officers, who boarded the ship to help extinguish the fire. These boats the Japanese sailors in a cowardly manner set adrift, lending no hand towards rescuing either the Chinese or even their own officers; and lastly, this great loss of life was occasioned by the fearful rapidity with which the flames spread; the long continued effort made by all hands to subdue the flames, leaving no time or opportunity to lower the ship's boats or its life raft after such efforts were discontinued.

In conclusion we most regretfully state that from all the evidence, we are convinced that the fire was the result of *intention* and *not of accident*. Only the most remote and improbable chance for it to have occurred from any accident exists: whereas a person so disposed could, in our opinion, without difficulty and with but the slightest chance of detection, have communicated this fire.

The inducement to do this may have arisen from antipathy on the part of some person towards the P. M. S. S. Co. or some of its officers, or from the fact that the Chinese passengers, although so few in number, were so generally supplied with large sums of money. This may have become known on shore and induced some wretch to fire the ship for the sake of an opportunity of robbing these people during the conflagration.

C. O. SHEPARD,  
Consul, President of the Court.

PAUL SHIRLY,  
Capt. and Senior U. S. Naval  
Officer present.

E. D. PERCY,  
Ship Master, (*Emperor Str.*)

U. S. Consulate, Kanagawa, Japan,  
September 5th, 1872.

By courtesy of the Court and at the request of the Agent of the Pacific Mail Steam-ship Company at this port the undersigned was present and participated in taking the testimony in this proceeding; and fully concurs in the foregoing finding and conclusions.

C. E. DE LONG,  
U. S. Minister.

## Law & Police.

### CHARGE OF MANSLAUGHTER. IN THE UNITED STATES CONSULAR COURT.

Before Mr. Consul SHEPARD.

Tuesday September 3rd, 1872.

This was a preliminary examination into a charge of manslaughter against a man named Maloney, who it was alleged was the cause of the death of a Japanese coolie at work on the sailing ship *Decapolis*.

Sakejitz: The man that was dead, Kozo, was near the brink of the hatch in a sailing vessel. A foreigner, Maloney, called him and he did not come, and he then caught hold of the deceased and in pulling him threw him down the hatchway. Miller then gave him some water and he was afterwards taken ashore and he died. He was subsequently buried. This was about 3 a.m., while they were tallying coal. They had been working all night. He was a head man of the coolies. Witness saw it, as did fifteen other Japanese. Kozo was alone above, the others were passing the coal from one ship to another. The affair happened on the coal ship. The coal was passed from stage to stage from the coal ship to the boat. There was no deck on the coal barge. The stages were hung by ropes.

Kozo was passing empty baskets. (The coal ship alluded to, the Consul explained, was the *Decapolis*). There were altogether about twelve or thirteen men, and those both above and below could see it. He did not know the names of those working with him. Witness, when the affair took place, had gone to get some water; he heard a report that a man had been thrown down the hold, and when he got back, water was being given to him. Witness was standing on a stage just below the deck; witness said he was ten feet below the deck. He was himself five feet five inches high. The foreigner was standing on the left of the hatch, which was ten feet wide. He was close to the hatch. Witness was not working at the time; was looking after the men below. The foreigner was urging on the men below. The coal in the vessel was nearly out when the prisoner called Kozo. The other witness was below—right at the very bottom. Another foreigner, Brown, was in company with Maloney. There was also another foreigner about beside Maloney. He did not know either the captain or officers, nor did he see them—the foreigner called “Kuchi-koi” once only. Kozo did not go when called, and the foreigner was angry and pushed the man, and pushed him into the hold. He was then taken up and put into the steamer and taken to the *New York*. He heard that the foreigner got angry. Maloney went to Kozo and struck him, and failing to support him, the deceased fell down the hold. Witness then said, that he struck deceased two or three times and caught him by the neck. Whilst he had hold of him he fell down the hold.

Hekitchi: He was on board the coal-ship, on the deck. The other witness was an overseer, and was walking round. Both he and the other witness were on the coal-ship. At the time of the affair he did not know exactly where Sakejitz was, but afterwards he was on deck. He did not know how many men were employed. There were rails along the ship. There were six men passing coal, and two men passing empties. The deceased was one of these eight. There were some foreigners—two or three. It was night, and he could not recognise the faces. He did not know anything about the affair. Others knew the man, but he did not. He saw a foreigner take hold of Kozo and throw him down the hold. He heard the foreigner speak, but did not know what he said. He spoke Japanese. Witness did not hear Maloney say “kuchi koi.” The deceased did not appear to have a basket when he fell. After calling him the foreigner caught Kozo, by the back of his head and pushed him in the hold. He did not see the foreigner throw him down—not all the circumstances. He saw him fall, however.

G. Hermann, of the *Decapolis*: He was on board when a man fell into the hold. He did not see him fall. There was a screen between him and the coolies, but when the accident happened he saw two foreigners.

Maloney: The coolie was told to pass some coal to another ship. Across the hatch was a plank. He was told twice to go and do some work, and to avoid it he tried to jump down the hold, and, missing the stage, he fell and was eventually killed. Captain Miller and Mr. Brown were present at the time.

Three more coolie witnesses for the prosecution not being present, instructions were given to the Japanese officer to have them present, and the case was adjourned.

Saturday, September 7th.

The charge was dismissed to-day, the evidence for the prosecution being very contradictory.

## Shipping Intelligence.

### ARRIVALS.

August 16th, General, to Order.  
September 1st, Brit. brig *Wanza*, Withers, 255, from Nagasaki, Coal.—Pitman & Co.  
Sept. 2, American Steamer *New York*, Furber, 2117 tons, from Shanghai, General, P. M. S. S. Co.  
Sept. 4th, Am. Str. *China*, Morse, 3,836, from Hongkong Aug. 27th, Mails and General.—P. M. S. S. Co.  
Sept. 5th, Am. barque *Ellen Loring*, Loring, 716, from Kobe Aug. 28th, Sundries.—Walsh, Hall & Co.  
Sept. 5th, Fr. Str. *Godavery*, Vailhen, 969, from Hongkong Aug. 28th, Mails and General.—M. M. Co.  
Sept. 6, *Sarah Watson*, Brit. barque, McDonald, 450, from Hongkong, Coal, Order.

### DEPARTURES.

September 2nd, Brit. Str. *Washi*, Coster, 223, for Hakodate, General.—Hudson, Malcolm & Co.  
Sept. 4, *Wm. Melhuish*, British ship, Thomas, 631, for San Francisco, September 1st, Rice, despatched by Walsh, Hall & Co.

Sept. 4, *Fidelio*, N. G. barque, Schuldt, 334, for Hongkong, Sept. 3rd, Rice, despatched by Walsh, Hall & Co.  
Sept. 4, *Jessie Isabel*, British ship, Mills, 727, for Kobe to load up for New York with Tea, despatched by Augustine Heard & Co.  
Sept. 4, *Relief*, Am. str., Corning, 791, for Shanghai, General, despatched by P. M. S. S. Co.  
Sept. 4, *Ottawa*, Brit. str., Hockin, 1,274, for Hongkong, Mails and general, despatched by P. & O. Co.  
Sept. 6, *Decapolis*, British barque, Almond, 631, for Sydney, N. S. W., September 5th, Rice, despatched by Walsh, Hall & Co.  
Sept. 7, *China*, Am. str., Morse, 3,836, for San Francisco, Mails and general, despatched by P. M. S. S. Co.

### PASSENGERS.

Per P. M. S. S. *New York*, from Shanghai and Ports. For Yokohama.—Edward Save, Belgian Consul General, D. G. de Huidobro, S. J. Morris, W. P. Mangum, U. S. Consul, R. G. Watson, H. B. M. Chargé d’Affaires, J. R. Davidson, Mr. and Mrs. Guernon, Captain Atkinson, Mrs. Tookey and servant, Mr. Schwabe and servant, R. H. Cook, Mrs. Massida, Mr. Frischling, W. Winstanley, W. H. Talbot, R. Robinson, J. A. H. Schepel and servant, Mr. Mathews, Major J. W. Kinder and servant, C. Illies, Henry Hertz, Mr. Nakayama, 19 Japanese. Steerage—3 Europeans, 181 Japanese and 5 Chinese. For San Francisco.—A. Bianconi, J. H. Watson. For Europe.—Lieut. C. T. Beniche, R.N.  
Per P. M. S. S. *China*, for Yokohama.—C. V. Martinho Marques, wife and infant, G. M. dos Remedios and servant, Mrs. dos Remedios, infant, and servant, and S. L. Guisenburg and three Chinese in the steerage. For New York.—Isidore Go Ye Yabanes. For San Francisco.—Seventy-two Chinese in the steerage.  
Per P. & O. *Ottawa*, for Hongkong.—Mr. Atkinson.  
Per M. M. *Godavery*, from Hongkong: Messrs. Grenet, Suauki, Kibara, Nicolas, Laplace, Labaline, Porte, Simon, Vachor, Mallet, Mallet, Radier, Renviere, Berthezeme, Prujol, Courlot, Kien, Joret, Parodi, Pini, Orcelluzzi, and Montalbetti.  
Per *Relief* for Kobe.—Mr. E. Wallace and 2 Japanese in the cabin, 57 in the steerage. For Nagasaki, Mr. Roth, and 30 Japanese in the steerage. For Shanghai, Captain Bunkum, Mr. McGregor, and 1 Chinaman in the steerage.

### CARGOES.

Per P. M. S. S. *New York*, from Shanghai and Ports.  
Treasure ... .. 55 pkgs., value \$565,750.  
The *Ottawa* took 625 bales Silk.

### REPORTS.

The *Wanza* reports having caught the typhoon about thirty miles this side of Van Diemen’s Strait. Lay to with head to southward, the wind veering from S.E. to N., a heavy sea running. The captain says he never experienced such weather at sea before.

The following vessels are now at Yokosuka:—*Monocacy*, *Victor Pisani*, and *Emma Augusta*.

The P. M. S. S. Co.’s Str. *New York*, Wm. G. Furber, commander, left Shanghai Aug. 26th at 3.31 a.m., and arrived at Nagasaki Aug. 28th at 4.53 a.m.; left Aug. 29th at 12.55 a.m., and passed U. S. Str. *Ashuelot*, bound west, same day at 12.30 p.m., and Company’s steamer *Costa Rica* Aug. 30th at 5.57 a.m.; arrived at Higo same day at 3.31 p.m.; left again Sept. 1st at 5.11 p.m., and arrived in Yokohama Sept. 3rd at 5.15 a.m. Had moderate weather throughout the voyage.

The P. M. S. S. *China*, Hiram G. Morse, commander, left Hongkong August 27th. First four days had S.W. winds and fine weather; since strong E. N. E. winds, last twenty-four hours blowing a gale, accompanied by very heavy rain.

# THE Japan Weekly Mail.

A POLITICAL, COMMERCIAL, AND LITERARY JOURNAL.

VOL. III.—No. 40.]

YOKOHAMA, SATURDAY, OCTOBER 5, 1872.

[PRICE \$24 PER ANNUM.]

## BIRTH.

On the 1st October, at No. 8, West Bluff, Mrs. THOMAS THOMAS, of a daughter.

## Notes of the Week.

A public meeting will take place on Tuesday next the 8th instant at 2 o'clock P.M. at the Chamber of Commerce rooms No. 59, Main Street, to consider what should be done by the community on the occasion of the formal opening of the Railroad on the 11th instant.

THE Committee entrusted with the presentation of the memorial in connection with the imprisonment of Mr. Cousens at Kobe, waited on Mr. Watson, on Wednesday by appointment, and duly handed him the document.

Mr. Watson, in accepting the memorial, said that the matter was one having reference only to judicial affairs, and he would refer the matter to Sir Edmund Hornby, and on his reply, communicate his opinions upon the subject to the Committee.

Sir Edmund Hornby having already read the memorial in the local papers had his reply ready prepared in writing, which was handed to the Committee, and was to the effect that he could not receive the memorial, with his reasons for so refusing.

Until Mr. Watson's second communication is received by the Committee, it is obviously a matter of courtesy to him to refrain from publishing his letter and that of the Chief Judge, which will be given to the public subsequently to the receipt of this second letter.

Captain Hereira of the *Maria Luz* having applied to the Kencho for his papers they have been refused, and he, in consequence, has sent in the following letter. The Kencho has since then, we learn, put the ship in charge of its own officers.

"TO THE KANAGAWA KENCHO.

"Yokohama, 3rd October, 1872.

"Having three times demanded of this Kencho the papers of my ship, the *Maria Luz*, and having each time been refused delivery of them, I am unable to leave the port with my ship; and it being of urgent necessity that I should get back to Hongkong without any delay, I hereby notify to this Kencho that I quit Yokohama by this day's mail, protesting against the above-mentioned refusal by the Kencho to deliver me the papers of the said ship, and holding the Kencho responsible for all consequences of their refusal and detention of the above-mentioned papers.

(Signed) RICARDO HEREIRA,

"Captain of the Peruvian barque *Maria Luz*."

It is much to be feared that the Japanese have put themselves in the wrong by this act.

WE have good reason for believing that Hanabusa, whose mission to Corea we noticed shortly in our last weekly issue, has gone thither with the object of repaying a large amount of money borrowed from the Korean Government by the Prince of Tsushima. It is thought that this will secure him a favourable reception, of which advantage may be taken to discuss other matters.

By an advertisement in another column, it will be seen that the Banks will be closed on the 11th inst. It is to be hoped that the shops and merchants' offices will also make the day a

general holiday, so that all may testify in some way to their respect for the Sovereign of the land in which they live.

WE understand that Captain Hereira has returned to Macao there to procure another load of "passengers." With the blockade of which the China papers speak he may not find this so easy a task as he appears to imagine.

ARRANGEMENTS are being entered into with a view to re-returning the Chinese "passengers" lately on the *Maria Luz* to Shanghai. Chen will return to China very shortly, and the coolies will follow at a later date.

On Wednesday morning a battalion of Japanese troops were exercised on the Swamp. They went through the usual battalion drill, and performed the evolutions in a style very creditable to those who have instructed them.

WE learn that several important reforms are in course of being carried out at the Saibansho. Legal forms, warrants and summons &c., are to be drawn up under the direction of Mr. Hill, now legal adviser to the Kencho, and will be printed both in Japanese and English. It is also proposed to assimilate the practice of the Court to that in use in England and America.

On Wednesday at 1 P.M. six other criminals were executed at Tobé. The circumstances attending the decapitation were of the same character as those which we described elsewhere.

At present no steps appear to have been taken with respect to the coolies lately "passengers" on the *Maria Luz*. These are to be seen perambulating the streets in a very miserable condition. We understand, however, that they are provided with food and quarters.

THE schooner yacht *Muse* was put up at auction on Wednesday but only \$350 was bid, and she was bought in at \$400 above that amount.

An outbreak is reported in the province of Koshu, chiefly among men of the samurai class, who have been impoverished by the revolution. A battalion of troops has been sent to repress it.

INFORMATION has been received that the telegraph between Yedo and Kobe will be opened on the 9th instant. The tariff for messages will be published shortly.

WE are informed, though we have not verified the statement, that the quotation of "bulbous below the ribs," in the Stanley-Livingstone letters, is from Hawthorne's English Notes, published in 1869. This goes to prove the theory we have upheld—that the letters were written by Stanley from notes furnished by Livingstone and conversations between the two travellers.

THERE are probably few in this community who have not at one time or another been victimized by the frauds perpetrated in the sale of bottled beer. It is not so long since a consignment of labels for brandy—Hennessey's, we believe—was sold in bulk, and now we have chanced upon a most palpable forgery. We have before us at the time of writing three labels—red, yellow, and black. The red ticket purports

to be a bottling label of F. Friend & Co., but is evidently a forgery; for not only is it engraved by a Japanese or Chinese, but it is stamped on a square piece of white paper, and has to be cut out for use. The yellow label is a forgery of the usual Allsopp's India Pale Ale, with the brand, and bottled by Friend & Co. This, too, is engraved by a Japanese or Chinese, and is a palpable forgery. The black label resembles the yellow except that the ground is uncoloured. In all, the signatures are badly executed, and both the latter, although purporting to be bottled by Friend & Co., bear in small letters, "This label is issued by us, Samuel Allsopp & Sons, Brewers, Yokohama," and then follow five unintelligible letters, which may mean "Japan," or anything else. Clearer cases of forgery never came to light, and we should esteem it a favour if any one who may chance to discover equally fictitious labels, will forward them to us, with the name of the dealer, and any other particulars which may tend to expose the guilty parties. The frauds are perpetrated either by the Japanese for their own benefit, or by foreigners who deceive the natives, or it may be that both are guilty; but certain it is that these spurious labels and the filthy beer thus passed off as Bass' or Allsopp's are to be found in every part of Japan frequented by foreigners, and it is high time some efforts were made to unearth the persons at whose instigation the forgery is committed.

The Honorary Secretary of the Art Union of London has received a copy of the engraving which will be presented to each subscriber for the year 1873. The engraving is thus described in the circular of the Art Union.

It is a plate admirably engraved by the late W. Holl, from the picture "Rebekah," by F. Goodall, R. A. The picture sets forth the scene at the moment when Abraham's servant, having accosted the damsel and asked for a little water out of her pitcher, "she gave him to drink, and drew water for his camels also;" and "as the camels had done drinking, the man took a golden ear-ring and two bracelets," and put them on her ear and her wrists, and, "wondering at her, held his peace, to wit whether the Lord and made his journey prosperous or not."

The artist has with consummate skill rendered in the face of Rebekah an expression of the various emotions which the incident was calculated to awaken in the mind of one destined to be "the mother of thousands of millions," and in whose seed should "all the nations of the earth be blessed." The anxious look of the servant, also, waiting to see if his suit should prosper, is admirably given. The Council have every reason to believe that this plate will be a great success.

Whether the expression on Rebekah's countenance is supposed to comprehend the complex emotions connected with her destiny, we are not quite certain from the above description, though this may fairly be inferred from it. But if so, Lord Burleigh's celebrated nod is a thing of the past.

#### THE OPENING OF THE RAILWAY.

THERE exists a very strong desire on the part of the foreign community resident here to do honour to the important occasion referred to in our last issue, and steps are being taken, the details of which will be announced when more matured, in order to give effect to this desire. As the event is more carefully considered in all its bearings, its importance assumes larger proportions. The contrast presented by the European and Asiatic modes of thought, institutions, and national life, becomes more vivid and more definitely realized. The mind apprehends more clearly the almost organic difference which exists between these two modes, and experiences alike astonishment at such an exceptional departure from that which has hitherto characterized the East, and hope in regard to all which that departure may involve in the future. The time taken to produce this change has been so extraordinarily short. It is really but the other day that Japan was opened, that prohibitions existed, involving even capital punishment as the penalty of disobedience, against any native leaving the country, and that a desire still reigned almost national in its extent, and of great intensity, to keep foreigners and foreign influence as far as possible at arm's length. Residence in the capital was dangerous,

and travel in the interior almost impossible. The old feudal system, with all its jealousies and all its power of individual and collective repulsion, showed no symptom of decay. Vast armies of retainers, whose habitual idleness could only be exchanged for an activity many fold more mischievous than that idleness, devoured the substance of the country. A haughty attitude, at once the child of ignorance and the parent of disaster and humiliation, was maintained towards the Western powers, and the lessons which had to be given before this attitude was relaxed threatened to leave behind them feelings in no sense calculated to bring Japan into friendly contract with the West.

And now the Mikado—the Pope-King—the inscrutable being of Kioto, whose office had so long been the source of perplexed wonderment and crude theory among Europeans, and whose person has for ages been the object of superstitious awe to his subjects—is about to open a Railway in his kingdom, and to pronounce what, from the almost sacerdotal character of his office, amounts to a benediction, upon the greatest revolutionary influence of modern life—revolutionary, however beneficently so. The first prelude to the peaceful symphony of the future is to be performed on Friday next. The ceremony will contrast but poorly with a European pageant, and those who see it with that inner eye by which alone all its significance can be apprehended, will do justice to it. But, to these, it betokens a revolution of a profound and astonishing nature, one, as we last week remarked, without parallel—for swiftness, at least—in the world's history. So recently as three years ago, any announcement that the TENNO was to traverse any highway in his Empire was a command to his subjects to close their houses, and, should they meet his *cortège*, to prostrate themselves, so that their profane eyes should not light upon his divine person. Now a proclamation has been issued ordering his subjects abroad on the auspicious occasion, so that they may see, and, at their will, gaze on their monarch. Surely, this involves an astonishing change!

It is well, therefore, that we men of the West should show our sympathy with Japan and her Prince on this occasion. The sentiment on our part is warm and sincere. We know all the difficulties and dangers which attend these salutary innovations—innovations made by men who have carried their lives in their hands for years in order to promote them, who have seen their colleagues cut down for pursuing a similar course, and whose courage, steadfastness, and tenacity of purpose alone have enabled them to carry these reforms. As we have already shewn last week, the personal influence of the Tenno must have been thrown into the scale with the reformers and the party of progress, while, *a priori*, it would have seemed infinitely unlikely that this should have been so. And such of us as are Englishmen are perhaps, specially enjoined to this duty, if only to repel the slanders on our national character, which men who may be charitably hoped to be incapable of understanding it, are not ashamed to sow broadcast elsewhere, in order to gratify the worst and least worthy feeling of a kindred and friendly race.\* That character, which, since we have been a nation, has ever been one for uprightness, veracity and manly boldness, is little affect-

\* Vide a letter reprinted in the *Japan Herald* of Sept. 27th from the *New York Times*.

ed by such slanders, and we disdain to answer them. But not the less do we wish the Japanese to feel that our habitual *hauteur*, our occasional high-handedness, and the absence in us of all tendency to fussy demonstrations, are compatible with a sincere and generous appreciation of themselves and their efforts.

#### CHURCH AFFAIRS.

IT is impossible to be contented with the present financial position of our Church affairs here. The rough statement—accurate enough for all practical purposes—placed before the meeting of yesterday week, showed that at the end of the year we should be about \$1,200 in debt, though this deficit will be met in the ensuing July by the Government grant. Still we are behind-hand, and the last two Treasurers were creditors on the books of the church to the extent of \$336 and \$371 respectively. The ordinary meaning attached to the word treasurer, is one who is entrusted with a treasure. In church affairs the title would seem, by a process of inversion, to be bestowed on anyone who is sufficiently complaisant to saddle himself with a floating debt contracted in the spiritual benefit of his fellows. Our budget at present is always about a year behind, and our successive Treasurers are in the position of men trying to jump on their shadows. The illusion that we shall overtake our present debt next July might fairly be cherished, were it not certain that, unless some extraordinary effort is made, the beginning of next October will see us precisely in the same condition of impecuniosity in which we now are. A consistent maintenance of the established relations between piety and poverty may be creditable to our conservative pretensions; but revolution in this respect has no terrors for us, and we should hail the advent of a leader who delivered us from a bondage at once galling and discreditable. It does not appear to us desirable that gentlemen should be asked to accept a public office, the first burden entailed by which takes the shape of a draft upon their private resources.

The causes of our present troubles are to be found in the debt contracted to build the new aisle, and to pay for our old friend the organ. The income accruing from the former is sufficient to defray the interest on the sum expended upon it, and as the seats still unlet become occupied, they may yield something towards a sinking fund for paying off its first cost. The organ can only assist in this by the equivocal appeal it may make to the æsthetical sensibilities of residents, not at present seatholders, but who may be induced by the attractions it presents to become such. But in its present condition it is calculated rather to ruffle than soothe these sensibilities, for it is cruelly out of tune, and its utter want of all proper relation to the size of the church makes it rather an object of dread than of attraction to susceptible worshippers. The acceptability of praise may possibly not be measured by its artistic perfection, but one is liable to be reminded of the anecdote told of Handel, who, on hearing some very discordant music in a church, remarked that the Almighty must be very good to let people make such a noise in his house.

The natural enthusiasm which prompted the purchase of the instrument may have been condoned, but the debt of its first cost and the expense of maintenance still remain to be faced. Our available musical talent is quite suffi-

cient and effectual as regards playing the congregation out of church. The art consists in playing them into it, and amateurs have more success in the former than the latter accomplishment. An instrument of moderate size assists in warming the devotion of worshippers, and affords the little skilled amateur an opportunity of gracefully expressing his own emotions in harmony with the requirements of the service. But a behemoth like ours excites the terrors of the congregation, and demonstrates the extreme weakness of amateurs at the key and pedal boards, a weakness made all the more apparent by the absence of those regulating composition pedals which are an essential part of the mechanism of every well-constructed organ. It is not much use for a child to put his hook in the nose of leviathan, but to attempt to guide him without even a hook is utter folly. The approaching toleration of Christianity in this country, combined with musical aspirations on the part of some of the more ambitious young people who have perfected their European education, may eventually provide us with a market for this treasure under the weight of which we have so long groaned, and in any future deliberations regarding musical arrangements affecting the collective welfare of the community it would be well to invite the councils of some one who detests the art—the only means by which the inevitable indiscretions of enthusiasm can be counteracted.

The main question now is—what can be done towards getting our budget in order? Raising the rent of the seats is the most obvious and legitimate measure; but it has equally obvious drawbacks. Modern financiers have learnt to look rather towards a reduction than an increase of duties as a means of raising revenue, and any fiscal strain put upon spiritual luxuries may diminish the desire for and consumption of them—so frail is human nature. The allowance made to the late chaplain represents that kindly disposition on the part of the Trustees which remunerates A out of B's work, and exemplifies the everlasting truth of the paradox, "unto him that hath shall be given, but from him that hath not shall be taken away even that which he seemeth to have." It was an axiom with the first Napoleon that nations never knew their resources until they became bankrupt, and the historian of the fortunes of Mr. Micawber shows that that remarkable economist never expatiated so eloquently upon the employment of capital as after he had lost all hope of a permanent alliance between it and himself. It is conceivable, therefore, that the very blackness of our present night may herald an approaching dawn, and that the flower may yet lurk among the formidable nettles which are now so apparent.

The resolution unanimously carried at the meeting of Friday week was undoubtedly demanded by the position of affairs. It will convince the British Government of our entire inability to support our establishment without a continuance of the assistance hitherto given to it, and should demonstrate to every resident here who values that establishment, that much unanimity of feeling, and a disposition to look at the whole question in a broad light, are necessary, not alone to free our church from its present burden of debt, but actually to ensure its maintenance.

## THE GAS COMPANY.

**M**OST of our readers are already aware that the pipes for supplying gas to the residents in the native town have, within the past few days, been laid in the principal streets. At this time, then, it may not be inopportune to lay before our readers a short description of the gas works now almost complete.

It will be remembered that the plant necessary for the manufacture of gas was imported in the ill-fated steamship *Sadkia*, and since July 1st the men have been at work day and night in order to be able to supply gas to the native town during the present month. That object will be achieved, for though, despite the strenuous exertions of all concerned, it will be impossible to supply gas in time for the inauguration of the railway and the visit of the Mikado; ten days later will see Basha-Michi, Benten-Dore, and one or two other streets properly lighted with gas. It is to be regretted that the visit of the Mikado and the inauguration of the gas works cannot be simultaneous; but the sinking of the main pipe in the bed of the creek opposite the railway will take so long a time as to preclude the supplying of gas before the 20th or 21st of the current month.

The gas works themselves stand in a plot of ground 300 feet long by 200 feet in depth, on the other side of the creek, but parallel with the railway station. On this area are all the necessary buildings, which consist of a distillation house built of stone and brick, and roofed with corrugated iron, a tile and plaster building 108 ft. long by 33 ft. wide, various godowns for the storing of material, coal, &c., work-shops, forge and a dwelling house for the European engineers. To afford a good idea of these buildings, and the various appliances in use, we will first describe the manufacture of the gas, tracing it from the coal to the consumer. To effect this we must first visit the distillation room or retort house. This building is 112 feet long by 32 feet broad, and contains two benches of furnaces, each comprising four furnaces, with five retorts to each. These are in two rows, each on either side of the chimney with which they communicate; are built of brick made in Yedo, and are some 12 ft. high, being of a most substantial character. We need here only describe one, since each is an exact counterpart of the others. The furnace is, we have said, of brick, made in Yedo by Japanese, and above are five clay retorts imported from Glasgow, 10 ft. in depth, and with iron mouths closed by screw flanges. The fires being lighted, and the retorts heated to that dull red which the French call *rouge cerise*, 200 lbs. of Takeshima coal are put into each retort, and the screw flange closed. After four hours the retorts are opened, the coke extracted, and the process repeated. We should mention that the retorts are placed, three just above the furnace, and two still higher, the flues being so constructed that the heat passes on either side of the middle retort on the lower row, and on the inner side of the upper retorts. Thence being carried to the back, it descends in the contrary direction and is finally conveyed to the central chimney placed between the two sets of furnaces. This chimney is 76 ft. high and about 10 ft. square at the base. It is constructed of Yedo brick, and bound round with iron bands, which give it such strength that it has withstood the shocks of earthquake, typhoons and frost—in this last is the greatest danger—without receiving the slightest injury. But to return to the retorts. The gas which has been obtained during the four hours' distillation is conveyed from each retort to a large iron pipe, two feet in diameter, called the hydraulic main, which is kept half full of water. The pipes leading from the retorts dip into the water and the escape of gas is thus effectually prevented. This pipe, now charged with the gas from forty retorts, passes through the wall of the building, and into the wall of the purifying room connecting directly with the condensers. The purpose of these latter is to cleanse the gas of the large quantity of coal-tar and water necessarily contained in it. They consist of sixteen pipes, some twenty feet high, set in pairs, and resting in a box 18 feet long by three feet wide and 18 inches high, divided between each pair by a partition extending to within two inches of the bottom. The gas from the hydraulic main enters the first pair of pipes, and descending, is forced

below the partition, where it deposits a large portion of the coal-tar and water, which are conducted by pipes to tanks arranged outside the building. The gas, in this process, passes under eight partitions; but it has not yet been sufficiently cleaned by mechanical means, and is therefore conducted to the scrubbers, which are placed in the same room as the condensers, and consist of two iron cylinders about 10 ft. high and 4½ ft. in diameter. They are filled with coke, and the gas being forced up in one and down in the other, loses much of its impurity, absorbed by the coke, which, so to speak, acts as a sponge. Having passed through the scrubbers, the gas has been cleansed as far as is possible with mechanical appliances, and chemical aid is now brought into play.

The gas is conveyed then from the scrubbers to a neighbouring room, where it enters the centre of a small iron cylinder about four feet in diameter, and fitted with a cover, which, when in use, rests in water. From this cylinder a series of pipes lead to four oblong iron boxes, 7 ft. long by 4 ft. broad, and 5 feet high, fitted with iron bars, and with a species of double side, in which, when filled with water, rests the iron cover. In two of these are three tiers of sieves filled with lime, through which the gas is forced, while in the others are an equal number of sieves of sulphate of iron, which deprives the gas of any sulphuretted hydrogen it may contain. By altering the position of the lid of the central cylinder, the gas can be forced through these boxes in any order that may be desired, or by the closing of a valve one or more may be left unused. Surmounting the central cylinder is a crane for moving the lids of the four surrounding boxes.

The gas being now fit for consumption has to be measured and stored, and it passes from these purifiers into the meter by a pipe placed exactly in the centre. In this meter is an elliptical drum and the gas acting upon this causes it to revolve, and by a simple arrangement marks the revolutions upon a dial fixed in front. Thence a pipe carries the gas to the gasometer situated in the rear of the distillation room.

This is a large iron cylinder 52 ft. in diameter by 16 ft. high, but capable of rising on iron supports as may be required by the supply of gas. Here it is stored, and when required is taken by another pipe back to the meter room, where it enters what is called a supply governor. To describe this machine properly would be impossible without drawings, but suffice it that the gas enters through a circular orifice partly closed by an iron cone which rises or falls with the pressure. Thus when the gas is lit in the public lamps in the evening, the pressure of the gas below the cone is decreased on account of the increased consumption, and the cone falls and allows a larger stream of gas to enter the supply pipes. In the morning, when the lamps are extinguished, the consumption being decreased and the pressure increased, the cone rises and nearly, but not quite, closes the orifice. This automatic governor is still further regulated by the use of water operating upon a floating tank connected with the cone by an iron rod, and the whole machine is so perfect that the supply of gas for consumption requires no one to superintend it. From this governor the gas passes out of the company's works and by the pipes to the consumers. In the meter room it should be mentioned is a small laboratory for chemical operations and a darkened room for testing the illuminating power of the gas by a photometer.

Here we may mention that should any part of the works get out of order, by the regulation of a system of valves any one portion can be isolated. Thus the gas may be transmitted to the consumer without passing either the condensers or the scrubbers or the purifiers, or even the meter, gasholder, or governor. In fact, if necessary, the gas can be sent direct from the retorts to the consumer, a state of affairs, we need hardly say, very unlikely to occur, unless in consequence of fire.

Such are the principal features of the gas works, and after a careful inspection it cannot be denied that every arrangement is thoroughly satisfactory and does Mr. Pelegrin, the Engineer in charge,—to whom we must tender our thanks for the information he courteously favoured us with—every credit.

We may now pass outside the works and briefly examine the operations of the Company in the public streets.

The gas is supplied by a Japanese Company, and, as a matter of course, the native town is to be illuminated first. The main pipe, which is 18 inches in diameter, runs from the works across the creek on a raised bridge, then parallel to the railway station to the creek, which it crosses below the bed, and thence to the Basha-Michi, Honcho-Dore, and up the Main Street to the Police station. So far has already been laid, but before Christmas it is intended to lay a main pipe up the Main Street as far as No. 79, thence to the Homura Road and across the creek to the Bluff, while the other streets will be supplied by small pipes, as also will the suburbs of the native town. There are, according to the present arrangements, to be 267 public lamps in the native town, without the suburbs, and 135 in the foreign settlement, without the Bluff; the use of one furnace and five retorts only being sufficient to supply the consumption at the outset. The arrangements for lighting the native town are complete; the public lamps will cost \$4 a month each, while the consumers will be charged \$3.50 per 1000 cubic feet. We understand that the prices will be the same in the foreign settlement; but nothing has been yet settled, though a preliminary committee of six gentlemen has been formed for the purpose of bringing the matter fully before the public. The company is willing to carry the supply pipes through the streets before Christmas, and it is to be hoped that something will be done to ensure our having gas as soon after that as possible.

In conclusion, we can only repeat what we have said before—that the works are in every respect satisfactory. When everything is complete the expense will only be about \$105,000, and, considering the great expense of importing the apparatus, this cannot be considered extravagant. The rates charged to consumers will doubtless prove fairly remunerative, and the Company will reap its reward in the almost universal consumption of its manufacture.

#### LIFE AND RESOURCES IN AMERICA.\*

THAT a Japanese whose experience in foreign countries is, at best, less than five years should undertake the production of a work purporting to explain the institutions and manners and customs of the United States, is, we may fairly be allowed to presume, one of the most favourable and significant indications of the progress being made by the Japanese. Mr. Mori, the author and compiler of the book in question, has, we understand, received his education in England, where he spent two years. He then returned to this country, where he was a strong advocate of those reforms which have of late occupied the attention of the government. By that government he was appointed to the post of Chargé d'Affaires at Washington. If we may judge from the voice of the public press of the United States, Mr. Mori's career in America has been in every way favourable to his reputation, and great regret is expressed at his proposed departure during the coming autumn. That Mr. Mori possesses considerable powers of observation and a by no means contemptible reasoning capacity is evidenced by the work which bears his name; for, despite the announcement that it was only prepared under his direction, there is ample internal evidence that much of the original phraseology is his own, while the deductions drawn from the mass of facts presented are not of that character which so generally characterizes the works of the average American author. Of course it must not be supposed that by this we mean any disrespect to American authors; we would say rather that Mr. Mori expresses opinions on political subjects which are not accepted by the masses—which, in fact, are only recognized by dispassionate reasoners; by men accustomed to look at matters without that bias which, not unnaturally, is the outcome of that rapid progress of which Americans have so much to be proud.

But to turn to the book. It is divided into fourteen chapters or parts, each treating of a different subject and replete with facts of the greatest value. The purpose of the book, which is for circulation in Japan, is to enlighten

the Japanese as to the world without, or as the author says in his preliminary note—"The object of this publication is not only to aid in removing those prejudices (resulting from want of mutual knowledge) but also to invite all the lovers of their race in Japan to join in the noble march of progress and human happiness." To accomplish this teaching of the Japanese nothing could be better calculated than the publication of this work, and we hope that the government will not allow a few well chosen and apposite remarks upon the Christian religion to hinder the translation of the work into Japanese and its extensive circulation among the natives.

Following the preliminary note is an introduction. The author states that in his observation he has "steered a middle course," and has given only such opinions as are held by the mass of Americans. On this point we differ slightly from Mr. Mori. On political questions he holds views by no means common to the masses. He then proceeds to take a brief survey of the principal features of the United States; he defines their limits; points out the various constituents and their proportions of the 39,000,000 of inhabitants; and, touching upon the land question, he concludes by the following paragraph which appears to us worthy of reproduction.

"While we entertain an exalted opinion of what is called a Republican form of Government, we confess that it is not without its disadvantages and dangers. For any foreign nation fully to understand them, must require time, and much careful study. The Japanese people have been somewhat fascinated by what they have seen of the American government and institutions, and it is of the utmost importance that they should well consider the subject in all its bearings, before adopting any of its features into their own form of government. The evils resulting from the misuse of freedom in America are among the most difficult to correct or reform, and ought to be carefully avoided. Another fact that should not be forgotten has reference to the educational qualifications necessary to secure success in a Republican form of Government. It is undoubtedly true that the best thinkers in America deplore the fact that the machinations of the politicians have resulted in placing the United States in an unfortunate condition in this respect. It has been so profitable with designing and selfish men to increase the number of voters, that they have secured the passage of laws which allow all men to vote in view of the single idea of personal freedom. This is undoubtedly all wrong, and the evil effects of this state of things are being manifested every day. A prosperous, happy, and permanent Republican government can only be secured when the people who live under it are virtuous and well educated."

The first part of the work touches upon the subject of "Official and Political Life," and from the author's position within the diplomatic circle of Washington, and doubtless from that position able to form an accurate opinion of the various elements which constitute Washington political society, this part may be considered as the best. It is the result of his own personal observation, not the compilation of statistics furnished by various officials, and in this respect is more distinctly Mr. Mori's than any other portion.

Mr. Mori, we say, has evidently studied this portion of his subject very thoroughly, and, taken as a whole, this chapter is eminently deserving of praise. He divides the constitution of the American government into three parts—Executive, Legislative and Judicial, and, in a few words, explains the various elements of each, and he then passes to an examination of the social characteristics of Washington life. He places the President, the Senate and the House of Representatives as the first layer of Washington society, and then the Judges of the Supreme Court, followed by the heads of bureaus and the officers of the Army and Navy. These are followed by the Government clerks, and he explains how thoroughly every class is in some way connected with politics, which enters into the life of almost every citizen in the United States. First come the Congressmen whose life is one continuous course of politics or office seeking; then the Government officials, appointed, not so much for their special capabilities, as for their political influence; next that large body of Postmasters, numbering some 26,000, each of whom has some interest in supporting the existing government by which the majority are appointed, and, lastly, the enormous tribe of hangers-on whose living depends upon the success of some petty official, himself, in turn, dependent upon the government. Mr. Mori continues:—

\* Life and Resources in America. Prepared under the direction of Arimori Mori. For circulation in Japan. Washington: D.C. 1871.

"Now, as the people here mentioned, numbering in the gross not far from sixty thousand persons, obtain their positions through political influence, it is natural that they should take a special interest in politics, and do their utmost for the success of the particular party to which they belong."

This, in a great measure, explains the very unsatisfactory condition of the United States civil service. Everything revolves upon a political axis; or, more aptly, everything vibrates as the political vane is blown in this or that direction. It has been argued—indeed, it is an argument frequently used by those who reason only in order to reach a desired conclusion—that the fact that universal suffrage is the mainspring of the American political machinery shows that the persons elected under this system must be not only free from all suspicion, but are necessarily the best adapted for the offices to which they have been elected. On this Mr. Mori very justly says:—

"It would appear therefore that as the people are intelligent and honest, so must be the office-holders; but this is not always the case, because of the existence of what are called mere politicians or demagogues. This class of citizens has greatly multiplied of late years, and it is safe to say that nearly all the troubles which befall the country are the result of their petty schemes and selfish intrigues. There is not a village in the land where they do not congregate or pursue in secret their unpatriotic designs. Of course there are many exceptions to this state of things, but the rule is as we have stated it: and the evils resulting from the power thus obtained and prostituted have come to be universally recognized and deplored by the honest people of the land. The loss of dignity, and the decline in public morals on account of politics is, to-day, a source of mortification and alarm among the virtuous and patriotic citizens of the country. The philosophy of Government is a subject to which the people of America have devoted but little attention, and very few books have been published on the subject, and yet it is claimed that they are in advance of all other nations in the practice of self-government. To what extent this is true, the present writer is not called upon to decide. It is too true, however, that the opinion is frequently expressed by foreigners that the unbridled system of a Republican government leads to many political troubles. The two or three crowning features of the American Government would seem to be as follows: That the nation is a peculiar organism, having a life and destiny of its own, founded on the idea of humanity, and like the individual person, but in a more continuous degree; that its authority to govern the people, is derived from their actual or implied assent; and that in asserting its prerogatives, it looks to the least possible interference with the free action of the individuals composing the community."

A little further on Mr. Mori points out that there are, however, many commendable features. He says:—

While deprecating the abuses to which the American people are subject, on account of what is called universal suffrage, there are many social features which are to be highly commended, and are peculiar to the country; among these is the absence of pauperism, and the universal respectability in personal appearance among all classes. This fact is apparent to all observers, and has been fully conceded by the best English writers on this country. There is no beggary here except such as arises from profligacy or causes beyond the control of human nature. Another peculiar feature of American life is the equal distribution of wealth, acknowledged as remarkably characteristic of the nation."

And we may conclude our extracts from this chapter with the following:—

"Generally speaking, the career of public men in this country, is measured more by their cunning or success in managing the people who have votes, rather than by their abilities."

This, we think, though in the main to be regarded as true, is too general a statement to be taken without some saving clauses. It is not our business here to point them all out by name, but there are many men to whom the taint of official corruption cannot adhere. Men like Motley and J. Q. Adams are appreciated in America, as much for their uprightness and honesty of character, as for the services they may have rendered their country; and there are not wanting others of the same stamp. Still, to the majority, Mr. Mori's remarks fully apply. Scarcely any political appointment is obtained without some political influence of an underhand nature, and this, it must be confessed, is one of the most deplorable characteristics of the political system of the United States.

The second part is devoted to an examination and an explanation of "Life among the Farmers and Planters."

The land susceptible of cultivation is said to be 2,250,000,000 acres, and then the somewhat extraordinary statement is added that half of this is owned by the Government. The writer then sets forth the various features of American agricultural industry, demonstrates the great usefulness of labour-saving machines, and alludes to their very extensive use in the United States. The various qualities of soil also receive attention, and a very detailed description is given of the life of a New England farmer, which class he terms the yeomanry of America. A New England farmer is indeed more like a solid English farmer than might be supposed. His land is made to produce all that nature and art combined can achieve. He is a scientific farmer, without allowing science to assume such a control as to hinder profitable cultivation, and he himself is not above lending a helping hand when necessary. The raising of stock, the manufacture of cheese, and, in fact, everything which bears in any way upon agriculture, is described in plain words, so that a Japanese, even if indifferently versed in the English language, may profit by a perusal. Afterwards we are initiated into the mystery of sugar-making-frolics, apple-parings, house-raising, corn-huskings, clam-bakes and barbecues, which would seem to denote that the farmers are by no means unwilling to enjoy themselves. As far as clam-bakes and barbecues are concerned, however, Mr. Mori is somewhat at fault. They are political and social rather than agricultural gatherings, and the former, in the neighbourhood of New York, are by no means desirable entertainments for a farmer's daughters. The house-raising is similar to the "bee" in Canada. To a description of "country" fairs, which, by the way, ought, we think, to be county fairs, the author devotes some pages, and he concludes this chapter by a few words illustrative of the Thanksgiving day.

The "Commercial Life and Developments" of America is the subject of the third chapter, and Mr. Mori here enters into a detailed description of the various classes of business men, the means of transport, and other cognate subjects. Before the civil war the American trade in sailing ships between Liverpool and New York was very large, and Mr. Mori attributes the decrease which has taken place in this particular branch to "the calamities which have befallen the mercantile marine of the country," by which he means the civil war. This is hardly frank. There is no doubt the war did great injury, but the chief cause of the decrease is the large number of steamers which now ply across the Atlantic, carrying passengers as cheaply as the sailing vessels, and freight at such comparatively low rates that competition as between steam and sail is rendered a thing of the past. Later on, Mr. Mori speaks of Boston as a noted mart for the commodities of India, China, and Japan. Whatever Boston may be to India or China, certainly not much trade passes between Boston and Japan. This, however, is but a trifling inaccuracy. In his remarks upon the American merchants, the writer is very happy in his description of that class. Having deprecated the "shoddy" element, he says:—

"But the average American merchant of to-day is a man who deserves and receives universal respect. He is intelligent, but not addicted to the profits and pleasures of literature. Engaged all day in the excitement of commercial speculation, he has but little time to devote to reading, and improving his mind. He works so hard and so constantly, that work becomes a second nature to him, prostrating his energies and making him indifferent to proper recreations; he considers his word as good as his bond, and, to protect his credit, will make the greatest sacrifice of property; he is liberal in his feelings and gives freely to all objects which have the sanction of his good opinion; he is hospitable, but would prefer to have his wife and daughters attend to the honours of his house and table; and when overcome by reverses, he takes a new start, changes the character of his business, perhaps, and will not acknowledge himself as overwhelmed, and proves his metal by attaining final success."

To the merchants follows "Life among the Mechanics" in which there is nothing special to note, and then we have a chapter on "Religious Life and Institutions." In this the author gives a very lucid and accurate account of some of the various religious bodies in America. Had we space we would extract some of its more curious features, but we must content ourselves here with allowing Mr. Mori to express in his own words his ideas upon the subject of Christianity. In one place he says

"Both the Old and New Testaments contain, as most of such books do, many wonderful and strange stories, hard to be comprehended. The present writer deems it best not to allude here to any of them, as they appear to him to be of no grave importance, in regard to their real religious essence. The increasing influence of the Bible is marvellously great, penetrating everywhere. It carries with it a tremendous power of freedom and justice, guided by a combined force of Wisdom and Goodness."

And in another he says:—

"It is proper, before concluding this chapter, that the writer should submit a few particulars respecting its arrangement, which are somewhat personal to himself. After his return to Japan from Europe, some years ago, he was frequently questioned by his countrymen as to his opinions about the Christian religion. In his replies, he took the ground, that, so far as he could understand it, the Bible was a good and a wise book, but that it contained many things he did not understand. That while the people who called themselves Christians claimed to have the only true religion and pretended to be better than all other men, they did not, in that particular, differ from the Chinese or Japanese, who assert the same claims for their religions. He thought it advisable that those who desire to form any opinion on Christianity, should acquaint themselves with it by close and attentive study, and then to judge for themselves. Hence, in the present chapter his desire has been simply to give facts, and in the plainest possible terms. Whatever may be his private opinions on matters of such great importance, he has not thought it proper for him either to oppose or advocate them. According to his observations, a very large proportion of the American people are known by the name of Christians, and yet a great many things are said and done by them which do not accord with the principles of their own Bible; but, is not this true of every nation upon the earth? Where men think that they know everything, and boast of their superior wisdom, the presumption is that they have yet much to learn; and all human experience, as well as the Bible of the Christians, inculcates the idea that before men can be wise and good, they must be humble. It would be a very wonderful thing, should the time ever arrive, when the so-called Christians, who profess the faith, but do not live up to it, shall cease to boast of the superiority of their religion, and regard themselves as worse than all other people, because of their guilt in making insincere professions. True Christianity may not be considered as identical with the general sense of civilization—in which the good and the bad participate,—but true philosophy would seem to teach that it should be a leading element in such civilization."

From the chapter of "Life in the Factories," which contains a vast number of facts, we need only express Mr. Mori's opinion on the extension of commerce. He says:—

"The extension of commerce will do more than anything else to diffuse the blessings of civilization, to bind together the universal society of nations, by sharpening, and at the same time gratifying their mutual wants and desires, and to maintain undisturbed that tranquility so indispensable to its full development."

Passing over the chapter on "Educational life and Institutions" we may pause for a moment at that upon "Literary, Artistic and Scientific Life" where the following apt remark occurs:—

"While many of the books published are so interesting or valuable as to be purchased by everybody interested in the subject, very many of them can only be sold by means of extravagant notices in the newspapers, and hence the custom prevails of sending most of all the new books to the newspapers, which pretend to give impartial notices, but often do the very reverse."

This reminds us of an anecdote told by Henry Ward Beecher of one of his relatives. He was engaged to review books for a religious paper and to award praise or blame as he felt each deserved. His first trial showed him what this meant. In reviewing some books of a sensational character, he took occasion to censure the loose and immoral tone in which they were written. The reviews were published; but next day the editor sent for him, and rebuking him for the way he had censured the books in question, said: "Why they were sent by A & Co., *they are our best advertisers.*" The reviewer then understood what was meant by "honest criticism." Mr. Mori may perhaps have heard Mr. Beecher's anecdote.

The article on "Life among the Miners" is very full in its description of the various modes of mining adopted in the United States, while that on "Life in the Army and Navy" is also replete with valuable statistics. "Life in the Leading Cities" is an accurate description of the various features of the most prominent cities in the

United States, and from it we glean the following curious fact which, we suppose, is unknown to most persons not native to New Orleans.

"Any description of this city would be incomplete without a notice of its cemeteries. Each one is enclosed with a thick brick wall of arched cavities, made just large enough to admit a single coffin, and rising to the height of twelve feet. Within the enclosure are crowded the tombs, which are built wholly above the ground, and are from one to three stories high. This method of sepulture is a necessity, for the earth is so universally saturated with water, that none but paupers are consigned to the earth."

Neither the chapter on Frontier Life nor on the Judiciary present any features worthy of comment, and the writer draws his labours to a conclusion with the following remarks:—

"Now that this little book is finished, the mind of the Compiler naturally turns to take a single comprehensive view of the great country which has been briefly described. It is indeed one of the wonders of the century and of the world. The extent of its domain and its unbounded resources,—the peaceful blending of its many nationalities,—the well-nigh unlimited diffusion of intelligence and knowledge, and the free, cosmopolitan character of its people, combine to give it a conspicuous position among the nations. At the very moment when these closing lines are being written, a Diplomatic Embassy from the Tenno of Japan, is on the point of visiting the City of Washington, and the fact cannot but have made an impression on their minds, that, after landing on the soil of America, they have been compelled to travel more than three thousand miles before reaching the metropolis. But when the Ambassadors, and the other high officials who accompany them, are informed as to the warm welcome which is in store for them from the Government of the United States, and many of the leading men and corporations throughout the Union, and when they shall have experienced the unbounded hospitality of the American people generally, they will undoubtedly be deeply impressed, and effectually convinced, that America and Japan are strongly bound together by the cords of sincere regard and unselfish affection."

We have but few remarks to add to what we have already said. As a native work intended for the use of Japanese for their enlightenment as to the United States, it is unequalled, while, at the same time, it may be read by a foreigner with both interest and profit. Every chapter clearly and concisely explains the subject in hand, and there are not wanting ample statistics of great value. The only fault we have to find is with the printer. His work has, to say the least, been carelessly executed; the type is battered, the ink inferior, while the pages are nearly all crooked. If such is the printing of the Bureau of Engraving and Printing, we should advise a change either in the printers or the material. The work does great credit to Mr. Mori, but the greatest discredit to the Bureau.

#### A WALK FROM KOBE TO NAGASAKI.

(Continued.)

Friday, 28th June. Bar. 30° 07', ther. 71° 5'; wind W. We left at 1.20 p.m. in a hired boat and with wind and tide in our favour, hoped to make a rapid trip to Kokura, our destination for the day. Both wind and tide were very light, so that our progress was but slow. On all sides were islands, large and small, rich in pines, firs and shrubs and looking deliciously fresh and green. Many of the smaller are uninhabited, save by animals and reptiles; the larger ones are taken possession of by fishermen, who find many pretty little bays, offering complete shelter from storms and wind. A cursory glance such as ours at the islands as we passed, can give but a poor idea of the beauties hidden among their many hills, and I felt a strong desire to be able to become better acquainted with some of them. The western lighthouse came in sight, was passed and we soon came in sight of Kokura, and entered the river at 3.30 p.m., where we determined to remain the night, in hopes of being rejoined by our absent friend. Kokura is rather to the north-west of the island about twelve or fifteen miles distant from Simonosaki: the approach to it is between two moderately well built forts, one on either side, which form also a kind of break-water. The lower part is of stone, and earthwork above, and

they command a full sweep of the sea on all points. They have been dismantled for some time past, and are now simply pleasant spots for an evening's lounge, being covered with soft, mossy grass, with a few trees planted about. The town is of some size, and a few years ago was of considerable importance and doing a good business, it being the port at which the princes and nobility embarked for Yedo and other parts in junks. It can also boast of some antiquity, evidences of which are to be found, not only in the houses themselves, but in the decorations, pictures, and writings which ornament the walls. Many of these pictures are very good, and show by their discoloured state, and also the seals, what claims they had for being considered aged. The woodwork also is much worm-eaten, and the very gardens are more elaborately arranged than is to be seen in more modern houses. The hotels, which were kept up principally by the Prince of Bizen, are commodious, clean, and comfortable. Although times have altered, and this, like many other once important places, has lost so much of its importance, it cannot lose it altogether, as it is still the nearest point to Simonseski from the interior of this island, and travellers are bound either to embark here or continue their route over a mountainous district to Tanoura, which is certainly very much nearer to Simonseski. To say the most of this place, it is poor and very dirty.

**Saturday 29th.** A black morning, raining hard with little prospect of cessation. We started at 10 a.m., and with but little encouragement. There seemed on our road to be a large quantity of coal, as in many places the roads are entirely formed of it, and some of the people must do a fair business in it, from the large amount they had stored beside their cottages. Some place there was as much as 100 to 150 tons, and apparently of a very good description. We arrived at Akama, our night's resting place, at 6 p.m.

**Sunday 30th.** Another dark and wet morning. The scenery on our road was most agreeable, flat where the road ran, rice only being cultivated, except in a few places where the ground was rather undulating. At one place there was a splendid road, hard, elastic and flat, on both sides a splendid row of lofty firs and pine, and beyond these thickets of many trees and shrubs. I have not seen a better or prettier road for a carriage drive in Japan. We reached Aoyagi at 12.10 where we stopped for luncheon. This village is like the many we have passed through on this Island very poor, and suffered severely from war and the late earthquake. The roof of the house we stopped at had been shaken in and everywhere signs of the severity of the shock. The streets are narrow, dirty, and uncared for, and when it rains, the water forms little rivulets for itself in any part of the road, instead of running down to the ditch which exists on either side. After about seven miles we arrived at Hakozaki a small village, but once of some importance in consequence of the number of temples. Just before entering the town stands a gate leading to a temple, which was built one thousand five hundred years, since; little is to be seen of it, as it is now a heap of ruins. On leaving the town we turned to the left to view another old temple fast approaching ruin. To the right of the avenue of lamps stands a bronze model of a pony, full size: it is an extremely good representation indeed, and the artist has given much attention to details. A little further on the same side is the remains of a pine tree, said to be over two thousand years old, but out of it has sprung two other trees about three feet in girth and fifty high: this is looked upon with great reverence. Entering the grounds immediately around the temple to the left is another tree, also of great age and reverent for its (supposed) healing power. Over the doorway is a piece of writing in gold, kept in good repair and framed. Translated it says, "All her enemies surrendered." The ancient history of Kium, which is anterior by many years to that of Nipon speaks of an Empress brave and fearless, who led her army and navy to war with Korea and Mongolia and succeeded in gaining the victory, and on her return, is said to have written the above with her own hands. In one of the temples are preserved some relics of

this Empress. Some cups embedded in stone, petrified, are said to be the identical cups she drank from, and a piece of petrified wood is said to be a portion of one of her ship's masts. Turning our back on these we passed through another avenue of antiquated lamps, many of which seem to have been overthrown by an earthquake towards the sea shore. On either side, in more prosperous times, stood tea-houses comfortable arranged and shaded from the sun by old lofty trees; at the end to the right the Prince had his summer house, beyond that was the drill ground; but all these delightful resorts are things of the past and nothing but the Prince's house stands to tell the tale of the happy hours that have been spent beneath the shadow of those tall pines. In front is the entrance to Hataka Bay, and the smoke of the steamer which left but a short time since is visible curling upwards. To the right of our point of view is Deer Island, so called from the number of deer there, which are said to be so tame as to eat from the hand. It is thickly wooded to the water's edge, and looks very pretty at this distance. Immediately to the left lies Hakata and Fukuoka. There are several small islands lying about in different parts of the bay, and give it a very pleasant appearance; but there is almost a total absence of life—scarce a sail to be seen in any part. There was a large concourse of people about the temple and grounds, the reason being that there having been no rain for so long, prayers had been offered up, and now that it had come bountifully, they had assembled to offer up thanksgivings. On leaving this place, our route lay through a dense forest of pines and firs. The avenue through it is broad, of hard, elastic sand. This is about two miles long, and would make a splendid evening's stroll. This ends at the entrance of the town of Hakata, which we reached at 6 p.m. Hakata and Fukuoka are separated merely by a river, and to go from one to the other is simply to cross the bridge. They may almost be called one town, so close are they together. They are of the oldest towns in the island, dating from over 1500 years back. They are of the greatest importance, being about the nearest point to the coast of Corea. History speaks of the Coreans making war on the island at this point and being repulsed. The approach to Fukuoka is over a bridge and through a gateway, for the town is surrounded by a wall. Entering this gate, you cross another bridge over the moat which surrounds the castle. The entrance to this is directly opposite the first bridge. Hakata is much the larger of the two towns, but Fukuoka, being a seaport, is the most important. The streets are wide and clean, being of sand.

**Monday, 1st July.**—Another wet morning, rain coming down in torrents. Started at 8.50 a.m., and at 1.20 p.m. we arrived at Saifu, distance about twelve miles south-south-east of Fukuoka. The approach is, as usual, through an avenue of granite lamps, and on either side inns or tea-houses, the last on the right, the one we occupied being by far the best. A little beyond this, up two steps, is another gateway of granite, and we entered the grounds through an ordinary wooden gate, on either side being old trees, generally plum, fenced in, the plum being held sacred and the others held in great reverence. The temple itself was closed, so we could only walk round and through the corridors or cloisters: these, as usual, were hung with fine old pictures; one was a bird's eye view of Fukuoka bay and Hakata, and gave a very good idea of these places. Outside the first corridor stood the figure of an animal in bronze, but I cannot give it a name—probably it was an extinct species. The body and legs were similar to those of a horse. A long neck, the head something like a lion's, with long curly mane and a thick horn in the centre of the forehead. The tail was also full of curls. A little beyond this is an ox couchant, full size, carved out of black marble and highly polished—this is certainly a masterpiece. A pond near by was full of gold and silver fish, some of enormous dimensions, measuring from two to three feet in length. They are not allowed to be touched, being held sacred. Visitors never fail to see the pond and the animals and trees are said to be over a thousand years old. We left at Tanjara at 7.20 p.m. This is a wretchedly poor place, and since the reformation all the inns have been taken away with, so we had to take up our quarters in the farmhouses.

# THE Japan Weekly Mail.

A POLITICAL, COMMERCIAL, AND LITERARY JOURNAL.

VOL. III.—No. 42.] YOKOHAMA, SATURDAY, OCTOBER 19, 1872. [PRICE \$24 PER ANNUM.

## Notes of the Week.

THE great event of the week has been the State Opening of the Railway, a full account of which will be found elsewhere. The speeches which we were unable to give in our issue of Tuesday will be found in their places, and two or three slight inaccuracies inevitable to the haste with which the account was written, have been rectified.

It is obvious that the conditions under which the public are admitted to the concerts at the German Club preclude all criticism upon them. But we have always obtained the courteous permission of the President to say a few words about the music performed on these occasions, and have generally availed ourselves of it in order that, by any means in our power, we might advance a cause we have much at heart. We shall not analyse the program of last Saturday evening further than to say that it was deficient in the important ingredient of German quartets for male voices, in which the Germans excel so greatly. We wish very much that more attention could be paid to this matter by the musical members of the Club. There seems to be some difficulty here in respect of keeping a quartet society together, which, considering the number of Germans in Yokohama, ought really not to exist. That there are voices enough,—material and potentiality, if we may use such words—cannot be doubted. But still the quartets are not a regular feature of the public or private entertainments of the Club, as they might—venture to say, should—be. Would not the trouble involved in a weekly practice for a couple of hours by the eight or twelve gentlemen who have sometimes performed at the Club, be amply repaid by the pleasure they themselves would derive from it after the difficulties of the first three months were surmounted? We leave out of the question the gratification the public would derive from such performances, not because we think this pleasure should be withheld from the public, but because, with amateurs, the love of the art itself and for its own sake, should be the great incentive to study. The companionship of music, and the beautiful world it enables men to retire to, if not to live in, should be the object of the amateur. If he can take others there, or extend the companionship to them, well and good. It is so much human sympathy superadded to the appeal made to him by his art, and this sympathy adds vastly to his enjoyment of it. But it must be no more than this. It must not be a question of what effect he, as a performer, makes upon his audience or his companion. This is the lowest, though we fear the most common, form the desire to excel as a musician can possibly take, and it is one which the true musician deprecates most sincerely. Applied to religion, it would be something like the anxiety of a worshipper to appear well in the eyes of the person sitting beside him in church—all thought of the object of the worship and the relation between it and himself swallowed up in the meanest of vanities. The value of the sympathy and community of emotion is not to be denied; indeed it greatly intensifies the pleasure derivable from these high sources, and as such this sympathy is valuable and beneficial. But it is as nothing compared with the absorption of the artist into the world of his art. All this vanity engendered and inflamed by his desire to gain applause or to produce impressions upon others is lead on his wings, and must for ever prevent his rising into the pure atmosphere of devotion. Music is an influence which should rather—we say it reverently—induce a man to

enter into his closet and shut his door, so that there, and alone, he may commune with the object of his worship.

But we fear to trust ourselves on the esoterics of our musical philosophy. We must return to the Club, and hope that the few words we have ventured to write upon the subject of concerted vocal music may not be thrown away.

Die Kunst ist lang,  
Und kurz ist unser Leben.

WE are anxious to draw attention to a very earnest and excellent article, re-published elsewhere in our columns this week, on the subject of "Female Missionaries in Japan," and taken from an American journal called *The Christian Union*.

The article is inspired by that excellent spirit which has made America foremost in Missionary enterprise in this country—a spirit to which we have always paid the most respectful homage. The entire soundness of the views so well urged by the author in respect of the objections to sending young Japanese women abroad for their education, cannot be doubted, and these views are in some sense correlated to those which we have ourselves constantly urged in respect of sending unprepared youths to Europe or America for the same purpose.

We have no authority for mentioning the name of the American lady who is taking the lead in the excellent movement referred to, but we shall hardly be trespassing upon lawful limits in bearing testimony to the singleness of purpose, the sound judgment, the energy and admirable spirit which characterise her conduct of it.

The Institution itself is to be found at No. 212.

It is reported that H. M. the Tenno was so much gratified with the success of the ceremony of Monday last that he has ordered preparations to be made for a State Opening of the Telegraphs, when arrangements will be made to enable him to send messages of congratulation to the various Powers allied to Japan by treaties.

ON the 27th of last month, the ascent of Fusi-yama was successfully made by a party of three, one of whom was a lady residing in Yokohama.

The undertaking has already been accomplished by two other ladies, one of them Lady Parkes, but not under the trying circumstances attending the present ascent, which took place after the heavy snow fall of the 25th and 26th ultimo.

The party were delayed at Gobueba and Subashiri by cold and heavy rains, so that when the mountain became visible on the clearing of the weather, the snow was seen to extend downwards from four to five thousand feet from the summit. The Japanese guides for a long time refused to undertake the ascent, stating that at so late a period, when heavy snow had fallen, no one had ever succeeded in the attempt. They were at last induced to go and the summit was safely reached, though for over four miles miles, a frozen surface had to be traversed, and for the last mile and a half every step had to be cut or dug in ice and snow.

The scene from the summit was wonderfully grand, the sky being cloudless. The effect of the rarified air was, however, severely felt by all the party. The descent was made to Murayama, on the other side of the mountain, some miles of snow having again to be traversed, the lava fields on this route being extremely trying and the slope excessively steep.

The party arrived safely at Nurayama, distant about thirty

three miles, the whole of which had to be traversed on foot; the time occupied from Subashiri to Murayama being from 7 a.m. Friday to 3.30 on Sunday morning. The only ill effect experienced was snow blindness which lasted some days, as remedies against the glare of the snow had not been provided and could not be procured.

THE troubles with regard to the *Maria Luz* are not yet at an end. We learn that Messrs. Bavier & Co. sent off a man on Tuesday night to take charge of the ship. On arriving alongside, provided with a Japanese permit, he was first refused permission by the crew to go on board, but subsequently being allowed to ascend, he was seized, his hands tied behind him, and lashed to the mast. On Wednesday morning the crew came ashore with their prisoner who was then released. It appears that of late several things have been stolen from the ship, and the crew suspected the man of being a thief and consequently treated him as we have related.

The man again attempted on Thursday morning to go on board. The crew again repelled him and this time assisted his exit by a few well directed pricks with the point of a bayonet. The latest phase of the affair is that Mr. De Long has gone on board to inquire into the matter, with what result is as yet unknown.

THE following notes of an ascent of Fujiyama have been forwarded to us from an officer of the R. M. battalion now stationed here. Their principal interest is that the height of the mountain is accurately determined. The observations have been corrected by instruments at the Lighthouse department at Benten.

September 8th, at Subashiri, 8 a.m., Bar. 27.60; Ther. 59°. Left tea house for summit at 10 a.m.: entered clouds at 12.40 p.m. Bar. 24.17; Ther. 58°. At 2.15 p.m., emerged from clouds, scant vegetation, consisting principally of a large weed, about 18 inches in length; Bar. 22.86; Ther. 50°. After numerous halts, at 5.40 p.m., arrived at the stone hut where we were to sleep; distance from the summit nominally 2 *ri*, in reality much less. Bar. 19.82; Ther. 40°; a cold raw wind from S. E. summit observed. Total time from Subashiri, 7 hours 40 minutes; a large patch of snow visible on side of the hill about 150 yards from the hut.

September 9th.—Out at 6 a.m. Bar. 19.73; Ther. 38.5. Arrived on summit at 7.30 a.m.; walked round to the highest point where we arrived at 8.45 a.m., 6 feet below highest point. Bar. 18.72 Ther. (in shade) 44° Ther. (in sun) 68°. Small lichens on rocks the only vegetation on summit. There was a patch of snow near the western edge of crater, and long icicles hanging from the rocks all round. The summit is about one *ri* round. We completed the circuit at 9.40 a.m. On the way round by the ordinary path are numerous idols of bronze and stone, the former very unlike any that we had previously seen, being apparently so much smoother and better finished. The type of countenance was also different. There are a few stone huts on the summit in which people live during the summer, deserting them on the approach of snow. At 9.45 a.m. commenced descent by the same path as we had come up. Left the hut at which we had slept at 10.30 a.m. Walking very disagreeable, every step burying us up to the knees in loose clinker. Entered clouds at 11.15 a.m., Bar. 21.60; Ther. 50.07. Stunted bushes; Bar. 22.16; Ther. 51.0. Caught a small butterfly; this, with the exception of a mouse on the summit, was the only sign of animal life we had seen on the mountain. Passed through woods, principally firs, larch, birch, mountain ash &c. Arrived at tea-house at 2.45 p.m.

We had a lovely view from the summit in the earlier morning, the clouds covering everything below us with one vast sheet, the increasing heat of the morning sun, however, gradually dispersed them, and before we commenced the descent, the white cliffs that bound Mississippi Bay on the north, were plainly visible.

Since returning, I have deduced, from the observations kindly kept for me by Mr. McRitchie at Benten, and from my own on the summit, the height to be

	feet.
By Hutton's method .....	13,070.64
By Wrigleys " .....	13,091.8598

By Rankine's " .....	13,030.643
A mean of the three methods .....	13,064.32
Correction for distance of upper station below highest point. ....	6.00
Correction for distance of lower station above sea level. ....	10.00
Total height .....	13,080.32

The above observations have had all the necessary corrections applied to them, the only one that might have been usefully made in addition, is that for the aqueous vapour, but I unfortunately had no hygrometer with me.

The instrument used at the upper station is compensated by Elliot's.

That used at the lower is a beautiful instrument also, being a large holosteric aneroid by a Glasgow maker of note named Gregor; it is very sensitive. I compared the two before starting, and the mean difference (by a series of observations) when placed on the same level was 11, which I have applied in the calculations.

With regard to the measurements of the crater, I am afraid they will only give very doubtful results, as from the loose nature of the clinkers, &c. near the edge of the crater, it was almost impossible to obtain anything correct in length, &c.

Approximate diameter of crater on a bearing W. N. W. and E. S. E. of centre of crater, 590 yards; approximate depth 440 feet.

The bottom of the crater appeared to consist of a comparatively small patch of sand, but it might have been dirty snow.

The sides are all loose clinker, affording no foothold, unless with the assistance of a rope.

WHATEVER may be the fate of the new Dramatic Corps, it was abundantly shown on Wednesday evening that the public, in no way daunted by its first expenditure of \$1,600, is willing to subscribe some \$1,000 a year in order to maintain the building now known as the Gaiety Theatre as a public hall. We do not wish here to interfere with the action of the Committee of management to be appointed by the subscribers, but there seemed on Wednesday night to be indications that the public, as a body, hardly understands the purposes for which it is, as it were, buying the theatre. In the first place it cannot be denied that the public expects Amateur Dramatic performances, and to that end it is generally supposed that another Amateur Corps will be formed. Beside this, however, it should be pointed out that the hall will be available for public meetings of all descriptions. Hitherto the Assembly-Rooms of the Chamber of Commerce have been the only available place for holding a public meeting, and we suppose that few who were present at the inauguration meeting of the Asiatic Society for Japan will forget the heat which was then experienced, and the inconvenience which attends any very large meeting which may be held there. In the Gaiety Theatre the public will have a species of Town-Hall, at least a building answering all the purposes to which a Town-Hall is generally put in English provincial towns. It will be available for any Dramatic Corps which may be formed, or for any little society of gentlemen who may wish to give an entertainment, for travelling troupes, for public meetings of every nature, and, if boarded over on a level with the stage, would form a very good ball-room. The possession by the public of such a place implies a corresponding amount of convenience, and we, in common with all others, are pleased to find that the public has so generously responded to the call made upon it for this purpose.

The meeting of Wednesday evening, besides receiving the intimation of the Committee appointed to collect subscriptions as to the sum obtained, entered upon two other questions—the transfer of the properties, and the formation of a new Dramatic Corps. It may be a moot point whether or not any discussion, at a public meeting where men are apt to become excited, of the first of these two questions could be of any service; and it was this uncertainty which enabled Mr. Merry to quash the discussion. But here we can without prejudice set before the public a few undeniable facts, which, however, unwelcome to the leader of the old corps and his associates, demand attention. To go back to the formation of the late corps. The public, anxious to assist its efforts, subscribed

some \$1,600 to be expended in the interior fittings of the building, which still remained public property. To this sum the corps added \$500. At the present time not only has this \$2,100 been spent, but the corps is some \$470 in debt. Now the members of the old corps aver that they do not expect their \$500 back—that is the \$25 subscribed by each individual—that sum having been, it is acknowledged, sunk in dresses and scenery. But it is intimated that the old corps intends asking payment for the furniture and fittings, paid for in the first instance with public money. Well might Mr. Pearson point out that the only proper thing to do under the circumstances was to hand over the property bought with the \$1,600 and say: "We have given you no *quid pro quo* for your money; we have only given two performances in twelve months, and we hand you back your property without payment." But still the incubus of the \$470 debt hangs over the corps, and to rid themselves of it, certain of its members would have the public buy their own property twice over. Such conduct as this is unworthy, and we hope, that before the actual transfer takes place, better counsels will prevail.

And, again, why was the leasing of the theatre to any amateur performers but those of the one regularly organized Dramatic Corps so strenuously objected to? If Brown, Jones and Robinson wish to give a performance—say *à la* German Reed—is it to be said "No, we won't lease the theatre to you, or any one but the regular corps?" Is that the liberal spirit which, we are told, pervaded the old corps? Is that the way, and we suspect it is, that applicants for either admission into the corps or for leasing the theatre should be treated? The exclusiveness so pointedly described by Mr. Swabey on Wednesday would seem to be a practical reality.

As to the formation of the new corps we do not propose to say much. Some eighteen gentlemen have joined it, and it is evident that many others will send in their names so soon as the old corps has ceased to have any connection with the theatre. They will not render themselves responsible for the debt of the old corps, nor do they intend to place themselves at the disposal of the few who some time since controlled the fortunes of that body. That the new scheme will prove successful we do not doubt; and if only Captain Bridgeford will undertake the management, the performances will very soon be of such a character as to meet with abundant support from the public.

THE accounts which are constantly being sent home, and especially to America, respecting the progress of this country, and the opening it affords for enterprising men of all professions, are beginning to bear bad fruit. They are inducing unsettled and dissatisfied men, who would be much wiser if they worked out the careers on which they at first entered, to leave those careers and try their fortune in Japan. Hence applications for appointments are being repeatedly made to all who are supposed to have employment to give away or power to procure it. The class attracted by these accounts is never a satisfactory one, and no one who has any proper sense of the responsibility attaching to recommendations will give them in favour of people whom they almost instinctively mistrust.

We think it well to give as much publicity as possible to the fact that the supply of foreigners required in this country is at present decidedly in excess of the demand, and that Japan is burdened with a very considerable number of them who do not know which way to turn for their daily subsistence. Nor can we recommend the Japanese to make selections from the class we speak of. As a general rule they will do better to send to head-quarters for their foreign employés. If they place their nominations in the hands of respectable and responsible people, they will get admirable foreign assistants. But if they are induced by importunities of various kinds to make engagements with persons whose antecedents are not fairly attested by people whom they can trust, they will find themselves in constant trouble, either in enforcing upon some a proper sense of their duties and responsibilities, or in ridding themselves of the burden of others who have only signed agreements with the idea of extorting a maximum of money for a minimum of work.

We have placed before our readers some few reasons for looking upon the two first letters which appeared in the *New York Herald* under—or rather above—the signature of Doctor Livingstone, as spurious, and no one now believes that they came from the hand of the great traveller, whatever may be the explanation of their origin. But the most destructive piece of criticism which has yet appeared on the whole subject is to be found in the *San Francisco Bulletin*, and is republished elsewhere in our columns this week. We may, however, state that our opinion is in no way changed in regard to the finding of Dr. Livingstone by Mr. Stanley, and we have reproduced the article in question rather to show how much ground existed from the first for sceptical criticism than to detract from the merit due to Mr. Stanley for his courage and vigour in carrying out Mr. Bennett's orders. But while we willingly acknowledge this, it must be confessed that the mystery attaching to the two first letters has not been cleared up, and that the palpable impossibility of regarding these as the work of Dr. Livingstone's hand was sufficient justification for looking upon Mr. Stanley's first statements with the utmost suspicion.

If we may judge from public rumour the forthcoming athletic sports will prove highly successful. Several of the best runners in this settlement are in training for the various events, and as the sports take place directly after the races, perhaps some of our rivals from Kobe or Osaka will pay us a flying visit. The only drawback is that the course will probably be cut up by the previous racing, but a few hours rolling will do much to remedy this defect.

ON Monday as a phaeton conveying Mr. and Mrs. Watson was being driven past the police station the vehicle upset, but we are glad to learn that neither of the occupants was seriously injured.

THE Jewish synagogue on the swamp, which our readers will remember was mentioned in a recent case of assault, has been sold at auction for \$255 to Mr. Wilkins.

By permission of the Admiral the band of the French iron-clad *Belliqueux* will play every Saturday afternoon, at 3 P.M., on the Bund, opposite the French naval hospital.

#### THE STATE OPENING OF THE RAILWAY.

THE Government may fairly be congratulated upon the ceremony of Monday last—in spite of some omissions in the invitation list which deprived it of the presence of some gallant officers whose claims to attention should not have been overlooked. The weather was superb, although the previous twenty-four hours had raised very gloomy anticipations in regard to it. The decorations seemed rather refreshed than dimmed by the pitiless rain to which they had been exposed, the population was in its best humour and best clothes, the advantages realized by the opening of the section between Yokohama and Shinagawa in June last had cleared away the last prejudices in respect of the enterprise, and everything was ripe for the State Opening of Monday. An intense curiosity animated the Japanese to see their Sovereign, and this curiosity was largely shared by foreigners. He was to be surrounded by the nobles of a court of almost fabulous antiquity, dressed in a garb which in all probability has not varied for two thousand years, but which may now be destined to disappear. He was to receive from the Representatives of the Foreign Powers allied to his Empire by friendly treaties, their congratulations upon an event of vast importance to it, and the revolution which brought him face to face with the outer world was to be further signalized by his reception, without the intervention of official ministrations, of a deputation of foreigners, anxious only to pay their respects to

the Monarch on whose shores they were residing and to congratulate him on the event he came to celebrate. And not only this. He was to permit, indeed to encourage, the approach to him of the representatives of a class among his own subjects which has never met with the recognition due to the valuable nature of the services it renders to society. The TENNO may have felt that he could hardly with grace refuse to accept the proffered congratulation of the foreign residents. But in receiving the representatives of the native commercial classes he conceded a very distinct and novel recognition of the important part played in the economy of the empire by those who conduct its commerce, and exhibited the Government in a new and gratifying attitude towards them.

And all this was done. The TENNO, obscured by no veil and shrouded in no mystery, presented himself before hundreds of foreigners and tens of thousands of his subjects, to the unrebuked gaze of all. If the nobles of Kioto attended him, no trace of the policy of Kioto distinguished the pageant. Four years ago Monarch and courtiers alike sat in quiet seats above the thunder, and appeared only to descend to earth to remind mortals how far above them and their concerns such gods were placed. The Government was a form of theocracy in which a perpetually renewed incarnation of deity claimed the worship and guided the destinies of its subjects. Superstition, the useful ally of statemen, obscured the Throne with clouds and thick darkness, and none but those who claimed something of an existence akin to that of its Occupant could approach it. Now, as on Monday, the son of Heaven takes his seat before his assembled subjects, receives and replies to congratulations, opens his railway and inspects his Mint and Arsenal. The darkness has been dispelled, the clouds have all rolled away, and the Monarch whom they hid claims the obedience of his people as their lawful, human, and mortal Sovereign—their Sovereign it may be by force of prescriptive right based on the obedience rendered to his office by a hundred generations, but not the less human and mortal on that account. It is indeed well that a revolution which has worked this prodigious change finds an office powerful enough to reduce into harmony the forces which produced that revolution. Let the advocates of the Shogunate attempt to form some conception of what the condition of Japan would now be had the Mikadoate disappeared instead of the Shogunate.

But to leave these political speculations, and deal with what seems to us the most remarkable feature of the proceedings of Monday. This reception by the Tenno of a deputation of the Yedo and Yokohama native merchants cannot but have a good effect upon the mercantile classes. It will raise their consideration in the eyes of others, and especially of those who have hitherto been accustomed to regard them with supercilious disdain. They will begin to feel that they are no longer a class to be despised and trampled on, but rather one whose interests must be consulted, whose opinions must be respected, and whose wealth is an integral part of the strength of the empire. That this recognition of their legitimate position will also increase their loyalty towards the throne, cannot be doubted. We may fairly expect to see them coming forward to assist the Government in the prosecution of its public works, subscribing money for the extension of the railway, and assisting in the formation of national banks.

It is a good and wise policy which recognizes these men as political entities, and relieves them from the pressure of that most blighting and disastrous of all human institutions—caste. Hitherto they have been at the feet of the privileged classes, but their reception by the TENNO is a guarantee that one at least of the hard and fast lines drawn by prejudice and jealousy has lost its paralysing force.

If report speak truly, the TENNO himself was greatly gratified by the proceedings of the day. And in good sooth he might well be so, for they betokened a policy of personal emancipation to himself from a thralldom which must be galling and almost insufferable to an intelligent being. Is it possible to conceive a fate more overwhelmingly sad than that one which condemns its victim to a life of absolute seclusion, tiresome etiquette, and isolation from the world of thought, feeling, and personal relation with one's race? Who would exchange a life of freedom and personal independence, even with all its anxieties and heart-aches, for an existence such as that which until now has been the inevitable lot of the ruler of Japan? What wonder that the sight of uncounted thousands of his subjects, anxious to pay him their homage and to recognize the sagacity of the Government over which he presides, should animate a monarch on an occasion like this, remind him of the weary existence he has happily escaped, and inspire him with new views of life, of duty, and the responsibilities attaching to the possession of power?

The speeches delivered on Monday are highly interesting, characteristic, and hopeful. Their most valuable feature, however, is the repeated assurance given that the extensions of the work will occupy the early attention of the Government. Nor can we insist too strongly upon the importance of these. We can only regard the present section as the earnest on the part of the Government that the great trunk line between Yedo and Osaka will be at once proceeded with. Whether the funds for this purpose should be borrowed within the country in order to give to the monied classes an interest in a work of such great national importance; or whether, seeing how high a rate of interest money bears here, it would be better to borrow the money abroad at a lower interest, and save to Japan the difference between the two rates; are questions which we may well leave for future discussion. But there should be no insuperable difficulties in getting this money, and if the Government goes the right way to work it may borrow on fairly easy terms. The great thing is to set about the extensions. The section between Kobe and Osaka seems to us to hang fire more than it ought, and this section should be urged on with all speed. The line between Osaka and Kioto is staked out, and ample funds for its construction are said to have been placed at the disposal of the Government by the inhabitants of Osaka. We hope it may be proceeded with at once.

It would be unjust as well as ungracious to leave this subject without paying a tribute to the services rendered to the Government in connection with this work by Mr. ENOYE MASARU. In spite of clamour, and in the face of very serious difficulties, he has brought it to a successful conclusion by dint of untiring energy and perseverance, and a tenacity of purpose which allowed nothing to interfere with the attainment of his object. We trust that he will work at the extension of the railway system in the same spirit, and

turn the experience he has gained in the construction of this section to good account in similar future undertakings.

### THE OPENING OF THE RAILWAY.

It is now little short of three years since the Government of Japan accepted the offer made by Mr. H. N. Lay, C.B., as the representative of several English capitalists, of a loan of a million pounds sterling, for the construction of railways in this Empire. The loan was regarded on both sides, we imagine, as a preliminary to more extensive operations; for the ideas of the Government embraced the plan of a line from Yedo to Osaka, and the English capitalists could, if so disposed, and if satisfied with the securities offered, have commanded sufficient capital to enable the Government to carry out any such views as it then indulged in: their means were ample, and their connections were powerful. By what cross purposes, misunderstandings, or miscarriages of the original plans, the representative of these capitalists found himself in a position of antagonism to his own allies, superseded in the commission granted to him by the Government, and disconnected with the operations which eventuated in the ceremonies of this day, it is neither our purpose nor our business here to determine. Suffice it, that disappointed in the assistance of those on whom he had relied for the fulfilment of his engagements to the Japanese Government, and not being supported in the views he took of his obligations or in his course of action under the emergency produced by this disappointment, Mr. Lay found his commission revoked, his connection with the Japanese Government severed, and the loan, together with all schemes relating to the introduction of a railway system into this country, handed over to others. But what concerns us to-day is not so much the preliminaries of the scheme of which we now see the fruits. We have merely referred to its inception as the first link in a chain of events which have culminated in the proceedings of to-day, proceedings which are destined to bear fruits to this Empire the value of which it is impossible to estimate.

The rapidity with which events have marched of late in this country have made it somewhat difficult to give a reliable picture of what Japan was even three years ago. But without some outline of that picture, the contrast between the present condition of affairs and that existing in the year 1869 can be but dimly perceived.

It was only towards the latter part of that year that the last flames of rebellion were quenched, and the power of the Mikado was firmly established—or perhaps it would be more correct to say, that the power and office of the Shōgun in the hands of the Tokugawa family, were abolished. But the storm which brought about the fall of the Shōgunate shook the Empire to its base. Its violence had indeed abated, and the eyes of keen observers saw the sky breaking in the direction in which alone hope could be looked for. But the waves still lashed the foot of the Throne, and at times its Occupant was obscured from sight by the blinding spray which broke over it. Grave reports were circulated that the nobles on whose adherence the stability of the Empire at that time really depended, had seceded from the Imperial cause. They had lost for ever all hope and chance of playing the same great part in the history of the Empire which their ancestors had played, and they writhed under such an anticipation of political extinction. Nor was their jealousy confined to the overshadowing and paramount influence of the Mikadoate. It operated among themselves, and at this critical period it was impossible to say in what direction the flames of this jealousy might break out, or what, if once awakened, they might not consume. But the keen men who at that time supported the Mikadoate as the real centre of gravity in the Empire, were equal to the emergencies of the moment. They saw that if the Mikadoate was to remain the centre of power, that centre must be associated with the idea of an active participation in the executive of the Empire. The removal of the Emperor from Kioto to Yedo was not sufficient. The day had passed when isolation and seclusion on the one side, and a superstitious breath-bating reverence on the other, could hold together a number of minds on whom light from various sources was gradually breaking or constantly flashing.

It was necessary that the Mikado should receive and confer with his ministers as the head of his Cabinet, should receive the visits of the foreign ministers, should appear in person at the reviews of his troops, and show himself to his subjects abroad in his capital. Little by little this change was brought about. The people accepted and welcomed it. His Majesty was to be seen at public ceremonies, and the attitude of the people, though still respectful, gradually lost much of that superstitious awe which formerly characterized it. To the influence pertaining to the Shōgun as the active head of the executive, he brought to bear the weight of an office the prestige attaching to which had been an article of religious faith with the people since the very dawn of the national history. The effects of this policy were not long in making themselves felt. The foreign Ministers found that the difficulties connected with the securing of a rigid observance of the treaties gradually disappeared—difficulties which arose solely from the chronic antagonism existing between the respective courts of Kioto and Yedo. An uninvited activity of a new order made itself felt in the affairs of the Empire, and in nothing was it more apparent than in the Department of Public Works. The loan offered by Mr. Lay was accepted, the Railway was commenced, a Department of Telegraphs was placed under the jurisdiction of the Engineer-in-Chief, and as fast as the necessary railway and telegraph plant arrived from England, it was laid down. But delays of an irritating and unanticipated character arose, and the dissatisfaction which these caused found free vent. It is due to the memory of the late Engineer-in-Chief to state our opinion that after much consideration of all the circumstances connected with those delays, they cannot justly be attributed to any want of professional knowledge in him, while undoubtedly the Government lost by his death the services of a man of rare insight, rapid and correct judgment, great boldness and unswerving honesty. The reflection that he was not present on Monday to witness the inauguration of the first section of the work which he commenced, cannot but dim the satisfaction of those who knew how ardently he longed to live to complete it, and how untiringly he devoted his mind and powers to it.

On the 15th of June last the section of the Line between Yokohama and Shinagawa (the port of Yedo) was opened with little ceremony. The traffic was at first purposely kept down by high fares, imposed with a view of accustoming the native officials to deal with it easily. Their aptitude for this work, however, was soon proved. They were punctual, vigilant, attentive to their duties, careful of the serious interests entrusted to them, courteous, forbearing and intelligent. Even under these high fares the traffic increased rapidly, and after a short time the tariff was reduced. In spite of, indeed, in consequence of the reduction, the receipts increased rapidly. Extra trains were required to afford the public sufficient accommodation, and in spite of the inconvenience which existed until to-day in the gap between Shinagawa and Yedo proper, thousands, attracted either by curiosity, business or pleasure, resorted to the line for the journey hitherto tediously performed by steamer or carriage between Yokohama and Yedo.

A month ago it was announced that the whole Line to Yedo was completed and was to be opened with great ceremony by the Tenno in person. Friday last was fixed for the occasion, for which great preparations were made. But the early days of the week were unpropitious. The rain was incessant and relentless. On Thursday Oct. 10th a storm of unusual violence raged, and though the 11th turned out a lovely day, the preparations for the ceremony were so retarded by the rain of the previous ten days that it was decided to postpone it until Monday. Saturday remained fine, but on Sunday all the miseries of the previous week were renewed. The rain poured in torrents the whole day, and Monday rose, grey, ungenial and forbidding. By eight a.m., however, all misgivings as to the intentions of the weather were dispelled. The sun was gracious and winning, a pleasant breeze added its genial influence, and nature smiled all the more delightfully that her previous aspects had been so repelling.

With the bright anticipations which such a favourable condition of the weather naturally induced, the day was ushered in, and even as early as seven o'clock there were

a few symptoms at both the Yokohama and Yedo termini of the line, of the vast crowds which thronged either station on the arrival of the Mikado. Even at that early hour, a few Japanese lingered about the Yokohama station-yard as if prepared to seize upon some point of vantage whence to see the Mikado and his train. Soon after this hour the foreign ministers and consuls commenced to arrive at the Yokohama station, one of the first being M. de Turenne, followed by others of the diplomatic and consular corps. By eight o'clock quite a large number of passengers were present, including those already mentioned, and several invited guests. As the clock struck the hour the train steamed out of the station, and running rapidly over the road, which here we will not stop to describe, reached Yedo a few minutes before nine.

Here, leaving the train, we will proceed to the Castle, whence the Mikado was to start for the ceremonial of the day. At about 8 a.m. the Imperial Guard of about 50 lancers, with three batteries of artillery each of four guns, arrived at Honj, the entrance to the Mikado's palace around which they disposed themselves in waiting for the departure of His Majesty. Also in waiting were a large number of Japanese of all classes, from the officer to the coolie, who placed themselves on either side of the road which was duly guarded with policemen, and like all Japanese behaved themselves with most creditable propriety. At the same time, although the road was kept clear by the police, the spectators were allowed great freedom, far in excess of what is usually the custom in this country. Indeed, Japanese

crowds are something different entirely from that which an European is wont to experience on the occasion of any procession or public ceremonial. Quiet—at least, under ordinary circumstances—and accustomed to follow strictly the mandates of those in immediate authority over them, they make no sound, but bow the head reverently as the Mikado—he who was to them but a short time since an unknown but divine personage—passes on his road. Such a crowd was assembled at the south gate of the Castle—Sakuradogomon—when the signal which announced the early approach of His Majesty was trumpeted forth by the buglers attached to the companies on guard. Almost directly after the sentinels at the gate came rapidly to the “present arms;” at the word of command the lancers and troops on guard did the same, and between the heavy stone pillars of the gate, came five guards of the Imperial Court, the *avant couriers* of the state carriage, in which was His Majesty The Mikado, attended by Prince Arisugawa no Miya and the Prime Minister. In turn, this was followed by six other guards, and then eleven carriages, some of foreign, others of evidently Japanese manufacture, each occupied by various high officials of the Court, among whom we noticed at the time the Princes of Jishin, Bizen, Higo and others. A little interruption took place on account of one of the horses in a Prince's carriage becoming restive, but this overcome, the procession, with the mounted guards in front, proceeded slowly along the principal streets, betwixt two thick lines of devoted subjects, prostrate on their hands and knees, but, it may be noted, that they were not compelled to cast their eyes on the ground, nor were the windows of the upper floors shut as has hitherto been the custom. Past the new barracks, the drilling ground, the Tokai-fu, and through another gate, whose name has for the moment escaped us, the procession wended its way to the Shinbasi station. On all hands, as this was neared, soldiers were stationed, and behind their double ranks were crowds of Japanese, who, seemingly half in doubt whether to kneel or not, made a compromise by bowing as the Mikado's carriage passed. But not a sound save the buzzing whisper of subdued conversation. Not a hurrah—only the clank of the musket as it came to the “present,” in a most primitive style, however, and the prolonged rattle as it struck the road at the Japanese equivalent to “order arms.” To foreign ears this may seem strange, but it was a Japanese ceremony, somewhat mixed with foreign ideas, but still Japanese.

Meanwhile, those in waiting at Shinbasi had been anxiously looking for the arrival of His Majesty. The station itself was remarkably well decorated. The rails round the enclosure were covered with evergreens, well proportioned arches of that material, with huge central arches profusely adorned with red and white

lamps at the entrance gates, obviating the lean and bare effect which might have been given by the ordinary railings. In the centre of the plazza in front was a railed-in plot, scarcely covered with grass at this time, but well planted with shrubs. In this was the flag staff with the national flag tied in a roll ready for flying, and other emblems of the joyous occasion. At the entrance to the station was a temporary portico covering an inclined platform leading to the station itself. This was most gorgeously decorated. At each side were growing chrysanthemums in pots, covered with red and white twisted cloth; small Venetian masts bearing upon their slender stems gay banners of various hues, while the bare wood of the roof was hidden from the eye of Majesty by red, white, and yellow cloth, hung in graceful festoons. Each side was open, but the pillars, hand-rail and the border of the carpet which covered the floor, were draped with evergreens.

Approaching the inside of the station, the decoration of flags and evergreens almost entirely covered the building. The floor was covered with a handsome carpet, bordered on each side by matting in black and white stripes. The roof was again concealed with festoons of coloured cloths, while over the door leading on to the platform were two small flags of mazarine blue with the Mikado's crest in gold. The pillars, which are on either side of the central porch, were draped in red and white cloth, while the Imperial chrysanthemum was blazoned in gold upon white and sky blue shields hung high on the pillars. Evergreens were trained round wherever practicable, and the architectural lines of the building were traced on all hands with lanterns and leaves. To the right in the station was the Mikado's retiring room, an apartment devoid of any decoration or gorgeous colouring; but neatly carpeted and comfortably furnished with sofas, easy chairs and the other usual necessities of a well appointed drawing-room. Returning again to the station we may note a profusion of flags of all nations, the chrysanthemum and the Public Works' flag seeming greatly to preponderate.

Advancing to the platform, reached by an inclined boarding covered with carpet, we see more flags, draped, as before, below the beams of the roof in huge festoons supported by a silken cord; chrysanthemums of every hue in costly vases, with an abundance of red and white cloth round the pillars, upon which were ranged a series of flags.

Some two hundred feet of this covered way is soon traversed, and at the end of another platform temporarily shut in by a light roof is the throne. This, though hardly as gorgeous as one accustomed to the brilliant ceremonials of European courts might possibly expect, was well worthy of note. It was approached by a pathway of matting bordered by evergreens and brilliant plants in pots, the pillars and every other available spot being utilised for the bearing of flags and red and white cloth. The throne itself, we have said, was at the end of the platform, and consisted solely of a handsome black lacquer chair—laid with gold and with a seat of red and gold embroidered silk with a white and gold embroidered centre: at the side of this chair was a small but excellent lacquered stool with a red and silk embroidered top—this stool, the use of which was at first sight somewhat a puzzle, was for a writing box and a shibatchi which were placed within reach of His Majesty. The dais upon which the throne stood, was about six feet from the ground, with six steps leading to a lower dais a height of four feet with two other steps to the throne itself. The dais and the steps leading to it were all carpeted with handsome Brussels manufacture. On each side were more pots of flowers. The roof was of flags representing what is called Nisiki no Mihata, the flag which may be observed on the obverse of the gold coin now in circulation, and which is, in fact, the old Imperial Standard, while at the back and sides were huge draperies of Imperial purple and white, with the chrysanthemum in gold in three places immediately behind the chair. The sides of this cloth were looped up, and the whole formed if not a very imposing, at least, an appropriate throne—entirely Japanese.

Beside these decorations which immediately met the eye, the native employed had been at considerable trouble and expense in arranging a small decoration of their own. Thus, while it appeared to receive but small attention from the Mikado—indeed, if a calm dignity is a test for

princes, His Majesty is a King among Princes—was greatly admired, being formed in the shape of that very popular mountain Fujiyama. It was constructed of evergreens trained on bamboo, the admixture of white giving a very accurate representation of the streaks of snow which are to be seen during winter extending far down the slopes of the sacred mount. Next this *chef d'œuvre*, for it may fairly be termed so, were two *mat sheds* containing such a show of chrysanthemums that even the gardener at the Middle Temple would sigh in despair at hoping to equal the excellence and rarity here displayed. 'T would take a botanist to do them adequate justice. Between these and the rails upon which the Royal train was drawn up, was a band belonging to the battalion of marines, under the leadership of Mr. Fenton, late bandmaster to the 1st-10th foot. The men were dressed in red jackets with yellow facings, dark trousers, French shakos and large white horse-hair plumes. The music they discoursed was most creditable, and speaks volumes in favour of the training they have undergone at the hands of Mr. Fenton. On the opposite side—that is to the right hand on leaving the station—were platforms for the spectators, large standing places for the Japanese and seats for foreigners in front. These, we were told, would accommodate 15,000 persons; but while we can believe that 15,000 tickets were issued and that a large part of that number found admittance to the grounds at some point or another, still the number is too large to be very generally credited.

Let us now return to the station which has become crowded with Japanese officials. To attempt to describe the dress of each separate person would be beyond us, as well as uninteresting; suffice it that there seemed to be three descriptions of hats. First a thin gauze cap somewhat in shape like the mob cap, differing in this, that it is tied about the head by bands of white silk or satin, is black, and stands perfectly erect. A second species—if so we may speak of a cap—is precisely the same, except that it droops at the back of the head; of the third it is beyond the pen to convey an accurate description. Shaped like a oblong box, it does not fit the head, but rests upon it, being tied beneath the chin with a string of blue or white silk. It is, we believe, made of paper. The dresses worn by the various officials differed but little from each other. Green or brown shot silk with the usual white undergarments seemed to have the preference, rosettes of pink or red being put with apparent indifference upon either the *hakama* or the robe. All but one or two wore foreign-made shoes. Standing out prominent from all others were three Loochoonan Princes. Their faces seemed to have rather the Mongolian cast of countenance than the Japanese, all three wearing long moustaches and beard, one retaining an abundance of hair of a perfectly grey shade. Their dress was a little different from those of the Japanese, black and blue gowns being the prevailing wear, each of the party bearing turbans of green, gold or red, and all wearing a kind of overshoe such as the Chinese compradores affect in this settlement. This one was, so far as could be seen, the only article in their costume palpably of foreign manufacture. Their appearance—certainly a strange spectacle to many present—was not so regarded by the Japanese officials, though a few others who not being among the privileged were seated behind the rail in the seats for foreigners, attracted no small share of notice from those around them. These, however, looked more like Japanese than Chinese. It may well be that the resemblance to the one race or the other is a matter of nature's caprice.

Under the direction of Mr. Enoye, Commissioner of Railways, who for the nonce was dressed in a green robe, and Mr. Yamaou, whose robe of brownish purple was profusely ornamented with dragons embroidered in gold thread, the officials present were marshalled into line and proceeding to the foot of the inclined platform under the portico awaited the arrival of the Mikado. The square in front was lined on two sides with troops dressed in dark tunics with red facings, unblacked leather gaiters, French shakos and white horse hair plumes, while at intervals on the other sides were a few Japanese and foreigners, the streets outside being blocked with the throngs who pressed forward to the royal road. But still this crowd was orderly and comparatively quiet. The streets were

blocked and the front ranks pressed hard up against the station gates. Suddenly some extra pressure was exerted by those in the rear, by sheer weight the gates were taken off their hinges and the people rushed in. Here, however, they showed themselves very orderly and respectful, quite a contrast to the behaviour of certain foreigners who not being able to obtain all they desired made use of abusive epithets to those in authority. Conduct such as this cannot but give the Japanese a bad impression, and it is much to be regretted that the great courtesy shown by all the officials should have been so outrageously abused.

The braying of trumpets in the distance announced that the business of the day was about to commence, and in the station there was a bustling about, a straightening of hats, and a plucking of clothes which betokened that His Majesty was near at hand. At precisely a quarter to ten the gates were thrown open, the troops presented arms, the bugles sounded, and the advance guard of court attendants and lanciers came prancing in on their mettlesome steeds. Following came the Mikado's state coach—a large brougham lined with damask, with an armed sent in the centre of the back cushion; a red, gold and blue tasselled hamper whereon sat two officials driving, or rather attempting to drive, four American horses, two of which are doubtless well known to our readers from having been driven in General Capron's carriage. Waiting awhile to allow all those who followed in the eleven carriages before alluded to to arrange themselves, His Majesty alighted and was received by the Minister of Public Works and Chief Commissioner of Railways who conducted him into the Central Hall where the representatives of Foreign Powers and Ministers and assistants of the various executive departments were assembled. Here His Majesty expressed in a few words his acknowledgments to the Representative body for their having favoured him with their presence to which the Italian Minister replied. Here His Majesty stood a few minutes, having the Foreign Representatives on his right and principal officials of his government on his left, and here he was presented by Enoye Masaru with a plan of the railways. This he handed to a Court attendant—four of whom having dismounted were in close proximity to him—and with slow and stately mien advanced into the station. His dress was simple in the extreme. His trousers, for so we must call them since they were not *hakama*, were white figured silk; his robe was brown silk with large flower patterns in squares, while his undergarment was red lined with white, and being gathered up slightly at the waist behind was spread out in a train and carried by two court attendants. His shoes were of some Chinese work with gold embroidery on a red ground, and he walked with a shuffle which if not peculiarly dignified was not ungainly. On his head he wore a singular box-like construction raised at the back with a high plume of silk crape kept upright in a paper frame, which nodded with every step. Attached to his robe was a strange hoop of leather which stood up against his back as if for the purpose of a rest. What its meaning or its real purpose may be we are at loss to know, but that, together with the head gear, are only worn by the reigning Mikado.

Slowly advancing into the station His Majesty assumed his place in the procession which moved on to the train in the following order:—

ENOYE MASARU, Chief Com. of Railways.	YAMAOU YOSO, Minister of Public Works.
YOTZUTOGI SHO SAMI, Kuge.	SHIKIBUNOSKA, Kuge.
JIZHIU, Court Attendant.	JIZHIU, Court Attendant.
HIS MAJESTY THE MIKADO.	
Sword Bearer.	Keeper of the Private Records.
JIZHIU, Court Attendant.	JIZHIU, Court Attendant.
MIYA, Cousin of the Mikado.	
JIZHIU, JIZHIU, JIZHIU, Surgeon in Ordinary.	JIZHIU, JIZHIU, JIZHIU, Physician in Ordinary.

BELGIAN CONSUL.  
DUTCH CONSUL.

We should have mentioned that just outside the station, on the raised dais above the platform, was a small native orchestra comprising some eighteen performers, the instruments being nearly all wind instruments. On the approach of the procession, the orchestra commenced playing, and the music though generally condemned by foreigners, had to our ears by no means an unpleasant though a weird species of distraught melody. This band continued playing until the train started on its journey to Yokohama. On reaching the state carriage the Mikado entered. It was an ordinary first class car with magnificent cushions in red and gold embroidery, Brussels carpet on the floor, and silken curtains with gold tassels at the windows. Outside, large gilt chrysanthemums adorned each of the centre panels, while gold carvings occupied the spaces where ordinarily are the ventilators. The engine was profusely decorated with flowers, principally chrysanthemums and the floral devices which adorned the front of the engine were tasty and neat in design. We may here mention that Mr. Galwey was in charge of the train, Dr. Purcell in medical charge, and Mr. Christy in charge of the engine, T. Hurt being the engine driver favoured with the valuable charge.

Once on the road, but little time was spent in reaching Yokohama. The train was whisked past Shinagawa where a thin line of Japanese was to be seen kneeling on the platform, the officials standing hat in hand as the train passed. The station was handsomely decorated with flags, lanterns, flowers and evergreens, and perhaps deserved a better fate than to be passed by without stoppage. So also did Kawasaki, with similar decorations, but with more flags, while Tsurumi and Kanagawa were both profusely adorned. Along the road, too, every favourable opportunity was seized to erect flagstuffs with either the national or Public Works' flag displayed, or lanterns erected on large frames. As the train passed Kanagawa, a thin white line of smoke was seen issuing from the various men-of-war in harbour, and although the wind was blowing off shore the roar of the guns, thundering forth in honour of the occasion, could be distinctly heard. Strange to say the Kanagawa fort failed to reply to the salute or even to hoist a flag—a singular circumstance, truly.

The train soon arrived at Yokohama, and on alighting from the car His Majesty was received by the Director of Railways, Mr. Cargill, and the Chief Assistant Commissioner, Mr. Takida, and at intervals along the platform were stationed the several railway employes, Japanese and foreign, and the foreign executive staff, viz: Mr. England, Mr. Sheppard and Mr. Dewing, Resident Engineers, Mr. Wimbolt, Inspecting Engineer, Mr. Galwey, Traffic Manager and Chief Locomotive Superintendent, Mr. Christy, Assistant Traffic Manager and Locomotive Superintendent Mr. Aldrich, Chief Accountant, and the Medical Officers, Dr. Purcell, principal, and Dr. Wheeler, assistant—all of whom, together with Mr. Robertson, of the Oriental Bank, who was with Mr. Cargill, were presented to the Tenno.

In the Central Hall were placed the principal Government officials of Yokohama and the foreign Consular body, who were respectively introduced to His Majesty by His Excellency Oye Taku, the Vice Governor of Kanagawa.

The procession then entered the State Pavilion, the ex-Princes, Daimios and Kuges standing in a line on each side of the dais looking towards the front, and behind them the Court officials. Facing them stood the members of the Government and High Officers of State on the left of the Throne, and on the right the Representatives of the Foreign Powers and Consuls.

Before entering upon the ceremonial at the Yokohama station we may say a few words as to the decorations which had been so liberally bestowed on all hands. Commencing at the bridge, which was covered on both sides with lanterns, the station yard was entered under a large archway of evergreens with lanterns hanging from the centre. The central grass plot, in which stands the flag-staff, was surrounded with flowers and leaves, while small flags were pendant from the stays. On either side was a large mat shed with accommodation for spectators,

both foreign and Japanese. These sheds, also, had their share of the ornamentation, and on the roof were alternately flags and Venetian masts, the bunting representing every nationality. In the centre was the state pavilion. This building, in which the ceremonial of the day, so far as Yokohama was concerned, took place, was one mass of flowers, flags and evergreens. Approached by six steps covered with carpet, a few more steps led to the throne, which was in every respect exactly similar to that at Yedo, with this exception, that the chair was of red lacquer instead of black. On each side were real and artificial flowers, one pot of the latter being deserving of special mention. Strange as it may seem the flower and leaves were of silk; the leaves of ordinary coloured silk, but the flowers, which represented lilies more than anything else, were composed of separate hanks of silk, coloured red, blue or yellow, each flower having a network button of yellow silk in the centre. The effect of this at a short distance was really surprising. We may also mention that the pillars supporting the temporary roof were covered, as elsewhere, with red and white cloth and evergreens, the roof being clouded by festoons of bunting and flags hung from all sides. Outside were Venetian masts with long streamers, the prevailing colour being red and white, mostly some modification of the Public Works' flag. Near the centre of the pavilion, in front of the throne, a carpeted way led round on each side by the back to the Central Hall which was decorated in a similar manner, the platform beyond being also decorated with growing chrysanthemums and other flowers.

His Majesty, having received the various officials, proceeded along the carpeted pathway round the side of the pavilion to the throne upon which took his seat, the Court attendants hanging his train over the back of the chair. Everyone having reached his place, His Majesty took from the folds of his robe a paper from which he read as follows:

"I have opened in person the Railway between Tokyo and Yokohama, and I sincerely hope that the facilities it affords for communication may tend to the development of trade and to the ever increasing prosperity of my people."

Whereupon Count Fé d'Ostiani, the Italian Minister, read the following address:—

SIRE,—Le Corps Diplomatique est heureux, Sire, d'être gracieusement appelé par V. M. à assister à la cérémonie significative et importante d'aujourd'hui. Cette fête solennelle, à l'occasion de l'ouverture du premier chemin de fer de votre Empire, marque une des gloires de l'auguste règne de V. M. I. un progrès éclatant dans la voie de la civilisation moderne, dont le Japon est désormais l'allié fidèle.

Puissent tant d'efforts généreux et constants que les nations de l'Occident ont suivi du plus vif intérêt être couronnés de tout le succès que V. M. I. et son gouvernement ont en vue dans leur initiative éclairée.

Tel est le vœu du Corps Diplomatique qui s'empresse, Sire, d'offrir à V. M. ses hommages et ses félicitations.

To this His Majesty replied by a short answer. The Ministers and other diplomatic officials then retired. Shortly after, a deputation of foreign gentlemen, consisting of Messrs. Marshall, Walsh, Grégoire, Wilkin, Mammelsdorff, Kingdon, Jackson, Greeven, Howell, Whittall, Baker and Pistorius, representing this community, advanced, and stopping short at the head of the steps, Mr. Marshall, as Chairman of the Chamber of Commerce, then read the following address:—

MAY IT PLEASE YOUR MAJESTY:

The Foreign Residents of Yokohama, enjoying the hospitality of this Empire and the protection of Your Majesty's Government, have deputed us to the grateful office of welcoming Your Majesty on this auspicious occasion, and presenting to Your Majesty their collective congratulations upon an event which they regard as one of no common interest and importance in the history of this Empire.

Impressed as they have been with the advantages enjoyed by those nations who have adopted the system of railway communication, with the prosperity to which it gives rise, the prejudices which it dissipates, the unification of the different parts of a country which it tends to produce, and the wealth which it creates and helps to distribute, they cannot but feel that the event celebrated this day, is one

peculiarly worthy of the exceptional lustre which Your Majesty's august presence sheds upon it.

They rejoice to think that the approval which may be inferred from that presence at this ceremony cannot but exercise an important and beneficial effect upon the manner in which the people of this country will regard the work this day inaugurated, and tend towards reconciling those who are not yet convinced of its necessity or expediency, to the progressive policy of Your Majesty's Government, under which it was commenced, and on the assistance of which its further most desirable extension depends.

Representing, as we do on this occasion, the commercial relations existing between Japan and our respective countries; looking forward to the development of these relations; and knowing the blessings of peace and prosperity which they are the means of diffusing among nations who cultivate them with due appreciation of their beneficial influences; we venture to hope that no effort will be wanting on the part of Your Majesty's Government to place the trade of this country upon the broadest and most solid foundations, in order that it may minister to the consolidation of Your Majesty's power; the welfare of the Japanese people; and the extension of the relations at present existing between Your Majesty's Government and the Governments of the Foreign Powers allied by friendly treaties with Japan.

The gracious intentions of Your Majesty towards this Empire, abundantly manifested as they have been by public acts, which have been received with gratitude and acknowledged with satisfaction by the people, have redounded to the credit of Your Majesty's Throne in the eyes of other nations; and it may be permitted us to express respectfully our earnest hope that Your Majesty may be long preserved in health and prosperity to witness the beneficial effects of this rule upon an united, a prosperous, and a happy people.

Yokohama, 10th October. 1872.

The address was engrossed in Old English characters with illuminated capitals; was covered with a red silk wrapper with the chrysanthemum on the outside; at each corner was a tassel of red silk pendant from a tri-coloured rosette. The roll was closed by a tassel of red and gold silk, and the whole formed really a very handsome document.

To this the Minister for Foreign Affairs read on behalf of His Majesty the following reply:—

"I am profoundly pleased to hear the congratulatory words which have been addressed to me by the Foreign guests residing at Yokohama. Of the people who live in this country, whether born on this soil or merely temporarily abiding here, whether here by chance or voyaging hither of their own accord, none are deprived of protection or lose their rights. This work will be still further extended with the object of increasing prosperity and of advancing my country in the path of civilization, and as long as the harmonious relations now existing between this and foreign countries continue to endure, I shall have both foreign and native people close to my heart."

The deputation then retired, facing His Majesty. Following them came a deputation of the Japanese community, among whom we recognized Mr. Takeshima, the President of the Gas Company. These gentlemen—five in all—were dressed in grey silk robes over black undergarments and wore the usual merchant's sword. The following address was read by the spokesman:—

"At the present moment the brilliant fortunes of the Empire have received a sudden impulse, and Your Majesty's sacred goodness illuminates the universe. Yokohama, for instance, advances daily in prosperity, and every merchant thrives in his business. Since the introduction of the telegraph and the postal system, communication with all parts of the country has become unimpeded. In addition to this the railway being now completed, the most distant places have become neighbours. It is possible to go backwards and forwards between Yedo and Yokohama in one day and heavy merchandize can also be carried. Railways had already been tried in civilized

countries, and the ingenuity of the contrivance was such that the invention has lately been brought into the Empire. The speed and convenience thus assured becomes a source of wealth and begets profit, more than tongue can describe. As this port is the chief seat of trade its whole commercial population enjoys Your Majesty's gracious favours in a high degree. The progress of the Empire towards civilization dates back but a few years, but the people of all nations admire and applaud the introduction of this glorious and unsurpassed work thus early. Henceforward we feel certain that as Your Majesty's reign goes on, the foundation of prosperity and good fortune will be laid, an eternal work shall be perfected, and in the end we shall stand on a level with and even surpass all other countries in the world. Your Majesty's people to-day look forward with confidence to the future, and hope to persevere diligently. Truly it is the most magnificent work seen since the foundation of the world, and we cannot find words sufficient to express our joy. Your Majesty's people take advantage of this visit of Your Majesty to offer their slight congratulations. They all rejoice unrestrainedly and pray that Your Majesty's reign may last for a myriad years. Your humble subjects, as representatives of the whole people, reverently offer their congratulations. Reverently represented with real awe and real fear.

14th October, 1872.  
(Signed.)

HARA ZENSABURŌ,  
TANAKA HEIHACHI,  
TAKASHIMA KAYŌMON,  
KANÉKO HEIBEI,  
MASUDA KAHEI,

To this Mr. Oye Taku, Governor of Kanagawa replied on behalf of His Majesty as follows:—

"I rejoice at your congratulatory words. Do you act up to their meaning and may success crown your efforts."

The deputation then withdrew.

We should here say that the seats erected for the spectators were filled with a large number of foreign residents on one side and Japanese on the other, while thousands of natives thronged the streets outside the barrier, the bridge, which formed an excellent spot for viewing the ceremonial, being also crowded. During the intervals between the presentations the band of the *Belliqueuse* played a selection of airs. And we may here state that when His Majesty left the pavilion, crowds of Japanese rushed to the throne and, anxious to obtain a relic, seized upon and broke the lacquered chair to pieces, and cut one part of the carpet into fragments to keep as mementos of the occasion. Indeed, at this point, the crush was so intense that it is a wonder that the flooring of the pavilion did not give away. Fortunately, however, no accident occurred here, and the remains of the chair being taken away by some officials, the pavilion was eventually deserted.

But to return. The native deputation having left, His Majesty almost immediately descended from the throne, and, returning by the reverse road to which he had come, re-entered the Central hall and retired to the room set apart for him and decorated in very much the same style as at Yedo. Resting here but a few minutes, His Majesty passed again through the Central Hall and along the platform to the train, where the troops on guard presented arms, the buglers playing the meanwhile. Once more entering the train, Yedo was soon reached, nothing of any importance occurring on the road, another salute being fired by the men of war in harbour as the train appeared in sight of the shipping.

Alighting at Yedo the Mikado proceeded slowly along the platform to the throne before described, and upon taking his seat and when all the members who formed procession occupied their respective places, His Majesty read the following speech to the assembled officials on the occasion.

"You announced to me the completion of the first line of railway in our country. I have opened it, and it gives me great pleasure that it is so great a source of convenience. This great work was commenced in the early days of an extensive general reform, with the hope that the peo-

ple would enjoy to all time the benefits arising from it. The perseverance and energy which have been manifested in carrying it out are worthy of high praise. I expect it to result in an increase of the national prosperity, and I congratulate both you and the people on the prospect which lies before us. It is my intention to develop the railway system still further, and I hope, beginning with this line, to spread it throughout the country."

After this speech was over the Prime Minister advanced to the Throne, followed by all the officials present, and, in the name of himself and others, read the following address to His Majesty:

"The Railway between Yedo and Yokohama having been completed Your Majesty our Tennō celebrates its opening at the head of your ministers. Your servants take advantage of the occasion to respectfully offer a word of congratulation upon the accomplishment of this great work. The object aimed at in successive ages and the chief duty of Government, are to increase the national prosperity and to confer benefit on the people. Since the commencement of the renovation of the Central Government Your Majesty has laboured from morn till eve with unceasing energy, and has effected great reforms in every direction, with the object of rendering the condition of the country more and more prosperous. It is unnecessary to endeavour to prove that such a work as this benefits both the State and the people. It is alone due to Your Majesty's unceasing energy and the humble co-operation of Your Majesty's servants. It is the sole desire of Your Majesty's servants that this work may receive further development, and that its immense benefits may be extended to the whole country, so that the people may gratefully appreciate its blessings as long as the universe endures."

His Majesty then addressed the people of Tokai in the same speech as at Yokohama.

Then here, as at Yokohama, the deputation of five merchants on behalf of the whole city residents (merchant class) presented an address to which the Deputy Chiji of Tokai-shi, gave the same reply as to the Yokohama merchants.

Then the staff of Railway Officials both native and foreign advanced before the dais preceded by the Commissioner of Railways. His Majesty read the following speech.

"I feel greatly satisfied at the successful result of your perseverance and devotion to the work committed to your charge, and it gives me much pleasure to acknowledge the services of those foreign gentlemen whose experience and knowledge has contributed to its completion."

The Minister of Public Works then read the following address relative to the railway undertaking by the Government.

"Represented with real awe and reverence. Your Majesty has deigned to be present at the completion of the railway between Yedo and Yokohama, and to celebrate the opening thereof. Following upon Your Majesty's address to the officials of Your Majesty's Government and the people, the officials of this Department have been favoured with Your Majesty's gracious appreciation of their labours. Your Majesty's servants esteem themselves fortunate in living in a sacred age, and in being associated in this great work. Their feelings of reverent gratitude for the gracious words which have been addressed to them is beyond expression. They reverently venture to observe that the causes of the completion of the great work were that two or three of Your Majesty's chief servants, disregarding public clamour, spent painful thought in bringing the project before Your Majesty, and that Your Majesty's wisdom saw fit to resolve upon its being carried out. In consequence of the commencement of this great enterprise in the middle of a busy time of general reform and the administration of government, and of the large sums of money provided for it from Your Majesty's treasury, this first line has been completed, and the advantages of railway communication have been for the first time brought to the knowledge of your people. The whole country is now united in a resolve to develop the magni-

ificent work on a large scale. The cause is no other than the great benevolence of Your Majesty, which it is the good fortune of your people to enjoy. What other reward can your servants wish for the insignificant labours they have performed. They are penetrated with the deepest gratitude on hearing, at the very moment when the great work has been completed, the words which have announced Your Majesty's gracious desire to extend this system to the whole country, in the hope that the prosperity of the Empire may gain thereby. Your Majesty's servants are now stimulated to renewed exertions; and they hope, by diligently working from morn till eve, in the extension of this great public work, to discharge a ten thousandth part of the gratitude they owe for Your Majesty's sacred favours. They humbly pray that the public works of the empire may be developed from day to day and from month to month, so that Your Majesty's sacred will may be obeyed, the national prosperity be increased, the people be benefitted, and the memory of Your Majesty's great achievements and virtues be handed down and made known through myriads upon myriads of succeeding years. Represented with real awe and reverence."

All the officials then retired to their respective posts, and the procession fell back to the Central Hall on reaching which His Majesty retired to a private room, and soon after entering his state carriage returned to the Castle. The foreign Ministers then went to Hamagoten where they were entertained at a cold collation and at 5 p.m. all returned to Yokohama, thus bringing to a conclusion the proceedings of this very eventful day.

At Yedo, as at Yokohama, crowds of Japanese thronged the platform and ever and anon, as the weight of the crowd increased, portions of the platform gave way, but fortunately no one was hurt. One accident only happened and that to a Japanese, we believe an employé of the railway, who fell under the engine when over the ash pit and received such injuries to his hands as to necessitate the amputation of all his fingers.

In the evening the streets in Yedo were illuminated, the station being a vast blaze of light, as were the streets around. In the foreign concession the American Consulate was illuminated, the flagstaff and stays being hung with lanterns from the top to the ground. At Hamagoten there was a pyrotechnic display and large numbers of Japanese crowded the streets until a late hour at night.

In the evening the native town of Yokohama was prettily illuminated. The brilliancy of gas cannot be expected from candles in paper lanterns, but the effect was pleasing, and the sight attracted large crowds whose behaviour was orderly and good-humoured in a high degree. At intervals along Curio Street were stages in storeys, some built up to the height of thirty or forty feet, and illuminated with red lanterns. The presiding figure in the uppermost storey was an apparently mythological female figure. The lower storey was set apart for an orchestra consisting chiefly of flutes and drums, producing music which could not be heard and cannot be recalled without a shudder.

The day passed off with the greatest gaiety and good humour. The ceremony was an entire success, and the occasion must be regarded as one of happy augury for Japan.

But we are compelled to note one or two deficiencies which it is very hard to explain, and which, if unexplained, involve a breach of courtesy reflecting gravely upon the managers of the ceremony. No invitations to attend it would appear to have been sent to the representatives of the French and English Naval and Military Services. The goodwill of these services towards Japan has never been wanting, and it is to be observed that the ships of both were dressed in honour of the occasion, in spite of an omission which might easily have suggested a different course.

#### THE FRANCO-PRUSSIAN WAR.\*

IN a recent issue of this journal we reviewed at some length a work on America published by Mr. Mori, Japanese Chargé d'Affaires at Washington, and in doing

\* *Petite Histoire de la guerre entre la France et la Prusse (juillet 1870—Mars 1871)*—par R. Watari, Japonais, étudiant à Paris, France. Paris, Typographie Lahure.

so we naturally inferred that the author was the first native of this country who had essayed the perils of the press. We find, however, that Mr. Mori does not stand alone; his honours are disputed by Mr. Watari, a Japanese student in Paris, who has ventured to pen a short work descriptive of the Franco-Prussian war. It is but a small volume of only 63 pages, but the result is the same—it marks a vast progress in the minds of those Japanese who have studied in foreign countries—a progress which in the due course of time must inevitably leave its mark upon the nation itself.

Intrinsically the brochure now before us demands but little notice. It is but a slight sketch of the events which preceded the war, of the struggle itself, and its results. Mr. Watari, who has, as is natural, a slight bias towards the French, refrains from going below the surface; he leave details to others, but to a Japanese, whose acquaintance with the history of the war must necessarily be little, he conveys an idea which, on the whole, is fairly accurate.

In his preface, Mr. Watari tells us he was in Paris during the whole of the siege "même quand cette ville était en état de siège" and, though not contained in the pamphlet in question, it would be extremely interesting to learn the sentiments which must have animated the mind of one so strange, as was Mr. Watari, to such scenes as resulted from the siege. A Japanese view of an European war would be a novelty to foreigners, and it is perhaps to be regretted that our author has not given us something more than a mere historical outline. But barely one word of criticism or reflection is to be found throughout the pages, though he indirectly praises the French for their bravery in danger and their resignation under uncontrollable reverses. "Paris était admirable de résignation et de courage, et les femmes elles-mêmes ne se plaignaient pas." In another place, in drawing his remarks to a conclusion, he says: "ainsi se termina cette sanglante lutte de deux grands peuples qui laissa la France ravagée, ruinée et mutilée."

Beyond this we need not quote anything from Mr. Watari's history, though it may not be out of place to state two facts, perhaps not generally known, which he gives us—Germany gained 1,616,778 in population by the acquisition of its new territory, and throughout the war took as many as 445,769 prisoners.

For the purpose of affording information to Japanese the book would doubtless be very useful if translated into the native tongue, and as Mr. Watari, having once tasted the sweets or bitters of authorship avows his intention of supplementing his work by a history of the Commune, he may also undertake the translation of both. Should a copy of his second work perchance fall into our hands we should be pleased to notice it, for small as it is, its writing cannot having been accomplished without great labour and perseverance and these cannot be too greatly encouraged.

#### AMATEUR THEATRICALS.

On Wednesday evening the adjourned meeting of those interested in the revival of amateur theatricals in Yokohama was held at the Gaiety Theatre, Mr. W. H. Smith in the chair.

The Committee, appointed at the last meeting to see how far the community would respond to a call upon their liberality in order to defray the rent of the theatre, reported progress. Altogether a sum of \$758 had been collected, and Mr. Townley said they might fairly hope to double it.

After some conversation, Mr. Pearson said that, with respect to the properties, the old corps had received some \$1,600 of the public money to purchase many of them, and the least that could be done now the corps was breaking up would be to hand the properties over to the public without charge.

On the motion of Mr. Merry, the transfer of the properties was left to be discussed by the Trustees of the old corps and the Committee of management to be appointed by the subscribers.

After further conversation it was decided that the Committee now appointed should, at such time as they may consider the subscription list closed, call a meeting of the subscribers to appoint a Committee of management.

The meeting then passed to the discussion of the best means of raising a new dramatic corps, but after much discussion

nothing practical was elicited until Mr. Smith, from the chair, took down the names of those present willing to become members of the new corps. A meeting of those gentlemen—some eighteen in number—was then appointed for Saturday evening next, same place and same hour, and the meeting dissolved.

#### YOKOHAMA RIFLE ASSOCIATION.

Yesterday afternoon, the annual meeting of this association was commenced, the three undermentioned prizes being shot for. The weather was all that could be wished, though some present complained of the light during the earlier stages, before the sun sank behind the trees on the right bluff. The matches were open to all and to any gun, but despite the number of Henry, Metford, Whitworth and other match rifles, the army Snider, or, "the old gaspipe," as it has been scoffingly termed, led the van each time. The R.M. battalion secured a fair share of the events, Captain Hill leading in each contest, though disqualified by the rules from taking more than one prize. We give below the leading scores and a few explanatory comments. To-day, the Association Cup and the Association Medal, the two events of the meeting, will be shot. We should mention that a Japanese gentleman, Mr. Motura, fired in the first two matches, but unfortunately failed to make a good average.

#### FIRST DAY,

Friday, 18th October.

1.—THE COMMITTEE'S CUP.—Presented by the Committee. First Prize, The Cup, value \$30; Second Prize, Half the entrance fees. Open to all Comers. 7 shots at 300 yards. Entrance \$2.

1—Capt. Hill, ... 2 2 4 3 3 3 3 = 20

2—Mr. Vivanti ... 3 2 2 3 0 3 3 = 16

At this, where of all others ranges, it was expected that the small bores would show their alleged superiority, the two prizes fell to Sniders; but the shooting was hardly up to the average.

2.—THE RANGE SWEEPSTAKES.—First Prize,  $\frac{3}{4}$  Entrance Fees; Second Prize,  $\frac{1}{4}$  Entrance Fees. Open to all Comers. 7 shots, at 200 yards. Entrance \$2. Winners Excluded.

1—Capt. Hill, ... 3 3 3 4 3 4 3 = 23

2—Mr. Barnard, ... 3 4 2 3 2 3 3 = 20

3—Mr. Townley, ... 3 2 3 3 3 4 2 = 19

4—Mr. Vivanti, ... 3 2 3 2 4 2 3 = 19

Both Captain Hill and Mr. Vivanti were excluded by the rules, but both shot through the seven rounds. Capt. Hill made the excellent score of 23 out of a possible 28, Mr. Barnard following with 20, one below an average of centres, Mr. Townley and Mr. Vivanti tying at 19. The prizes, of course, fell to Mr. Barnard and Mr. Townley.

3.—THE BANKERS' CUP.—Presented by the Bankers of Yokohama. First Prize, The Cup, value \$30; Second Prize, \$20. Open to all Comers. 7 shots, at 400 yards. Entrance \$2. Winners Excluded.

1—Capt. Hill ... 4 4 4 4 3 3 3 = 25

2—Mr. Bresciani ... 3 3 4 4 4 3 2 = 23

3—Pt. Spanswick, R.M. 3 4 3 3 2 4 4 = 23

5—Pt. Mitchell, R.M. 3 4 4 3 4 3 2 = 23

This was perhaps the best match of the day, and being so close a struggle for first honours, the score was watched with much interest. Captain Hill again led with four bulls eyes and three centres, most excellent shooting; Mr. Bresciani and Privates Spanswick and Mitchell tying for the prize. In shooting off Mitchell made a bulls eye, Spanswick taking second place.

This concluded, a sweepstakes was fired, Mr. Benson and Mr. Bresciani tying. In shooting off, Mr. Benson won.

#### Law & Police.

IN H. B. M.'s CONSULAR COURT, AT KANAGAWA.

Before Mr. Consul ROBERTSON.

Thursday, October 17th.

Osman and Postung, Malay seamen of the British bark *Omah Pasha*, were charged with assaulting See Hing a Malay seaman. Prisoners pleaded guilty.

Plaintiff sworn stated.—My name is See Hing. The night before last met the two prisoners and went with them a little way. Was going to buy food. Prisoners struck me with some iron thing they had in their hands. They both struck me. They hurt my head in two places. They then both ran away. Complained of the assault yesterday morning. A man name Aloo was present at the time of the assault.

Prisoner Postung said that the plaintiff had taken away a girl from him at Singapore and that was the reason he struck him.

Osman stated he was only assisting his friend. Each were sentenced to one month hard labour but to be put on board their ship in case she sailed before the expiration of their sentence.

#### Extracts.

##### DR. LIVINGSTONE.

##### HAS STANLEY FOUND HIM?

*Critical Examination of the Evidence—The Probabilities of Fraud. (San Francisco Bulletin.)*

In the *Bulletin* of the 20th instant, under the head of "The Discoverer Discovered," there is a brief statement of the fact that there are still "doubting Thomases" who disbelieve in Stanley and his discovery of Livingstone, who think the whole account of his African journey an invention, and his Livingstone letter a forgery, followed by a concise summing up of the points that tend to establish the integrity of the great explorer, and an extract from the *London Times* giving the weight of its great authority in his favour. The question involved is one that interests every lover of science or humanity, and it is not doubted, that before disposing of so important a matter, the *Bulletin* will allow its readers to "hear both sides."

What are the facts? The circumstances connected with Dr. Livingstone are too well known to need repetition. A devotee of science, who had taken his life in his hand and pushed boldly into the great jungle of Central Africa, and who, upon evidence that seemed conclusive, was mourned by his friends and by the world as dead. If he was yet living, he was in the interior of a vast and almost inaccessible continent, surrounded by savages and destitute of any means of escape. To undertake to find him from without, was an enterprise too desperate even for hope herself.

Suddenly, H. M. Stanley, of whom the world had no previous knowledge, appears upon the eastern coast of Africa, and announces himself as the agent of the *New York Herald*, sent to be the leader of an expedition, to be there organized, to go in search of Dr. Livingstone. The audacity of the enterprise, on the part of both employer and employed, arrested the attention of the whole of Christendom, and prepared the public mind for whatever was to follow. In a few months the telegraph, and in due season thereafter, the mails proclaim the entire success of the expedition and thrill all humanity with the intelligence that Stanley has found Dr. Livingstone alive and well, has relieved his necessities, and left him to complete his great work.

Armed with letter and despatches purporting to be from Dr. Livingstone himself, and with a tale of incident and adventure that was undoubtedly Oriental in its marvellous details, even if all true, he has dashed like a meteor across Europe, and for the moment dazzled and blinded those who wished his statements true, into an acceptance of them, almost without question or doubt. Their very audacity seemed to demand belief, and everywhere honours and courtesies were showered upon him. Geographical and other learned societies welcomed him with open arms; intelligent men of every civilization greeted him as a new leader, and royalty itself—both past and present—stepped out of its charmed circle to acknowledge a nobility higher than it was in its power to bestow. What was the marvellous tale as told by himself?

That he had started from Zanzibar, upon the eastern coast of Africa, with an expedition fitted out by himself, to go in search of Dr. Livingstone. The party included two white men besides Stanley, and a large number of natives, horses and asses.

That he had traveled for about three months, nearly west, upon a regular caravan road, about six hundred miles, to Unyanyembe upon the route pursued by Burton and Speke twelve or fourteen years before. On the way he had lost by death one white man, ten natives, two horses and twenty-seven asses, and the residue were so weakened by sickness and the climate that a rest was necessary.

At Unyanyembe, while halting to recruit, Stanley himself was stricken down with the remittent fever of the country, and his further progress to Ujiji stopped by a demand for tribute from the sovereign through whose dominions he must pass. By making a

## BIRTH.

On the 5th January, the wife of EDWIN J. SPENCE, Esq., of  
a daughter.

## Summary.

SINCE our last, the following mail arrivals and departures  
have been noted. Arrivals:—Dec. 28th, P. M. S. S. *Japan*,  
from San Francisco; Dec. 31st, M. M. str. *Volga*, from Hong-  
kong; Jan. 5th, P. & O. str. *Sunda*, from Hongkong.  
Departures:—Dec. 30th, P. M. S. S. *Japan*, for Hongkong;  
Dec. 31st, P. & O. str. *Bombay*, for Hongkong; Jan. 7th,  
M. M. str. *Volga*, for Hongkong.

The absence of any mail for San Francisco in the middle of  
the month compels us to despatch this issue by the French  
steamer *Volga*. The news we have to report is of a varied  
nature, though the intervention of the Christmas and New  
Year's holidays has somewhat affected trade.

The change in the Japanese calendar, by which the Japanese  
year is assimilated to that of most civilized countries, is one  
of the most important events of the fortnight. The altera-  
tion was made without any difficulty or public opposition,  
though it is currently reported that the advancement of the  
native settling day—as explained in our last—has caused  
some trouble among native merchants. Owing to the short  
notice which had been given of the intended alteration, the  
Japanese festivities were not so prolonged or of so extensive a  
nature as has generally been the case; but the houses were  
decorated as usual, and business was entirely suspended.  
(Page 15.)

On the 25th and 26th ultimo, the exhibition at Yedo of  
manufactures and products which are to be sent to the Vienna  
exhibition of this year was opened to the foreign public, and  
on both days large numbers availed themselves of the govern-  
ment invitation. The display of cereals and some of the products  
was rather poor; but the collections of lacquer and porcelain  
were very good. The idea prompting those under whose  
supervision the collection was made, seems to have been to  
introduce native wares in the European markets. Thus, in  
viewing the collection at Vienna, it must be remembered that  
the Japanese department is not merely a collection of curios

and articles *de luxe*; but of wares made in Japan and suitable  
for foreign use. (Page 10, 12.)

It has been announced by one of the local journals that the  
Japanese Government contemplates an additional issue of  
paper money, to the extent of 50,000,000 *rios*. We publish  
elsewhere an official denial of the statement; indeed the scheme  
is of a character so entirely foreign to the course lately pur-  
sued by the Japanese Government that the announcement  
was, from the first, viewed with some doubt. (Page 15.)

On New Year's eve one of the leading merchants of both  
Yokohama and Yedo, named Yama-Shiro, committed suicide.  
The reason for this act is not positively known, though two  
reasons are assigned for it. (Page 17.)

A most lamentable accident, resulting in the death of a na-  
tive child, lately befel a shooting party near Oiso. Published ac-  
counts state that while a gun was lying across the knees of one  
of the party who were resting in a tea house, one of the charges  
exploded, the shot entering the stomach of a child standing  
close by, the boy surviving the shot for about half an hour.  
The matter has been duly reported to Mr. Dohmen, H. B. M.'s  
Vice Consul for Yedo. (Page 16.)

On the 23rd December at 7.30 p.m. a fire broke out in the  
village of Homoko, occupied chiefly by fishermen and a few  
farmers. A strong wind was blowing at the time, and the  
houses being all covered with thatch, the flames spread with  
great rapidity, destroying no less than 42 houses and rendering  
324 people houseless. A subscription list was circulated among  
the foreigners in this settlement and the sum of \$390 raised  
for the relief of the homeless. Under the superintendence of  
Mr. Dickens and the Nanushi of the village this sum was dis-  
tributed among the people, who expressed great gratitude for  
the timely help. (Page 16.)

On the 25th a fire broke out at Kawasaki, destroying no  
less than 110 houses. Three persons lost their lives during the  
conflagration. (Page 17.)

We may note, as showing the advancement made by the  
Japanese in the manners and customs of western nations, that  
a party recently returned from the country found large quanti-  
ties of beef, pork and beer on sale for native consumption.  
(Page 17.)

At a meeting recently held at the Public Hall, it was resolv-  
ed to form an Athletic Club. The initiatory proceedings have  
been taken, and it appears probable that the Club will meet with  
success. (Page 12, 17.)

A meeting of the subscribers to Christ Church was held on  
the 31st ultimo. A proposal to raise the pew rents was much  
discussed, but ultimately shelved. The Treasurer's report  
and the accounts were received and passed. (Page 13.)

Two pony paper hunts have to be recorded: one on Christ-  
mas day, won by Mr. Abbott on Haut Ton, and the other on  
New Year's day, won by Mr. Thomas on Garry Owen.  
(Page 17.)

On the 2nd inst. H. I. M. the Mikado received the Corps  
Diplomatique. The usual congratulatory speeches were made,  
the only noticeable feature being the allusion to the change  
in the calendar. (Page 16.)

From Nagasaki we hear of a serious riot at the Takasima  
coal mines. The rioters destroyed several houses and did  
much damage to property; but were eventually overpowered,  
and the ringleaders arrested. During the fight which took  
place two of the natives were killed. (Page 16, 17.)

## 1872.

IN our summary of the year 1871 we traced with as much accuracy as was possible to us, and as much detail as seemed necessary, the movements of the great clans which preceded the formal abolition of the feudal system in Japan, an event towards which the mind of the nation had moved so rapidly and undeviatingly during some previous years, that when the formal announcement of it was made by a proclamation from the Throne on the 29th August 1871, neither surprise, regret nor remonstrance was shown in any part of the Empire. Two of the great clans which had taken leading parts in the Revolution had previously been propitiated by the allotment to prominent members of them of posts as Councillors of State, and the flattering advances made to the others not only secured their adherence to the Imperial cause as represented under its new conditions, but attracted to it from all of them the important accession of considerable contingents of troops intended to form the nucleus of a national army. The machinery of the administration had also been previously adjusted to meet the exigencies of the new position by changes in the Cabinet which, though involving no alteration of its *personnel*, assigned to its members posts which their antecedents and special endowments best fitted them to fill. Time being fully ripe, the proclamation, simple in form yet pregnant with weighty thought, was launched from the Throne, and the polity of Japan assumed an external shape more in harmony with her aspirations and more adapted to her necessities than that which, however well it may have suited her old condition of isolation, was at once an anachronism in her present history and a stumbling-block in her path of progress. The preparation for this change which the public mind had previously undergone, had, as we have said, removed or reduced all the obstacles which opposed it, the year 1871 was brought to a close in peace, the last weighty event in it being the despatch of an important mission to America and Europe.

The year 1872 dawned in peace and full of promise of a novel and interesting nature. The good vessel of the State, now no longer confined to moorings from which a span of the surrounding water was mistaken for the entire ocean, spread her canvass to unaccustomed winds, and set sail upon a voyage of such adventure and discovery as will at least dispel, or prevent the recurrence of, any such delusion for the future. H. M. the MIKADO celebrated the first day of the year by a State visit to the Arsenal at Yokosuka, where he inspected the works completed and in progress, and passed through an accidental "baptism of fire" with a calmness which, though characteristic of exalted rank under similar circumstances, never fails to make a favourable impression upon the crowd, or to secure to its possessor the homage which the world instinctively pays to personal courage. A few days afterwards he received the congratulations of the Diplomatic Body upon the opening of the new year and the prosperous state of the Empire.

Early in January welcome news arrived from Nagasaki that a number of native Christian converts who had been arrested and threatened with deportation on account of their faith, had been released by the orders of the cen-

tral Government. This was the first real triumph which diplomacy had obtained on this question, and though largely due to the persistent efforts made in the same direction by other Representatives of the Treaty Powers, was immediately the consequence of the urgent representations of Mr. ADAMS and M. de TURENNE. The efforts of the authorities had long been directed towards securing the apostacy of the converts, and were so far successful that some few of them regained their liberty by renouncing their faith. Those who still clung to it were treated with less severity than formerly, and it became evident that the views of the Government on this question, if not indeed its conscience, had been impressed by the representations of the Foreign Ministers. Yet the truth must be told, and Japan must bear as best she can the shame attendant on the telling of it. Out of about three thousand men, women and children imprisoned some four years ago, nearly two thousand have succumbed to the privations and misery consequent upon their confinement. Exposed with but too little shelter to the summer heats and the winter's cold, exhausted by excessive labour and reduced by insufficient food, their numbers have gradually diminished until some fifteen hundred or two thousand of them now only remain to dispute the scanty bread and water of their affliction, and to illustrate the inconsistencies into which governments fall when they limit their efforts to showy appeals to a world they desire to conciliate, and neglect justice, mercy, and the weightier matters of the law in dealing with their own subjects. Rumours have lately reached us that the more lenient treatment which these poor sufferers experienced after the releases of the early part of the year is being again exchanged for the former severity. These rumours want confirmation, though they are far from ill-founded, and, if true, the world will surely hear of them, to the grievous detriment of the reputation of this country. At Hakodate, thanks to the remonstrances of M. BUTZOW, the Russian Minister, some unwarranted arrests of Christian converts were summarily withdrawn and subsequently atoned for. About a month ago it was reported in Yedo, even among native officials of high position, that an amnesty was to be granted at a fixed date to all the surviving objects of the former persecutions, and a large measure of religious toleration proclaimed throughout the Empire. But the Government has not yet thought proper to gratify the hopes which naturally sprang from these rumours. Let us hope that the year now dawning, fraught as it must be with the gravest consequences to this Empire, may witness a concession to the people of that greatest of boons to them, and most certain guarantee of growing enlightenment on the part of their rulers—Liberty of Conscience.

Later in the month of January the Government took a step indicative alike of an advance in its views upon an important question in the science of Political Economy, and of its power to face a deeply-rooted and pernicious, yet natural, prejudice on the part of its subjects. There is no subject on which the minds of the people are more sensitive and excitable than that relating to the price and supply of the staple article of their food. Any legislation tending to raise its price, or seeming to endanger its supply, places the authors of it in serious jeopardy, and a weak government proposing any measure which, however er-

roncously, might be thought calculated to produce either of these results, might not only find itself dislodged in a moment from power, but might light up a flame of disaffection, or even of rebellion, the quenching of which would prove a difficult task. And especially is this danger great in Asiatic countries, where the people have but scant means of making their opinions known, and extremely little faith, or grounds for it, in the disinterestedness of the acts of their official superiors. Knowing their government to be more or less corrupt, they suspect it on all occasions, but never so fiercely as when it touches the price of food. And here it may be remarked that the wisdom which the Japanese Government, as represented by its Council of State, constantly shows in its decisions or in the measures which it inaugurates, is as constantly traversed by the folly or incapacity of the officials entrusted with the carrying out of them. We have often to congratulate the Government upon measures which could only proceed from sagacious and enlightened men, and we have as often to comment upon acts which can only be accounted for on the supposition of an incredible ignorance in the subordinate administration, or of a system of corruption, which, while it largely neutralizes the benefits to the people of those wiser measures of the Council, is the worst canker which can infect official life.

The measure, however, to which we refer was one removing the restrictions upon the exportation of grain. Leaving the prohibition against the export as it had hitherto stood, it provided that the surplus stores existing at any moment in the country might, at the discretion of the Government, be sold for exportation by public tender to Japanese or Foreigners. The measure was excellent, but was immediately negatived, so far as its beneficial effect to the commercial community at large was concerned, by confiding the whole business to the care of one mercantile firm. Two or three mock auctions were held at which the Government bought in the quantities advertised for sale, and foreign buyers, indignant and disgusted at being made the dupes of a crafty scheme of imposture, refused to expose themselves afterwards to a repetition of this treatment. The protests made by this Journal against the proceedings of the Government were incessant, though they failed to change its decision; and the objections of the mercantile community to acts so detrimental to its individual members, though loud and incessant, were unfortunately nothing more than this. They never took any collective form, or were embodied by the Chamber of Commerce in a *note identique* to the Ministers of the various Treaty Powers. Had this been done, and had the arguments embodied in this note been sound, carefully weighed, and strongly urged, we have no manner of doubt but that the trade would have been properly thrown upon to the mercantile community at large. But a mysterious palsy seemed to seize it, the objections evaporated in mere discontent, and a measure calculated to be of equal service to Japan and to the foreign community was allowed to shrivel into a concession made to a single firm, the Government itself deriving no benefit from that competition which would have been ensured by a wiser carrying out of its policy.

In March was published the text of a Treaty between

China and Japan which had recently been made in Peking. It contained a clause binding each country to an offensive and defensive alliance in case of external attack, and the ratification of it was refused by Japan on this account. Such commercial intercourse as exists between the two countries is now supervised by officers entrusted on either side with the protection of their nationals, and the question of any fresh treaty seems to have fallen into abeyance.

Towards the end of the same month an alarming report reached Yokohama that an attempt had been made upon the life of the MIKADO, and that a wide spread conspiracy existed for the subversion of his power. It originated in the endeavour of ten persons—Buddhist fanatics—to enter the front gate of the Palace with a petition which they expressed a desire to lay at the feet of His Majesty. Although told that their proceeding was irregular, they persisted in their attempt to enter the castle, but were quickly disarmed and taken into custody.

On the 3rd April a great calamity overtook the city of Yedo. A fire broke out in a *yashiki* belonging to the Aidzu clan, and under the influence of a high wind spread with great rapidity. It raged for over twelve hours, and swept away everything from the Nihon Bashi downward to Skidji, and from the Castle to the beach. Ample evidence still remains of the magnitude of the disaster, though it will undoubtedly be the cause of a great improvement in the appearance of the city, which is to be rebuilt more substantially and on a better plan. 41 Streets and 5,117 houses were destroyed, and over twenty thousand persons rendered homeless.

On the 6th May H. M. the MIKADO paid a visit of inspection to the Kaiseijo, the foreign school of Yedo, and expressed his satisfaction at the results of the examination of the pupils which was held in his presence.

Early in the same month an Exhibition of a somewhat heterogeneous nature was opened in Yedo, and attracted large numbers of native visitors, for whom the collection of antiquities, curiosities, foreign and native products or works of art, may conceivably have had some interest. The attempt was praiseworthy, and must be regarded rather in relation to the direction of the endeavour than its actual success.

A similar but much more ambitious attempt was made at Kioto about the same time. Liberal concessions in regard to the privilege of travel were made to foreigners, and visitors from all the open ports of Japan and from China availed themselves of the opportunity of seeing a city renowned in Japanese history, picturesque in its character, and attractive in its decay.

Although but a minor event in the history of the month, the discovery of the tomb of William Adams by Mr. WALTER, near a temple in the neighbourhood of Yokoska, deserves a passing notice. The sturdy Englishman, who may possibly have seen Shakespeare, Bacon and Elizabeth, had given his name to a street still existing in Yedo, and found an honoured resting-place in the land whither, in his own pious and modest language, he had sailed "to make a little experience of the small knowledge which God had given him."

On the 12th June, after many delays, now perhaps forgotten, yet provocative at the time of much impatience and adverse criticism, the section of the railway between

Yokohama and Shinagawa, the port of Yedo, was unostentatiously opened for passenger traffic. As the ceremonial observed on the occasion of the more formal opening which took place later in the year, enters into the chronicle of the events of 1871, we content ourselves here with the bare mention of the foregoing fact.

On the 19th Mr. R. G. WATSON, who had relieved Mr. ADAMS as H. M. Chargé d'Affaires, had his first audience of H. M. the MIKADO, under circumstances which inaugurated a mode of receiving the Envoys of the Treaty Powers more conformable with the customs of European Courts, and with the attitude which universal custom prescribes as indicative of an equality between the monarch represented and the monarch approached, than those which had hitherto obtained at the Court of Yedo.

On the 28th H. M. the MIKADO left Yedo in the flag-ship of the Japanese Admiral, attended by a squadron of the Imperial Navy, for a visit to the Southern Provinces of the Empire, from which he returned after an interesting cruise of some weeks' duration.

In the middle of July every Englishman in Yokohama, not absolutely ignorant of or insensible to the high privileges of his birthright, was startled by a decision delivered by Mr. HANNEN, the Acting Assistant Judge, that English subjects were practically without the power of appeal from the decisions of the tribunal which had up to that time been known as the Supreme Court for China and Japan, a branch of which existed here under that name. This decision was delivered in a suit raised to determine the question as to whether an appeal lay from this Court to the Supreme Court in Shanghai. If not, our only possible relief from its judgments was by appeal to the Privy Council, the expense and delay attendant upon which practically deprived us of all power of appeal whatsoever. The case was ably argued by Mr. DICKINS from the text of the Order in Council of 1865, and in giving judgment, Mr. HANNEN confessed that he could find no section of the Order under which he could grant an appeal from his decisions to the Supreme Court in Shanghai. The arrival here of Sir EDMUND HORNBY in August afforded the Chief Judge an opportunity of reviewing the question, and considering the further arguments adduced by Mr. DICKINS against the assumed extent of the jurisdiction of the Court. These arguments were admitted to be irresistible, and the Court was pronounced a Provincial Court, with power to grant an appeal from its decisions to the Supreme Court at Shanghai. It should be mentioned that in recording his judgment, Sir EDMUND HORNBY expressed his concurrence in the decision of the Acting Assistant Judge in the case in which the suit instituted to try the right of appeal originated, and affirmed that as the pleadings in the original suit had been formally headed "In the Supreme Court," no further appeal, even to the Privy Council, could be admitted. If may be remarked, on the one hand, that the question of the correctness of Mr. HANNEN's original decision was not before the Chief Judge, who must have disposed of it before hearing those arguments against it which could have been adduced upon an appeal; and, on the other hand, that the pleadings could only have been headed as they were while the Court assumed to itself the title and jurisdiction of a Supreme Court. The plaintiff in the case was therefore taken between wind and water; condemned by a judgment against which he had resolved

to appeal, but cut off from the right of appeal by his submission to conditions indispensable to the bringing of his first suit. The anomalous nature of his position was only equalled by its happy rarity and by the practical hardship which it involved.

About this time an event took place the ultimate issue of which is yet uncertain, but which was destined to lead to a *cause célèbre* in the annals of this country, and to exercise a marked effect upon the iniquitous trade in human beings carried on with the sanction of the Portuguese Government from Macao. A vessel called the *Maria Luz*, commanded by an officer of the Peruvian navy, had been loaded there with coolies, and, having met with bad weather, had sought shelter here for the purpose of making repairs and taking in provisions. Although her appearance on inspection afforded no evidence that her freight was ill-treated, the suspicious distance from the shore at which she lay, and the sympathy for the coolies which the extreme heat of the weather not unnaturally excited, made their condition and fate, and the hateful trade of which they were felt to be the more or less unwilling victims, subjects of general conversation and discussion. It soon transpired that one of the coolies had been found one night swimming under the bows of an English man-of-war, and had been taken on board in a very exhausted state. Omitting details now sufficiently known and therefore of needless repetition here, the man was restored to the *Maria Luz*. But a second coolie, having also escaped and swum off to the *Iron Duke*, to the officers of which vessel he narrated the severity with which his companion had been treated, the attention of the Japanese authorities was called by Mr. WATSON, H. M. Chargé d'Affaires, to the illegal acts thus committed in their waters, an enquiry into which was at once instituted. The coolies were all landed, and an examination of them, which it is right here to state was not subjected to cross examination, afforded strong *prima facie* evidence for the belief that the severities and cruelties which are the ordinary and perhaps necessary accompaniments of this trade, had formed part of the discipline of the *Maria Luz*. After a full and protracted enquiry the Japanese authorities, seeing no law of their own or any obligation of international law, which could compel them to surrender to the Captain of the *Maria Luz* men who complained that they were held in duress by him, refused to force them on board again against their will, and ultimately shipped them back to China, whose authorities gratefully acknowledged the generous and spirited act. Much influence was brought to bear on the Japanese Government to induce them to waver in their views and change their course of action. The dangers to which it exposed them were urged and doubtless exaggerated. The informality, perhaps the technical illegality, of their act was equally pressed upon them. The interests of Peru had been, by the bitter irony of fortune, informally entrusted to the hands of the American Minister, who could easily have been pardoned for an exceptional treatment of them in harmony with the fundamental instincts of his country's heart and policy, but who chose to side with Peru as if he had been merely her attorney, instead of, before all things, the Representative of a nation which had spent its blood and wealth like water in the cause of freedom. The more popular representatives of the foreign press, mean and impotent

on the one hand, and adverse to the high-spirited decision of Japan on the other, contented themselves either with silly platitudes and impertinent personalities, or legal arguments which, through not urged without force and ability, were manifestly special pleadings upon technical points, and, as such, of little persuasive force in a question involving new developments of the world's morality, not yet indeed made universal law, but gradually being moulded into that form by the very pressure given to them by such cases as that under consideration. Though loth to obtrude our own action in this matter upon our readers, we venture to refer to one incident in it which was much misrepresented at the time. In first writing upon the question we used words which, though assuredly true, were perhaps susceptible of an actionable interpretation, with which, indeed, they were threatened. By these words we were content to stand for the sake of bringing to light all the iniquities which we were convinced attended this trade. But such a course would have been useless in the face of an enquiry instituted by the Government and answering every purpose which we hoped to subserve by our own defence; and therefore when a means was found, approved by referees of punctilious honour, and in itself far within the limits of what might have been said in elucidation of our words, whereby expensive and protracted processes of law could be avoided, we embraced them without hesitation.

About this time certain documents of a contemptuous and insulting character, purporting to be translations of despatches sent to Japan by the Korean Government, were published here and attracted some attention. Although the channel through which they were made public, and their own internal evidence, were sufficient to discredit, if not to negative, all idea of their authenticity, they were greedily accepted by the public at the value of their own pretensions, and caused much discussion in regard to the probabilities of a war between the two countries. They were promptly disavowed by the Government with some appearance of displeasure, though their authenticity was still asserted by the misled journal which acted as their sponsor. In all probability they originated in one of many similar attempts made by members of the Tokugawa party to discredit the course of action of the present Government, and arouse the pride and decaying vigour of the old national party. It was sufficiently well known that the Koreans lamented the fall of the Tokugawa family, and regarded with but little sympathy the rise of a liberal power friendly to the Western nations, eager to reform antiquated institutions, and entirely averse to that policy of isolation in which Korea ignorantly imagines that her welfare and safety consist. The relations between the two Governments were unsympathetic, if not unfriendly, and it was imagined that discredit might be cast upon the administration, even if not upon the Imperial cause itself, by showing that it had tamely submitted to insults which would in other times have roused the spirit of the nation to active revenge. We believe the attempt to have been entirely unsuccessful, little credit having been given to the documents in which it was founded. A mission of a mixed financial and political nature was sometime afterwards despatched to Korea under the charge of Hanabusa, a Daijō, or Departmental Head of the Foreign Office, and returned a

short time ago. The difficulty of ascertaining the exact truth in relation to matters which it is the policy of the Government to conceal, prevents our recording with any confidence the result of this mission, which was variously reported to have been received with contumely, if not with violence, and to have achieved an entire success. Suspicion certainly attaches to the persistency with which the Government has apparently thought it necessary to deny the alleged repulse of its overtures, and it is possible that considerable ground exists for uneasiness in regard to the relations of the two countries. The expense of a war with Corea, however, and the entire fruitlessness of any military advantage Japan might gain there, are stronger arguments for withdrawing from all connection with the country, than for operations undertaken in a mere spirit of revenge for possible discourtesies from an ignorant and barbarous people.

On the 15th August, H. M. the MIKADO paid an unexpected visit to Yokohama on his return from the South. Little ceremonial attended his landing from the flagship, and after a stay of a few hours he proceeded to Shinagawa by special train, making his first acquaintance with the Railway on this occasion.

On the night of the 24th August the *America*, the newest and finest vessel of the Pacific Mail Company's extensive fleet, was entirely destroyed by a fire which broke out in her after steerage. Its origin is to this day enveloped in mystery, although the Court of Enquiry summoned to investigate the circumstances connected with it pronounced a decided, though insufficiently founded, opinion that it was the work of an incendiary. The loss of life attending it, chiefly among the Chinese emigrants, was appallingly great, and though largely attributable to their panic-stricken attempts to escape with the weighty fruits of their labours in California, must be partly laid to the account of an absence of that discipline for which ample provision is indeed made in the Company's regulations in case of similar disasters at sea, but which applied with insufficient force to an accident in harbour. The disaster to a Company so popular, both on account of its many-sided usefulness and the character of its *personnel*, could not but excite much sympathy, although the misfortune to the poor Chinese sufferers demanded and received the larger available share of this emotion.

About the same time a case, the details of which are so well known and so trifling in themselves that we forbear to recapitulate them,—known now popularly as the Cousen's Case—arose in Hiogo out of an arbitrary and excessive exhibition of Consular authority, which, in its further subsequent developments, showed that the official arrogance in which it had its rise may not only be exerted with the certainty of support in higher quarters, but be safely exhibited towards Englishmen who have lost the spirit, once possessed by them, of asserting and insisting on their rights and liberties. The British community at Hiogo limited to unseemly demonstrations its remonstrances against a judgment it professed to reprobate and pretended to resist, while the community of Yokohama was content to rest submissively under a rebuke, equally illegal and discourteous, which reached it through indirect and ungracious means, leaving its defence, with a liability to such a shower of impertinencies as the supporters of the Chief Judge might discharge, to a Journal, which, though

it has made no concession to gain its suffrages, has never shrunk from a defence of its liberties or the maintenance of its reputation. As regards the case itself, no one has rebuked more sternly than ourselves the truculence of Englishmen in their bearing towards Asiatics. But we held and still hold, that the punishment visited upon Mr. COUSENS was excessive; that the conduct of the English officials at Hiogo was intemperate, undignified and unseemly; and that the letter addressed by Sir EDMUND HORNBURY to Mr. WATSON on the subject was a slight to this community which should not have been left to us alone to cast with equal haughtiness, though we hope with more logic, in the teeth of the Chief Judge.

In September, the Japanese authorities, owing to a flagrant case of abuse of the passes granted for this purpose, withdrew from foreigners the valuable privilege, hitherto courteously extended to them, of travelling beyond the boundaries prescribed by the treaties. A punishment condemning all for the guilt of one could not but appear harsh to Europeans, and at the risk of being smitten with disease in the hip-joints for offering up an unacceptable sacrifice, it were to be wished that the guilt could be removed by the immolation of the culprit. It may be doubted whether the restrictions will be removed before the revision of the treaties.

On Monday, the 14th October, the whole section of the railway between Yokohama and Yedo was formally opened by H. M. the MIKADO, in the presence of the principal officers of his court, the foreign ministers, the greater part of the foreign residents and many thousands of his subjects. The ceremony had been fixed for an earlier date, but was postponed on account of unfavourable weather. Addresses from the foreign ministers, from representatives of the foreign mercantile community, and from native merchants, were severally presented to His Majesty and graciously replied to. An apparent coldness, originating in the absence of those cheers and huzzas which the presence of a monarch generally excites among ourselves, characterized the ceremonial, but the MIKADO was deeply gratified with it, and warmly expressed the satisfaction he experienced in inaugurating a work which, though small in itself, is the forerunner and guarantee of many important and beneficial changes in the Empire.

The Japanese have surprised the foreign public by the readiness with which they have adapted themselves to the working of the Railway traffic. The trains are despatched with extreme regularity, and hitherto no accident has occurred. Perfect punctuality is observed, and the public are treated with entire consideration and civility. Excepting the engine-driver and a yardsman at the stations and at each terminus to assist the station-masters until they become thoroughly conversant with their duties, the entire working staff is Japanese. They print, collect and issue the tickets. They work the points and signals, and they maintain adequate regulations and order at the several stations and along the line. Travellers passing through Egypt and subsequently visiting this country would note the contrast between the administration of this line and those in Egypt, and saying that nearly all the passengers and staff are Japanese, it might be imagined that the journey was being made upon an English or French line. The line is worked on the "block system."

The following table, embracing the last published returns, shows the statistics of the traffic, which will be still more favourable when the line is open for the conveyance of goods, a step we hope to see taken without farther delay.

The section between Kobe and Osaka is yet uncompleted. That between Osaka and Kioto is in progress, and the extension of this to Tsuruga determined on. Owing to the many important questions which have to be determined in regard to the main trunk line between Yedo and Osaka, a final decision has not yet been arrived at as to the exact position of the entire route, but this is under present consideration and may be expected to be settled shortly.

The Telegraph line between Yokohama and Nagasaki is completed, but owing to the inexperience of the native operators and the difficulty attendant on instructing them in the details of their work, the communication is still liable to frequent interruptions. It is a question how far a considerable extension of the trained European staff may not at first be necessary to meet the requirements of the position. The expense which would attend this is considerable, but of little moment when compared with the advantages to the Government and the public which would accrue from uninterrupted regularity in the transmission of messages.

In November was issued an edict, said to have been some time previously under consideration, yet undoubtedly owing its appearance at that moment to exciting causes of an unrelated nature, abolishing the Yoshiwara and similar institutions throughout the country. These institutions, the puzzle and wonder of the philosopher and the scientific moralist, and the opprobrium of Japan, held tens of thousands of women, under contracts not only recognized by the Government but productive of revenue to it, to a bondage of the most odious form of slavery. Admitting that the Christian ethics enjoin a personal chastity which the Asiatic nations may regard only as a praiseworthy, but by no means essential, feature in a well-regulated character; that in the mysterious and complex economy of a world which oppresses us at every turn with its problems, we are forced to regard the career of abject wretchedness and unrelieved degradation which these institutions symbolized, as an efficient guardian of the purity of count-

less happy homes which, but for them, would be polluted and depraved; admitting that however persistently the Christian nations may ignore this form of vice, it exists nevertheless, and on the most gigantic scale, and that evil rarely assumes such inveterate and perverting forms as when it is shrouded in obscurity and veiled by a hypocritical appearance of unconsciousness;—admitting all these things, it still cannot be doubted that the existence in this country of the system which has just been abolished was a foul blot on its fame and a symbol of its low ethical condition. We shall not pretend to see in the edict any guarantee for a sudden elevation in the social morality of the nation: but in the satisfaction with which the measure is said to have been hailed throughout the country, we see some earnest of the dawning of a higher life among the people; some ground for hope that the most mournful figure which has arisen in society, the perpetual symbol of the degradation and sinfulness of man, shall be less obtruded alike to her own disgrace, and his temptation; and that those virtues on the exercise of which the family, which is the centre and archetype of the State, depends, may be cherished among the rising generation of this country, by mothers whose retrospect of early life is without reproach or the recollections with which it must now be so often and so indissolubly and demoralizingly associated.

In the latter part of October, H. M. the MIKADO received the Loochooan Envoys and distributed to them the customary largesses.

Towards the middle of November a Russian squadron attending the Grand Duke Alexis visited in Japan, and after touching at the southern ports, arrived in Yokohama. The Grand Duke at once became the guest of the MIKADO, and no pains were spared to do him honour and to make his visit interesting and agreeable. A review of the Japanese fleet was held in the Bay of Yedo, and complimentary visits, salutes and processions formed the order of the day. The squadron subsequently sailed northward, touched at Hakodate, and proceeded to Vladivostock.

We have now narrated the principal events of the year which have come under the cognizance of foreigners; some of the reflections which they suggest must be deferred until our next issue.

(To be continued.)

The following is a formal list of the announcements and edicts published in the Government Gazette, which may be useful for future reference.

Jan. 13. Visit of Mikado to Yokosuka.

Feb. 10. 2nd day of the new year. The Foreign Representatives went to congratulate the MIKADO, for the first time.

— 22. Issue of 2,500,000 yen paper money for the Colonization of Yezo.

— 26. Old style of dress abolished. Foreign dress worn at Court. Abolition of privileges enjoyed by officials in travelling, at the post towns etc. Pardon granted to remaining rebels.

— 28. Notification that Treasury will sell surplus rice. Strict rules against smuggling.

Mar. 3. Not necessary to omit a stroke in writing the names of the reigning Mikado, his father and grandfather.

— 8. Yashiki of clan in Kioto and Osaka to be handed over to the local authorities.

— 10. Yanagiwara appointed to China.

— 15. Proclamation pardoning Christians who have recanted.

— 18. Further orders to Yanagiwara.

— 23. Permission accorded to deal in land. Railroad from Osaka to Kioto announced.

— 26. Attack on the Palace.

Mar. 28. Proclamation in which right to punish Japanese subjects by Japanese law in places where they have Consuls.

April 7. War Department divided.

— 20. Visit of Mikado to School of languages.

— 21. Abolition of Jingishô and conversion into Kio-bushô.

May 4. Abolition of prohibition of women to enter certain sacred shrines and Buddhist temples.

— Mining law; (illiberal.)

Abolition of patent law.

— 20. No Japanese allowed to sell or mortgage landed property to foreigners. Disturbances at Niigata.

— 31. Permission to Buddhist priests to eat flesh, marry, grow their hair and wear common clothes, except during ceremonies.

June 12. Railway opened to Shinagawa, 15 miles.

— 22. Ito and Okubô left again with full powers.

— 28. Departure of MIKADO on his tour.

July 3. Korean Affairs handed over to the Foreign Office.

— 22. Visit of the Empress to Miyanoshita.

— 22. Extension of the postal system to the island of Yezo.

— 28. Law for the disposal of a bankrupt's property.

Aug. 2. Prohibition to conduct burials without attendance of either Shinto or Buddhist priests.

— 6. MIKADO's return.

Aug. 23. Transference of Osaka Custom House from local authorities to Treasury. (Same course gradually pursued at all the open ports.)

Sept. 5. Ogasawara Iki no Kami comes forth from his concealment and is pardoned. (Vide *Japan Mail* weekly notes.)

Sept. 7. Judicial business taken out of the hands of the Prefect of Kanagawa and transferred to the Judicial Board. (The same process is being carried out in all the *ken*.)

— Garrison sent to Mito, a provincial district which has always been troublesome.

Sept. 14. Important fiscal change. Land taxes on paddy as well as arable land may henceforth be paid in money instead of kind, at the option of the purchaser, the rate being fixed according to the price obtainable at the nearest market town. (Want of transport, banks and other organization, render the universal carrying out of this arrangement only possible by degrees.)

Sept. 16. Abolition of native guards formerly provided for the protection of foreigners in Yedo.

— 19. Abolition of passport system for Japanese travelling from one open port to another in foreign mail steamers.

— 25. Prohibition of the common practice of changing

the name and surname at the pleasure of the individual. (An obviously necessary police measure.)

— 29. Perfect freedom henceforth allowed landlord and tenant to enter into leases without official intervention. Prohibition of the practice of forcing individual carpenters or coolies on certain employers, instead of allowing the masters to hire what persons they chose. (Measure aimed at the handicraft guilds.)

Oct. 1. Notice to the Exhibition Commissioners to collect objects to send to the London Exhibition of 1873.

— 14. Opening of the railway.

— 17. Abolition of the sect of Yama-bushi or Seers.

— 16. Audience of Loochooan Envoys.

Nov. 12. Decree abolishing the contracts under which prostitutes and singing girls were held to service.

Some few of the later Edicts, the most important of which is the change of the calendar to that of the European nations, have been omitted on account of an uncertainty connected with the date of their issue.

#### SIR H. PARKES ON THE CONSULAR SERVICE.

WE have received by the last English mail the Blue Book containing the evidence in detail as given by Sir R. ALCOCK, Sir H. PARKES, Major CROSSMAN, Mr. MEDHURST and others before the Committee of the House of Commons recently constituted for enquiry into the condition of the Consular Service in general, which term naturally comprised the constitution of Her Majesty Consular establishment in China and Japan. As the evidence brought out in the course of the examination of these witnesses touches on many points which we doubt not will prove of interest to our readers, we propose to devote one or more articles to an examination of the statements as therein presented by the gentlemen to whom we have above referred. Of the whole evidence taken, the portion relating to matter of most interest to the British public is naturally that which refers to our commercial relations with China. We may find it convenient to criticize this evidence later; but as our readers may be supposed to feel a more immediate concern in the statements made by the several witnesses with reference to Japan, we think that we shall best consult their wishes by giving these our first attention.

In view of the rapid strides which have been made by this country in recent years in the march of European civilization, it is scarcely necessary to observe that Sir R. ALCOCK is already quite out of date as an informant of Her Majesty's Government and of the public in reference to the political condition of these islands, and to the aspect and prospects of the trade therewith in which the nations of the West are concerned. We shall therefore do better to pass on at once to the consideration of the evidence of Sir H. PARKES, though we must premise our remarks on the statements made even by Her Majesty's Minister by the caution that the Japan of May 1871, when he sailed for San Francisco, is widely different from the Japan of December 1872.

The first observation which it occurs to us to make, with reference to the mass of evidence before us, is the jumble of ideas which we were fully prepared to find with respect to localities so far geographically removed from England as are these. This is indeed nothing wonderful, for it must be within the observation of everyone who has travelled extensively that no two things could well

bear a greater disproportion to one another than the daily extension of travelling on the part of Englishmen on the one hand, and the enduring ignorance of the commonest elements of geography on the part of the same nation, on the other. In the questions before us Hongkong and Yokohama are placed in exactly a like category; the same interrogations are put as to the utility or otherwise of longer maintaining a garrison at either place—in utter non-recognition or apparent ignorance of the fact that the circumstances of the places bear no conceivable analogy the one to the other, inasmuch as the one is a British colonial possession, whilst the other is but a sea-port in a friendly country. Yet Mr. F. STANLEY, in his examination of Major CROSSMAN, evidently considers Yokohama as much a permanent station for British troops as Hongkong, while another member of the Committee seems by his questions to advocate such a startling proposition as would be involved by the withdrawal of the British garrison from the latter place. All this recalls the anecdotes current in Walpole's time of the then Duke of Newcastle. "Oh—yes—yes—to be sure—Annapolis must be defended—troops must be sent to Annapolis—Pray where is Annapolis?"—"Cape Breton an island! wonderful!—Show it me in the map. So it is, sure enough. My dear sir, you always bring us good news. I must go and tell the King that Cape Breton is an island."

We propose to follow the chief points in Sir H. PARKES' evidence, in so far as it relates to Japan, in the order in which they occur. To begin with the lowest grade of officers in the Consular service, H. M.'s Minister states (p. 55) that there is no difficulty in getting student-interpreters for Japan, but he forthwith goes to disabuse the minds of his questioners of any too rose-coloured impressions which his reply may have conveyed, by adding that they (the students in question) arrive in the country of their future residence to find that they and their parents have been deluded by the government which induced them to come to the land of the Rising Sun on a salary of £200. To quote the words of Sir H. PARKES in reply to Mr. KINNAIRD; "The student-interpreter" "pay is £200, which you must understand to mean £100, "because the purchasing power of the £200 there (in "Japan) is not more than that of the £100 in England. "Everything is expensive; the cost of living and clothing "is expensive, and the mode of life is unavoidably different "from what it is in England. A young man in England "may have a home in his own family. If he has not, he "can hire a room and live unobserved upon very small "means, and nobody can pry into his mode of life; but in "Japan it is different. There he must be observed, &c., " &c."

In referring to the desirability or otherwise of limiting the selection for the posts of Minister in China or Japan, Sir H. PARKES very sensibly remarks that it would be impossible for him to devise a fixed rule to meet the case. "A man trained in the country, who has great experience "of it, &c., must certainly possess considerable qualifica- "tions; but, on the other hand, an able man is an able man "everywhere."

Sir H. PARKES next, with equal common sense, goes on to give his opinion that the junior members of the Consular service, though in the absence of vacancies they cannot complain of not being promoted, may not unreason-

ably murmur at being kept without adequate remuneration for their services; but we must correct the assertion made in this reply to the effect that members of the Consular service do not enter into any contract with the Government, the fact being that they bind themselves under a pecuniary forfeit to serve the Government for a period of five years. Every public servant in the East will, we think, re-echo the remark that "after a man has served the Government perhaps fifteen or twenty or twenty-five years, it becomes a source of considerable anxiety to him to find that his income is inadequate to meet his ordinary requirements. I think that long service and able work is very often passed unrewarded simply because the Treasury desire not to add £100 or £200 to the cost of the establishment."

We also most fully concur in Sir H. PARKES' observation respecting the non-advisability of having Merchant-Consuls in Japan, and we trust that when the treaties come to be revised, a clause will be introduced providing for the abolition of a class who, from their double position, have so unfair an advantage over simple merchants, and who, we fear, have, in too many instances, taken an unfair advantage of their position.

We must reserve for a future occasion the further remarks which suggest themselves to us by the evidence before us, and for the present we shall conclude with the following significant quotation:—"Generally speaking, I consider all grades of the service in Japan underpaid."

Q. I want to know whether the salary you receive has ever enabled you to meet the expenses of your position?

A. "I may say it has, although I have only just made both ends meet. I came away from Japan, after six years service there, poorer than I went."

Q. "You have not been able to save anything?"

A. "Nothing; but I am aware that some of the officers under me have not been able to make both ends meet."

#### JAPAN AT THE AUSTRIAN EXHIBITION.

LAST March we informed our readers that the Japanese Government had, at the instance of M. CALICE, the Austrian Minister to this Court, determined on putting in an appearance at the forthcoming Exhibition in Vienna. It is no secret that the Government was at first lukewarm upon the matter, foreseeing that the effort would involve very considerable expense, with no certainty of any compensating advantage. It was already weighted with the heavy costs of a personal Mission to the European Courts, designed to represent in a becoming and dignified manner the aspirations of the Empire towards a fitting and acknowledged place in the comity of nations, and it might have pleaded with some force to be excused from a further effort which could not but be burdensome and might not be profitable. But those who have closely watched the action of the Government during the past two or three years can hardly have failed to see that, in spite of many errors of one kind or another, a broad, sagacious and far-sighted policy has been its main characteristic. Commenting as we do from week to week upon this action, and applying to it as we must such measures and gauges of its abstract merits or adaptability to the wants and condition of the Empire as we may possess, it often happens

that our criticisms are unfavourable and sometimes uncomplimentary. But it would be an injustice to deny or refrain from acknowledging that the general course of policy followed by the Government shows many evidences of great wisdom and sagacity. And the difficulties besetting this policy are undoubtedly very great. Foreigners are a little too apt to lose sight of the fact that the external relations of the Empire to foreign nations form but a very small part of the care of the administration. They are irritated at times by the appearance of a harshness or want of compliance with reasonable demands in regard to their trade or the local ordinances under which they carry it on. They chafe under Custom-House obstructiveness or municipal supineness. The *laches* of a tide-waiter are adduced to throw ridicule upon or to impeach the action of the Government, and the folly of a mayor is loudly trumpeted to discredit the action of a Cabinet. But we are assuredly sometimes too impatient in these respects, and unwise when we draw conclusions so large from premises so narrow. He who imagines that the maintenance of peace and order among thirty millions of people who have been disturbed and impoverished by a revolution which has subverted the very foundations of society, and brought them into contact, and sometimes into collision, with disturbing influences of an unknown force and nature, has either never studied history or done so to little purpose. Nothing is more common than for shallow critics to bring forward as weighty arguments against a given policy objections which a child might anticipate or answer, under the unintelligent delusion that they had never been anticipated and were incapable of being answered. It is not thus, however, that more patient—we will not even say wiser—men argue, and it might be more prudent if such critics would learn to infer, or at all events to suspect, that where the general course of affairs which are conducted under complicated conditions is smooth and orderly there must be more wisdom than folly in those to whose management this result is chiefly due. He who would form his estimate of Shakespeare from the concluding couplets of his greatest passages, of Handel from his water-music, of Chatham or Warren Hastings from their verses, or of Newton by his writings on the prophecies, would resemble the critics of the Japanese Government who overlook its indisputable claims to approbation, and see only its shortcomings and mistakes.

And it seems to us that in view of the fundamental idea which lies at the root of the action of the Government, the idea, namely, of making Japan the first of the Eastern nations, if not of drawing her abreast of the Western nations, she has done well in spending so much care, time, trouble and money upon that collection of her products which is to represent her at Vienna. The collection is ample and interesting, as we have elsewhere shown, and, if we may judge by the general outline of its appearance, is wisely calculated rather to enable the European nations to judge of her varied resources and commercial potentialities, than to dazzle or divert them with her skill in the mere arts of decoration and ornamentation. And in this she has done well. We are the last to think that the final causes of man's existence are the trucking and trafficking to which fate seems to have condemned him, and for which the average range of his faculties perhaps best qualifies him; but we are profoundly con-

vinced that with extended trade comes wealth, and that with wealth come civilization, cultivation, science, art and much that adorns and dignifies human life. Nor is there anything in that apotheosis of poverty preached by our Divine Master which necessarily contravenes this position. The temptations and falls of poverty are at least equal to those attendant upon riches, which men may possess without trusting in them, and enjoy without abusing. The gratification of man's benevolent sentiments depends largely upon the acquisitions produced by the vigour of his more selfish instincts, and if the one teaches him to scatter, the other prompts him to increase. It would be folly to deny that the average amount of happiness distributed amongst the units which compose these millions of Japanese will not be increased by a healthy and active trade, and a larger share of the good things of this life. We cannot be persuaded that more warmth, more light, more material comfort, increased powers of locomotion, more education, more amusement and better food are not desirable things for a people. But they are only to be had by increased trade, better directed industry, and sounder laws tending to distribute in the best possible manner the wealth which is necessary to produce or procure these desirable things.

As regards the collection itself little need be said here, for our readers have at the same time in their hands a brief description of it. To eyes possibly not educated to the highest refinements of lacquer-criticism, the specimens of the finest ware seem incomparable, though we understand that examples as fine are constantly to be met with in "Curio-town." We have always thought and still think, that straight lines and right angles prevail too much in Japanese cabinet work, and that a more free introduction of the curve would greatly improve it. The change would undoubtedly destroy one of its main present characteristics; but the fascination which this work has possessed for European collectors has lain far more in its exquisite ornamentation than its form. Again; how long will it be before the Japanese abandon the conventional art and perspective which they have inherited from the Chinese? There is undoubtedly much charm in it, and it affords ample scope for the production of vigorous effects by simple means. Yet it is assuredly unsound, and will wane as soon as a closer study of landscape has become more common among Japanese artists. A true lover of nature will arise here one of these days, and do for Japanese art what Raffaele did for Perugino's art, that is, mount it and ride it to the gates of paradise. But we do not yet hear that any young artists have been sent to study at Rome, Venice or Florence—a step which we should be pleased to see taken when matters are a little more settled. Their early impressions of these great collections would be in the highest degree interesting.

The collection of animals is hardly worth sending home, though there is a horned owl so grave and wise looking that we are persuaded Lord Thurlow would have appeared like a mere undergraduate by his side. We should distinctly refuse to believe any judge or even Lord Chancellor who refused to acknowledge that he would be the better for that bird's expression of countenance. The eagles are good, and wonderfully like Sir Charles Napier of Seindo—especially the picture of him by Count Pierlas which faces the third volume of Sir Charles' diary.

The curly-haired ponies are peculiar, and not without the air, attitude and expression of the despised animal which generally ranks next and below the horse. We only trust it will not be generally supposed even in Vienna that these are the creatures whose performances we chronicle twice a year, and whose promises are the chief topic of local conversation many months before our spring and autumn meetings. Lastly, if the Japanese imagine that any interest will attach to the three-legged dog from Yezo, which is obviously only a monster, or that the Darwinites are likely to make him a peg upon which to hang some startling generalization, it is perhaps right to tell them at once that they are mistaken.

#### THE YEDO EXHIBITION.

THE determination of this country to be adequately represented at the Austrian Exhibition to open on May 1st, 1873 is one which cannot be too much applauded. To previous exhibitions Japan has, it is true, contributed; but the idea prompting this Government to enter the lists has heretofore been very different from that which, it is evident, is now urging the authorities on their present course. Hitherto, the exhibits which Japan has contributed have been what are known as curios, and these only—articles of little use except as ornaments or curiosities. On the present occasion it is not hard to see that the object which it is sought to attain is the introduction of Japan wares—in such forms as to be useful to foreigners—into the markets of Europe—to induce foreigners to use Japan lacquer-ware, Japan porcelain, and Japan manufactures as they would those manufactured in their own or neighbouring countries. With this motive none can quarrel. A few visitors to the Yedo exhibition have been disappointed at the many imitations of foreign wares which were there displayed; but if the object of this is remembered the disappointment can hardly fail to give place to unfeigned admiration.

The exhibition which was opened to foreigners on the 25th and 26th is one which happily combines the curious with the useful, and it will be strange indeed if the Japan group at Vienna does not attract a large proportion of visitors. According to the instructions issued in Austria the exhibits are to be divided into eighteen groups, and at the minor exhibition in Yedo some effort has been made to follow out the Austrian idea. Still it was hardly successful, for, so far from there being only eighteen groups, we saw no less than twenty-three or twenty-four, while, in places, several groups were unnumbered, the visitor passing from group V to group VIII without any distinguishing marks for those intervening. Still, this is perhaps hypercritical, and should hardly be noticed in an exhibition of so temporary a character.

On entering, the first thing that strikes the eye is a plan of the Austrian Exhibition, giving a section of the rotunda, and view of the wings and general elevation of the front. Beneath is a large gilt screen possessing no remarkable attractions, and on the left is the door leading to Group I.

To any but a geologist this portion of the exhibition must, we fear, present but few features of interest. On one side are blocks of quartz, and a variety of similar minerals. On the other, gold in a refined and natural state, silver, iron and copper, the iron and copper both being manufactured into small bars. Above these is a collection of blocks of sulphur and a variety of ores, including quicksilver and agate from the island of Hirado, and alum from Simabara; more refined gold in bottles, specimens of copper wire and lead being in a neighbouring case, together with small bars of iron and a few specimens of steel.

In the next compartment, but strangely classified in the same group, are specimens of tobacco, both cut and in the leaf. In quality it seems to be satisfactory, though somewhat light. Following these are materials for various textures, hemp, nettle, and a variety of other plants, together with bark and fibre. Below these, and apparently far away from their respective classes, are a few shells, of that common kind to be bought here by the

hundred, and some dozen entomological specimens; none of any very rare species or curious nature. In this department also is a skin, apparently that of a gigantic frog, and several specimens of fish skins with a variety of fossils from Hirado and the adjacent islands, including fossilized plants, flowers, leaves and other similar objects.

Group 2, as arranged by the Japanese authorities, consists of a multitude of pharmaceutical vegetables—one to be recognized as the *Mesima-Kobu*, an excrescence growing on the mulberry tree in the island of Mesima, near Gotto, and much used as medicine—but many with names and characters wholly unfathomable, one reminding us much of a star-fish, another of a sea-urchin. Here also is a good collection of pearls, the largest being about half an inch in size at the greatest diameter, but of an indifferent colour. In the next room is a display of cereals, rather poor in quality and quantity, and yet more pharmaceutical vegetables, the latter seeming chiefly to consist of nuts. Further on is a collection of vegetable oils, strangely displayed in Hennessy's brandy bottles, with the labels still perfect, these being flanked on the one side with several specimens of native salt, which struck us as being very coarse, and on the other by numerous chemical products in bottles. Close by is a cone of prepared sulphur from Hirado.

Group 3 comprises colouring materials, of no special interest. In the same group, however, are a few specimens of candles and tallow in the block. The colour is bad, and not such as would find favour at home, though it is infinitely superior to that which we see commonly used. There are also specimens of white vegetable wax produced in the province of Simabara; and also the same substance in its unprepared state.

In Group 4 we come to the Japanese spirits, which present but little variety and occupy but small space. There are to be seen the red and white saki, the different intermediate yellow colours, and the coarse spirit made from the sweet potatoes and so extensively drunk in the southern provinces of Japan. Appropriately connected with the collection of spirits is a variety of saki jars and cups, both in wood and stone, and, in order to complete the set, two ordinary saki tubs.

The next room is devoted to various implements for smoking. There is tobacco in leaf, and cut, a tobacco-cutting machine, native made cigars, a lacquer and silver *hibatchi*, with drawers for pipes and tobacco, and everything complete for a smoker's use, tobacco boxes without end, from the handsome gilt lacquer to that of common varnished paper, with pipes of all degrees, shapes, fashions and sizes. Here are also a few tea pots, appropriate adjuncts to a Japanese smoker's outfit, and, lastly, a very old and handsome lacquered box for *hibatchi* &c. ornamented with silver, and, if we may judge from the prices the curio dealers ask for a very inferior article of the same shape, of almost priceless value.

The skins and leather next attract our attention. The former comprise otter, mink and a variety of other skins, the latter being but a small collection. The leather work however, is deserving of special mention. Many of the visitors doubtless passed by these specimens without bestowing upon them a second glance. Those, however, who looked carefully were probably astounded at the excellence of the work, which consists chiefly of fine net work with dragons, dogs, and other animals and objects scattered at irregular intervals over the surface. Each piece is evidently cut out of one skin, and for fineness and accuracy of workmanship could not easily be excelled in either Europe or America. Three or four pairs of boots are also noticeable. Made by Japanese, they fully equal the productions of many European makers. A few kid and other prepared skins complete the list.

From this we pass to the crystals, of which there is a very fair collection, one perfect in colour and shape being fully six inches in diameter. Beyond the specimens of unset crystals, however, there is but little to notice. The attempts to imitate foreign jewellery are lamentable failures, not for an instant to be compared to the work to be seen at any time in Curio Street. The necklaces are roughly set, and indeed, this portion of the collection is wholly unworthy of those to whom the task of obtaining the exhibits has been entrusted.

To these follow another assortment of pipes and *hibatchis* both in metal and wood, none, however, of any remarkable beauty, and we then come to a small but splendid collection of bronzes. The *chef d'œuvre* is probably a small cabinet or box, some eight inches long by five in breadth, and the same in height. The top is of lattice work, highly ornamented, the sides being covered with *bas reliefs* of processions of priests and others, *en route* to a small temple. The finish of this small bronze is remarkably fine, and its evident antiquity adds considerably to its value. Two handsome vases, deeply inlaid with silver and richly ornamented with gold and silver figures in raised work, are also to be noted, as also several platters covered with the usual blue enamel. There are, besides, a variety of bronze vases, together with two made of brass, all of them bearing marks of age and completing a valuable if a small collection.

Near by are two Japanese swords in plain deal scabbards; but, if we may judge from appearance, made of highly tempered steel. Immediately beneath there are a few old fashioned Japanese stirrups of bronze, thickly inlaid and ornamented with gold and silver. A few bronze *hibatchis*, and a couple of tripod candlesticks on the native pattern complete this group.

We now come to the lacquer work, and this collection, we may say without exaggeration, comprises specimens of almost every kind to be seen in the country. Cabinets in gold lacquer, and in black and gold; chow-chow boxes of every diversity of shape and of every variety of lacquer, cigar boxes, glove and handkerchief boxes, handsome black lacquered stands, ornamented with gold; in fact the display of lacquer, all in this department being comparatively new and suited for European markets, is not only large and varied, but extremely good.

In the next compartment is a display of basket work, including frames for solar topees, and a number of articles which find a ready market here in Japan and might do so in other countries. Here also are a few candlesticks of native manufacture, shoo-horns, tea cups, bird cages, and some vases in shape like those of bronze, but, in this instance, made of basket work.

Lacquer work, this time very old, and of a superior class to that previously alluded to, next claims our notice. Again we have cabinets, chow-chow boxes, stands, cups and trays, in red, gold and black lacquer; and besides these are a variety of imitation marble tops for tables, very highly polished and a camphor wood cabinet very highly finished. Close by are some real marble basins—the imitation, however, look better than the real—and marble blocks in various colours from the mountain Ilokwan to the east of Nagasaki.

The next group contains a small collection of fishing nets and tackle, much of it in imitation of foreign manufacture. In the same room we find, what, in our opinion, is one of the finest if smallest collection in the exhibition. We allude to the tortoise-shell work. Besides such ordinary articles as cap-peaks and tail-combs, there are several very handsome ladies' head ornaments, and sets containing brooch, earrings and bracelets, most elaborately carved and ornamented, a bird cage, in tortoise-shell, cigar cases, charms, and sleeve buttons, and lastly a plant with the leaves of tortoiseshell and the berries of red coral. Each article in this collection is made of the finest shell, and far surpasses anything usually seen by foreigners either here or at Nagasaki. Also in the same room are a variety of dolls and fans in silk and crape, which do not call for particular notice, and we may pass on to the collection of paper and manufactures in that article. Besides specimens of the various kinds of paper in common use in the country, there are waterproof coats in paper, imitation oil cloth in the same material, and a number of similar articles. There is also a collection of photographs and a stereoscope on a large scale.

Next we come to a skeleton put together by a Japanese, and then to a collection of musical instruments, from which we pass on to a further display of lacquer ware and several handsome gilt screens. In a small corner between two rooms we discover three or four oil paintings by a Japanese artist. One evidently is a scene on the Nihon bashi, and the others are views of the castle, and the residence of the late Tycoon. In these pictures the stereotyped Japanese style is partly discarded, the artist having

evidently studied under some foreigner, and though his figures are deficient in roundness, yet the pictures have painted been with some idea of perspective and a little knowledge of drawing.

We now come to the collection from Yezo. There are here models of fishing boats and small sampans, much like those in use here. A sleigh, bearing a slight resemblance to the sledges of Siberia, models of houses, complete and in frame work, a small stuffed fawn, sea birds, foxes, and a variety of native animals. Besides these is a coat of bird's feathers, another made of seaweed, and several coats of cloth of gold. A few photographs complete the list, which, although somewhat tame to those who have resided in this country, will prove highly interesting to persons at home.

Passing a handsome gilt model of a shrine, we arrive at the collection of Porcelain and this forms one of the most interesting features of the exhibition. On a table stand two centre pieces evidently constructed for foreign use, and showing great originality of design. These, together with a number of tea cups, sauce tureen and various other pieces belonging to an European dinner service, are made in Seto and Owari, from whence also come several handsome vases. From Hizen we have a number of square dishes and plates of a style and make suitable for foreign use, while from Yamashiro we have cups and saucers in blue and white porcelain. The manufacturers of Kaga exhibit a number of tea and coffee pots and the various pieces for a tea service, in which porcelain with red embossed figures prevails. Satsuma sends, besides some common dishes and pots for Japanese use, several handsome vases and portions of dinner and tea sets, all for foreign use. Several specimens of coarse dishes come from Etchizen, while from Hirado we see blue and white dishes for Japanese use and a peculiarly handsome set of European coffee cups manufactured at Mikawachi. Similar articles also come from Kishiu and Ysu. Probably the handsomest and most costly porcelain in this group are two centre pieces painted by hand in Yedo. The colouring is most gorgeous, the shape of the pieces very elegant, and the effect far superior to anything in the exhibition. This completes the collection of porcelain which forms one of the most interesting groups in the exhibition.

To this succeed models of houses and cooking utensils very well executed; after which the visitor leaves the exhibition building to visit the collection of animals placed in the grounds. There is a bear from Yesso, two horses about 8 hands high with curly hair like a Newfoundland dog, two oxen from Tedsima, two foxes from Yesso, an eagle, a horned owl, a brown and a white crow, a kite and a three-legged dog. None of them present any remarkable features, and we may pass on to the small collection which is to be sent to the English exhibition. This comprises a general assortment of Japanese products and manufactures, but except for an imitation of a French dinner service demands no special note. Neither does that which it is intended should form the nucleus of a Japanese permanent exhibition, and having with this taken the visitor through all the various groups we may bring these remarks to a conclusion. The collection is a good one, and cannot fail to do credit to Japan at the Exhibition at Vienna.

#### THE HOMOKO FIRE.

The sum of \$390 was collected chiefly through the exertions of Mr. Jackson and Mr. Macdonald for the Homoko sufferers. In kinsatz this sum was represented by 409 riyos, which were distributed by Mr. Dickens, aided by the Nanushi of the village. The distribution was effected on two separate occasions, at the last of which Mr. Macdonald assisted at the house of the Nanushi, when the recipients were assembled and the portion allotted to each based upon the number of his family was delivered into his own hands. All official intermediation was in this way avoided, and the money subscribed found its way undiminished to its proper destinations. A small sum, however, of 3 riyos was left to be distributed at the discretion of the Nanushi among twelve lodgers, who were included among the other recipients and among the most necessitous of these. Of this distribution the Nanushi, who appears to be a most worthy person, has given Mr. Dickens a full account. A few quarter and half *boos* that remain-

ed over, amounting in all to 5 *boos*, were presented to the children of the Nanushi, who did not appear to be much richer than his neighbours. Nothing could exceed the gratitude called forth by this timely assistance, and a glance at the condition of the recipients was enough to reveal the want in which they stood of a generous aid.

An account of the distribution is subjoined, which it is hoped may be of some interest, statistical and other, to our readers.

#### AMATEUR ATHLETIC ASSOCIATION.

On Thursday Dec. 26th a meeting was held at the Gaiety Theatre to take steps for the formation of an Athletic Club, Capt. Hill in the chair.

The Chairman briefly introduced the subject, stating that for the purposes of such an Association a running path would be necessary, and this, it had been suggested, should be formed on a portion of the Rifle Range. It was not probable that any objection would be urged to its partial use for such a purpose. The cost of the necessary enclosure was estimated at \$250, Mr. Davis having calculated the cost of the formation of the path itself at \$125. Subscriptions to the amount of \$250 had been promised, and a sum of \$120, being a surplus balance from the last sports, now remaining in the hands

of Mr. Hamilton, would probably be transferred by him to the present Association. About thirty members might be relied upon to join, and the financial prospects of the scheme might be estimated as under:—

RECEIPTS.			
Subscriptions promised	...	...	\$250
From Mr. Hamilton	...	...	120
30 Members, each \$5	...	...	150
30 Subscribers, each \$5	...	...	150
Total...	...	...	\$670
EXPENDITURE.			
Path and Enclosure	...	...	\$250
Advertising and Incidentals	...	...	100
Momban...	...	...	60
Available Balance...	...	...	260
			\$670

The entrance fees could not be calculated; but would probably enable the Association to offer valuable prizes for competitors. The programmes usually more than defrayed their cost by the proceeds of their sale, and an additional source of income would be the admission fees and contributions of non-members.

Mr. Brent proposed, Mr. Talbot seconded, and it was unanimously agreed to, that an Amateur Athletic Club be formed.

Mr. W. H. Smith proposed, Lieut. Wright seconded, and it was carried that a Committee of Five should be elected, and authorized to frame rules for the Government of the Club and the formation of a path and enclosure. The rules and bye-laws to be submitted to a general meeting of members for approval.

The choice by ballot fell upon the after named:—

Messrs. Brent, Hannen, Talbot, Wright and Snow.

Messrs. Snow and Harriman proposed "That the entrance fee and subscription shall not exceed \$10 together; that the annual subscription be \$6 and the entrance fee \$4. Subscribers of \$5 and upwards to be considered members, with all privileges except that of competing for prizes offered by the Club."—Carried.

Messrs. Reid and Dare proposed "That gentlemen present be invited to enrol their names on the list of members; and that any gentlemen wishing to join the Club hereafter be proposed and seconded by two members and balloted for in the customary manner."—Agreed to.

Mr. Brent proposed and Lieut. Wright seconded "That the Club be called the Amateur Athletic Association of Yokohama."—Carried.

Mr. W. H. Talbot suggested that the opinion of the meeting be taken as to the choice of a site for the path projected. Personally he thought the Rifle Range the best that could be fixed upon, as it was quite retired, and a convenient distance from the settlement. He thought it would be advisable to give the Committee full power to choose the ground.

Lieut. Wright thought it desirable to ascertain whether it would not be too far away for residents in the settlement. The great idea in fixing the locality of such a path was for a man to put on his flannels and get as close to his work as possible.

Mr. Brent observed that the Swamp and the Rifle Range were the only places available. He went to see Mr. Russell Robertson, who thought there would be some difficulty in obtaining the requisite ground around the Cricket field, which itself had only been secured on stringent conditions. The cricketers were bound to allow the use of their plot by any of the inhabitants, and nearly every Consul had some condition to impose before it was at last obtained. For himself, he thought that even if permission were obtained to form a path in the ground set apart for a public garden, it would be impossible to make a charge to spectators of the public sports promoted by the Club. Everybody would naturally say, "as it is a Public Garden, we have a right to come here without payment." It was not only desirable, but necessary, that a running ground should be closed, and this there would be no difficulty in doing at the Rifle Range. Distance had not much to do with the matter of selection. There would also be wanted at the ground a dressing room, a couple of bath rooms, and a well, the erection of which would probably be

objected to on the Swamp. He thought the choice of site a matter which had better be left for discussion at a future meeting of members.

The Chairman asked if the military authorities had any objection to the use of ground on the Rifle Range?

Mr. Brent replied that Col. Richards and Capt. Bridgford had assured him that personally they would raise no difficulty. The object of the Rifle Range would not be done away with. Three sides of the ground would be fenced in, leaving the fourth side open, and the interior of the enclosure would always be available for football, or sport of that kind. The form of the path would be elliptical, its exterior circuit being 480 yards, so as to give a straight "run-in" of about 160 yards clear. The width of the ground would be 80 yards, and the path itself 12, and in some places 15 feet in breadth. It was decided to leave the choice of ground to the member's meeting, and the meeting separated with a vote of thanks to the Chairman.

#### CHURCH MEETING.

The annual meeting of subscribers to Christ Church was held on Tuesday Dec. 31st, Mr. R. Robertson, H. B. M.'s Consul, in the chair.

In opening the proceedings, the Chairman said they had met to receive the report of the Treasurer and to pass the accounts, as well as to discuss one or two other matters which required attentive consideration. He would call upon Mr. Wilkin to read the report which shewed

A balance due to Treasurer of.....	\$ 276.99
And on Parsonage account.....	154.46
The Supplemental account shewed incidental expenses .....	1,191.00
Contributions of British Subjects.....	2,245.00
do. of other than do. ....	570.00
Received from Government.....	1,513.41

The report requested assistance to obtain an increase of the Government grant to an approximate amount to that contributed by British subjects, and pointed out that if the latter's augmented contributions were not met by an equivalent, the efforts of the Committee were frustrated and the finances embarrassed. Last year the Government contribution was \$600 less than the amount of those of British subjects, although the latter had received no assistance in the erection of the new aisle and the repair of the church, which had been effected by private contribution and by loan. The report further set forth that Mr. Bailey had returned to England in March last, a handsome sum being raised to defray the expenses of the passage of himself and family. The Revd. E. W. Syle had been invited over from Shanghai to temporarily occupy the chaplaincy. A committee of gentlemen in England had undertaken the selection of a chaplain, and were prepared to act whenever required.

Mr. James presented the financial statement, which was as follows:—

RECEIPTS.			
British Residents' Subscription...	...	...	\$2,245.50
Other contributions	...	...	570.00
Government Grant, 1871	...	...	1,513.41
Deficit	...	...	276.99
			<u>\$4,605.90</u>

PAYMENTS.			
Balance due Mr. Shand	...	...	\$ 120.78
Chaplain's salary, 1872...	...	...	3,294.12
Incidental expenditure...	...	...	1,191.00
			<u>\$4,605.90</u>

PARSONAGE ACCOUNT.			
Proceeds of collection	...	...	\$ 31.50
Nine months' Rent	...	...	141.18
Deficit..	...	...	154.46
			<u>\$327.14</u>

PAYMENTS.			
Balance from last year	...	...	\$131.14
Fire Insurance	...	...	140.00
Painting Parsonage	...	...	56.00
			<u>\$327.14</u>

Mr. Murray proposed, and Mr. W. Bourne seconded, a motion for the reception of the report and accounts.—Carried.

The Chairman pointed out that they had every reason to congratulate themselves upon the state of the accounts; for, though there was a deficit, yet at the same time, the receipts were considerably in excess of those of last year. He added that although the meeting then assembled was called for passing the accounts and receiving the report, and though they could not legitimately pass any resolution which could be recorded on the minutes of the meeting, yet there was a subject which might well be discussed, more especially as there was a very fair attendance of subscribers. The subject he alluded to was the scheme suggested by Mr. James for paying off a part of the heavy incubus of debt with which the Church was saddled, by raising the pew rents. It was proposed by Mr. James to raise the sittings from \$20 to \$25 a year, and the pews from \$90 to \$100 a year, the excess of \$5 on each sitting and \$10 on each pew to form a sinking fund for paying off the debt of \$3,600 which had been incurred in connection with the new aisle and the organ. He should, in writing home, of course, have to explain to the Foreign Office the action which had been taken; but the excess raised on the pew rents would not appear in the accounts, and would not therefore be taken into account when the Government made the grant.

Mr. Winstanley, reverting to the accounts, wished to know how the deficit which appeared in the accounts was to be paid off.

Mr. James replied that one item in the expenditure of this year—that under the head of “incidentals”—was very large, and, as it included a variety of large items, such as “new stoves,” “repairing the Church,” &c., which naturally would not occur next year, he thought the “incidentals” would be reduced sufficiently to avoid a deficit.

The Chairman thought the secret of the deficiency lay in the fact that the salary of the Chaplain was too high. At all events it was higher than the Community could well afford.

Mr. Murray reminded the meeting that they had forgotten the question of “pew rents.” Would Mr. James fully explain his scheme?

Mr. James could not do so at that moment; but as it was intended to shortly call a meeting of the community in accordance with the act, to discuss and decide the whole question he should then be prepared to lay his scheme before the public in full.

Mr. Macdonald thought it would be advisable to take the sense of the meeting on the question, although, as the Chairman had pointed out, the decision arrived at could not be officially recorded.

Mr. Jackson entirely disagreed with the scheme. He thought that to raise the pew rents would be most unpopular, and would, he was well assured, act most prejudicially on the pecuniary resources of the Church. Many persons, also, he knew only wanted an excuse like the present to throw up their sittings altogether, while many houses who took whole pews would demur against the extra \$10. He, himself, thought that the pew rents were quite high enough—others, indeed, thought they were too high—and he could not conscientiously ask the Bank to increase their grant for the Church. A subscription was a different thing. In that case the money came out of his own pocket, while the increased grant would come out of that of the Bank.

Mr. Winstanley said he and many others would not pay a farthing more.

Mr. Fraser wished to know how many sittings were let.

Mr. James answered that there were nine whole pews and 128 sittings let, and, in answer to further questions, said that although there were other seats they were in bad positions and would not be taken.

Mr. Winstanley said that although they expected an increased grant from the Government, yet it appeared as if there would be a deficit as, indeed, there always was.

Mr. Smith replied that at one time there was no deficit. When Mr. Boyle was in Yokohama they had no deficit and no subscriptions, except a few collections in the church. Then they purchased an organ, built an aisle, and undertook other

expenses which now left them with a heavy debt. As to paying it off he did not at all see that it was necessary. The raising of the pew rents was evidently unpopular, and the debt of \$3,600 was not overwhelming.

Mr. James insisted that it was necessary to pay off the debt.

Mr. Howell quite agreed with Mr. James. They should clear off the debt which was hanging over them. At present the community might be against raising the pew rents; but the money was wanted—indeed must be had sooner or later, and he felt that the good sense and proper feeling of the public would come to their assistance, and the rents would be paid. It might be that if the public were questioned as to their willingness to pay an increased rental they would decline to pay; but if a meeting agreed that the pew rents should be raised they would pay with less hesitation. They had only to appeal to the good sense of the community to be assured of success.

Mr. Wilkin differed from Mr. Howell, besides he thought that the present generation should not be made to pay everything. The community had subscribed liberally; they had built a new aisle, bought an organ and sent Mr. Bailey home, and he thought that future generations of residents should contribute their share of the expenses, since they would enjoy the benefits.

Mr. Smith still insisted that it was not necessary to pay off the debt. Indeed, he thought the Church was in a very flourishing condition. He would second Mr. Macdonald's motion.

It being then intimated that there was a scheme for reducing the rate of interest.

Mr. Macdonald explained that the Oriental Bank Corporation would lend the money (\$3,600) at 8 per cent. instead of 12 per cent., which they were now paying, if several gentlemen gave promissory notes for the amount. He was willing to give his note if he could be fairly secured against loss.

Mr. James said there was the organ, which, together with the pew rents, they could offer as security. The organ and church were insured.

Mr. Jackson thought the best way to dispose of the pew rent question would be to ask Mr. James to go round and ask the pew and seat holders individually and personally whether they would be willing to pay the higher rents.

Mr. Fraser seconded Mr. Jackson's motion.

The Chairman said that there was one thing which he felt bound to mention in this matter. When he wrote to the F. O. he would have to explain all this, and, however well he might explain that the excess rentals were to form a sinking fund to pay off a debt which the Government had refused to recognize, they might say the scheme was of the nature of a subterfuge, and, taking the excess rentals into consideration thereby decrease the grant. There was, of course, a chance of this course being taken.

Mr. Howell said the Government were in an economical mood, and might very possibly take advantage of the higher rents to reduce the grant.

Mr. Smith suggested that they could very well wait till July when they received the Government grant, and then send round a subscription paper, the proceeds to be devoted to paying off the debt.

Mr. Wilkin gave notice that he would move at the forthcoming meeting that a subscription list be sent round during the year for the specific purpose of raising a sum to reduce the loans upon the new aisle and the organ, provided the Government were unfavourable to the proposed creation of a sinking fund.

The Chairman thought that under the circumstances they had better wait, and meanwhile he would explain the matter to the F. O. and learn how they would act.

It was then decided to adopt this plan, and, the question as to the rate of interest raised by Mr. Macdonald being left over till the next meeting, to take place this month, the meeting separated with the usual vote of thanks to the Chairman.

## Law &amp; Police.

IN H. B. M.'s PROVINCIAL COURT.  
Before Mr. Acting-Assistant Judge HANNEN.

Monday, December 23rd, 1872.

DRUSE versus MALCOLMSON.

This was a claim for \$8.08, for provisions supplied.

Defendant admitted being partly indebted, but respecting a claim for 6½ lbs. Ham and 37 loaves bread, he denied all knowledge.

Plaintiff sworn; said the Ham was ordered by plaintiff, as likewise 37 loaves bread and other provisions. Plaintiff had a Mr. Holm boarding with him.

Defendant stated that the bread, as far as he knew, came to his lodger; he had never ordered it. Respecting the ham, he had eaten some of it, but it was his lodger that had to pay for it, as he ordered it. Mr. Holm was boarding with him. Defendant had eaten some of the bread that came. He had paid for bread to the plaintiff for five months previous. His boarder had left now.

His Honor considered that defendant having eaten the bread every morning was sufficient to show his indebtedness for this item, he should give judgment in favour of plaintiff for \$4.33, without costs.

Saturday, 28th December, 1872.

B. Gardiner, captain of the *Pelham*, was charged with assaulting J. H. Joy, on the 7th December.

Pleaded not guilty.

J. H. Joy stated that on Sunday, the 7th inst., it was his watch at the helm at 10 a.m. He was looking at the sails to see if they were full, when he felt his knife snatched from its sheath. He looked around, and the captain struck him a violent blow on the side of his head. He fell down and cried out for help. The captain replied that he would give him help, and further threatened him. He got up and took the wheel again, asked the captain why he struck him. The captain then told him to give no cheek, and made another attempt to strike him. He rushed away, followed by the captain, and went into the fore-castle. The captain then told him if he would go back to the wheel, he would not strike him again. He went back to the wheel, and the captain threatened to throw him overboard. The night before there had been a slight difference between the captain and himself.

To the Captain.—He had never attempted to draw his knife upon him.

To the Court.—No one was present when the assault took place.

Kenneth Campbell deposed that he remembered the 7th December. He heard the last witness call for help. He did not see anything of the assault. When he heard the cry he thought it was a man overboard. He saw last witness at the wheel; he could not get away from it. He saw a scratch on his forehead.

The captain stated that this witness was the cause of the disturbance the night before.

Charles Mormon stated that he heard the cry for help. The sailors were in the fore-castle. They were going forward, but the boatwain told them to remain where they were. He heard the captain tell the complainant that if he went back to the wheel, he would not interfere with him. He saw a scratch on his forehead.

The Captain, in defence, said he did not strike the complainant, he merely pushed him by the collar. He was a very disobedient youth, and in the Hongkong Jail three times. On one occasion, the complainant drew his knife upon him.

His Honour did not think it a very serious affair. He should fine accused one dollar and costs.

Monday, December 30th, 1872.

C. Smith and J. Murray were charged with being drunk and disorderly.

Murray was sentenced to pay a fine of \$5 and costs, or seven days imprisonment, but the evidence on the part of the Japanese policemen being so contradictory against Smith, His Honour discharged him.

IN THE UNITED STATES CONSULAR COURT.

Before Mr. Consul SHEPARD.

In the matter of the *Taiho Maru* v. *Gosaku Maru*.

His Honour gave judgment in this case this morning.

The motion by Captain Batchelder for a new trial was refused principally on the ground that at the former hearing, he did not use sufficient diligence in procuring the evidence, that he wished to be adduced at a new hearing now.

Motion dismissed.

J. C. DAVIS versus CAPT. BATCHELDER.

This was an action brought to recover some \$700 on a promissory note.

Judgment for amount claimed was given in favour of plaintiff.

## Notes of the Fortnight.

## THE CURRENCY.

IN a recent daily issue we referred to a statement recently made in the *Japan Herald* that an additional issue of paper money to the extent of fifty millions of Riyos was contemplated by the Government, and we said that this statement had caused much alarm and anxiety both among the foreign and native mercantile communities. The following contradiction to that statement and declaration of the intentions of the Government in respect of the currency are made on the authority of Mr. Yoshikawa Akimasa, Comptroller of the Currency.

It would appear that an impression prevails in certain quarters that a fresh issue of inconvertible paper money amounting to fifty millions of Riyos is about to be made by the Government. The origin of this supposition doubtless lies in its having become known that an order was lately sent to Frankfort on the Maine for a supply of notes similar to those last issued by the Government. So far therefore the rumour is not without foundation. But the purpose to be served by the notes just ordered is solely that of being given in exchange for the existing issues of the Daijokwan and the Mimbusho, it being the object of H. I. M.'s Government to introduce uniformity into the paper currency of the Empire.

It may also be well to state that the whole quantity received from Frankfort up to this date has been similarly employed, that several millions of the former issues have been already withdrawn and destroyed, and that the local issues of the Daimios, amounting in the aggregate to a very large sum, are now being called in and the Government paper money substituted for them, the obligations of the Daimios having, as is well known, devolved upon H. I. M.'s Government.

The issues of the Daimios were made partly during the war and just after its cessation, but the prevalent belief that no paper money existed in Japan until within the last fifteen years is erroneous. Some of the local issues now being called in have been outstanding for 150 and some for so long a period as 200 years, worn out notes having of course been exchanged for new ones from time to time during that period.

H. I. M.'s Government, so far from contemplating any addition to the quantity of paper money already in circulation, purpose to initiate operations for its redemption at no distant date. The process of withdrawing the whole of the existing circulation will necessarily occupy an extended period of time, but, as already stated, it seemed to H. I. M.'s Government eminently desirable to bring the currency into a state of uniformity without delay. It is not proposed, however, to defer the commencement of operations for redemption until this uniformity has been attained.

## CHRISTMAS.

THE bright clear cold weather has been in excellent harmony with the Christmas season. The settlement was gay, and the display at Yedo of the articles intended for the Austrian exhibition gave the Residents an excuse for spending the next day in inspecting them. High Mass was performed on the mid-night of Christmas eve at the Roman Catholic Church, and Christmas Day was celebrated as usual at Christ Church. The church was profusely and tastefully decorated by some of the young lady residents, to whom the congregation are much indebted for their exertions, and an able and interesting sermon was preached by the Rev. E. W. Syde from the text "In honour preferring one another."

## THE NEW YEAR.

THE New Year, with its festivities, its rejoicings and its amusements is now past and gone, and Yokohama, revived by its holiday, relapses into business with its cares and tribulations. The weather, for those who took advantage of the holiday to go into the country, as well as for those who devoted their New

Year's day to paying a series of complimentary visits, has been all that could be desired, and the New Year has been ushered in with all due solemnity.

Among the Japanese this early advent of the new year has been somewhat in the nature of a surprise, and the consequence has been that the feastings and amusements usual among them at the opening of their year have been much curtailed. Still, the people have apparently enjoyed themselves, and, most of the houses being decorated, the streets have presented quite a lively appearance. What troubles have been caused in native commercial circles by the change in the calendar we have not yet learned, but of that we shall doubtless hear in due time. Suffice it for the time that all have enjoyed the holidays and now return to Grey Shirtings and Yarns with renewed interest.

#### SUICIDE OF AN OFFICER.

It is reported that a high officer of the Government has committed suicide on account of his inability to bear the usual scrutiny into the transactions of his department.

Rumours, pointing to irregular business connections between high native officials and foreigners, very compromising to the reputation to those officials, and, as such, detrimental to the credit of the Government and the interests of the nation, have lately been in free circulation. It would seem probable that we may shortly have to enlarge on this subject.

#### FATAL ACCIDENT.

ONE of those unfortunate accidents with fire arms, seemingly impossible to account for, is reported to have occurred in the country, the untimely explosion of a gun unhappily resulting in the death of a Japanese child. It appears that Captain Purvis R.N. and Mr. Gilbert were on a shooting excursion near Oiso. On Saturday December 28th, after having walked for several hours, they entered a small house outside the village in order to rest for a few minutes. Here Mr. Gilbert was induced to show his gun to a Japanese, and, after explaining to him its various details he half cocked it and laid it across his knee. Within a few seconds one charge exploded, the shot striking a native boy about five years of age, entering on the right side in an oblique direction and probably lodging over the left hip. Mr. Gilbert at once saw what had taken place, and dropping the gun, picked up the child who, however, did not fall. Captain Purvis and Mr. Gilbert both did all in their power to relieve the boy, who did not seem to suffer much, but died in about twenty-five minutes after the accident. Within a few minutes after the shot had been fired a large crowd of Japanese assembled round the house and, on the father beginning to express some anger at the occurrence, his friends told him it was a misfortune and that he should remain quiet. Beyond this no symptom of anger or even discontent was evinced, though the father refused some money which Mr. Gilbert, in the first excitement of the moment, offered him. The village yakunin of course soon arrived at the house and both gentlemen gave their names and returned to Yokohama, Mr. Gilbert reporting the accident to Mr. Dohmen, H. B. M.'s Vice Consul in Yedo. It should be mentioned that before Mr. Gilbert left the village the father offered compromise the affair for a few dollars, but this Mr. Gilbert very properly declined to do, subsequently expressing his wish to make, at the proper time, every pecuniary compensation in his power. The accident is much to be regretted; but it is a subject for congratulation—if congratulation be possible under such circumstances—that it was not through incautious shooting, so fruitful a source of accident in this and other countries.

#### RECEPTION OF THE CORPS DIPLOMATIQUE.

On Thursday, His Imperial Majesty The Mikado, received the Diplomatic Corps; Count Fe d'Ostiani, the Italian Minister, as its senior member, on behalf of the other Ministers, addressed His Majesty as follows:—

Le Corps Diplomatique, Sire, vient se ranger autour du Trône de Votre Majesté Impériale pour vous offrir ses félicitations et ses hommages à l'occasion de cette nouvelle année, que pour la première fois, le Japon va célébrer en même temps que les nations de l'Occident.

Le Corps Diplomatique, qui dans ces derniers temps a été témoin de tout le progrès matériel et moral inauguré sous les auspices de Votre Majesté Impériale, voit dans chaque innovation qui s'opère dans ce pays, un nouveau gage de la fraternité qui lie le Japon aux pays dont nous avons l'honneur d'être les représentants.

Nous vous présentons, Sire, nos vœux sincères pour la prospérité de Votre Auguste personne, de la Famille Impériale et de Votre Pays.

The MIKADO replied to the address in the following terms:

Messieurs du Corps Diplomatique.—C'est avec un vif plaisir que nous recevons vos compliments de félicitations à l'occasion de la nouvelle année, et nous sommes très-heureux de vous voir continuer en bonne santé l'exercice de vos fonctions.

Notre vœu le plus cher, est que les Chefs Souverains de vos Gouvernements respectifs, puissent vivre continuellement dans la jouissance d'une paix profonde, et d'une sécurité parfaite, et nous vous prions de leur faire part de nos sentiments les plus affectueux.

Le second jour du 1er mois de l'an 2533.

After His Majesty had given the reply, the Ministers were invited to a collation, and during the afternoon presents were forwarded to the residences of the various Ministers by the Mikado.

#### FIRE AT HOMOKO.

On Monday Dec. 23rd, about half-past seven, a fire broke out among the fishermen's huts in the village of Homoko. The houses there are all thatched, and as a strong breeze was blowing from the sea, the flames soon spread. House after house became involved, and so rapid was the progress of the flames, aided by the very combustible nature of the buildings, that the fishermen had scarce time to escape with their families and encamp, surrounded in a few instances by their household goods, in the neighbouring paddy-fields. The height of the flames and the fierceness of the fire soon gave the alarm, and three of the Shand & Mason engines, lately purchased by the Japanese authorities, were brought into action, and threw large volumes of water upon the houses as yet untouched. To attempt to save those already on fire was out of the question; but eventually the flames were extinguished, and the villagers, most of them houseless, sought temporary shelter. A subsequent visit to Homoko revealed a sad scene. Forty houses were levelled with the ground, a few smoking embers being the only visible remains. In addition to the heavy loss occasioned by the destruction of the dwellings, the villagers have in most instances lost their stores of barley and rice which have but recently been gathered, and of course fell an easy prey to fire. A subscription has been initiated on behalf of the sufferers by Mr. Jackson and Mr. Macdonald.

The following are the results of the fire as given by the Nanaahi of the village:—

42 houses destroyed.

324 persons rendered homeless of whom 152 are women.

Mr. Jackson of the Hongkong and Shanghai Bank will receive any subscriptions, and an account of the expenditure will be published.

The following incident also refers to the matter and is recorded for such interest as may legitimately attach to it in the eyes both of foreigners and Japanese.

In by-gone days when civility was not always extended to foreigners by the inhabitants of the neighbouring villages, the villagers of Homoko were always urbane and pleasant in their demeanour towards us. On Monday night last a fire broke out in the hamlet and destroyed forty or fifty houses—nearly the whole village in fact—leaving the poor people exposed to cold which is often much aggravated at night by high winds. The matter formed the topic of a short conversation on Christmas night at the table of a resident, and a hundred dollars were then and there raised for the relief of the more destitute among the villagers. "The luxury of doing good" was not the least among those enjoyed on this occasion. (See also page 12.)

#### RIOT AT TAKASIMA.

ACCORDING to the Nagasaki papers there has been quite a riot among the Takasima colliers, apparently in consequence of a divided authority between the Hizen officials and the Public Works Department.

The riot, as all such riots do, sprang from a very small beginning. Some half dozen coolies having imbibed too freely of *saki* commenced quarrelling with the inmate of a neighbouring house. The latter retaliated both in the matter of blows and, we may suppose, in drinking, for two tubs of *saki* were broached and the riot became general. The foreigners present, Messrs. Potter, Dale, A. Glover and Wake, attempted to quell the disturbance, and succeeded in doing so for a short time; but the coolies, again rising, gutted and demolished the colliery buildings, and being already divided into two parties attacked their opponents' houses. The foreigners again attempted to make peace, but were stoned by the natives; and the house in which they were was demolished.

Seeing that they could do no good, says the Nagasaki paper, another remaining longer would be very dangerous, the Europeans returned to their houses and collected the Officers, Engineers and all the Colliery servants, and made preparations in case the rioters should come over the hill and attack the houses on the side where the foreigners resided, threats of something of the kind having been hinted at by some of the coolies.

As the fighting and noise of smashing up houses could be distinctly heard during the night every one remained on watch until daylight, hoping that the rioters would gradually quieten down. In this, however, they were mistaken, as the first news Mr. Potter received in the morning was that they had gutted and pulled down most of the Colliery buildings, also many of those belonging to the native contractor, and that they threatened to come over and do the same to the houses on the European side.

On hearing this Mr. Potter, after consulting with the Hizen Officials and Europeans, sent all their money and other valuables together with Mrs. Wake and family and the wives and children of native officials, to Nagasaki, and assembled all the Colliery employees at Mr. Glover's Bungalow, in order the better to protect themselves should the rioters make a descent on them as threatened.

Being afraid that matters might become very much more serious and European life be endangered, should these rioters be allowed to go on drinking and to remain masters of the Island, after due consultation with the officials and his brother Europeans, Mr. Potter twice sent notice to the rioters to return quietly to their houses, telling them at the same time that if they did not, and still continued to prevent the Engineers and others attending to their duties, that strong measures would be taken to force them to obedience.

The only answer returned from the rioters on the top of the hill was defiance and threats, whereupon Mr. Potter collected all the officers and Colliery servants and with Messrs. Hall, A. Glover and Wake, proceeded to capture the ringleaders and to enforce order.

On reaching the crest of the hill a determined stand was made and stones hurled at Mr. Potter's party; but after a hand to hand fight in which both Messrs. Potter and A. Glover were wounded by stones, the rioters took to their heels pursued by the Japanese belonging to the Colliery.

During the fight Mr. Potter was only saved from being run through the face with a bamboo spear by the prompt assistance afforded him by Mr. Araki Shonoski, one of the Japanese Engineers whose house had on the previous night been completely gutted.

The result thus fortunately proved in the favour of the foreigners, two of the ringleaders being killed and several of their followers severely wounded; but the suggestion that under other circumstances the rioters might have been victorious is by no means pleasant. The riot, indeed, seems to have been of a most serious nature, and as the Nagasaki authorities have taken up the matter most vigorously, anything of the kind may for the future be avoided. The mine itself was, in consequence of the stoppage of the work, flooded to a considerable depth, and though operations have been resumed, the estate has lost much by this untimely disturbance, a loss which, considering all the circumstances under which the mines are worked, is much to be regretted.

#### ATHLETIC ASSOCIATION.

For the past twelve months we have on every possible occasion urgently advocated the formation of an Amateur Athletic Association, and we are now gratified to find that an effort has been made to accomplish that desirable result. It is, however, to be regretted that the meeting (elsewhere reported), took place on a day when many of the community were at Yedo visiting the Exhibition; still, those more immediately interested in athletics were present, while those who were not will have an early opportunity of becoming members, and thus practically testifying to their desire for the welfare of the Association. The estimated receipts and expenditure as read at the meeting tell a flattering tale, and as it is possible to lay out an enclosed running path on the Rifle Range without interfering with the original purpose of the ground, no better spot could be selected. We hope the Association will

meet with success, and, as a little more spirit seems of late to have animated those interested in athletics, we may not hope in vain.

#### AMATEUR THEATRICALS.

We publish below the correspondence which has taken place between the amateur actors and the Hospital Committee. The latter are to be congratulated upon receiving so handsome an amount as \$400, a fact which proves, in addition, that the public is by no means indifferent to the success of those who provide amusement for the community.

Yokohama, December 23rd, 1872.

RUSSELL ROBERTSON, Esq.,

Chairman of the General Hospital Committee,

SIR,—On behalf of the amateurs who gave the dramatic performance in aid of the General Hospital, I beg to hand you a cheque for \$400.

I remain, Sir,

Your obedient servant,

A. MITCHELL,

Hon. Sec.

Yokohama, December 23rd, 1872.

DEAR SIR,—In the name of the Committee of the Yokohama General Hospital, I beg to tender you the cordial thanks of the Committee for the cheque for \$400, as also for the kindly sympathy that prompted you, and the gentlemen associated with you, to give a performance in aid of the funds of the hospital.

The amount is most welcome, and by its aid the debt of the hospital will be materially lowered.

In again tendering you my best thanks,

I am, dear Sir,

Your obedient servant,

RUSSELL ROBERTSON,

Chairman, Yokohama General Hospital Committee.

#### TEA AND SILK SHIPMENTS.

The following is the list of tea and silk shipments per the P. M. S. S. *Colorado*:—

#### MISCELLANEOUS.

The Christmas Paper Hunt was won by Mr. Abbott on Haht Ton; Mr. Shaw, who was second getting a spill at the last jump. On New Year's day the heavy weight (12-st.) paper hunt took place, the start being from opposite Mr. Grigor's bungalow. Captain Snow lead for some time, but was eventually passed, his pony refusing, the race being won by Mr. Thomas on Garry Owen, Mr. Mollison second.

On Christmas morning a large fire occurred at Kawasaki. The number of houses burnt and destroyed is one hundred and ten: three lives were lost.

We understand that Yama-shiro a leading native merchant of Yedo, committed suicide on New Year's eve. Two reasons have been assigned for this act—one that he was unable to meet his engagements, and the other that he had been in bad odour with the Government, for whom he had been engaged in several commercial transactions. We understand that the Government has taken over a part of the goods which had been purchased by the merchant on Government account.

WITH reference to the scarcity of game, so much complained of this season by foreigners, we understand that whatever

may be the state of the country near Yokohama and Yedo, there is plenty of game in the interior, and within easy reach. A bag was lately made in a few days numbering no less than 117 head, some 30 brace of pheasants being among the slain.

As an instance of the advancement of European customs in this country, we may mention that two gentlemen, who recently went shooting on the Nakasendo, about fifty miles from Yokohama, found beef, pork and beer, sold in large quantities for use by the Japanese.

It seems the Japanese have not yet learnt the lesson which we should have supposed was inculcated by their reckless purchases of pigs and dogs some months since. Rabbits are now the favoured animals, and two gentlemen have imported from San Francisco some twenty-two rabbits, costing, laid down here, some \$250. We learn that soon after their arrival an offer of \$1,150 was refused, this being followed by an offer of \$1,400 which was accepted.

Passengers,.....24,922. Amount,.....\$8,413.20  
18 Miles Open.

Average per mile per week £101 5s. 5d.

#### NAGASAKI.

THE new Customs Regulations as put into force at Nagasaki, we are sorry to say, continue most vexatious and annoying to everyone who has had business to transact. The list of well founded grievances during the week, is a long one and would fill several pages, but we select only a few to illustrate the necessity for immediate reforms in the system being made. Whether the trouble arises from a wrongful interpretation of the Government instructions, or from the over-zeal of the minor officials recently arrived from Yedo, we do not pretend to say; but one thing is certain that such regulations or the execution of them are not in existence in any other progressive country. It will be remembered that H. I. R. M. S's *Seitona* and *Vitia* arrived here about 3 p.m. on the 26th instant; too late to enable supplies of fresh provisions being prepared, and sent on board that day, within the regulation time fixed by the Custom-house authorities, and the shipment of these articles consequently had to be delayed until the next morning. The beef, bread and vegetables which were the articles to be delivered, were put into boats at Sagaramatz jetty before 6 a.m., and should have been on board at that hour in conformity with the regulations of the Russian service, but notwithstanding the clause in the treaty providing for the exemption of such articles from

Custom-house control, these goods had to remain at the jetty until 8 a.m. when the examination officer arrived. Even by stretching the meaning of the limitation clause of "between sunset and sunrise," it would be impossible to bring 8 o'clock to mean sunrise, and this cannot be urged in defence of the detention. A complaint has been officially lodged against this needless interference, and a repetition of it may not occur again; but why it ever occurred in these days of reforms and the terms of the treaty set at naught, is one of the puzzles which Japan alone seems capable of furnishing to the world.—*Nagasaki Express*.
